	Nemphalene Acetic Acid		
	(*vii*) Any other pesticide not specified above		

Note :

(1) Limits shall be complied with at the end of the treatment plant before any dilution.

(2) From the 'Additional Parameters' specified in 71 (*ii*), only the relevant parameters (based on the raw materials used and products manufactured) may be prescribed by the concerned State Board on a case-to-case basis.

(3) No limit for COD is prescribed. If the COD in a treated effluent is persistently more than 250 mg./1, such industrial units are required to identify the chemicals causing the same. In case, these are found to be toxic as defined in Schedule I of the Hazardous Chemicals Rules, 1989, the State Boards in such cases may direct the industries to install tertiary treatment, stipulating time limit. This may be done on a case-to-case basis.

(4) Solar evaporation followed by incineration is a recognised practice, provide the guidelines of solar evaporation as given below are followed.

Guidelines on solar evaporation system or waste water from pesticide industry.

(*i*) Solar evaporation pans shall be constructed in such a way that the bottom is at least one metre above the ground level.

(*ii*) Solar evaporation pans shall be leak proof and of impervious construction and designed as per IS : 7290.

(*iii*) The solar evaporation pans shall be designed or

1	2	3	4
			the basis of evaporation rate matching to the output of waste water.
		(*iv*)	Waste water must be pre-treated as below before subjecting to solar evaporation : (*a*) Oil and grease and floating organics shall be removed so that the rate of evaporation is not affected (*b*) Acidic/Alkaline waste must be neutralised before solar evaporation to maintain pH in the range of 6.5 to 8.5 (*c*) Toxic volatile matter shall be removed so as not to cause air pollution
		(*v*)	During the rainy season, storm water shall not be allowed to mix with process waste and enter the pans. The waste water shall in no case outflow from the evaporation pans. Alternative arrangements shall be made to hold the waste water in proper impervious tanks and if necessary, force evaporated
		(*vi*)	In no circumstances, the liquid effluent shall be discharged without conforming to the minimal national standards or stored in a holding arrangement which is likely to cause pollution
		(*vii*)	The sludge from the solar evaporation pans shall be incinerated or disposed as per the guidelines for management and handling of hazardous waste, published by the Ministry of Environment and Forests Government of India, after obtaining authorization from the State Pollution Control Board under the Hazardous Wastes (Handling and Management) Rules, 1989
		(*viii*)	The facility shall be protected from flood and storm to prevent embankments from erosion or any other damage which may render any portion inoperable
		(*ix*)	Facilities shall have protective enclosure to keep wildlife, domestic animals, unauthorised persons, etc. away.
72.	Oil Drilling and Gas Extraction Industry		
A.	Standards for Liquid Effluent 1.0 On-shore facilities (For Marine Disposal)		
		pH	5.5—9.0
		Oil and grease	10 mg/1
		Suspended solids	100 mg/1
		BOD (3 days at 27°C)	30 mg/1

1	2	3	4

Note :

(*i*) For on-shore discharge of effluents, in addition to the standards prescribed above, proper marine out fall has to be provided to achieve the individual pollutant concentration level in sea water below their toxicity limits as given below, within a distance of 50 metres from the discharge point, in order to protect the marine aquatic life .

Parameter	Toxicity limit, mg/1
Chromium (as Cr)	0.1
Copper, (as Cu)	0.05
Cyanide, (as CN)	0.005
Fluoride, (as F)	1.5
Lead, (as Pb)	0.05
Mercury, (as Hg)	0.01
Nickel, (as Ni)	0.1
Zinc, (as Zn)	0.1

(*ii*) Oil and gas drilling and processing facilities, situated on land and away from saline water sink, may opt either for disposal of treated water by on-shore disposal of by re-injection in abandoned well, which is allowed only below a depth of 1000 metres from the ground level. In case of re-injection in abandoned well the effluent have to comply only with respect to suspended solids and oil and grease at 100 mg/1 and 10 mg/1, respectively. For onshore disposal, the permissible limits are given below :

Sl. No	Parameter	On-shore discharge standards (not to exceed)
1	2	3
1	pH	5.5—9.0
2	Temperature	40°C
3.	Suspended Solids	100 mg/1
4.	Zinc	2 mg/1
5.	BOD	30 mg/1
6.	COD	100 mg/1
7.	Chlorides	600 mg/1
8.	Sulphates	1000 mg/1
9.	TDS	2100 mg/1
10.	% Sodium	60 mg/1

1	2	3
11	Oil and grease	10 mg/1
12.	Phenolics	1 2 mg/1
13.	Cyanides	0.2 mg/1
14.	Fluorides	1.5 mg/1
15.	Sulphides	2.0 mg/1
16	Chromium (Cr + 6)	0.1 mg/1
17	Chromium (Total)	1 0 mg/1
18.	Copper	0 2 mg/1
19.	Lead	0 1 mg/1
20.	Mercury	0.01 mg/1
21.	Nickel	3 0 mg/1

2.0 Off-shore facilities :

For off-shore discharge of effluents, the oil content of the treated effluent without dilution shall not exceed 40 mg/1 for 95% of the observation and shall never exceed 100 mg/1 Three 8-hourly grab samples are required to be collected daily and the average value of oil and grease content of the three samples shall comply with these standards.

B. Guidelines for Discharge of Gaseous Emission :

1.0 DG sets

1.1 DG sets at drill site as well as production station shall conform with the norm notified under the Environment (Protection) Act, 1986

2.0 Elevated/ground flares

2 1 Cold Venting of gases shall never be resorted to and all the gaseous emissions are to be flared

2 2 All flaring shall be done by elevated flares except where there is any effect on crop production in adjoining areas due to the flaring. In such cases, one may adopt ground flaring.

2.3 In case of ground flare, to minimise the effects of flaring, the flare pit at Group Gathering Station (GGS)/Oil Collecting Station (OCS) and Group Collection Station (GCS) shall be made of RCC surrounded by a permanent wall (made of refractory brick) of minimum 5 m height, to reduce the radiation and glaring effects in the adjoining areas.

2.4 A green belt of 100 m width may be developed around the flare after the refractory wall in case of ground flaring.

2.5 If the ground flaring with provision of green belt is not feasible, enclosed ground flare system shall be adopted, and be designed with proper enclosure height, to meet the ground level concentration (GLC) requirement.

1	2	3	4

2.6 In case of elevated flaring, the minimum stack height shall be 30 m. Height of the stack shall be such that the max. GLC never exceeds the prescribed ambient air quality limit.

3.0 Burning of effluent in the pits shall not be carried out at any stage.

C. Guidelines for Disposal of Solid Waste :

1.0 Disposal of drill cuttings.

1.1 The cuttings shall be conveyed through a conveyor system to the disposal pit after proper washing.

1.2 No drill cuttings (of any composition) shall be disposed off-shore. For off-shore installation, drill cuttings separated from mud, shall be transported on-shore through supply vessels for secured land-fill disposal as per Ministry of Environment and Forests' guidelines. The site shall be approved by the concerned authority (State Government/State Pollution Control Board).

1.3 The disposal of drill cuttings (on-shore/off-shore) shall conform to the guidelines provided by the Ministry of Environment and Forests.

1.4 The secured land-fill pit shall be covered with a thick layer of local top soil provided with proper top slope, after drilling operation is over.

2.0 Disposal of drilling mud.

2.1 The unusable portion of the drilling mud (of any composition); after reclamation shall be disposed of only at a secured land-fill site approved by the concerned authority (State Government/State Pollution Control Boards). The disposal of mud shall conform to the guidelines provided by the Ministry of Environment and Forests under the Hazardous Wastes (Management and Handling) Rules, 1989.

2.2 No mud (of any composition) shall be disposed off-shore. For off-shore installation, the unusable portion of the mud shall be brought back to the shore for disposal in a secured land-fill.

2.3 Only water-based mud system shall be used. Where oil-based muds are used, the muds, after

1	2	3	4
			they become unusable, shall be properly treated/incinerated, in a centralised treatment facility. In case of off-shore installation, these may be brought to the shore and treated.
		3.0	Production stage solid waste disposal.
		3.1	The dried sludge from waste water treatment plant and other solid wastes at production stage shall be disposed in a secured land-fill.
		3.2	In case oil content in the sludge is high, it shall be properly treated/incinerated and ash shall be disposed of in a secured land-fill
73.	Pharmaceuticals industry (Bulk Drugs):		
		(*i*) Compulsory parameters	(mg/l except pH)
		pH	6.5 — 8.5
		Oil and grease	10
		BOD (3 days at 27°C)	100
		Total suspended solids	100
		Bioassay test	90% survival after 96 hours in 100% effluent test shall be carried out as per IS 6582-1971
		(*ii*) Additional parameters	mg/l
		Mercury	0.01
		Arsenic	0.2
		Chromium (hexavalent)	0.1
		Lead	0.1
		Cyanide	0.1
		Phenolics (C_6H_5OH)	1.0
		Sulphides (as S)	2.0
		Phosphate (as P)	5.0
		Note :	
		(*i*)	The limit of BOD (3 days at 27°C) shall be 30 mg/l if effluent is discharged directly to a fresh water body.
		(*ii*)	The additional parameters are applicable to bulk drug manufacturing units depending upon the process and product.
		(*iii*)	No limit for COD is prescribed, but it shall be monitored. If the COD of the treated effluent is greater than 250 mg/l, such industrial units are required to identify chemicals causing the same. In case these are found to be toxic, as defined in the Hazardous Chemicals Rules, 1989 (Schedule

1	2	3	4
			(1) the State Boards in such cases shall direct the industries to instal tertiary treatment system within the stipulated time limit This may be done on a case-to-case basis.

74 Emission Standards for brickkilns :

I Minimal National Emission Standards for Brick Kilns :

Size	Kiln Capacity	Maximum limit for the concentration of particulate matter (mg/N cu m)
1	2	3
Small	Less than 15,000 bricks per day (less than 15 ft. trench width)	1000
Medium	15,000-30,000 bricks per day (15 - 22 ft trench width)	750
Large	More than 30,000 bricks per day (more than 22 ft trench width)	750

Note.—The above particulate matter emission limits are achievable by installing fixed chimney high draught kilns and/or settling chamber

II Stack Height Regulation

The following stack heights are recommended for optional disperson of particulate matter :—

Kiln Capacity	Stack height
1	2
Less than 15,000 bricks per day (less than 15 ft trench width).	Minimum stack height of 22 m or, Induced draught fan operating with minimum draught of 50 mm Water Gauge with 12 m stack height.
15,000-30,000 bricks per day (15 - 22 ft. trench width)	Minimum stack height of 27 m with gravitational settling chamber or Induced draught fan operating with minimum draught of 50 mm Water Gauge with 15 m stack height
More than 30,000 bricks per day (more than 22 ft trench width)	Minimum stack height of 30 m with gravitational settling chamber or, Induced draught fan operating with minimum draught of 50 mm Water Gauge with 17 m stack height.

[1][III. Existing moving chimney bull's trench kilns shall be dispensed with by June 30, 2000 and no new moving chimney kilns shall be allowed to come up.]

---

[1] Subs. by G.S.R. 682 (E), dated 5th October, 1999, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 5th October, 1999.

IV Considering the immediate need to protect the top soil and to find ways for safe disposal/utilisation of flyash, it is provided that from the 1st January, 1997, all brick-manufacturing units within a radius of 50 kms from any thermal power plant, shall utilise flyash in optimal proportion for making bricks.

75. Soda Ash Industry
(Solvay Process)

PARAMETER	MINAS (Recipient body specified)		
	Marine	Brackish	Inland surface water
pH	6.5—9	6.5—9	6.5—9
Temperature	45°C or less	45°C or less	45°C or less
Oil and grease	2 mg/1	20 mg/1	10 mg/1
Suspended solids (SS)	500 mg/1	200 mg/1	100 mg/1
Ammoniacal nitrogen	5 mg/1	50 mg/1	[1]["50 mg/1"]
Bioassay	[2][96 hours 30% survival]	96 hours 90% survival	[2]["96 hours 90% survival"]

Note.— MINAS for disposal in brackish and inland surface water are without any dilution

Standards for Dual Process Soda Ash Plants :

Parameter	MINAS
	(Inland Surface Water)
pH	6.5—8.0
Ammonical nitrogen, as N (mg/1)	50
Nitrate nitrogen, as N (mg/1)	10
Cyanide, as CN (mg/1)	0.2
Hexavalent chromium (mg/1)	0.1
Total chromium (mg/1)	2.0
Suspended solids (mg/1)	100
Oil and grease (mg/1)	10

Note.—[3][The standards shall be implemented by the industry in a time target schedule by December 1999.] The progress on the time-targeted implementation schedule shall be periodically submitted by the industry to the State Pollution Control Board and Central Pollution Control Board

76 Emission Standard
for SO_2 from Cupola
furnace :

Standard for sulphur Dioxide emission from Cupola furnace :

Characteristics	Emission limit
Sulphur dioxide (SO_2) emission	300 mg/Nm^3 at 12% CO_2 corrections

To achieve the standard, foundries may install scrubber, followed by a stack of height six times the diameter of the Cupola beyond the charging door.

Note.—In case due to some technical reasons, installation of scrubber is not possible, then value of SO_2 the ambient air has to be effected through the stack height.

---

1. Subs. by corrigendum—G.S.R. 57 (E), dated 4th February, 1997, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 5th February, 1997.
2. *Ibid.*
3. Subs. by G.S.R. 682 (E), dated 5th October 1999, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 5th October, 1999.

77. Specifications of Motor Gasoline for Emission Related Parameters :

Sl. No	Characteristics	Requirement	Method of Test ref. to P : of IS : 1448
(i)	Reid Vapour Pressure at 38°C, KPa	35 to 70	P : 39
(ii)	Benzene, per cent by volume, Max	5.0(1)	P : 104
(iii)	Lead Content (as Pb) g/1, Max	0.15 (low leaded(2) 0.013 (unleaded)	P : 38
(iv)	Sulphur, per cent by mass, Max	0.10 (unleaded) 0.20 (leaded)	P : 34
(v)	Potential Gum, g/m^3, Max	50	ASTM 873 : 8
(vi)	Gum (Solvent Washed) g/m^3 Max	40	P . 29
(vii)	Orygenates (Content Ether (MTBE, ETBE) Alchohol, per cent by volume, Max	15	
(viii)	Phosphorus	*See* Foot Note(3)	ASTMD 3231

(1) 3.0 per cent by volume maximum in metro cities by 2000 AD.

(2) 0.15 g/1 by 31st December, 1996 (for entire country).
0.013 g/1 by 1st April, 1995 (in four metro cities);
by 1st December, 1998 (for all State Capitals/UTs and major metro cities), and
by 1st April, 2000 for the entire country

(3) Phosphorous containing additives shall be absent

Note :

(*a*) Above specifications applies to leaded as well as unleaded petrol except lead content.

(*b*) For new refineries coming up during or after 1997 the specification applicable by 2000 for existing refineries shall be applicable by 1997.

78. Specification of Diesel Fuel for Emission-Related Parameters :

Sl. No.	Characteristics	Requirement	Mothod of Test ref. to P : of IS . 1448
(i)	Density at 15°C, Kg/m^3	820 to 880(1)	P : 32
(ii)	Cetane Number, Min	45.0(2)	P : 9
(iii)	Distillation 85 per cent by volume recovery at °C Max 95 per cent by volume recover at °C, Max	350 370	P : 18
(iv)	Sulphur, per cent by mass	0.50(3)	P : 33

(1) 820 to 860 by 2000 AD

(2) 48 by 31st December, 1998 (except in the refineries—Digboi, Gauhati and Bongaigaon Refineries and Petrochemicals Ltd.)

(3) (*i*) 0.50 per cent by mass by 1st April, 1996 in four metros and Taj Trapezium;
(*ii*) 0.25 per cent by mass by 1st October, 1996 in Taj Trapezium.
(*iii*) 0.25 per cent by mass by 1st April, 1999 throughout the country.

Note :

(*a*) Above specifications apply to HSD only.

(*b*) For new refineries coming during or atfer 1997 specification applicable by 2000 for existing refineries shall be applicable by 1997.

(*c*) 'P' refers to parts of IS : 1448".]

		New Batteries	Existing Batteries
[1][79. Coke oven plants (by product recovery type)	Fugitive Visible Emissions		
	(*a*) Leakage from door	5 (PLD)*	10 (PLD)*
	(*b*) Leakage from charging lids	1 (PLL)*	1 (PLL)*
	(*c*) Leakage from AP Covers	4 (PLO)*	4 (PLO)*
	(*d*) Charging emission (second/charge)	16 (with HPLA)*	50 (with HPLA)*
Stack Emission of Coke Oven			
(*a*) SO_2 (mg/Nm^3)		800	800
(*b*) NOx, (mg/Nm^3)		500	500
(*c*) SPM, (mg/Nm^3)		50	50
(*a*) SPM emission during charging (stack emission mg/Nm^3		25	25
(*b*) SPM emission during coke pushing (stack emission) gm/ton of coke		5	5
Sulphur in Coke Oven gas used for heating (mg/Nm^3)		800	800
Emission for quenching operation Particulate matter gm/MT of coke produced		50	50
Benzo-Pyerine (BOP) concentration in work zone air (ug/m^3)			
— Battery area (top of the battery)		5	5
— Other units in coke oven plant		2	2
— Ambient standards (ng/m^3)		10	10

— For control fo emissions and to maintain environmental quality in work zone area, the following guidelines shall be followed, namely :—

(*i*) New coke oven units shall follow any of the low-emission procedures, such as, coke dry cooling, non-recovery coke-ovens Indirect Quenching Process, Jumbo coke oven reactor, Modified Wet Quenching System with appropriate environmental controls(e g, baffles, filtering media, collection and treatment of residual water from quench tower and recycling, Use of process water as quenching water shall not be permissible)

(*ii*) Effective pollution control measures (for e g, Extensive maintenance and cleaning of oven doors and frame seals, ascension pipes, charging holes and lids and other equipment, On-main charging system (HPLA); Luting charging holes with clay-suspension, Modified guide/transfer car with emission control system etc,) shall be taken to reduce coal charging and coke pushing emissions The bleeder of the coke oven shall be flared

(*iii*) In the case of existing coke ovens with west quenching, the new procedures as in (*i*) and (*ii*) shall be adopted and emission standards achieved within four years (by 2001)

Note : Units set up after the publication fo this notification shall be treated as new units

*HPLA — Aspiration through high pressure liquor injection in goose neck.
*PLD — Per cent leaking doors.
*PLL — Per cent leaking lids.
*PLO — Per cent leaking offtakes]

[2][80. Specification of two-stroke engine oil :

Specification	Standard	Test Procedure
Two-stroke engine oil grade JASO-FC as per JASO M-345-93 specification and API TC as per specification No. ASTMD 4859	Minimum smoke Index of 85	JASO-M342-92 for JASO-FC and ASTMD-4857 for APITC

The above specification shall be effective from the 1st day of April, 1999.

---

1. Ins. by G.S.R. 631 (E) dated 31st October, 1997 published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*), dated 31st October, 1997.
2. Ins. by G.S.R. 504 (E), dated 20th August, 1998 published in the *Gazette of India, Extraordinary*, Pt.II, Sec. 3 (*i*), dated 21st August, 1998.

[1][81. Battery manufacturing industry

(*i*) Lead Acid Battery Manufacturing Industries : Emission Standards.

Source	Pollutant	Standards Conc. based (mg/Nm^3)
Grid casting	Lead	10
	Particulate matter	25
Oxide manufacturing	Lead	10
	Particulate matter	25
Paste mixing	Lead	10
	Particulate matter	25
Assembling	Lead	10
	Particulate matter	25
PVC Section	Particulate matter	150

- To comply with the respective standards, all the emissions from above-mentioned sources shall be routed through stack connected with hood and fan in addition to above, installation of control equipment viz Bag filter/ventury scrubber, is also recommended.
- The minimum stack height shall be 30 m

Liquid Effluent Discharge Standards

Pollutant	Concentration based standards
pH	6.5—8 5
Suspended solids	50 mg/l
Lead	0.1 mg/l

(*ii*) Dry Cell Manufacturing Industry : Emission Standards

Pollutant	Standards Concentration-based (mg/Nm^3)
Particulate matter	50
Manganese as Mn	5

- To comply with the respective standards, all the emissions from above-mentioned sources shall be routed through stack connected with hood and fan. In addition to above, installation of control equipment viz. bag filter/ventury scrubber, is also recommended.
- The minimum stack height shall be 30 m.

Effluent Standards

Pollutant	Concentration based standards
pH	6.5—8.5
Total suspended solids	100 mg/l
Manganese as Mn	2 mg/l
Mercury as Hg	0.02 mg/l
Zinc as Zn	5 mg/l

(*iii*) Secondary Lead Smelters

Pollutant	Concentration based standards
Lead as Pb	10 mg/Nm^3
Particulate matter	50 mg/Nm^3
Minimum stack height	30 m

1. Ins. by G.S.R. 7, dated 22nd December, 1998 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 2nd January, 1999.

82. Environmental Standards for Gas/Naphtha-based Thermal Power Plants

(*i*) Limit for emission of NOx

(*a*) For existing units—150 ppm (v/v) at 15% excess oxygen.

(*b*) For new units with effect from 1-6-1999.

Total generation of gas turbine	Limit for Stack NOx emission [(v/v), at 15% excess oxygen]
(*a*) 400 MW and above	(*i*) 50 ppm for the units burning natural gas.
	(*ii*) 100 ppm for the units burning naphtha
(*b*) Less than 400 MW but upto 100 MW	(*i*) 75 ppm for the units burning natural gas
	(*ii*) 100 ppm for the units burning naphtha
(*c*) Less than 100 MW	100 ppm for units burning natural gas or naphtha as fuel
(*d*) For the plants burning gas in a conventional boiler.	100 ppm

(*ii*) Stack height H in m should be calculated using the formula $H = 14\ Q^{0.3}$, where Q is the emission rate of SO_2 in kg/hr, subject to a minimum of 30 mts

(*iii*) Liquid waste discharge limit.

Parameter	Maximum limit of concentration (mg/l except for pH and temperature)
pH	6.5—8.5
Temperature	As applicable for other thermal power plants
Free available chlorine	0.5
Suspended solids	100.0
Oil and grease	20.0
Copper (total)	1.0
Iron (total)	1.0
Zinc	1.0
Chromium (total)	0.2
Phosphate	5.0

83. Standards/Guidelines for control of Noise Pollution from Stationary Diesel Generator (DG) Sets

(A) Noise Standards for DG sets (15-500 KVA)

The total sound power level, Lw, of a DG set should be less than, $94 + 10 \log_{10}$ (KVA), dB (A), at the manufacturing stage, where, KVA is the nominal power rating of a DG set

This level should fall by 5 dB(A) every five years, till 2007, i.e. in 2002 and then in 2007

(B) Mandatory acoustic enclosure/acoustic treatment of room for stationary DG sets (5 KVA and above)

Noise from the DG set should be controlled by providing an acoustic enclosure or by treating the room acoustically.

The acoustic enclosure/acoustic treatment of the room should be designed for minimum 25 dB (A). Insertion Loss or for meeting the ambient noise standards, whichever is on the higher side (if the actual ambient noise is on the higher side, it may not be possible to check the performance of the acoustic enclosure/acoustic treatment. Under such circumstances the performance may be checked for noise reduction upto actual ambient noise level, preferably, in the night time). The measurement for Insertion Loss may be done at different points at 0.5 m from the acoustic enclosure/room, and then averaged.

The DG set should also be provided with proper exhaust muffler with Insertion Loss of minimum 25 dB (A)

(C) Guidelines for the manufacturers/users of DG sets (5 KVA and above)

01 The manufacture should offer to the user a standard acoustic enclosure of 25 dB (A) Insertion Loss and also a suitable exhaust muffler with Insertion Loss of 25 dB (A).

02 The user should make efforts to bring down the noise levels due to the DG set, outside his premises, within the ambient noise requirements by proper siting and control measures.

03 The manufacturer should furnish noise power levels of the unsilenced DG sets as per standards prescribed under (A).

04 The total sound power level of a DG set, at the user's end, shall be within 2 dB (A) of the total sound power level of the DG set, at the manufacturing stage, as prescribed under (A)

05 Installation of a DG set must be strictly in compliance with the recommendations of the DG set manufacturer.

06 A proper routine and preventive maintenance procedure for the DG set should be set and followed in consultation with the DG set manufacturer which would help prevent noise levels of the DG set from deteriorating with use.

84. Temperature Limit for Discharge of Condenser Cooling Water from Thermal Power Plant.

A · New thermal power plants commissioned after June 1, 1999.

New thermal power plants, which will be using water from rivers/lakes/reservoirs, shall install cooling towers-irrespective of location and capacity. Thermal power plants which will use sea water for cooling purposes, the condition below will apply.

B : New projects in coastal areas using sea water

The thermal power plants using sea water should adopt suitable system to reduce water temperature at the final discharge point so that the resultant rise in the temperature of receiving water does not exceed 7° C over and above the ambient temperature of the receiving water bodies.

C : Existing thermal power plants.

Rise in temperature of condenser cooling water from inlet to the outlet of condenser shall not be more than 10° C.

D : Guidelines for discharge point :

1. The discharge point shall preferably be located at the bottom of the water body at mid-stream for proper dispersion of thermal discharge.

2 In case of discharge of cooling water into sea, proper marine outfall shall be designed to achieve the prescribed standards. The point of discharge may be selected in consultation with concerned State Authorities/NIO.

3. No cooling water discharge shall be permitted in estuaries or near ecologically sensitive areas such as mangroves, coral reefs/spawning and breeding grounds of acquatic flora and fauna.

85. Environmental Standards for Coal Washeries

1. Fugitive emission standards

— The difference in the value of suspended particulate matter, delta (Δ), measured between 25 and 30 metre from the enclosure of coal crushing plant in the downward and leeward wind direction shall not exceed 150 microgram per cubic meter. Method of measurement shall be High Volume Sampling and Average flow rate, not less than 1.1 m^3 per minute, using upwind downwind method of measurement.

2 Effluent discharge standards

- The coal washeries shall maintain the close circuit operation with zero effluent discharge.
- If in case due to some genuine problems like periodic cleaning of the system, heavy rainfall etc. it become necessary to discharge the effluent to sewer/land/stream then the effluent shall conform to the following standards at the final outlet of the coal washery

S No.	Parameter	Limits
1	pH	5.5—9.0
2.	Total suspended solids	100 mg/l
3	Oil & Grease	10 mg/l
4	B.O.D. (3 days 27 deg C)	30 mg/l
5	COD	250 mg/l
6	Phenolics	1.0 mg/l

3 Noise level standards

- Operational/Working zone—Not to exceed 85 dB (A) Leq for 8 hours exposure
- The ambient air quality standards in respect of noise as notified under Environmental (Protection) Rules, 1986 shall be followed at the boundary line of the coal washery

4. Code of practice for Coal Washery

- Water or Water mixed chemical shall be sprayed at all strategic coal transfer points such as conveyors, loading/unloading points etc. As far as practically possible conveyors, transfer points etc. shall be provided with enclosures
- The crushers/pulverisers of the coal washeries shall be provided with enclosures, fitted with suitable air pollution control measures and finally emitted through a stack of minimum height of 30 m, conforming particulate matter emission standard of 150 mg/Nm^3 or provided with adequate water sprinkling arrangement
- Water sprinkling by using fine atomizer nozzeles arrangement shall be provided on the coal heaps and on around the crushers/pulverisers
- Area, in and around the coal washery shall be pucca either asphalted or concreted
- Water consumption in the coal washery shall not exceed 1.5 cubic meter per tonne of coal
- The efficiency of the settling ponds of the waste water treatment system of the coal washery shall not be less than 90%
- Green belt shall be developed along the road side, coal handling plants, residential complex, office building and all around the boundary line of the coal washery
- Storage bunkers, hoppers, rubber decks in chutes and centrifugal chutes shall be provided with proper rubber linings
- Vehicles movement in the coal washery area shall be regulated effectively to avoid traffic congestion. High pressure horn shall be prohibited Smoke emission from heavy duty vehicle operating in the coal washeries should conform the standards prescribed under Motor Vehicle Rules, 1989

86. Water quality standards for coastal waters marine outfalls

In a coastal segment marine water is subjected to several types of uses. Depending on the types of uses and activities, water quality criteria have been specified to determine its suitability for a particular purpose. Among the various types of uses there is one use that demands highest level of water quality/purity and that is termed as "designated best use" in that stretch of the coastal segment. Based on this, primary water quality criteria have been specified for following five designated best uses :—

Class	Designated best use
SW-I (See Table 1.1)	Salt pans, Shell fishing, Mariculture and Ecologically Sensitive Zone
SW-II (See Table 1.2)	Bathing, Contact Water Sports and Commercial fishing

SW-III (See Table 1.3)	Industrial cooling,. Recreation (non-contract) and Aesthetics
SW-IV (See Table 1.4)	Harbour
SW-V (See Table 1.5)	Navigation and Controlled Waste Disposal.

The standards along with rationale/remarks for various parameters, for different designated best uses, are given in Table 1.1 to 1.5

TABLE 1.1

PRIMARY WATER QUALITY CRITERIA FOR CLASS SW-I WATER

(For Salt pans, Shell fishing, Mariculture and Ecologically Sensitive Zone)

S No.	Parameter	Standards	Rationale Remarks
1	2	3	4
1	pH range	6.5—8.5	General board range, conducive for propagation of aquatic lives, is given Value largely dependent upon soil-water interaction
2.	Dissolved Oxygen	5.0 mg/l or 60 percent saturation value, whichever is higher	Not less than 3.5 mg/l at any time of the year for protection of aquatic lives
3.	Colour and Odour	No noticeable colour or offensive odour.	Specially caused by chemical compounds like creosols, phenols, naptha, pyridine, benzene, toluene etc., causing visible coloration of salt crystal and tainting of fish flesh
4	Floating Matters	Nothing obnoxious or detrimental for use purpose	Surfactants should not exceed an upper limit of 1.0 mg/l and the concentration not to cause any visible foam.
5	Suspended Solids	None from sewage or industrial waste origin	Settleable inert matters not in such concentration that would impair any usages specially assigned to this class
6	Oil and Grease (including Petroleum Products)	0.1 mg/l	Concentration should not exceed 0.1 mg/l as because it has effect on fish eggs and larvae.
[1][7	Heavy Metals : Mercury (as Hg) Lead (as Pb) Cadmium (as Cd)	0.001 mg/l 0.001 mg/l 0.01 mg/l]	Values depend on : (*i*) Concentration in salt, fish and shell fish. (*ii*) Average per capita consumption per day. (*iii*) Minimum ingestion rate that induces symptoms of resulting diseases .

---

[1] Subs. by G.S.R. 682 (E), dated 5th October, 1999, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3(*i*), dated 5th October, 1999.

Note : SW-1 is desirable to be safe and relatively free from hazardous chemicals like pesticides, heavy metals and radionuclide concentrations. Their combined (synergestic or antagonistic) effects on health and aquatic lives are not yet clearly known. These chemicals undergo bio-accumulation, magnification and transfer to human and other animals through food chain. In areas where fisheries, salt pans are the governing considerations, and presence of such chemicals apprehended/reported, bioassay test should be performed following appropriate methods for the purpose of setting case-specific limits.

TABLE 1.2

PRIMARY WATER QUALITY CRITERIA FOR CLASS SW-II WATERS

(For Bathing, Contact Water Sports and Commercial Fishing)

Sl No	Parameter	Standards	Rationale /Remarks
1	pH range	6.5—8.5	Range does not cause skin or eye irritation and is also conducive for propagation of aquatic lives
2	Dissolved Oxygen	4.0 mg/l or 50 percent saturation value, whichever is higher.	Not less than 3.5 mg/l at anytime for protection of aquatic lives
3.	Colour and Odour	No noticeable colour or offensive odour.	Specially caused by chemical compound like creosols, phenols, naptha, benzene, pyridine, toluene etc causing visible colouration of water and tainting of and odour in fish flesh
4	Floating Matters	Nothing obnoxious or detrimental for use or purpose	None in concentration that would impair usages specially assigned to this class
5	Turbidity	30 NTU (Nephelo Turbidity Unit)	Measured at 0.9 depth
6	Fecal Coliform	100/100 ml (MPN)	The average value not exceeding 200/100 ml in 20 percent of samples in the year and in 3 consecutive samples in monsoon months
7	Biochemical Oxygen Demand (BOD) (3 days at 27° C)	3 mg/l	Restricted for bathing (aesthetic quality of water) Also prescribed by IS 2296-1974

TABLE 1.3

PRIMARY WATER QUALITY CRITERIA FOR CLASS SW-III WATERS

[For Industrial Cooling, Recreation (non-contact) and Aesthetics]

Sl. No.	Parameter	Standards	Rationale /Remarks
1.	pH range	6.5—8.5	The range is conducive for propagation of aquatic species and restoring natural system
2.	Dissolved Oxygen	3.0 mg/l or 40 percent saturation value, whichever is higher.	To protect aquatic lives.
3.	Colour and Odour	No noticeable colour or offensive odour.	None in such concentration that would impair usages specifically assigned to this class.

Sl No	Parameter	Standards	Rationale /Remarks
4.	Floating Matters	No visible, obnoxious floating debris, oil slick, scum	As in (3) above.
5	Fecal Coliform	500/100 ml (MPN)	Not exceeding 1000/100 ml in 20 percent of samples in the year and in 3 consecutive samples in monsoon months.
6	Turbidity	30 NTU	Reasonably clear water for Recreation, Aesthetic appreciation and Industrial cooling purposes.
*7.	Dissolved Iron (as Fe)	0 5 mg/l or less	It is desirable to have the collective concentration of dissolved Fe and Mn less or equal to 0.5 mg/l to avoid scaling effect.
*8.	Dissolved Manganese (as Mn)	0.5 mg/l or less	

*Standards included exclusively for Industrial Cooling purpose. Other parameters same.

TABLE 1.4

PRIMARY WATER QUALITY CRITERIA FOR CLASS SW-IV WATERS

[For Harbour Waters]

Sl. No.	Parameter	Standards	Rationale /Remarks
1.	pH range	6.5—9.0	To minimize corrosive and scaling effect
2.	Dissolved Oxygen	3.0 mg/l or 40 percent saturation value, whichever is higher.	Considering bio-degradation of oil and inhibition to oxygen production through photosynthesis
3.	Colour and Odour	No visible colour or offensive odour.	None from reactive chemicals which may corrode paints/metallic surfaces.
4	Floating materials Oil, grease and scum (including Petroleum products)	10 mg/l	Floating matter should be free from excessive living organisms which may clog or coat operative parts of marine vessels/ equipment.
5.	Fecal Coliform	500/100 ml (MPN)	Not exceeding 1000/100 ml in 20 percent of samples in the year and 'in 3 consecutive samples in monsoon months.
6.	Biochemical Oxygen Demand (3 days at 27° C)	5 mg/l	To maintain water relatively free from pollution caused by sewage and other decomposable wastes.

TABLE 1.5

PRIMARY WATER QUALITY CRITERIA FOR CLASS SW-V WATERS

[For Navigation and Controlled Waste Disposal]

Sl. No.	Parameter	Standards	Rationale /Remarks
1.	pH range	6.5—9.0	As specified by New England Interstate Water Pollution Control Commission.
2	Dissolved Oxygen	3 0 mg/l or 40 percent saturation value, whichever is higher	To protect aquatic lives
3.	Colour and Odour	None in such concentrations that would impair any usage specifically assigned to this class.	As in (1) above
4.	Sludge deposits, Solid refuse floating solids, oil, grease & scum.	None except for such small amount that may result from discharge of appropriately treated sewage and/or industrial waste effluents	As in (1) above.
5	Fecal Coliform	500/100 ml (MPN)	Not exceeding 1000/100 ml in 20 percent of samples in the year and in 3 consecutive samples in monsoon months

87 Emission Regulations for Rayon Industry

(*a*) Existing Plants

Estimation of Uncontrolled Emission Quantity (EQ) of CS_2

for VSF,

EQ = 125 kg of CS_2/t of fibre

for VFY,

EQ = 225 kg of CS_2/t of fibre

Stack Height (H) requirement, m	Remarks
11Q 0 41—3Vs D/u	A minimum of 80% of total emission shall pass through stack. If the calculated stack height is less than 30 m, a minimum of height 30 m shall be provided.

Where Q — CS_2 emission rate, kg/hr

Vs — stack exit velocity, m/sec.

D — diameter of stack, m

u — annual average wind speed at top of stack, m/sec.

Multiple Stacks

1. If there are more than one stack existing in the plant, the required height of all stacks shall be based on the maximum emission rate in any of the stacks. In other words, all the stacks carrying CS_2 emission shall be of same heights (based on the maximum emission rate).

2. Number of stacks shall not be increased from the existing number. However, the number of stacks may be reduced The existing stacks may be rebuilt and if stacks are to be relocated condition 3 below applies

3 Spacing among the stacks (x) at the minimum shall be 3 0 H (in m) If distance, x, between two stacks is less than 3.0 H (in m), emission shall be considered as single point source and height of both the stacks shall be calculated considering all emission is going through one stack.

b. Ambient Air Quality Monitoring

The industry shall install three air quality monitoring stations for CS_2 and H_2S measurements in consultation with State Pollution Control Board (SPCB) to ensure attainment of WHO recommended ambient air quality norms (CS_2 = 100 µg/m^3, H_2S = 150 µg/m^3, 24 = hr, average).

c. For new plants/expansion projects being commissioned on or after 1-6-1999.

Permissible emission limits are :

CS_2 = 21 kg/t of fibre

H_2S = 6.3 kg/t of fibre

(Note · *a* and *b* above also apply to new plants/expansion project)

[1][88. Emission Standards for new generator sets (up to 19 kilowatt) run on petrol and kerosene with implementation schedule.—The emission standards for portable generator sets run on petrol and kerosene shall be as follows .—

A. From June 1, 2000

Class	Displacement (CC)	CO(g/kw-hr)		HC + NOx (g/kw-hr)	
		2-stroke engine	4-stroke engine	2-stroke engine	4-stroke engine
1	≤ 65	603	623	166	65
2.	> 65 ≤ 99	-	623	-	36
3	> 99 ≤ 225	-	623	-	19.3
4	> 225	-	623	-	[illegible]6.1

B From June 1, 2001

Class	Displacement (CC)	CO(g/kw-hr)	HC + NOx (g/kw-hr)
1.	≤ 65	519	54
2	> 65 ≤ 99	519	30
3	> 99 ≤ 225	519	16.1
4.	> 225	519	13.4

C. Test method shall be as specified in SAEJ 1088. Measurement mode shall be D1 cycle specified under ISO 8178 (Weighting Factor of 0.3 for 100% load, 0.5 for 75% load and 0 2 for 50% load).

D. Following organisations shall test and certify the generator sets ·—

(*v*) Automotive Research Association of India, Pune.
(*vi*) Indian Institute of Petroleum, Dehradun.
(*vii*) Indian Oil Corporation, R&D Centre, Faridabad.
(*viii*) Vehicle Research Development Establishment, Ahmednagar

These organisations shall submit the testing and certification details to the Central Pollution Control Board, annually. The Central Pollution Control Board may send the experts in the field to oversee the testing.

89. Noise standards for fire-crackers.—

A. (*i*) The manufacture, sale or use of fire-crackers generating noise level exceeding 125 dB (AI) or 145 dB (C) pk at 4 meters distance from the point of bursting shall be prohibited.

---

[1] Ins. by G.S.R. 682 (E), dated 5th October, 1999, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 5th October, 1999.

(*ii*) For individual fire-cracker constituting the series (joined fire-crackers), the abovementioned limit be reduced by 5 $\log_{10}$ (N) dB, where N = number of crackers joined together

B. The broad requireents for measurement of noise from fire crackers shall be—

(*i*) The measurements shall be made on a hard concrete surface of minimum 5 meter diameter or equivalent.

(*ii*) The measurements shall be made in free field conditions i e., there shall not be any reflecting surface up to 15 meter distance from the point of bursting.

(*iii*) The measurement shall be made with an approved sound level meter.

C. Department of Explosives shall ensure implementation of these standards

Note : dB (AI) : A-weighted impulse Sound Pressure Level in decibel

dB (C) pk : C-weighted Peak Sound Pressure Level in decibel]

GENERAL STANDARDS FOR DISCHARGE OF EFFLUENTS

---

[2][SCHEDULE III

(*See* rule 3)

AMBIENT AIR QUALITY STANDARDS IN RESPECT OF NOISE

Area code	Category of Area	Limits in dB (A) Leq	
		Day Time	Night Time
(*a*)	Industrial area	75	70
(*b*)	Commercial area	65	55
(*c*)	Residential area	55	45
(*d*)	Silence Zone	50	40

Note-1 Day time is reckoned in between 6 a.m., and 9 p.m.

Note-2 Night time is reckoned in between 9 p.m., and 6 a.m.

Note-3 Silence zone is defined as areas upto 100 metres around such premises as hospitals, educational institutions and courts. The Silence zones are to be declared by the Competent Authority.

Use of vehicular horns, loudspeaker and bursting of crackers shall be banned in these zones.

Note-4 Mixed categories of areas should declared as one of the four above mentioned categories by the Competent Authority and he corresponding standards shall apply.]

---

[3][SCHEDULE IV

(*See* rule 3)

STANDARDS FOR EMISSION OF SMOKE, VAPOUR, ETC., FROM MOTOR VEHICLES

(1) Every motor vehicle shall be manufactured and maintained in such condition and shall be so driven that smoke, visible vapour, grit, sparks, ashes, cinders or oily substance do not emit therefrom.

(2) On and from he 1st day of March 1990, every motor vehicle in use shall comply with the following standards :—

(*a*) Idling CO (Carbon monoxide) emission limit for all four wheeled petrol driven vehicles shall not exceed 3 per cent by volume;

---

1. Entire Schedule II omitted by G.S.R. 801 (E), dated 31st December, 1993 (w.e.f. 31st December, 1993).
2. Ins. by G.S.R. 1063 (E), dated 26th December, 1989, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 26th December, 1989.
3. Ins. by G,S.R. 54 (E), dated 5th February, 1990, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 5th February, 1990.

(b) Idling CO emission limit for all two and three wheeled petrol driven vehicles shall not exceed 4.5 per cent by volume;

(c) Smoke density for all diesel driven vehicles shall be as follows :—

Method of Test	Maximum smoke density		
	Light absorption coefficient m-1	Bosch Units	Harridge Units
(a) Full load at a speed of 60% to 70% of maximum engine rated speed declared	3.1	5.2	75
(b) Free acceleration	2.3	—	65

(3) On and from the 1st day of April, 1991, all petrol driven vehicles shall be so manufactured that they comply with the mass emission standards as specified at Annexure 'I'. The breakdown of the operating cycle used for the test shall be as specified at Annexure 'II' and the reference fuel for all such tests shall be as specified in Annexure 'III' to this Schedule.

(4) On and from the 1st day of April 1991 all diesel driven vehicles shall be so manufactured that they comply with the mass emission standards based on exhaust gas capacity as specified as Annexure 'IV' to this Schedule.

(5) On and from the 1st day of April, 1992, all diesel driven vehicles shall be so manufactured that they comply with the following levels of emissions under the Indian driving cycle :—

Mass of carbon Monoxide (VO) Maxmi Grams per KWH	Mass of Hydrox carbons (HC) Maxmi Grams per KWH	Mass of Nitrogen Oxides (NC) Maxmi Grams per KWH
14	3.5	18

(6) Each motor vehicle manufactured on and after the dates specified in paragraphs (2), (3), (4) and (5) shall be certified by the manufacturers to be conforming to the standards specified in the said paragraphs and the manufacturers shall further certify that the components liable to effect the emission of gaseous pollutants are so designed, constructed and assembled as to enable the vehicle, in normal use, despite the vibration to which it may be subjected to comply with the provisions of the said paragraphs.

(7) *Test for smoke emission level and carbon monoxide level for motor vehicles.*—(a) Any officer not below the rank of a sub-inspector of police or an inspector of motor vehicles, who has reason to believe that a motor vehicle is by virtue of smoke emitted from it or other pollutants like carbon monoxide emitted from it, is likely to cause environmental pollution, endangering the health or safety of any other user of the road or the public, may direct the driver or any person incharge of the vehicle to submit the vehicle for undergoing a test to measure the standard of black smoke or the standard of any of the other pollution.

(b) The driver or any person incharge of the vehicle shall upon demand by any officer referred to in sub-pararaph (a), submit the vehicle for testing for the purpose of measuring the standard of smoke or the levels of other pollutants or both.

(c) The measurement of standard of smoke shall be done with a smoke meter of a type approved by the State Government and the measurement of other pollution like carbon monoxide shall be done with instruments of a type approved by the State Government.

ANNEXURE-I

(*See* paragraph 3)

MASS EMISSION STANDARDS FOR PETROL DRIVEN VEHICLES

1. Type Approval Tests :

Two and Three Wheeler Vehicles

Reference Mass. R (Kg)	Co (g/km)	HC (g/km)
1	2	3
R ≤ 150	12	8
150 R≤ 350	$12 + \frac{18\,(R-150)}{200}$	$8\ \frac{4\,(R-150)}{200}$
R> 350	30	12

Light Duty Vehicles :

Reference Mass, rw (Kg)	Co (g/km)	HC (g/km)
1	2	3
rw ≤ 1020	14.3	2.0
1020 < rw ≤ 1250	16.5	2.1
1250< rw ≤ 1470	18.8	2.1
1470 < rw ≤ 1700	20.7	2.3
1700 < rw ≤ 1930	22.9	2.5
1930 < rw ≤ 2150	24.9	2.7
rw ≤ 2150	27.1	2.9

2 Conformity of Production Tests :
Two and Three Wheeler Vehicles:

Reference Mass, R (Kg)	CO (g/km)	HC (g/km)
1	2	3
R < 150	15	10
150 R < 350	$15 + \frac{25\,(R-1500)}{200}$	$\frac{5\,(R-150)}{200}$
R > 350	40	15

Light Duty Vehicles

Reference Mass, rw (Kg)	CO (g/km)	HC (g/km)
1	2	3
rw ≤ 1020	17.3	2.7
1020 ≤ rw ≤ 1250	19.7	2.7
1250 ≤ rw ≤ 1470	22.5	2.8
1470 ≤ rw ≤ 1700	24.9	3.0
1700 ≤ rw ≤ 1930	27.6	3.3
1930 ≤ rw ≤ 2150	29.9	3.5
rw ≤ 2150	32.6	3.7

For any of the pollutants referred to above of the three results obtained may exceed the limit specified for the vehicle by not more than 10 per cent.

Explanation : Mass emission standards refers to the gm of pollutants emitted per km run of the vehicle as determined by a chassis dynamometer test using the Indian Driving Cycle.

ANNEXURE II

(*See* paragraph 3)

BREAK DOWN OF THE OPERATING CYCLE USED FOR THE TESTS

No. of Operation		Acceleration (m/acc^2)	Speed (Km/h)	Duration of each operation (s)	Cumulative time(s)
1		2	3	4	5
01	Idling	—	—	16	16
02.	Acceleration	0.65	0—14	6	22
03.	Acceleration	0.56	14—22	4	26
04.	Deceleration	—0.63	22—13	4	30
05.	Steady speed	—	13	2	32
06.	Acceleration	0.56	13—23	5	37
07.	Acceleration	0.44	23—31	5	42

Noise Standards

A Noise Limits for Automobiles [1][Free Field distance at 7 5 metre] in dB (A) at the manufacturing Stage

(*a*)	Motorcycle, Scooters and Three wheelers	80
(*b*)	Passenger Cars	82
(*c*)	Passenger or Commercial vehicles upto 4MT	85
(*d*)	Passenger of Commercial vehicles above 4 MT and upto 12 MT	89
(*e*)	Passenger or Commercial vehicles exceeding 12 MT	91

B Domestic appliances and construction equipments at the manufacturing stage to be achieved by 31st December, 1993

(*a*)	Window Air Conditioners of 1 ton to 1.5 ton	68
(*b*)	Air [1][Coolers]	60
(*c*)	Refrigerators	46
(*d*)	Diesel generator for domestic purposes	85-90
(*e*)	Compactors (rollers). Front loaders. Concrete mixers. Cranes (moveable). vibrators and Saws	75

---

[1] Subs. by G.S.R. 801 (E), dated 31st December, 1993 (w.e.f. 31st December, 1993), published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 31st December, 1993.

ANNEXURE I

(For the purposes of Parts A, B and C)

The State Boards shall follow the following guidelines in enforcing the standards specified under Schedule VI .—

1 The waste waters and gases are to be treated with the best available technology [1][BAT] in order to achieve the prescribed standards

2 The industries need to be encouraged for recycling and reuse of waste materials as far as practicable in order to minimise the discharge of wastes into the environment.

3 The industries are to be encouraged for recovery of biogas, energy and reusable materials

4. While permitting the discharge of effluents and emissions into the environment, State Boards have to take into account the assimilative capacities of the receiving bodies, especially water bodies so that quality of the intended use of the receiving waters is not affected Where such quality is likely to be affected, discharges should not be allowed into water bodies.

5 The Central and State Boards shall put emphasis on the implementation of clean technologies by the industries in order to increase fuel efficiency and reduce the generation of environmental pollutants

6 All efforts should be made to remove colour and unpleasant odour as far as practicable

7 The standards mentioned in this Schedule [1][shall also apply to all other [1][effluents discharged such as] industrial, mining and mineral processing activities and sewage

8 The limit given for the total concentration of mercury in the final effluent of caustic soda industry, is for the combined effluent from (*a*) Cell house, (*b*) Brine plant, (*c*) Chlorine handling, (*d*) hydrogen handling, and (*e*) hydrochloric acid plant

9. [2][* * *]

10 All effluents discharged including from the industries such as cotton textile, composite woollen mills, synthetic rubber, small pulp and paper, natural rubber, petro-chemicals, tanneries, paint, dyes, slaughter houses, food and fruit processing and dairy [industries][1] into surface waters shall conform to the BOD limit specified above, namely, 30 mg/1 For discharge of an effluent having BOD more than 30 mg/1, the standards shall conform to those given above for other receiving bodies, namely, sewers, coastal waters and land for irrigation

11 [3][******]

12 In case of fertilizer industry, the limit in respect of chromium and [1][fluoride] shall be complied with at the outlet of chromium and flouride removal units respectively

13 In case of pesticides :

(*a*) The limits should be complied with at the end of the treatment plant before dilution

(*b*) Bio-assay test should be carried out with the available species of fish in the receiving water, the COD limits to be specified in the consent conditions, should be correlated with the BOD limits.

---

[1] Subs. by G.S.R. 801 (E), dated 31st. December, 1993, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 31st December, 1993.

[2] Serial number 9 omitted by G.S.R. 176 (E), dated 2nd April, 1996, published in the *Gazette of India, Extraordinary*, Pt,. II, Sec. 3(*i*), dated 3rd April, 1996.

[3] Serial No. 11 omitted by G.S.R. 801 (E), dated 31st December, 1993, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 31st December, 1993.

(*c*) In case metabolites and isomers of the pesticides in the given list are found in significant concentrations, standards should be prescribed for these also in the same concentration as the individual pesticides.

(*d*) Industries are required to analyse pesticides in waste water, by advanced analytical methods such as GLC/HPLC.

[1][14. The chemical oxygen demand (COD) concentration in a treated effluent, if observed to be persistently greater than 250 mg/1 before disposal to any receiving body (public sewer, land for irrigation, inland surface water and marine coastal areas), such industrial unit are required to identify chemicals causing the same In case these are found to be toxic as defined in the Schedule-I of the Hazardous Wastes (Management and Handling) Rules, 1989, the State Board in such cases shall direct the industries to instal tertiary treatment stipulating time limit]

[2][15 Standards specified in Part A of Schedule VI for discharge of effluents into the public sewer shall be applicable only if such sewer leads to secondary treatment including biological treatment system, otherwise the discharge into sewers shall be treated as discharge into inland surface waters.]

ANNEXURE-II

(For the purpose of Part D)

The States Boards shall follow the following guide-lines in enforcing the standards specified under Schedule VI .—

(*a*) In case of cement plants, the total dust (from all sections) shall be within 400 mg/[Nm][2] and 250 mg/[Nm][2] for the plants upto 200 t/d and more than 200 t/d capacities respectively

(*b*) In respect of calcination process (e g , Aluminium plants), Kilns and Step GrateBagasse-fired-Boilers. Particulate Matter (PM) emissions shall be within 250 mg/[Nm][2]

(*c*) In case of thermal power plants commissioned prior to 1-1-1982 and having generation capacity less than 62 5 MW, the PM emission shall be within 350 mg/[Nm] [2]

(*d*) In case of Lime Kilns of capacity more than 5t/day and upto 40t/day, the PM emission shall be within 500 mg/[Nm] [2]

(*e*) In case of horse shoer pulsating Grate and Spreader Stroker Bagasse-fired-Boilers, the PM emission shall be within 500 (12% CO$_2$) and 800 (12% CO2) mg/[Nm^3][2] respectively In respect of these boilers, if more than one is attached to a single stack, the emission standard shall be fixed, based on added capacity of all the boilers, connected with the stack.

(*f*) In case of asbestos dust, the same shall not exceed 2mg/[Nm^3][2]

(*g*) In case of the urea plants commissioned after 1-1-82, coke ovens and lead glass units, the PM emission shall be within 50 mg/[Nm^3][2]

(*h*) In case of small boilers of capacity less than 2 tons/hr. and between 2 to 5 tons/hr. the PM emissions shall be within 1600 and 1200 mg/[Nm^3][2].

(*i*) In case of integrated Iron and Steel Plants, PM emission upto 400 [micrograms/Nm^3][2] shall be allowed during oxygen lancing.

(*j*) In case of stone crushing units, the suspended PM contribution value at a distance of 40 metres from a controlled, isolated as well as from a unit located in a cluster should be less than 600 micrograms/[Nm^3][1]. [***][2] These units must also adopt the following pollution control measures :—

(i) Dust containment cum suppression system for the equipment .

(ii) Construction of wind breaking walls;

(iii) Construction of the metalled roads within the premises.

(iv) Regular cleaning and wetting of the ground within the premises;

(v) Growing of a green belt along the periphery.

(k) In case of Ceramic industry, from the other sources of pollution, such as basic raw material and processing operations, heat recovery dryers, mechanical finishing operation, all possible preventive measures should be taken to control PM emissions as far as practicable.

2. The total fluoride emissions in respect of Glass and Phosphatic Fertilizers shall not exceed 5 mg/[Nm^3][1] and 25 mg/[Nm^3][1] respectively.

[3][3 In case of copper, lead and Zinc smelting, the off gases may, as for as possible, be utilised for manufacturing Sulphuric acid.]

[4][4. In case of cupolas (Foundries) having capacity melting rate) less than 3 tonne/hour, the particulate matter emissions shall be within 450 mg/Nm^3. In these cases it is essential that stack is constructed over the cupola beyond the charging door and the emissions are directed through the stack, which should be at least six times the diameter of cupola In respect of Arc Furnaces and Induction Furnaces, provision has to be made for collecting the fumes before discharging the emissions through the stack]

* Annual Arithmetic mean of minimum 104 measurements in a year taken twice a week 24-hourly at uniform interval.

** 24-hourly/8-hourly values shall be met 98% of the time in a year, 2% of the time, it may exceed but not on two consecutive days.

Note.—1. National Ambient Air Quality Standard : The levels of an air quality necessary with an adequate margin of safety, to protect the public health, vegetation and property.

2. Whenever and wherever two consecutive values exceed the limit specified above for the respective category, it shall be considered adequate, reason to institute regular/continuous monitoring and further investigations.]

NOTIFICATIONS

PROHIBITION ON THE USE OF BENZIDINE-BASED DYES AND ITS SALTS[1]

S.O. 881 (E) dated 31st October, 1989.[1]—In exercise of the powers conferred by Cl. (*d*) ofsub-section (2) of Sec 6 of the Environment (Protection) Act, 1986 (29 of 1986), read with rule 13 of the Environment (Protection) Rules, 1986, the Central Government hereby notifies the prohibition and restriction on the use of benzidine-based dyestuffs in the dying and colour processing industries

The use of Benzidine based dye and Intermediates

1. **Application.**— This notification shall apply in respect of the prohibited substance as defined in the Environment (Protection) Rules, 1986, handled and the process incidental thereto in the course of which these substances are formed or carried on

2. **Prohibited substances.**— For the purpose of this notification, the following chemical substances shall be classified as "prohibited substances" except when these substances are present or formed as by-product of a chemical reaction in a total concentration not exceeding one per cent —

(*i*) benzidine and its salts , and

(*ii*) any substance containing any of these compounds

3. **Brief description**— Benzidine and Benzidine hydrochloride are important intermediates for the manufacture of dyes Benzidine is white or slightly reddish crystalline powder with a melting point of 115°C to 120°C when slightly heated. It darkens on exposure to air and light These are produced by the reduction of nitrobenzidine with zinc and sodium hydroxide. The resulted hydrobenzidine is heated with the acid and its compounds have two phenols with two amino groups attached to them. These are also known as bipnenydiamine or diaminordiphenyl Benzidine-based commercial dyes include direct orange (1), direct red (1), direct red (13), direct red (28), direct blue (2), direct blue, direct brown (2), direct brown (95), direct black (38) and acid red (85)

4. **Dyes and dye-intermediates.**— All dyes and dyes-intermediates containing benzidine and its derivatives shall be prohibited for "handling". The use of benzidine-based dyes also called as benzidine-azo dyes shall be required to be discontinued within three years from the time of issue of this notification

5. **Extension**— The prohibition on the handling of benzidine-based dyes is applicable to whole of India

6. **Filing of objections.**— Any person interested in filing an objection against the imposition of prohibition or restrictions on the handling of hazardous substances as notified may do so in writing to the Joint Secretary, Ministry of Environment and Forests, Paryavaran Bhawan, Central Government Office Complex, Lodi Road, New Delhi-110003, within thirty days from the date of publication of this notification in the Official Gazette

* * *

No objection notification.

S.O. 108 (E) dated 30th January, 1990.[2]—Whereas a notification under clause (*iii*) ofsub-rule (2) of Rule 13 of the Environment (Protection) Rules, 1986 inviting objections from the concerned quarters within a period of sixty days from the date of publication of the said notification, against Governemnt's intention for the imposition of prohibition on benzidine-based dyes and its salts, was published in the Ministry of Environment and Forests, S.O. No. 881 (E), dated the 31st October, 1989;

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 31st October, 1989.

[2] Published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*) dated 30th January, 1990

And whereas no objection was received within the said period of sixty days ;

Now, therefore, in exercise of the powers conferred by clause (*iv*) of sub-rule (2) of Rule 13 of the said rules, the Central Government hereby prohibits and restricts the use of benzidine-based dyes and its salts in the dying and colour processing industries. All dyes and dye-intermediates containing ben-zidine and its derivatives shall be prohibited for "handling". The use of benzidine-based dyes, also called as benzidine-azo dyes, shall be required to be discontinued within three years from the date of issue of this notification.

* * *

PROHIBITION ON THE HANDLING OF AZODYES

S.O. 243 (E) dated 26th March, 1997[1]—Whereas a draft notification proposing imposition of Prohibition on the Handling of Azodyes was published *vide* the notification of the Government of India in the Ministry of Environment and Forests Number S O 292 (E) dated 29-3-1996 inviting objections and suggestions from all persons likely to be affected thereby before the expiry of the period of sixty days from the date on which the copies of Gazette containing the said notification are made available to the public;

And whereas copies of the said Gazette were made available to the public on the 26th April, 1996;

And whereas the objections and suggestions received from the public on the said draft within the said period of sixty days were duly considered by the Central Government.

And whereas the Central Government is of the opinion that the azodyes specified in the Schedule appended to this notification are cancer-causing and are detrimental to human health and it is, therefore, considered necessary to prohibit the handling of these azodyes;

Now, therefore, in exercise of the powers conferred by Cl (*d*) of sub-section (2) of section of Sec. 6 of the Environment (Protection) Act, 1986 (29 of 1986) read with rule 13 of the Environment (Protection) Rules, 1986, the Central Government hereby prohibits the handling of azodyes specified in the Schedule appended to this notification and the processes incidental thereto in the course of which these substances are formed or carried on throughout India

The Prohibition on the handling of azodyes specified in the Schedule to this notification shall come into force on the expiry of a period of ninety days from the date of issue of this notification

The prohibition on the handling of azodyes shall apply to the whole of India.

ENVIRONMENTAL CLEARANCE FOR INDUSTRIES

S. O. No. 85 (E), dated 29th January, 1992.[1]—Whereas considerable adverse environment impact has been caused due to degradation of the environment with excessive soil erosion and water and air pollution on account of certain development activities, thereby engendering not only the destruction of natural resources like forests, mangroves, wetlands, rivers, likes, genepool reserves and vegetation cover which is fast dwindling in large parts of the country, but also affecting the health and very survival of living being—both animal and human,

And whereas it is necessary to protect and improve the quality of environment by control pollution of are, water and soil along with biotic pressure on natural resources, which is so intense that our natural biological and genetic wealth is threatened with severe damage,

And whereas certain development projects should be carried on within the carrying capacity of the eco-system through judicious location beyond defined distances from eco-system through judicious location beyond defined distances from eco-system through judicious location beyond defined distances from eco-system through judicious location beyond defined distances from eco-system, though judicious location beyond defined ensure that developmental activity takes place in harmony with the environment and improvement thereof;

And whereas the aforesaid goals can be achieved only by carefully assessment of a project proposed to be located in any area, on the basis of an environmental Impact Assessment of each project and the necessary Environment Management Plan for the prevention elimination or mitigation of the adverse impact, right from the inception stage of the project;

---

[1] Published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*i*), dated 29th January, 1992.

Now, therefore, in exercise of the powers conferred by sub-section (1) and Cl. (*v*) of sub-section (2) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby directs that on and from the date of the final publication of this notification under Cl. (*d*) of sub-rule (3) of Rule 5 of the Environment (Protection) Rules, 1986, the expansion or modernisation of any existing industry or new projects listed in Schedule I or Schedule II shall not be undertaken in any part of India, unless it has been accorded environmental clearance by the Central Government as the case may be, the State Government concerned in accordance with the procedure hereinafter specified in this notification.

2 Notwithstanding anything contained in Schedule II, any project proposed to be located within 10 kilometers of the boundary of reserved forests, or a designated ecologically sensitive area, or within 25 kilometers of the boundary of national park or sanctuary will require environmental clearance from the Central Government.

3. Notwithstanding anything contained in Schedules I and II, the Central Government in the Ministry of Environment and Forests may review the environment clearance given to any project by any State government if

(*a*) Written representation is received by that Ministry against such clearance from the affected parties, or

(*b*) it is *prima-facie* evident that environmental imperatives and norms specified by that Ministry have been ignored by the State Government concerned while giving such clearance.

4 Procedure for seeking environment clearance of projects.—(1) Any person who desires to undertake any project in any part of India or the expansion or modernisation of any existing industry or project listed in Schedule I and II shall submit an application to the Secretary, Ministry of Environment and Forests. New Delhi, where environmental clearance is required from the Central Government, or to Environment Secretary of the State Government concerned, where the environmental clearance is required from the State Government. The application shall be made in the pro forma appended to this notification and shall be accompanied by prepared in accordance with the guidelines issued by the Central Government in the Ministry of Environment and Forests

(2) In case of the following [1][site-specific] projects—

(*a*) mining;

(*b*) pit-head thermal power station;

(*c*) Hydro-electric power projects

(*d*) Multi-purpose river valley projects,

a preliminary site clearance will be required from the Central Government in the Ministry of Environment and Forests before initiating any investigations involving cutting of trees, dulling, digging or construction of any sort temporary or permanent.

The said site clearance will be granted for the sanctioned capacity and will be valid for a period of 5 years for commencing the construction.

(3) (*a*) The detailed project report submitted with the application shall be evaluated and assessed by the Impact Assessment Agency of the Central Government or as the case may be, of the State Government in consultation with a Committee of Experts, having a composition as specified in Schedule III to this notification.

(*b*) The said Committee of Experts will have full right of entry and inspection of the site or, as the case may be, factory permises at any time prior to, during, or after the commencement of the operations relating to the project.

---

[1] Corrigendum *vide* S.O. 180 (E) dated 24th February, 1992 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 4th March, 1992.

(c) The Impact Assessment Agency will prepare a set of recommendations based on technical assessment of documents and data furnished by the project authorities supplemented by data collected during visits to the site of factory, interaction with affected population and environmental groups. The recommendations and the conditions subject to which environmental clearance is given may be made available to concerned parties. The assessment shall be completed within a period of 3 months on receipt of the requisite documents and data from the project authorities.

(4) In order to enable the Impact Assessment Agency concerned to monitor the effective implementation of the recommendation and conditions subject to which the environment clearance has been given, the project authorities concerned shall submit a half-yearly report to the concerned agency.

(5) Any person interested in filing any objection against the proposed directions contained in this notification; may do so in writing to the Secretary Ministry of Environment and Forests, [1][Paryavaran] Bhavan. CGO Complex, Lodi Road. New Delhi within 60 days from the date of publication of this notification in the Official Gazette.

SCHEDULE I

List of project requiring environmental clearance from the Central Government

1. Atomic Power
2. Thermal Power
3. Multi-purpose River Valley Projects
4. Ports, Harbours and Airports
5 Railway lines (involving acquisition of non-railway land)
6 Refineries
7 Fertilizers
8 Pesticides and Insecticides
9 Petrochemicals
10 Explosives and Accessories
11 Drugs and pharmaceuticals (except formulations)
12 Production of Plastics
13. Rubber-Synthetic
14. Asbestos and asbestos products
15. [1][Sodium and/or Potassium Cyanide]
16. Primary metallurgical industries

    (Zinc, lead, Copper Aluminium and Steel)
17. Integrates Steel Plants
18. Tyres/ tubes of trucks, jeeps, cars and other heavy vehicles
19. Alkalis (Na OH)
20. Integrated Paint Complex

---

1. Corrigendum *vide* S.O. 180 (E) dated 24th February, 1992 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 4th March, 1992.

21. Man-made fibres (Synthetic and semi-Synthetics, Rayon, Nylon and Polyester)

22. Storage betteries with land processing

23. Incineration plants for hazardous waste and chlorinated hydrocarbons

24. All projects with threshold criteria above those specified in Schedule II.

SCHEDULE II

List of projects requiring environmental clearance from the State Government

(Subject to the provisions of para 2 of the notification)

	Nature of Projects	Threshold Criteria (if any)
1.	Ceramics	
2.	Coal Washery	
3.	Briquetting	
4.	Carbonising Plant	
5.	Engineering (Turbings, Castings, Rolling Mills)	
6	Refractories	
7.	Pipelines (RCC, State, Seamless)	
8	Calcium Carbide	
9	Barbon Black	
10.	Reprocessing Lubricating Oil	
11	Glass	
12.	Drugs and Pharmaceuticals (Formulations)	
13.	Electroplating	
14	Storage Batteries (non-lead processing)	
15.	Alkalis (NA$_2$, Co$_3$ and Ca Co$_3$)	
16.	Plastics Processing (HDPE, LLDPE, LDPE, PVC, PP, etc.)	
17	Tyres/Tubes of two wheelers and cycle rickshaws	
18	Retreading of all types of tyres	
19	Paints (Varnish, Coal Tar Chemicals, Pigments)	
20.	Dye Single Industry	
21.	Soaps and detergents	
22.	Food Processing (Meant, Fish, Animal Products)	
23.	Milk Processing	
24.	Paper Products	
25.	Incineration Plants for non-hazardous waste	
26.	Hydro-electric power	

	Nature of Projects	Threshold Criteria (if any)
	(*a*) New project	UP to 10 MW
	(*b*) All power houses to be located existing canal falls for existing dams with already embedded panstocks	UP to 10 MW
27.	Cement	UP to 20 MW
28.	Steel Plants	UP to 5,000 TPA
29	Leather Tannery	UP to 5,000 Skins PD
30	Distilleries	UP to 150 KLD
31	Sugar	UP to 4,000 TPD cane
32	Textile	UP to 500 Mts/d
33	Pulp, paper and Newsprint	Up to 33,000 TPA
34	Dye Intermediates	Up to 5 TPA
35.	Thermosets Phenol and Urea formaldehyde	Up to 5,000 TPA
36	Acids	Up to 500 TPA
37	Vegetable Oil Processing	Up to 500 TPA
		Capital Cost
38.	Foundaries	Up to Rs. 20 crores
39	Communications	Up to Rs. 20 crores
40	Tourism and other projects [1][within] 1 Km. of HTL of sea, or at locations with an elevation of more than 1,000 mts	Up to Rs. 5 crores
		Area
41	Irrigation	Up to 2,000 Hectare command
42	Mining	Up to 5 hectare lease
43	Road (in Himalayas or involving forest land)	Up to 5 Kms length
44	Industrial Estates	Up to 100 units
45	Industrial Township (New and Expansion)	Up to 5,000 dwelling units

SCHEDULE III

Composition of the expert committees for environmental impact assessment

The evaluation and assessment of development projects at the Central experts in each development section constituted as under .

1 An outstanding and experienced ecologist or environmentalist or technical professional in the relevant development sector having demonstrated interest in environment Conservation and sustainable development.

Expert members.

Members with M. Tech./Ph D. in the relevant filed and long experiences including at least 8 years experience in environmental management in relevant sectors :

2. Eco-system Manager with Systems Management and Modelling Experience.

3. Air Pollution Control.

4. Water Pollution Control.

---

1. Corrigendum *vide* S.O. 180 (E) dated 24th February, 1992 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 4th March, 1992.

5. Flora/Fauna Survey and Management.
6. Water Resources Management,
7. Land Use Planning/Biological reclamation of degraded lands.
8. Conservation and Protection of Aquatic Life
9-10. Ecologists (2).
11 Social scientist with experience of rehabilitation of project oustees.
12. Specialist with background of economics and project appraisal.
13-14 Subject area Specialists in relevant development sector (2).
15. Representative of NCO/Environmental Action groups
16 Representative of Impact Assessment agency at Centre/State

Member Secretary

Note.—Experts indicated will serve in their individual capacities except those specifically nominated as representatives.

ANNEXURE

Application Form

1. (*a*) Name and Address of the project proposed :

(*b*) Location of the projects :
Name of the place :
District Tehsil :
Latitude/Longitude
Nearest Airport/Railway Stn.

(*c*) Alternate sites examined and the reasons for the size proposed :

2 Objective of the project :

3. (*a*) Land Requirement :
Forest land and Density of vegetation.
Other (specify) :

(*b*) (*i*) Landuse in the Catchment/within 10 Kms. radius of the proposed site

(*ii*) Topography of the area indicting gradient, aspects and altitude.

(*iii*) Vulnerability to erosion

(*c*) Pollution sources existing in the 10 kms. radius and their impact on quality of air, water and land.

(*d*) Distance of the nearest National Park/Sanctuary/Biosphere Reserve/Monunment/heritage site/Reserve Forest :

(*e*) Rehabilitation plan for quarries/borrow areas .

(*f*) Green belt Plan :

(*g*) Compensatory afforestation plan :

4. Climate and Air Quality :

(*a*) Windrose at site :

(*b*) Max./Min./Mean annual temperature :

(*c*) Incidence of inversion :

(*d*) Frequency of cyclones/tornadoes/cloud bursts :

(*e*) Ambient air quality data :

(*f*) Nature and concentration of emission of SPM [1][Gases] (CO, CO_2, So_2, NO_x, CHn etc.) from the project ·

5. (*a*) Water balance site :

(*b*) Lean season water availability; Water Requirement :

(*c*) Source to be tapped with competing users (River, lake, Ground, Public Supply)

(*d*) Water quality :

(*e*) Changes observed in ground water in the last 15 years and present [1][charging] and extraction details

(*f*) (*i*) Quantum of waste water to be released with treatment details,

(*ii*) Command Area Development Plan

6. Solid Wastes :

(*a*) Nature and quantity of solid waters generated to be disposed .

(*b*) Solid wastes disposal method to prevent further pollution of air, water and land.

7 Notice and Vibrations :

(*a*) Sources of noise and vibrations ;

(*b*) Ambient noise lever :

(*c*) Noise and Vibrations control measures proposed :

(*d*) Subsidere problem of any with control measures,

8 Power requirement indicating source of supply, complete environmental details to be furnished separately, if captive power unit proposed

9 Peak labour force to be deployed given details of

—Health status through preliminary screening of workforce labour and staff both;

—Endemic health problems in the area due to water/solid borne diseases,

—Health care system proposed ,

10 (*a*) Number of villages and population to be displaced ;

(*b*) Rehabilitation Master Plan;

11. Risk assessment report along with Disaster Management Plan :

12. (*a*) Detailed Project Report :

(*b*) Environmental Impact Assessment Report : prepared as per Guidelines of MEF

(*c*) Environmental Management Plan.

13. Details of Environmental Management Cell.

14. Details of air and water quality monitoring stations to be set up.

* * *

[1] Corrigendum *vide* S.O. 180 (E) dated 24th February, 1992 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 4th March, 1992.

ENVIRONMENTAL CLEARANCE OF PROJECTS

S.O. 60 (E) dated 27th January, 1994.[1]—In exercise of the powers conferred by sub-section (1) and Cl. *(v)* of sub-section (2) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986) read with Cl. *(d)* of sub-rule (3) of Rule 5 of the Environment (Protection) Rules, 1986, the Central Government hereby directs that on and from the date of publication of this notification in the Official Gazette, expansion or modernization of any activity if pollution load is to exceed the existing one, or new project listed in Schedule I to this notification, shall not be undertaken in any part of India unless it has been accorded environmental clearance by the Central Government in accordance with the procedure hereinafter specified in this notification;

2. Requirements and procedure for seeking environmental clearance of projects :

I. *(a)* Any person who desires to undertake [2][any new project] in any part of India or the expansion or modernisation of any existing industry or project listed in the [2][Schedule I shall] submit an application to the Secretary Ministry of Environment and Forests, New Delhi.

The application shall be made in the proforma specified in Schedule II to this notification and shall be accompanied by [3][a project report which shall, *inter alia*, include an Environmental Impact Assessment Report [Environmental Management Plan] and an [4][Environment Management Plan and details of Public hearing as specified in Schedule IV] prepared in accordance with the guidelines issued by the Central Government in the Ministry of Environment and Forests from time to time.

(b) Case rejected due to submission of insufficient or inadequate data and Action Plans may be reviewed as and when submitted with complete data and [5][Plan] Submission of [5][incomplete data or plans for] for the second time would itself be a sufficient reason for the Impact Assessment Agency to reject the case summarily.

II. In case of the following site [6][specific projects :]

(a) mining,

(b) pit-head thermal power stations;

(c) hydro-power, major irrigation projects and/or their combination including flood control;

(d) ports and harbours (excluding minor ports).

The project authorities will intimate the location of the project site to the Central Government in the Minitry of Environment and Forests while initiating any investigation and surveys. The Central Government in the Ministry of Environment and Forests will convey a decision regarding suitability or otherwise of the proposed site within a maximum period of thirty days. [The

3. Subs. by S.O. 356 (E) dated 4th May, 1994 published in the *Gazette of India, Extraordinary*, Pt II, Sec. 3 *(ii)*, dated 4th May, 1994.
4. Subs. by S.O. 318 (E) dated 10th April, 1987 published in the Gazette of India, Extraordinary, Pt. II, Sec. 3 *(ii)*, dated 10th April, 1997.
5. Subs. by S.O. 356 (E) dated 14th May, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 *(ii)* dated 14th May, 1994.
6. Corrigendum *vide* S.O. 230 (E) dated 17th March, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 *(ii)*, dated 17th March, 1994.

said site clearance shall be granted for a snctioned capacity and shall be valid for a period of five years for commencing the construction, operation or mining ;]

[1][(*e*) prospecting and exploration of major minerals in areas above 500 hectare.;]

III. (*a*) [2][The reports] submitted with the application shall be evaluated and assessed by the Impact Assessment [3][Agency, and if deemed necessary it may consult] a Committee of Experts, having a composition as specified in Schedule III of this Notification. The Impact Assessment Agency (IAA) would be the Union Ministry of Environment and Forests. The Committee of Experts mentioned above shall be constituted by the Impact Assessment Agency [4][***] or such other body under Central Government authorised by Impact Assessment Agency in this regard.

(*b*) The said Committee of experts shall have full right of entry and inpection of the site or, as the case may be, factory premises at any [5][time prior to] during or after the commencement of the operations relating to the project.

[6][(*c*) the Impact Assessment Agency shall prepare a set of recommendations based on the technical assessment of documents and data furnished by the project authorities and supplemented by data collected during visits of sites of factories, if undertaken and details of public hearing. The assessment shall be completed within a period of ninety days from receipt of the requisite documents and data from the project authorities and completion of public hearing and decision conveyed within thirty days thereafter. The clearance granted shall be valid for a period of five years from commencement of the construction or operation of the project.]

[7][IV In order to enable the Impact Assessment Agency to monitor effectively the implementation of the recommendations and conditions subject to which the environmental clearance has been given, the project authorities concerned shall submit a half yearly report to the Impact Assessment Agency Subject to the public interest the Impact Assessment Agency shall make compliance reports publicly available]

V. If no comments from the Impact Assessment Agency are received within the time limit, the project would be deemed to have been approved as proposed by project authorities.

3 Nothing contained in this Notification shall apply to,

(*a*) any time falling under Entry Nos. 3, 18 and 20 of Schedule I to be located or proposed to be located in the areas covered by the [8][Notification S.O.] No. 102 (E),

(*c*) Any item reserved for Small Scale Industrial Sector with investments less than Rs 1 crore

4. Concealing factual data or submission of false, misleading data/reports, decisions or recommendations would lead to the project being [2][rejected approval] if granted earlier on the basis of false data, would also be revoked. Misleading and wrong information will cover the following .

— False information.
— False data.
— [3][Engineered reports]
— Concealing of factual data.
— False recommendations or decisions

SCHEDULE I

(*See* Paras 1 and 2)

List of Projects Requiring Environmental Clearance from the Central Government

1. Nuclear Power and related projects such as Heavy Water Plants, nuclear fuel complex, rare earths.

2. River Valley projects including hydel power, major irrigation and their combination including flood control

3 Ports, Harbours, Airports (except minor ports and harbours)

4 Petroleum Refineries including crude and product pipelines

5. Chemical Fertilizers (Nitrogenous and Phosphatic) other than single superphosphate).

6. Pesticides (Technical).

7. Petrochemical complexes (Both Olefinic and Aromatic) and Petrochemical intermediates such as DMT,Caprolactam LAB etc. and production of basic plastics such as [4][LLPDE, HPDE], PPPVC.

8. Bulk drugs and pharmaceuticals.

9. Exploration for oil and gas and their production, transportation and storage.

10. Synthetic Rubber.

11. Asbestos and Asbestos products.

12. Hydrocyanic acid and its derivatives.

---

1. Subs. by S.O. 356 (E) dated 14th May, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*) dated 14th May, 1994.
2. Subs. by S.O. 356 (E) dated 14th May, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*) dated 14th May, 1994.
3. Corrigendum *vide* S.O. 230 (E) dated 17th March, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 17th March, 1994.
4. Corrigendum *vide* S.O. 230 (E) dated 17th March, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 17th March, 1994.

13. (*a*) Primary metallurgical industries (such as production of Iron and Steel, Aluminium, Copper, Zinc, Lead and Ferro Alloys).

    (*b*) Electric arc furnaces (Mini Steel Plants).

14. Chlor alkali industry.

15. Integrated paint complex including manufacture of resins and basic raw materials required in the manufacture of paints.

16. Viscose Staple fibre and filament yarn.

17. Storage batteries integrated with manufacture of oxides of lead and lead antimony alloy.

18. All tourism projects between 200m—500 meters of High Water Line and at locations with an elevation of more than 1000 meters with an investment of more than Rs. 5 crores.

19. Thermal power plants.

[1][20. Mining projects (major minerals) with leases more than 5 hectares.]

21. [2][Highway Projects except projects relating to improvemen work including widening and strengthening of roads with marginal land acquisition along the existing alignments provided it does not pass through ecologically sensitive areas such as National Parks, Sanctuaries, Tiger reserves, Reserve forests.]

22. Tarred Roads in Himalayas and or Forest areas.

23. Distilleries.

24. Raw Skins and hides.

25. Pulp, paper and newsprint.

26 Dyes

27 Cement.

28. Foundries (individual).

29 Electroplating

SCHEDULE II

Application Form

1. (*a*) Name and Address of the project proposed :

   (*b*) Location of the project :
   Name of the place :
   District, Tehsil :
   Latitude/Longitude :
   Nearest Airport/Railway Station :

---

[1] Subs. by S.O. 356 (E) dated 14th May, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*) dated 14th May, 1994.

[2] Subs. by S.O. 318 (E), dated 10th April, 1997 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 10th April, 1997.

[3] Corrigendum *vide* S.O. 230 (E) dated 17th March, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 17th March, 1994.

(*c*) Alternate site examined and the reasons for selecting the proposed site :

(*d*) Does the site conform to stipulated land use as per local land use plan ;

2. Objectives of the project :

3. (*a*) Land Requirement :
Agriculture Land :
Forest Land and Density of vegetation.
Others (specify) :

(*b*) (*i*) Land use in the Catchment/within 10 kms. radius of the proposed site :

(*ii*) Topography of the area indicating gradient, aspects nd altitude;

(*iii*) Erodability classification of the proposed land;

(*c*) Pollution sources existing in 10 kms. radius and their impact on quality of air, water and land :

(*d*) Distance of the nearest National Park/Sanctuary/Biosphere Reserve/Monuments/heritage site/Reserved Forests :

(*e*) Rehabilitation on plan for quarries/borrow areas :

(*f*) Green belt plan :

(*g*) Compensatory of afforestation plan :

4. Climate and air Quality :

(*a*) Windrose at site;

(*b*) Max./Min./Mean annual temperature;

(*c*) Frequency of inversion :

(*d*) Frequency of cyclones/tornadoes/cloud burst :

(*e*) Ambient air quality data :

(*f*) Nature and concentration of emission of SPM, Gas (CO, CO_2, SO_2, No_x CH_n etc.) from the proejct :

5. Water balance :

(*a*) Water balance at site :

(*b*) Lean season water availability :

Water requirement :

(*c*) Source to be tapped with competing users (river, lake, ground, public supply) :

(*d*) Water quality :

(*e*) Changes observed in quality and quantity of ground water in the last 15 years and present charging and extraction details :

(*f*) (*i*) Quantum of waste water to be released with treatment details :

(*ii*) Quantum of quality of water in the receiving body before and after disposal of solid wastes :

(*iii*) Quantum of waste water to be released on land and type of land :

(*g*) (*i*) Details of reservoir water quality with necessary Catchment Treatment Plan :

(*ii*) Command Area Development Plan :

6. Solid wastes :

   (*a*) Nature and quantity of solid wastes generated :

   (*b*) Solid waste disposal method :

7. Noise and Vibrations :

   (*a*) Sources of noise and Vibrations :

   (*b*) Ambient noise level :

   (*c*) Noise and Vibration control measures proposed .

   (*d*) Subsidence problem if any with control measures .

8 Power requirement indicating source of supply · Complete environmental detail to be furnished separately, if captive power unit proposed

9. Peak labour force to be deployed giving details of :

   — Endemic health problems in the area due to waste water/air/soil borne diseases ·

   — Health care system existing and [1][proposed] :

10. (*a*) Number of villages and population to be displaced :

    (*b*) Rehabilitation Master Plan :

11. [1][Risk Assessment Report and Disaster] Management Plan :

12. (*a*) Environmental Impact Assessment

    (*b*) Environment Management Plan :

    (*c*) Detailed Feasibility Report

    (*d*) Duty filled in questionnaire

    } Report prepared as per guidelines issued by the Central Government in MOEF from time to time

13 Details of Environment Management Cell

I hereby give an undertaking that the data and information given above are true to the best of my knowledge and belief and I am aware that if any part of the data/ nformation submitted is found to be false or misleading at any stage, the project be rejected and the clearance given, if any, to the project is likely to be revoked at our risk and cost

Signature of the applicant
with name and full address.

Date :
Place .

Given under the seal of Organisation on
behalf of whom the applicant is signing

In respect to item for which data are not required or are not available as per the declaration of project proponent, the project would be considered on that basis

SCHEDULE III

[*See* sub-para III (a) of [1][Para 2]

Composition of the Expert Committees for Environmental Impact Assessment

[2][1. The Committees will consist of experts in the following disciplines] .

---

[1] Corrigendum *vide* S.O. 230 (E) dated 17th March, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 17th March, 1994.

[2] Subs. by S.O. 356 (E) dated 14th May,1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 14th May, 1994.

(*i*) Eco-system Management

(*ii*) Air/Water Pollution Control

(*iii*) Water Resource Management

(*iv*) Flora/Fauna conservation and management

(*v*) Land Use Planning

(*vi*) Social Sciences/Rehabilitation

(*vii*) Project Appraisal

(*viii*) Ecology

(*ix*) Environmental Health

(*x*) Subject Area Specialists

(*xi*) Representatives of NGOs/persons concerned with environmental issues.

2. The Chairman will [1][be an outstanding] and experienced ecologist or environmentalist or technical [1][professional with wide] managerial experience in the relevant development sector.

3. The representative of 1[Impact] Assessment [1][Agency will] act as a Member-Secretary.

4. Chairman and Members will serve in their individual capacities except those specifically nominated as representatives

5. The Membership of a Committee shall not exceed 15.

[2][SCHEDULE IV

(*See* sub-para 1 of para 2)

Procedure for Public Hearing

(1) **Process of Public Hearing.**—Whoever apply for environmental clearance of projects, shall submit to the concerned State Pollution Control Board twenty sets of the following documents namely :—

(*i*) An executive summary containing the salient features of the project both in English as well as local language.

(*ii*) Form XIII prescribed under Water (Prevention and Control of Pollution) Rules, 1975 where discharge of sewage, trade effluents, treatment of water in any form, is required.

(*iii*) Form I prescribed under Air (Prevention and Control of Pollution) Union Territory Rules, 1983 where discharge of emissions are involved in any process, operation or industry.

(*iv*) Any other information or document which is necessary in the opinion of the Board for their final disposal of the application.

(2) **Notice of Public Hearing.**—

(*i*) The State Pollution Control Board shall cause a notice for environmental public hearing which shall be published in at least two newespapers widely circulated in the region around the project, one of which shall be in the vernacular language of the locality concerned. State Pollution Control Boardshall mention the date, time and place of public hearing. Suggestions, views, comments, and

---

1. Corrigendum *vide* S.O. 230 (E) dated 17th March, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 17th March, 1994.
2. Added by S.O. 318 (E) dted 10th April, 1997 published in the *Gazette of India, Extraordinary* Pt II, Sec. 3 (*ii*) dated 10th April, 1997.

objections of the public shall be invited within thirty days from the date of publication of the notification.

(*ii*) All persons including bona fide residents, environmental groups and others located at the project site/sites of displacement/sites likely to be affected can participate in the public hearing. They can also make oral/written suggestions to the State Pollution Control Board.

Explanation.— For the purpose of the paragraph person means,—

(*a*) any person who is likely to be affected by the grant of environmental clearance;

(*b*) any person who owns or has control over the project with respect to which an application has been submitted for environmental clearance;

(*c*) any association of persons whether incorporated or not likely to be affected by the project and/or functioning in the field of environment,

(*d*) any local authority within any part of whose local limits is within the neighbourhood, wherein the project is proposed to be located.

(3) **Composition of public hearing panel.**—The composition of Public Hearing Panel may consist of the following, namely :—

(*i*) Representative of State Pollution Control Board.

(*ii*) District Collector or his nominee;

(*iii*) Representative of State Government dealing with the subject;

(*iv*) Representative of Department of the State Government dealing with Environment;

(*v*) Not more than three representatives of the local bodies such as Municipalities or panchyats;

(*vi*) Not more than three senior citizens of the area nominated by the District Collector

(4) **Access to the Executive Summary.**—The concerned persons shall be provided access to the Executive Summary of the Project at the following places namely —

(*i*) District Collector Office,

(*ii*) District Industry Centre,

(*iii*) In the Office of the Chief Executive Officers of Zila Parishad or Commissioner of the Municipal Corporation/Local body as the case may be,

(*iv*) In the head office of the concerned State Pollution Control Board and its concerned Regional Office;

(*v*) In the concerned Department of the State Government dealing with the subject of environment.]

* * *

ENVIRONMENTAL IMPACT ASSESSMENT OF DEVELOPMENT PROJECTS IN RELATION TO THERMAL POWER PLANTS

S.O. 319 (E) dated 10th April, 1997.[1]—In exercise of the powers conferred by Sec. 23 of the Environment (Protection) Act, 1986 (29 of 1986) (Hereinafter referred to as the said Act), the Central Government hereby directs that the powers conferred on it by sub-section (1) of Sec. 3 of the said Act to take measures for protecting and improving the quality of the environment and preventing controlling and abating environmental pollution be exercisable also by the State Government as notified in the notification of the Government of India in the Ministry of Environment and Forests No. S.O. 60 (E) dated the 27th January, 1994 in relation to the Thermal Power Plants specified in Schedule-1 annexed to this notification subject to the conditions and limitations specified in Schedule-II annexed to this notification.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 10th April, 1997.

SCHEDULE I

Category of Thermal Power Plants requiring environmental clearance from the State Government.

I. Co-generation Captive Plants :

(*i*)	Co-Generation Plants	All Co-generation Plants irrespective of the installed capacities.
(*ii*)	Captive Power Plants :	Upto 250 MW (both coal and gas/naphtha based) coming up separately and not along the main industry.

II. Utility Projects :

(*i*) Coal based plants upto 500 MW using fluidized bed technology subject to sensitive areas restrictions.

(*ii*) Coal based Power Plants upto 250 MW using conventional technologies.

(*iii*) Gas/Naphtha based plants upto 500 MW.

Note : Any project proposed to be located within the radius of twenty five kms. boundary of reserved forests, ecologically sensitive area which may include National Parks, Sanctuaries, Biosphere Reserves, critically polluted area and within fifty kms of inter-state boundary shall require environmental clearance from the Central Government.

SCHEDULE-II

Procedure for seeking environment clearance of projects.

1. (1) Any persons who desires to establish a thermal power plant of any category mentioned in Schedule-I, shall submit an application to the Department of the State Government dealing with the subject of Environment.

(2) The application shall be made in the Form 'A' specified in Schedule-II annexed to this notification and shall be accompanied by a detailed project report which shall, *inter alia*, include an Environmental Impact Assessment Report and an Environment Management Plant prepared in accordance with the guidelines issued by the State Department of Environment from time to time.

(3) Cases rejected due to submission of insufficient or inadequate data and Action Plans may be reviewed as and when submitted with complete data and Action Plans. Submission of incomplete data for the second time would itself be a sufficient reason for the State Government to reject the case summarily.

2. In case of the pit-head thermal power plants, the applicant shall intimate the location of the project site to the State Government while initiating any investigation and surveys. The State Government will convey a decision regarding suitability or otherwise of the proposed site within a maximum period of thirty days. The said site clearance will be granted for a sanctioned capacity and it will be valid for a period of five years for commencing the construction or operation of the project.

3. (1) The applicant shall obtain No Objection Certificate from the concerned Pollution Control Board. The State Pollution Control Board shall issue No Objection Certificate to establish only after completing public hearing as specified in Schedule-IV annexed to this notification.

(2) The reports submitted with the application, and No Objection Certificate from the State Pollution Control Board shall be evaluated and assessed by the State Government, in consultation with a Committee of experts which shall be constituted by the State Government as specified in Schedule-III appended to this notification.

(3) The said Committee of experts shall have full right of entry and inspection of the site or, as the case may be, factory premises at any time prior to, during or after the commencement of the operations relating to the plant

(4) The State Government Department dealing with the subject of Environment shall prepare a set of recommendations based on technical assessment of documents and data furnished by the applicant supplemented by data collected during visits to sites, if undertaken and interaction with affected population and environment groups, if necessary.

(5) The assessment shall be completed within a period of ninety days from receipt of the requisite documents and data from the applicant and decision conveyed within thirty days thereafter

(6) The environmental clearance granted shall be valid for a period of five years from commencement of the construction or operation of the project

4 Concealing factual data or submission of false, misleading data or reports, decisions of recommendations would lead to the project being rejected. Approval, if granted, earlier on the basis of false data, can also be revoked

Form A

Application Form

1 (*a*) Name and Address of the project proposed

(*b*) Location of the project
Name of the place
District, Tehsil
Latitude/Longitude
Nearest Airport/Railways Station

(*c*) Alternate sites examined and the reasons for selecting the proposed site:

(*d*) Does the site conform to stipulated land use as per local land use plan :

2 Objectives of the project

3 (*a*) Land Requirement ·
Agriculture Land :
Forest land and Density of vagetation other (specify) ·

(*b*) (*i*) Land use in the Catchment/within 10 Kms. radius of the propoed site .

(*ii*) Topography of the area indicating gradient, aspects and altitude

(*iii*) Erodibility classification of the proposed land :

(*c*) Pollution sources existing in 10 Kms. radius and their impact on quality of airm water and land:

(*d*) Distance of the nearest National Park/Sanctuary/Biosphere Reserve/ Monuments/heritage site/Reserve Forest:

(*e*) Rehabilitation plan for querries/borrow areas:

(*f*) Green belt plan :

(*g*) Compensatory afforestation plan :

4. Climate and Air Quality :

(*a*) Windrose at site :

(*b*) Max/Min/Mean annual temperature ·

(*c*) Frequency of inversion :

(*d*) Frequency of cyclones/tornadoes/cloud burst :

(*e*) Ambient air quality data :

(*f*) Nature and concentration of emission of SPM, Gas (CO, CO_2, NO_x, CH_n etc) from the project :

5. Water balance .

(*a*) Water balance at site :

(*b*) Len season water availability :

Water Requirement :

(*c*) Source to be tapped with competing users (River, Lake, Ground, Public supply)

(*d*) Water quality :

(*e*) Changes observed in quality and quantity of ground water in the last 15 years and present charging and extraction details :

(*f*) (*i*) Quantum of waste water to be release with treatment details

(*ii*) Quantum of quality of water in the receiving body before and after disposal of solid wastes :

(*iii*) Quantum of waste water to be released on land and type of land,

(*g*) (*i*) Details of reservoir water quality with necessary Catchment Treatment Plan,

(*ii*) Command Area Development Plan :

6. Solid wastes :

(*a*) Nature and quantity of solid wastes generated ·

(*b*) Solid waste disposal method :

7. Noise and Vibrations :

(*a*) Sources of Noise and Vibrations :

(*b*) Ambient noiselevel:

(*c*) Noise and Vibration control measures proposed ·

(*d*) Subsidence problem if any with control measures."

8. Power requirement indicating source of supply : Complete environmental details to be furnished separately, if captive power unit proposed :

9. Peak labour force to be deployed giving details of :

Endemic health problems in the area due to waste water/air/soil borne diseases .

Health care system existing and proposed :

10. (*a*) Number of villages and population to be displaced :

(*b*) Rehabilitation Master Plan :

11. Risk Assessment Report and Disastar Management Plan

12. (*a*) Environmental Impact Assessment :

(*b*) Environment Management Plan :

(*c*) Detailed Feasibility Report :

(*d*) Duly filled in questionnarie :

Report prepares as per guidelines issued by the Central Governemnt in the MOEF from time to time ·

13. Details of Environmental Management Cell :

I hereby give an undertaking that the data and information given above are true to the best of my knowledge and belief and I am aware that if any part of the data/information submitted is found to be false or misleading at any stage, the project be rejected and the clearance given, if any, to the prject is likely to be revoked at our risk and cost.

Signature of the applicant
with name and full address

Given under the seal of Organisation
on behalf of whom the applicant is signing.

Date :
Place.

In respect to item for which data are not required or is not available as per the declaration of project proponent, the project would be considered on that basis.

SCHEDULE III

[*See* Sub para (2), Para 3 of Schedule-II]

Composition of the Expert Committees for Environmental Impact Assessment

1 The Committees will consist of experts in the following disciplines

(*i*) Eco-System Management

(*ii*) Air/Water Pollution Control

(*iii*) Water Resource Management

(*iv*) Flora/Fauna Conservation and management

(*v*) Land use Planning

(*vi*) Social Sciences/Rehabilitation

(*vii*) Project Appraisal

(*viii*) Ecology

(*ix*) Environmental Health

(*x*) Subject Area Specialists

(*xi*) Representatives of NGOs/persons concerned with environmental issues.

2. The Chairman will be an outstanding and experienced ecologist or environmentalist or technical professional with wide managerial experience in the relevant development sector.

3. The representative of Impact Assessment Agency will act as a Member-Secretary.

4. Chairman and Members will serve in their individul capacities except those specifically nominated as repesentatives.

5. The membership of a Committee shall not exceed 15.

SCHEDULE IV

[*See* para 3, sub-paragraph (2) of Schedule-II]

Procedure for Public Hearing

(1) **Process of Public Hearing.**—Whoever apply for environmental clearance of projects, shall submit to the concerned State Pollution Control Board twenty sets of the following documents namely :—

(*i*) An Executive summary containing the salient features of the project both in English as well as local language.

(*ii*) Form XIII prescribed under Water (Prevention and Control of Pollution) Rules, 1975 where discharge of sewage, trade effluents, treatment of water in any form, is required.

(*iii*) Form I prescribed under Water (Prevention and Control of Pollution) Union Territory Rules, 1983 where discharge of emissions are involved in any process, operation or industry.

(*iv*) Any other information or document which is necessary in the opinion of the Board for their final disposal of the application.

(2) **Notice of Public Hearing.**—(*i*) The State Pollution Control Board shall cause a notice for environmental public hearing which shall be published in at least two newspapers widely circulated in the region around the project, one of which shall be in the vernacular language of the locality concerned. State Pollution Control Board shall mention the date, time and place of public hearing. Suggestions, views, comments, and objections of the public shall be invited within thirty days from the date of publication of the notification.

(*ii*) All persons including *bonafide* residents, environmental groups and others located at the project site/sites of displacement/sites likely to be affected can participate in the public hearing. They can also make oral/written suggestions to the State Pollution Control Board.

Explanation.—For the purpose of the paragraph person means —

(*a*) any person who is likely to be affected by the grant of environmental clearance;

(*b*) any person who owns or has control over the project with respect to which an application has been submitted for environmental clearance;

(*c*) any association of persons whether incorporated or not likely to be affected by the project and/or functioning in the field of environment;

(*d*) any local authority within any part of whose local limits is within the neighbourhood wherein the project is proposed to be located.

(3) **Composition of public hearing panel.**—The composition of Public Hearing Panel may consist of the following, namely :—

(*i*) Representative of State Pollution Control Board;

(*ii*) District Collector or his nominee;

(*iii*) Representative of State Government dealing with the subject of power;

(*iv*) Representative of Department of the State Government dealing with Environment;

(*v*) Not more than three representatives of the local bodies such as Muncipalities or Panchyats;

(*vi*) Not more than three senior citizens of the area nominated by the District Collector.

(4) **Access to the Executive Summary.**—The concerned persons shall be provided access to the Executive Summary of the Project at the following places namely :—

(*i*) District Collector Office;

(*ii*) District Industry Centre;

(*iii*) In the Office of the Chief Executive Officer of Zila Parishad or Commissioner of the Municipal Corporation/Local body as the case may be;

(*iv*) In the head office of the concerned State Pollution Control Board and its concerned Regional Office;

(*v*) In the concerned Department of the State Government dealing with the subject of environment.

DUMPING AND DISPOSAL OF FLY ASH DISCHARGED FROM COAL OR LIGNITE BASED THERMAL POWER PLANTS

S.O. 453 (E) dated 22nd May, 1998.—The following draft of a notification which the Central Government proposes to issue in exercise of the powers conferred by sub-section (1), read with Cl (*v*) of sub-section (2) of Sec. 3 and clause (*e*) of sub-section (2) of Sec 6 of the Environment (Protection) Act, 1986 (29 of 1986) is hereby published as required under sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986, for the information of all persons likely to be affected thereby; and notifice is hereby given that the said draft notification will be taken into consideration by the Central Government on or after sixty days from the date of publication of this notification in the Official Gazette.

Any person interested in filing any objection against the proposed draft notification may do so in writing to the secretary, Ministry of Environment and Forests, Prayavaran Bhawan, CGO Complex, Lodi Road, New Delhi-110003, within the said period of sixty days

DRAFT NOTIFICATION

Whereas it is necessary to protect the environment, conserve top soil prevent the dumping and disposal of fly ash discharged from coal or lignite based thermal power plants on land and inlandfills

And whereas there is a need for restricting the excavation of top soil and promoting the utilisation of fly ash in the manufacture of building materials, in construction activity for other uses within a specified radius of fifty kilometers from coal or lignite based thermal power plants

Now, therefore, in exercise of the powers conferred by sub-section (1), read with clause (*v*) of sub-section (2) of Sec 3 and Cl. (*e*) of sub-section (2) of Sec 6 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby directs, that on and from the date of final publication of this notification under sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986—

(A) No person shall excavate or cause to be excavated top soil within a radius of fifty kilometers from coal or lignite based thermal power plants

(B) All coal or lignite based thermal power plants shall utilise the entire fly ash generated in the power plants as follows :

1 Every coal or lignite based thermal power plant shall make available dry fly ash, bottom ash and pond ash without any payment or any other consideration for the purposes of manufacturing ash based building materials such as cement, concreate, blocks, bricks, panels or any other material or for enconstruction of roads, embankments or for any other construction activity.

2. Every coal or lignite based thermal power plant set up subject to environment clearance conditions stipulating the submission of an action plan for full fly ash utilisation shall, within a period of nine years from the final publication of this notification, phase out the dumping and disposal of fly ash on land and in

landfills in accordance with the plan. Such action plan shall provide for twenty per cent of the fly ash utilisation, within one year from the final publication of this notification with further increase in utilisation by ten per cent every year progressively for the next eight years to enable the utilisation of the entire fly ash generated in the power plant.

3. Every coal or lignite based thermal power plant not covered by paragraph (2) shall, within a period of fifteen years from the final publication of this notification, phase out the dumping and disposal of fly ash on land and in landfills in accordance with an action plan to be drawn up by the power plants. Such action plan shall provide for twenty per cent of fly ash utilisation within three years from the final publication of this notification, with further proportionate increase in utilisation every year progressively for the next twelve years to enable the utilisation of the entire fly ash generated in the power plant

4. All action plans under Cl. (2) and (3) of paragraph B of this notification, shall be prepared and submitted to the Central Pollution Control Board within a period of three months from the date of final publication of this notification.

5. The Central and State Government agencies, the State Electricity Boards, the National Thermal Power Corporation and the management of the thermal power plants shall make available land, provide electricity and water for production purposes and access to the ash lifting area for promoting the setting up of ash based production units in the proximity of the area where fly ash is generated in the power plant.

6. Annual implementation report providing information about the compliance of provisions in this notification shall be submitted by the 30th day of April every year to the Central Pollution Control Board by the coal or lignite based thermal power plants

7 Manufacture of building materials from dry fly ash, bottom ash or pond ash, such as cement, concrete, blocks, bricks, panels or any other material or the use of such ash in construction activity such as in roads, embankments or for any other use shall be carried out in accordance with specifications laid down by the bureau of Indian Standards, Indian Road Congress, Central Building Research Institute, Roorkee, Central Road Research Institute, New Delhi, Building Materials and Technology Promotion Council, New Delhi, National Research Development Corporation, New Delhi.

8. The Central Public Works Department, Public Works Department, Development Authorities, Housing Boards, National highway Authority of India and other construction agencies including those in the private sector within a specified radius of fifty kilometers from coal or lignite based thermal power plants, shall prescribe the use of ash and ash based products and construction systems in their respective schedules of specifications and construction applications, including appropriate standards and codes of practice, within a period of four months from the final publication of this notification

9 All local authorities shall prescribe in their respective building bye laws and regulations the use of ash and ash based products and construction techniques in building materials, roads, embankments or for any other use within a period of four months from the date of final publication of this notification.

PROHIBITION OF INDUSTRIES IN MURUD-JANJIRA REGION

S.O. No. 20 (E), dated 6th January, 1989.[3]—Whereas a notification under sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986, inviting objections against the imposition of prohibition on the location of all industries in Murud-Janjira are a in Raigarh district of Maharashtra was published *vide* No. S.O 851 (E), dated the 7th September, 1988.

And Whereas all objections received have been duly considered by the Central Government,

Now, therefore, in exercise of the powers conferred by clause (*d*) of sub-rule (3) of Rule 5 of the said rules, the Central Government hereby prohibits location of all industries, carrying on of operations or processes in a belt of one kilometre from the high tide mark from the Revdanda Creek (lat 19° 35") upto Devgarh Point (near Shrivardhan) (lat 18° O') as well as in one kilometre belt along the banks of the Rajpuri Creek upto Mhasia, except those industries, operations of processes which are in connection with the promotion and development of Tourism and those which are permitted by the Central Government after examining the environment impact

* * *

PROHIBITION ON INDUSTRIES AND MINING OPERATION ETC. IN DEHRADUN

S.O. No. 102 (E), dated 1st February, 1989.[4]—Whereas notification under sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986 inviting objections against the imposition of restriction on location of industries, mining operation and other developmental activities in the Doon Valley, in Uttar Pradesh was published *vide* No. S.O. 923 (E), dated the 6th October, 1988.

And whereas all objections received have been duly considered by the Central Government,

Now, therefore, in exercise of the powers conferred by Cl. (*d*) of sub-rule (3) of Rule 5 of the said rules, the Central Government hereby imposes restrictions on the following activities in Doon Valley, bounded on the North by Mussorie ridge, in the North-East by Lesser Himalayan range, on the South-West by Shivalik ranges, river Ganga in the South-East and river Yamuna in the North-West, except those activities which are permitted by the Central Government for examining the environmental impacts.

(*i*) Location, setting of industrial units—It has to be as per guidelines, given in the annexure or guidelines as may be issued from time to time by the Ministry of Environment and Forests, Government of India.

---

1. Principal Notification published *vide* S.O. No. 84 (E) dt. 16th February, 1987 and S.No. 60 and entries relating thereto inserted *vide* S.O. 62 (E) published in Gazette No. 42 dated 18.1 88.
2. Sl. No. 61 and 62 and entries relating thereto Ins. by S.O. 623 (E) dated 3rd September, 1996.
3. *Vide* Gazette No. 465 dated 28th July, 1989.
4. *Vide* Gazette No. 56 dated 1st February, 1989.

(*ii*) Mining—Approval of the Union Ministry of Environment and Forests must be obtained before starting any mining activity.

(*iii*) Tourism—It should as per Tourism Development Plan (TDP), to be prepared by the State Department of Tourism and duly approved by the Union Ministry of Environment and Forests.

(*iv*) Grazing—As per the plan to be prepared by the State Government and duly approved by the Union Ministry of Environment and Forests.

ANNEXURE

Guidelines for permitting, restricting industrial units in the Doon Valley area

Industries will be classified under Green, Orange and Red Categories, as shown below for purposes of permitting/restricting such industrial units in the Doon Valley from the environmental and ecological considerations .

CATEGORY GREEN

A. List of Industries in approved industrial areas which may be directly considered for issue of no objection certificate without referring to (Ministry of Environment and Forests) (in case of Doubts Reference will be made to Ministry of Environment and Forests)

1. All such non-obnoxious and non-hazardous industries employing upto 100 persons The abnoxius and hazardous industries are those using inflammable, explosive, corrosive or toxic substances.

2 All such industries which do not discharge industrial effluents of a polluting nature and which do not undertake any of the following processes .

Electroplating;

Galvanising;

Bleaching,

Degreasing,

Phosphating,

Dyeing;

Pickling, tanning;

Polishing,

Cooking of fibres and Digesting,

Designing of Fabric;

Unhairing, Soaking, deliming and bating of hides

Washing of fabric;

Trimming, Puling, juicing and blanching of fruits and vegetables,

Washing of equipment and regular floor washing, using of considerable cooling water, Separated milk, buttermilk and whey;

Stopping and processing of grain;

Distillation of alcohol, stillage and evaporation;

Slaughtering of animals, rendering of bones, washing of meat;

Juicing of sugar cane, extraction of sugar, Filtration, centrifugation, distrillation;

Pulping and fermenting of coffee bean;

Processing of fish;

Filter back wash in D.M. Plants exceeding 20 K.I per day capacity;

Pulp making, pulp processing and paper making Cocking of coal washing of blast furnace flue gases;

Stripping of oxides,

Washing of used sand by hydraulic discharge;

Washing of latex etc,

Solvent extraction

3 All such industries which do not use fuel in their manufacturing process or in any subsidiary process and which do not emit fugitive emissions of a diffused nature.

Industries not satisfying any one of the three criteria are recommended to be referred to Ministry of Environment and Forests

The following industries appear to fall in non-hazardous, non-obnoxious and non-polluting category, subject to fulfilment of above three conditions .

1 Atta-chakkies

2. Rice Mullors

3 Iceboxes

4 Dal mills

5 Groundnut decortinating (dry)

6 Chilling

7 Tailoring and garment making

8 Apparl making

9 Cotton and woollen Hosiery

10 Hand loom weaving

11 Shoe lace manufacturing

12 Gold and silver thread and sari work

13 Gold and silver smithy

14 Leather foot wear and leather products excluding tanning and hide processing

15. Manufacture of miror from sheet glass and photo-frame

16 Musical instruments manufacturing

17 Sports goods

18 Bamboo and cane products (only dry operations)

19 Card Board and paper products (Paper and pulp manufacture excluded)

20 Insulation and other coated papers (Paper and pulp manufacture excluded)

21. Scientific and Mathematical instruments

22. Furniture (Wooden and Steel)

23. Assembly of domestic electrical Appliances

24. Radio assembling

25. Fountain pens

26. Polythene, plastic and P.V.C. goods through extrusion/moulding
27. Surgical gauges and bandages
28. Railway sleepers (only concrete)
29. Cotton spinning and weaving
30. Rope (cotton and plastic)
31 Carpet weaving
32. Assembly of Air coolers
33 Wires, pipes-extruded shapes from metals
34. Automobile servicing and repair stations
35 Assembly of Bicycles, baby carriages and other small non-motorized vehicles
36. Electronics equipment (assembly)
37. Toys
38 Candles
39 Carpentary—excluded saw mill
40 Cold storage (small scale)
41. Restaurants
42. Oil-ginning/expelling (non-hydrogenation and no refining)
43 Ice cream
44 Mineralized water
45 Jobbing and Machining
46 Manufacture of Steel units and suit case
47 Paper pins and U-clips
48 Block making for printing
49 Optical frames

CATEGORY ORANGE

B. List of Industries that can be permitted in the Doon Valley with proper environmental control arrangement.

1. All such industries which discharge some liquid effluents (below 500/kl/day) that can be controlled with suitable proven technology.
2. All such industries in which the daily consumption of coal/fuel is less than 24 mt/day and the particulars emissions from which can be controlled with suitable proven technology.
3. All such industries employing not more than 500 persons.

The following industries with adoption of proven pollution control technology subject to fulfilling the above three condition fall under this category :

1. Lime manufacture—pending decision on proven pollution control device and Supreme Court's decision on quarring;
2. Ceramics;
3. Sanitaryware;

4. Tyres and tubes
5 Refuse incineration (controlled);
6. Flour-mills;
7 Vegetable oils including solvent extracted oils;
8. Soap without steam boiling process and synthetic detergents formulation,
9 Steam generating plants;
10. Manufacture of office and house-hold equipment and appliances involving use of fossil fuel combustion;
11. Manufacture of machineries and machine tools and equipments,
12. Industrial gases (only) Nitrogen, Oxygen and (CO_2),
13. Miscellaneous glassware without involving use of fossil-fuel combustion;
14 Optical glass,
15 Laboratory ware
16 Petroleum storage and transfer facilities,
17. Surgical and medical products including and probabilities of latex products;
18 Foot-wear (Rubber),
19. Bakery products, Biscuits and Confectioners,
20. Instant tea/coffee, coffee processing,
21 Malted food,
22 Manufacture of power driven pumps, compressors refrigeration units, fire fighting equipment etc.;
23 Wire drawing (cold process) and bailing straps,
24 Steel furniture, fasteners etc.;
25. Plastic processed goods;
26. Medical and surgical instruments;
27 Acetylene (synthetic);
28. Glue and Gelatine;
29. Potassium permanganse;
30. Metalic sodium;
31. Photographic films, papers and photographic chemicals,
32. Surface coating industries;
33 Fragrances, fragours and food additives;
34. Plant nutrients (only manure),
35. Aerated water/soft drink,

Note :—

(*a*) Industries falling within the above identified list shall be assessed by the State Pollution Control Board and referred to the Union Department of Environment for consideration, before according No Objection Certificate.

(*b*) The total number of fuel burning industries that shall be poermitted in the Valley will be limited by 8 tonnes per day or Sulphur Dioxides from all sources. (This corresponds to 400 tonnes per day Coal with 1% sulphur).

(*c*) Sitting of Industrial areas should be based on sound criteria.

CATEGORY RED

C. List of Industries that cannot be permitted in the Doon Valley

1. All those industries which discharge effluents of a polluting nature at the rate of more than 500 kl/day and for which the natural course for sufficient dilution is not available, and effluents from which cannot be controlled with suitable technology.

2 All such industries employing more than 500 persons/day

3 All such industries in which the daily consumption of coal/fuel is more than 24 mt/day

The following industries appear to fall under this category covered by all the points as above .

1. Ferrous and non-ferrous metal extraction, refining, casting, forging, alloy making processing etc.,
2. Dry Coal Processing/Mineral processing industries like Ore sintering benefication, pollutization etc ;
3. Phosphate look processing plants;
4. Cement plants with horizontal rotary kilns;
5. Glass and glass products involving use of coal,
6 Petroleum refinery,
7 Petro-chemical industries,
8 Manufacture of lubricating oils and greases,
9 Synthetic rubber manufacture,
10 Coal, oil, wood or nuclear based thermal power plants,
11 Vanaspati, hydrogeneted vegetable oils for industrial purposes;
12 Sugar mills (White and Khandari),
13 Craft paper mills,
14 Coke oven by products and coaltar distillation Products;
15. Alkalies;
16 Caustic soda,
17. Potash;
18. Electro-thermal products (artificial abrasives, Calcium carbide etc.);
19 Phosphorous and its compounds;
20. Acids and their salts (organic and inorganic);
21. Nitrogen compounds (Cynides, cynamides and other nitrogen compounds);
22 Explosive (including industrial explosives, detonators and fuses);
23. Pthalic anhydride;
24. Processes involving chlorinated hydrocarbon;
25. Chlorine, fluorine, bromine, Iodine and their compunds;

26. Fertilizer industry;

27. Paper board and straw board,

28 Synthetics fibres;

29 Insecticides, fungicides, herbicides and pesticides (basic manufacture and formulations),

30. Basic drugs;

31. Alcohol (Industrial or potable);

32. Leather industry including tanning and processing;

33 Coke making, coal liquification and fuel gas making industries;

34. Fibre glass production and processing,

35 Manufacture of pulp-wood pulp, mechanical or chemical (including dissolving pulp),

36 Pigment dyes and their intermediates,

37 Industrial carbons (including graphite electrodes, anodes midget electrodes, graphite blocks, graphite crucibles, gas carbons activated carbon synthetic diamonds, carbon black, channel black, lamp black etc.);

38. Electro-chemicals (other than these covered under Alkali group);

39. Paints, enamels and varnishes,

40. Poly propylene,

41 Poly Vinyl chloride;

42 Cement with vertical shaft kiln technology pending certification of proven technology on pollution control,

43. Chlorates, perchlorates and peroxides;

44 Polishes

45 Synthetic resin and plastic products.

PROHIBITION ON STORAGE OF CHEMICALS IN ANTOP HILL, BOMBAY

S.O. 136 (E), dated 9th February, 1990.[1]— Whereas a notification under sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986 (hereinafter referred to as the said rules) inviting objections against the imposition of prohibition on storage of chemicals in Antop Hill in Bombay was published *vide* S.O. 852 (E), dated the 7th September, 1988;

And whereas an order under Cl (*d*) of sub-rule (3) of rule 5 of the said rules could not be issued within 120 days of the notification under Cl. (*a*) of sub-rule (3) of rule 5 of the said rules because of the matter being subjudice under Writ Petition 121 79/85, namely, *M.C. Mehta* v *Union of India and Others* in the Supreme Court of India and Writ Petition 3381 of 1987 in the Bombay High Court;

And whereas the Honourable Supreme Court in its order dated 5-12-1989 directed the Government of India in the Ministry of Environment and Forests to consider objection received in response to the notification No. S.O. 852 (E), dated the 7th September, 1988 and take decision without having any objection in respect of the fact that the matter is pending in that Court;

And whereas 138 objections were received which included 133 against and 5 for the prohibition.

---

[1] Published in Gazette No. 76 dated 9th February, 1990.

Now, therefore, in exercise of the powers conferred by clause (*d*) of sub-rule (3) of rule 5 of the said rules, the Central Government hereby imposes prohibition and restrictions that no hazardous, chemicals as defined in Cl. (*c*) or rule 2 of the Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989, not being a chemical in the quantity mentioned in Annexure, shall be stored in Antop Hill Warehousing Complex and that the storage of approved chemicals shall be regulated in accordance with the recommen-dations of the Garg Committee.

ANNEXURE

Chemicals, with quality, that can be stored at the Warehousing Complex, Wadala

1.	Activasted bleaching earth	2 te
2.	Aluminium sulphate	50 te
3.	Anhydride butile	25 te
4.	Aspirin powder	10 te
5.	Barium sulphate	15 te
6	Basic chrome sulphate	2 te
7	Bitumen	10 te
8.	Borax	100 te
9.	C.M C. (Carboxy Methyl cellulose)	5 te
10.	Calcium chloride	100 te
11.	Calcium fluoride	3 te
12.	Calcium oxide	75 te
13.	Calcium sulphate	75 te
14.	China Clay	25 te
15	Citric acid	100 te
16	Copper sulphate	6 te
17	Cream of tartar	5 te
18	Dipotassium phosphate	1 te
19	Disodium phosphate	2 te
20.	Fatty alcohols	5 te
21	Ferric chloride	10 te
22.	Glass Wool	2 te
23	Glauber salt	175 te
24.	Glucose liquid	25 te
25.	Hillo suspension	50 te
26.	Lactic acid	20 te
27.	Lactose	250 te
28.	Lithopone	105 te
29.	Magnesium chloride	10 te
30.	Magnesium oxide	2 te
31.	Manitol	5 te
32.	Mono sodium glutamate	3 te
33.	Olcic acid	2 te
34.	Potash alum	80 te

35	Potassium bicarbonate	25 te
36	Potassium chloride	45 te
37	Pectin	10 te
38	Polysorbate	5 te
39	Salicylic acid	200 te
40	Sodium acctate	5 te
41.	Sodium alginate	25 te
42.	Sodium bicarbonate	150 te
43.	Sodium Carbonate	150 te
44	Sodium chloride	75 te
45.	Sorbitol	100 te
46.	Stearic acid	10 te
47.	Talcum Powder	50 te
48.	Tamarind seed	50 te
49	Tannin extract	10 te
50	Tartaric acid	50 te
51	Titanium dioxide	100 te
52	Tapioca	25 te
53	Trisodium phosphate	50 te
54	Wax	35 te
55	Zinc oxide	50 te

COASTAL REGULATION ZONE (CRZ)

S. O. 114 (E), dated the 19th February, 1991.[1]—Whereas a Notification under Sec. 3 (1) and Sec 3 (2) (*v*) of the Environment (Protection) Act, 1986, inviting objections against the declaration of Coastal Stretches as Coastal Regulation Zone (CRZ) and imposing restrictions on industries, operations and processes in the CRZ was published *vide* S.O. No. 944 (E) dated 15th December, 1990.

And whereas all objections received have been duly considered by the Central Government;

Now, therefore, in exercise of the power conferred by Cl. (*d*) of sub-rule (3) of Rule 5 of the Environment (Protection) Rules, 1986, and all other powers vesting in its behalf, the Central Government hereby declares the coastal stretches of seas, bays, estuaries, creeks rivers and backwaters which are influenced by tidal action (in the landward side) upto 500 metres from the High Tide Line (HTL) and the land between the Low Tide Line (LTL) and the HTL as Coastal Regulation Zone; and imposes with effect from the date of this Notification, the following restrictions on the setting up and expansion of industries, operations or processes etc, in the said Coastal Regulation Zone (CRZ).

[2][For the purposes of this notification, the High Tide Line means the line on the land up to which the highest water line reaches during the spring tide. The High Tide Line shall be demarcated uniformly in all parts of the country by the demarcating authority or authorities so authorised by the Central Government, in accordance with the general guidelines issued in this regard.]

---

1. Published in the *Gazette of India*, dated 20th February, 1991.
2. Subs. by S.O. 1122 (E), dated 29th December, 1998 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 29th December, 1998.

Note.—The distance from the high Tide Line (HTL) to which the proposed regulations will apply in the case of rivers, creeks and backwaters may be modified on a case by case basis for reasons to be recorded while preparing the Coastal Zone Management Plans (referred to below); however, this distance shall not be less than 100 metres or the width of the Creek, river or backwater whichever is less.

2. Prohibited Activities :

The following activities are declared as prohibited within the Coastal Regulation Zone namely :

(*i*) setting up of new industries and expansion of existing industries, except those directly related to water front or directly needing foreshore facilities;

(*ii*) manufacture or handling or storage or disposal of hazardous substances as specified in the Notifications of the Government of India in the Ministry of Environment and Forests No. S O 594 (E), dated 28th July 1989, S O 966 (E), dated 27th November, 1989 and GSR 1037 (E), dated 5th December, 1989,

[1][except transfer of hazardous substances from ships to ports, terminals and refineries and *vice versa*, in the port areas .

Provided that Government of India in the Ministry of Surface Transport, on a case to case basis, may permit storage of the petroleum products as specified in Annexure-III appended to this notification within the existing port limits of existing ports and hardours and in those areas of ports that have not been classified as CRZ-I subject to implementation of safety regulations including guidelines issued by Oil Safety Directorate in the Government of India, Ministry of Petroleum and Natural Gas after ensuring proper location of site and availability of necessary equipment to meet the safety norms and the exigencies arising due to any accident or spillage.]

(*iii*) Setting up and expansion of fish processing units including warehousing (excluding hatchery and natural fish drying in permitted areas);

[2][Provided that existing fish processing units for modernisation purposes may utilise twenty five percent additional plinth area required for additional equipment and pollution control measures only subject to existing Floor Space Index/Floor Area Ratio norms and subject to the condition that the additional plinth area required for additional equipment and pollution control measures only subject to existing Floor Space Index/Floor Area Ratio norms and subject to the condition that the aditional plinth area shall not be towards seawards side of existing unit and also subject to the approval of State Pollution Control Board or Pollution Control Committee.]

(*iv*) setting up and expansion of units/mechanism for disposal of waste and effluents, except facilities required for discharging treated effluents into the water course with approval under the Water (Prevention and Control of Pollution) Act, 1974, and except for storm water drains,

(*v*) discharge of untreated wastes and effluents from industries, cities or towns and other human settlements. Schemes shall be implemented by the concerned authorities for phasing out the existing practices, if any, within a reasonable time period not exceeding three years from the date of this notification;

(*vi*) dumping of city or town waste for the purposes of landfilling or otherwise; the existing practice, if any, shall be phased out within a reasonable time not exceeding three years from the date of this Notification;

---

1. Ins. *vide* S.O. 494 (E), dated 9th July, 1997 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 9th July, 1997.
2. Ins. *vide* S.O. 494 (E), dated 9th July, 1997 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 9th July, 1997.

(*vii*) dumping of ash or any wastes from thermal power stations;

[1][(*viii*) land reclamation, bunding or disturbing the natural course of sea water except those required for construction of ports, harbours, jetties, wharves, quays, slipways, bridges and sea links and for other facilities that are essential for activities permissible under the notification or for control of coastal erosion and maintenance or clearing of water ways, channels and ports or for prevention or sandbars or for tidal regulators, storm water drains of for structure for prevention of salinity ingress and sweet water recharge.]

(*ix*) mining of sand, rocks and other substrate materials, except those rare minerals not available outside the CRZ areas;

[2]["Provided that in the Union Territory of the Andaman and Nicobar Island, drawal of ground water can be permitted from specific sites, if no other source of water is available and when done manually through ordinary wells or hand pumps, with the approval of Secretary, Department of Environment, Andaman and Nicobar Administration on a case to case basis, within 50 to 200 m from High Tide Line for local inhabitants for drinking purposes only".]

(*x*) harvesting or drawal of ground water and construction of mechanisms thereof within 200m of HTL; in the 200m to 500m zone it shall be permitted only when done manually through ordinary wells for drinking, horticulture, agriculture and fisheries.

[1][Provided that drawal of ground water is permitted, where no other source of water is available and when done manually through ordinary wells or hand pumps, for drinking and domestic purposes, in the zone between 50 to 200 m from High Tide Line in case of seas, bays and estuaries and within 200 m or the CRZ, whichever is less, from High Tide Line in case of rivers, creeks and backwaters subject to such restrictions, as may be deemed necessary, in areas affected by sea water intrusion, that may be imposed by an authority designated by State Government/Union Territory Administration.]

(*xi*). construction activities in ecologically sensitive areas as specified in Annexure-I of this Notification;

(*xii*) any construction activity between the Low Tide Line and High Tide Line except facilities for carrying treated effluents and waste water discharges into the sea, facilities for carrying sea water for cooling purposes, oil, gas and similar pipelines and facilities essential for activities permitted under this Notification; and

(*xiii*) dressing or altering of sand duens, hill natural features including landscape charges for beautification, recreational and other such purpose, except as permissible under the Notification.

3. Regulation of Permissible Activities :

All other activities, except those prohibited in para 2 above, will be regulated as under :

(1) Clearance shall be given for any activity within the Coastal Regulation Zone only if it requires water front and foreshore facilities.

(2) The following activities will require environmental clearance from the Ministry of Environment and Forests, Government of India, namely :

(*i*) Construction activities related to Defence requirements for which foreshore facilities are essential (e.g., slipways, jetties etc.); except for classified operational component of defence projects for which a separate procedure shall be followed. (Residential buildings, office buildings, hospital complexes, workshops shall not come within the definition of operational requirements except in every special cases and hence shall not normally be permitted in the CRZ).

---

[1] Subs. vide S.O. 494 (E), dated 9th July, 1997 published in the the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 9th July, 1997.

(ii) [1][Operational constructions for ports and harbours and light houses and constructions for activities such as jetties, wharves, quays and slipways :

Provided that for expansion or modernisation of existing ports and harbours including fishing harbours operational constructions for ports and harbours and construction of jetties, wharves, quays, slipways, single point mooring and single buoy mooring and for reclamation for facilities essential for operational requirements of ports and harbours in areas within the existing port limits except the areas classified as category CRZ-I (i), shall require environmental clearance from Government of India in the Ministry of Surface Transport, which shall take decision on these activities on the basis of Environment Impact Assessment Report.

Provided further that reclamation for commercial purposes such as shopping and housing complexes, hotels and entertainment activities shall not be permissible.]

(iii) Thermal power plants (only foreshore facilities for transport of raw materials facilities for in-take of cooling water and outfall for discharge of treated waste water/cooling water), and

(iv) [1][All other activities with investment exceeding rupees five crores except those activities which are to be regulated by the concerned authorities at the State/Union Territory level in accordance with the provisions of paragraph 6, sub-paragraph (2) of Annexure I of the notification.]

(3) (i) The coastal States Union Territory Administrations shall prepare, within a period of one year from the date of this Notification Coastal Zone Management Plans identifying and classifying the CRZ areas within their respective territories in accordance with the guidelines given in Annexures-I and II of the Notification and obtain approval (with or without modifications) of the Central Government in the Ministry of Environment and Forests,

(ii) Within the framework of such approved plans, all development and activities within the CRZ other than those covered in para 2 and para 3 (2) above shall be regulated by the State Government, Union Territory Administration or the local authority as the case may be in accordance with the guidelines given in Annexures-I and II of the Notification; and

(iii) In the interim period till the Coastal Zone Management Plans mentioned in para 3 (3) (i) above are prepared and approved, all developments and activities within the CRZ shall not violate the provisions of this Notification State Governments and Union Territory Administrations shall ensure adherence to these regulations and violations, if any, shall be subject to the provisions of the Environment (Protection) Act, 1986.

4. Procedure for monitoring and enforcement :

The Ministry of Environment and Forests and the Government of State or Union Territory and such other authorities at the State or Union Territory levels, as may be designated for this purpose, shall be responsible for monitoring and enforcement of the provisions of this notification within their respective jurisdictions.

---

[1] Subs. *vide* S.O. 494 (E), dated 9th July, 1997 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 9th July, 1997.

ANNEXURE I

Coastal Area Classification and Development Regulations

Classification of Coastal Regulation Zone :

6 (1) For regulating development activities, the coastal stretches within 50 metres of High Tide Line on the landward side are classified into four categories, namely :

Category I (CRZ-I).

(*i*) Areas that are ecologically sensitive ad important, such as national parks, sanctuaries, reserve forests, wildlife habitats, mangroves, corals/coral reefs, areas close to breeding and spawning grounds of fish and other marine life, areas of outstanding natural beauty/ historically/heritage areas, areas rich in genetic diversity, areas likely to be inundated due to rise in sea level consequent upon global warming and such other areas as may be declared by the Central Government or the concerned authorities at the State/Union Territory level from time to time.

(*ii*) Area between the Low Tide Line and the High Tide Line.

Category-II (CRZ-II)

The areas that have already been developed upto or close to the shore-line. For this purpose, "developed area" is referred to as that area within the municipal limits or in other legally designated urban areas which is already substantially built up and which has been provided with drainage and approach roads and other infrastructural facilities, such as water supply and sewerage mains.

Category-III (CRZ-III) :

Areas that are relatively undisturbed and those which do not belong to either Category-I of II These will include coastal one in the rural areas (developed and undeveloped) and also areas within Municipal limits or in other legally designated urban areas which are not substantially built up.

Coastal stretches in the Andaman and Nicobar, Lakshadweep and small islands, except those designated as CRZ-I, CRZ-II or CRZ-III.

Norms for Regulation of Activities.

6 (2) The development or construction activities in different categories of CRZ are shall be regulated by the concerned authorities at the State/Union Territory level, in accordance with the following norms :

CRZ-I

No new construction shall be permitted within 500 metres of the High Tide Line. No construction activity, except as listed under 2 (*xii*), will be permitted between the Low Tide Line and the High Tide Line.

[1][Provided that construction of dispensaries, schools, public rain shelters, community toilets, bridges, roads, jetties, water supply, drainage, sewerage which are required for traditional inhabitants of the Sunderbans Bio-sphere reserve area, West Bengal, may be permitted on a case to case basis, by an authority designated by the State Government.]

CRZ-II

[2][(*i*) Buildings shall be permitted only on the landward side of the existing road (or road proposed in the approved Coastal Zone Management Plan of the Area) or on the

---

[1] Ins. by S.O. 494 (E), dated 9th July, 1997 published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*), dated 9th July, 1997.

[2] Subs. *vide* S.O. 494 (E), dated 9th July, 1997 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 9th July, 1997.

landward side or existing authorised structures. Buildings permitted on the landward side of existing and proposed roads/existing authorised structures shall be subject to the existing local Town and Country Planning Regulations including existing norms of Floor Space Index/Floor Area Ratio :

Provided that no permission for construction of building shall be given on landward side of any new road except [1][roads approved in the Coastal Zone Management Plan] which are constructed on the seaward side of an existing road].

(*ii*) Reconstruction of the authorised buildings to be permitted subject to the existing FSI/FAR norms and without change in the existing use.

(*iii*) The design and construction of buildings shall be consistent with the surrounding landscape and local architectural style.

CRZ-III

(*i*) The area upto 200 metres from the High Tide Line is to be earmarked as 'No Development Zone' [2][No construction shall be permitted within this zone except for repairs of existing authorised structures not exceeding existing FSI, existing plinth area and existing density, and for permissible activities under the notification including facilities essential for such activities. An authority designated by the State Government/Union Territory Administration may permit construction of facilities for water supply, drainage and sewerage for requirements of local inhabitants]. However, the following uses may be permissible in this zone—agriculture, horticulture, gardens, pastures, parks, play fields, forestry and salt manufacture from sea water

(*ii*) Development of vacant plots between 200 and 500 metres of High Tide Line in designated areas of CRZ-II with prior approval of Ministry of Environment and Forests (MEF) permitted for construction of hotels/beach resorts for temporary occupation of tourists/visitors subject to the conditions as stipulated in the guidelines at Annexure-II.

(*iii*) Construction/reconstruction of dwelling units between 20 and 500 metres of the High Tide Line permitted so long it is within the ambit of traditional rights and customary uses such as existing fishing villages and gothans Building permission for such construction/reconstruction will be subject to the conditions that the total number of dwelling unit shall not be more than twice the number of existing units, total covered area on all floors shall not exceed 33 per cent of the plot size, the overall height of construction shall not exceed 9 metres and construction shall not be more than 2 floors (ground floor plus one floor)

[3][Construction is allowed for permissible activities under the notification including facilities essential for such activities. An authority designated by State Government/Union Territory Administration may permit construction of public rain shelters, community toilets, water supply, drainage, sewerage, roads, and bridges. The authority may also permit construction of schools and dispensaries, for local inhabitants of the area, for those panchyats the major part of which falls within CRZ if no other area is available for construction of such facilities.]

(*iv*) Reconstruction/alterations of an existing authorised building permitted subject to (i) to (iii) above.

CRZ-IV

Andaman & Nicobar Island :

(*i*) No New construction of buildings shall be permitted within 200 metres of the HTL;

---

1. Ins. *vide* S.O. 735 (E) dated 21st October, 1997 published in the *Gazette of India; Extraordinalry* Pt. II, Sec. 3 (*ii*) dated 21st October 1997.
2. Subs. *vide* S.O. 494 (E), dated 9th July, 1997 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 9th July, 1997.
3. Ins. *vide* S.O. 494 (E), dated 9th July, 1997 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 9th July, 1997.

(*ii*) The buildings between 200 and 500 metres from the High Tide Line shall not have more than 2 floors (ground floor and 1st floor), the total covered area on all floors shall not be more than 50 per cent of the plot size and the total height of construction shall not exceed 9 metres;

(*iii*) The design and construction of buildings shall be consistent with the surrounding landscape and local architectural style.

[1][(*iv*) (*a*) Corals from the beaches and coastal waters shall not be used for construction and other purposes,

(*b*) sand may be used from the beaches and coastal waters, only for construction purpose upto the 31st day of March, 1998 and thereafter it shall not be used for construction and other purposes]

(*v*) Dredging and underwater blasting in and around coral formations shall not be permitted, and

(*vi*) However, in some of the island, coastal stretches may also be classified into categories CRZ-I or II or III with the prior approval of Ministry of Environment and Forests and in such designated stretches, the appropriate regulations given for respective Categories shall apply

Lakshadweep and small Islands

(*i*) For permitting construction of buildings the distance from the High Tide Line shall be decided depending on the size of the islands. This shall be laid down for each island, in consultation with the experts and with approval of the Ministry of Environment and Forests, keeping in view the land use requirements for specific purposes *vis-a-vis* local conditions including hydrological aspects erosion and ecological sensitivity;

(*ii*) The buildings within 500 metres from the HTL shall not have more than 2 floors (gound floor and 1st floor), the total covered area on all floors shall not be more than 50 per cent of the plot size and the total height of construction shall not exceed 9 metres;

(*iii*) The design and construction of buildings shall be consistent with the surroundings landscape and local architectural style.

(*iv*) Corals and sand from the beaches and coastal waters shall not be used for construction and other purposes;

(*v*) Dredging and underwater blasting in and around coral formations shall not be permitted; and

(*vi*) However, in some of the islands, coastal stretches may also be classified into categories CRZ-I or II or III, with the prior approval of Ministry of Environment and Forests and in such designed stretches, the appropriate regulations given for respective Categories shall apply.

ANNEXURE II

Guidelines for Development of Beach Resorts/Hotels in the Designated areas of CRZ-III for Temporary Occupation of Tourist/Visitors, with prior approval of the Ministry of Environment and Forests.

7 (1) Construction of beach resorts/hotels with prior approval of MEF in the designated areas of CRZ-III for temporary occupation of tourists/visitors shall be subject to the following conditions :

(*i*) The project proponents shall not undertake any construction (including temporary constructions and fencing or such other barriers) within 200 metres (in the landward side) from the High Tide Line and within the area between the Low Tide and High Tide Line;

---

[1] Inserted by S.O. 73 (E), dated 31st January, 1997 published in the *Gazette of India*.

(*ii*) The total plot size shall not be less than 0.4 hectares and the total covered area on all floors shall not exceed 33 per cent of the plot size i.e., the FSI shall not exceed 0.33 The open area shall be suitably landscaped with appropriate vegetal over;

(*iii*) The obstruction shall be consistent with the surrounding landscape and local architectural style;

(*iv*) The overall height of construction upto highest ridge of the roof, shall not exceed 9 metres and the construction shall not be more than 2 floors (ground floor plus one upper floor);

(*v*) Ground water shall not be tapped within 200 m of the HTL, within the 200 metres-500 mette it can be tapped only with the concurrence of the Central/State Ground Water Board,

(*vi*) Extraction of sand. levelling or digging of sandy stretches except for structural foundation of building swimming pool shall not be permitted within 500 metres of the High Tide Line;

(*vii*) The quality of treated effluents, solids wastes, emissions and noise levels etc., from the project area must conform to the standards laid down by the competent authorities project area must conform to the standards laid down by the competent authorities including the central/State Pollution Control Board and under the Environment (Protection) Act, 1986;

(*viii*) Necessary arrangements for the treatment of the effluents and solid wastes must be made. It must be ensured that the untreated effluents and solid wastes are not discharged onto the water or on the beach; and no effluent/solid waste shall be discharged on the beach;

(*ix*) To allow public access to the beach, atleast a gap of 20 metres width shall be provided between any two hotels/beach resorts, and in no case shall gaps be less than 500 metres apart; and

(*x*) If the project involves diversion of forest land for non-forest purposes, clearance as required under the Forest (Conservation) Act, 1980 shall be obtained. The requirements of other Central and State laws as applicable to the project shall be met with.

(*xi*) Approval of the State/Union Territory Tourism Department shall be obtained.

7 (2) In ecologically sensitive areas (such as marine parks, mangroves, coral reefs, breeding and spawning grounds of fish, wildlife habitats and such other areas as may notified by the Central/State Government/Union Territories) construction of beach resorts/hotels shall not be permitted.

DECLARATION OF DAHANU TALUKA, DISTRICT THANE (MAHARASHTRA) AS AN ECOLOGICALLY FRAGILE AREA

S.O. 416 (E), dated 20th June, 1991.[1]—Whereas a notification under Cl. (*v*) of sub-section (2) of Sec 3 of the Environment (Protection) Act, 1986, inviting objections from the concerned quarters within a period of sixty days from the date of publication of the said notification, against Govt.'s intention to declare Dahanu Taluka, District Thane (Maharashtra) as an ecologically fragile area and to impose restrictions on the setting up of industries which have detrimental effect on the environment was published *vide* S.O No 80 (E), dated 8th February, 1991 and Corrigendum (S O 147 (E) issued on 27th February, 1991). And whereas certain objections were received from Environmental Action Groups of Dahanu and Bombay, individuals of Dahanu, Govt of Maharashtra, Dahanu Industries Association Dahanu Taluka Krushak Samaj etc These objections were duly considered and accordingly certain modifications have been incorporated in this notification

NOTIFICATION

In exercise of powers conferred by Cl (*v*) of sub-section (2) of Sec. 3 of the Environment (Protection) Act, 1986, the Central Government, in consultation with the Government of Maharasthra, after considering the need for protecting the ecologically sensitive Dahanu Taluka, and to ensure that the development activities are consistent with principles of environmental protection and conservation, hereby declare Dahanu Taluka, District Thane (Maharashtra) as an ecologically fragile area and to impose restrictions on the setting up of industries which have detrimental effect on the environment

The location for siting of industries and industrial units shall be in conformity with the Guidelines given in the Annexure

However, the industrial projects already approved or in existence in the said Taluka before the date of issue of this notifications, will not be affected by this notification. The existing industries shall have to conform to the statutory standards

The Government of Maharashtra will prepare a Master Plan or Regional Plan for the Taluka based on the existing land use of Dahanu Taluka within a period of 1 year from the date of this notification and get the plan approved by the Ministry of Environment and Forests. This Master Plan or Regional Plan will clearly demarcate all the existing green areas, orchards, tribal areas and other environmentally sensitive areas No change of existing land use will be permitted for such areas in the Master Plan or Regional Plan for the Taluka [2][* * *] The total area within the Dahanu Taluka for location of permissible industries will be restricted to a maximum of 500 acres within the industrial areas marked in the Master Plan. The industrial units will be located at sites that are environmentally acceptable.

Industries which are using chemicals above the limits/quantities as prescribed in the Environment (Protection) Act and Rules for hazardous chemicals, notified by the Government of India, should be considered hazardous industries. Hazardous waste may be prosposed off in the identified areas after taking precautionary measures. The disposal areas have to be prescribed, carefully monitored and enforced and the site (s) will be identified in the Master Plan and will be, as far as possible, within the premises of the 500 acres area identified for the industrial estate.

---

[1] Published in Gazette No. 359 dated 20th June, 1991.

[2] Omitted by S.O. 69, dated 2nd February, 1999 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 3rd February, 1999 and S.O. 130 (E), dated 24th February, 1999 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 3rd February, 1999 and S.O. 130 (E), dated 24th February, 1999 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 24th February, 1999.

The Government of Maharashtra will constitute a monitoring Committee to ensure the compliance of the conditions mentioned in the notification, in which local representatives may be included.

ANNEXURE

Guidelines for Permitting/Restricting Industries and Industrial Units in the Dahanu Taluka, Thane District in Maharashtra.

Industries will be classified under three categories, viz, Green, Orange and Red and shown below for the purpose of permitting/restricting such industrial activities in Dabanu Taluka on the basis of environmental and ecological considerations. In case of doubts as to the category in which the industry falls, a reference shall be made to the Ministry of Environment and Forests, Government of India, and such industry will not be permitted untill cleared by the Ministry of Environment and Forests, Govt. of India Expansion/modernisation of existing industries falling in green and orange categories only would be considered on merit Some restriction in Volume of waste water generated, i e., 2 to 3 CMD may be imposed for certain type of small scale units falling under Green or Organge categories.

GREEN CATEGORIES

List of industries that can be considered by the Maharashtra Government agencies for approval/rejection in approved industrial areas without prior approval of the Ministry of Environment and Forests, Government of India (provided that all the following conditions are satisfied) :

(1) Only those industries that are non-obnoxious and non-hazardous will be permitted (Obnoxious and hazardous industries include those using inflammable, explosive, corrosive or toxic substances)

(2) Only those industries that do not discharge industrial effluents of a polluting nature will be permitted

Note :— Industries that undertake any of the following processes or process of similar nature shall be regarded as industries that discharge industrial effluents of a polluting nature, namely :—

Electroplating
Galvanizing
Bleaching
Degreasing
Phosphating
Dyeing
Pickling
Tanning
Polishing
Cooking of fibres
Digesting of hides
Desizing of fabrics
Removal of hair, soaking deliming and washing of fabric
Distillation of alcohol, stillage evaporation
Crushing of sugarcane, filteration, centrifugation, distillation for extraction of sugar,
Manufacture of charcoal

Canning and processing of fruits and vesetables including production of Jam, Jelly, Sauce etc

Filtering backash in D M. Plants

Pulp making pulp processing and paper making

Cooking of coal

Stripping of oxides

Washing of used sand by hydraulic discharge

Solvent extraction.

(3) Only those industries that do not use coal in their manufacturing process will be permitted

(4) Only those industries that do not emit fugitive emissions of a diffused nature will be permitted

Note :— (1) Some of the industries that ordinarily fall in the non-obnoxious, non-hazardous and non-polluting category, subject to fulfilment of above conditions are :—

Rice Mills, Dal Mills, Grain Mills (for production flour),

Manufacture of Supari and masala grinding;

Groundnut decorating (dry);

Chilling Plants and cold storage,

Ice making;

Preserving and processing of fish, coruscates and similar foods,

Manufacture of milk and dairy products such as butter, ghee etc.;

Book binding;

Engraving etching, block making;

Manufacture of structural stone goods, stone dressing and polishing (stone crushing/ stone quarrying will not be permitted);

Manufacture of metal building component such as grills, gates, doors and window frames, water tanks, wire nets, etc. (use of coal not permitted);

Manufacture of mineral water;

Manufacture of trunks and suitcases;

Manufacture of stationery items (except paper and inks);

Manufacture of optical frames;

Manufacture of office and household furniture and appliances.—both steel and wood;

Manufacture of machinery and machine tools and equipment (small-scale);

Wire drawing (cold process), Wire Nails, Baling straps;

Processing if instant Coffee/tea;

Glassware using fuel other than coal/coke;

Optical Glass;

Laboratory ware;

Bakery products, biscuits and confectionery;

Flour mills (excluding Roller flour mills);

(2) The inclusion of industries in this list is for convenience and if in a given case they do not fall in the above category they will be treated as in the Orange or Red Categories.

ORANGE CATEGORY

List of industries that can be permitted in Dahanu Taluka with proper environmental assessment and adequate Pollution Control Measures in sites that have been approved by the Ministry of Environment and Forests, Government of India.

Ceramics;

Preservation of meat and canning;

Manufacture of building materials, such as bricks tiles, blocks, pipes etc. from fly ash generated from the approved/existing power plants,

Sanitryware,

Vegetable oils including solvent extracted oils,

Soap(without steam boiling process),

Formulation of synthetic detergents (non-phosphatic);

Steam generating plants (without coal/coke),

Manufacture of industrial gases (only Nitrogen, oxygen and CO_2),

Surgical and Medical products, excluding prophylactics and latex products

Rubber Foot wear,

Malt foods,

Manufacture of pumps compressors, refrigeration units and fire fighting equipment, medical and surgical instruments,

Fragrances, flavours and food additives,

Organic plant nutrients,

Aerated waters/soft drinks,

Industries falling within the above category with an outlay exceeding Rs 3 crores will have to be referred to the Ministry of Environment and Forests, Government of India for consideration

Industries falling within the above category with an outlay not exceeding Rs 3 crores shall be granted environmental clearance by the State Government Environment Deptt and the MPCB

RED CATEGORY

List of industries that cannot be permitted in Dahanu Taluka

The illustrative list of industries that fall within this category include :—

Metallurgical industries including foundries and alloy making processes;

Coal and other mineral processing industries;

Cement Plants;

Industries based on the use of coal/coke

Refineries;

Petrolchemical industries;

Synthetic Rubber Manufacture;

Thermal and nuclear power plants;

Manufacture of vanaspati, hydrogeneted vegetable oils for industrial purposes;

Sugar Mills;

Manufacture of by-products of coke ovens and coal tar distillation products;

Alkalis and acids;

Electro-thermal products (such as artificial abrasives, calcium carbide, etc.);

Phosphorus and its compounds;

Nitrogen compunds,

Explosives;

Fire-crackers;

Pthalic anhydride;

Processes involving chlorinated hydrocarbons;

Chlorine, fluorine, bromine, iodine and their compounds;

Chemical fertilizers

Synthetic fibres and rayon,

Manufacture and formulation of synthetic pesticides/insecticides/bactericides/fugicides etc.,

Basic drugs,

Alcohol,

Slaughterhouse,

Tanning and processing of animal, skins, hides, leather, etc ;

Plastic or latex industry including manufacturing of Balloon,

Making of coke, liquifaction of coal, Manufacture of fuel gas;

Fibre glass production or processing;

Dyes and their intermediates;

Industrial carbon and carbon products,

Electro-chemicals and their products;

Paint, enamels and varnishes;

Poly vinyl chloride;

Polypropylene;

Chlorates, per chlorates and peroxides;

Polishes;

Synthetic resins;

Plastics;

Asbestos;

Stone Crushing Units

Note :— The case of industries which do not fall in any of the above mentioned three categories, decision in regard to their classification will be taken by the State Government for those projects having an outlay not exceeding Rs. 3 crores and for other reference is to be made to the Ministry of Environment and Forests, Government of India.

PART III-3

SCHEME ON LABELLING OF ENVIRONMENT FRIENDLY PRODUCTS (ECO-MARK)

NOTIFICATIONS

G.S.R. 85 (E), dated 20th February, 1991.[1]—(1) The Government have decided to institute a Scheme on Labelling of Environment Friendly products. The scheme will operate on a national basis and provide accredition and labeling for household and other consumer products which meet certain environmental criteria along with quality requirements of the Indian Standards for that product. The Label shall be known as the "ECOMARK" and will be of the design to be notified.

Any product which is made, used or disposed of in a way that significantly reduces the harm it would otherwise cause the environment could be considered as Environment Friendly Product

(2) *Objectives of the Scheme* ·

The specific objectives of the scheme are as follows —

(*i*) To provide an incentive for manufactures and importers to reduce adverse environmental impact of products.

(*ii*) To reward genuine initiatives by companies to reduce adverse environmental impact of their products

(*iii*) To assist consumers to become environmentally responsible in their daily lives by providing information to take account of environmental factors in their purchase decisions.

(*iv*) To encourage citizens to purchase products which have less harmful environmental impacts.

(*v*) Ultimately to improve the quality of the environment and to encourage the sustainable management of resources.

(3) Administrative and Organisational Structure—

There will be three stages leading to the award of the "ECOMARK" —

1 A steering committee set up in the Ministry of Environment and Forests, to determine the product categories for coverage under the scheme and also formulate strategies for promotion, implementation, future development and improvement in the working of the scheme.

2. A technical committee, set up in the Central Pollution Control Board, to identify the specific product to be selected and the individual criteria to be adopted, including, wherever possible, inter-se priority between the criteria if there be more than one.

3. The Bureau of Indian Standards to assess and certify the products and draw up a contract with the manufactures, allowing the use of the label, on payment of a fee

(3.1.1) *Steering Committee :*

A steering Committee shall be set up in the Ministry of Environment and Forests by the Central government to decide the products categories to be taken up under the scheme, and to formulate the strategies for promotion, future development and improvement of this scheme. The product categories will be notified from time to time.

The functions of the Steering Committee shall be as follows :—

(*a*) Selection of the logo for the ECOMARK".

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 21st February, 1991.

(*b*) Activities related to creation of mass awareness for promotion and acceptance of the scheme.

(*c*) Determining the product category to be taken up under the scheme.

(*d*) Co-ordinating ways of ensuring that industry is actively involved in the scheme.

(*e*) Securing the involvement of other Ministries, Government Departments, industry Associations and other Non-Governmental Organisation and Consumer organisations.

(*f*) Formulation of strategies for future development of the scheme.

(*g*) Identifying institutions in India or outside which are engaged in the standardization of any article or process or improvement of quality of any article or process and recommending assistance to build consumer awareness.

(*h*) Supporting any research for the formulation of ECOMARK products in the interest of Consumer groups.

The composition of the Committee shall be as follows :—

(*i*)	Secretary, Deptt. of Environment and Forests	Chairman
(*ii*)	Secretary, Deptt of Civil Supplies (or his representative)	Member
(*iii*)	Secretary, Ministry of Industry (or his representative)	Member
(*iv*)	Secretary, Ministry of Chemicals and Petrochemicals (or his representative)	Member
(*v*)	Secretary, Ministry of Agriculture (or his representative)	Member
(*vi*)	Secretary, Ministry of Information and Broadcasting (or his representative)	Member
(*vii*)	Director General of Technical Development (or his representative)	Member
(*viii*)	Director General, Council of Scientific and Industrial Research (or his representative)	Member
(*ix*)	Director General, Health Services (or his representative)	Member
(*x*)	Development Commissioner, Small Scale Industries (or his representative)	Member
(*xi*)	Chairman, Central Pollution Control Board	Member
(*xii*)	Not more than five non-officials, to be nominated by the Central Government, to represent the interests of industry, consumer groups or other non governmental organistions; of which atleast two will represent consumer groups.	
(*xiii*)	Officer in charge, "ECOMARK" in the Ministry of Environment and Forests.	Member-Secretary

In case of special requirement of expertise in specific fields, the committee may invite experts as special invitees.

The terms of the Committee shall be for three years or until reconstituted.

(3.1.2.) *Technical Committee* .

A Technical Committee shall be constituted by the Central Government to identify the individual products and determine the criteria for awarding the ECOMARK. The Committee shall function in the Central Pollution Control Board, Delhi.

The following shall be the functions for the Technical Committee :—

(*i*) Identification of specific products for classifying as environment friendly

(*ii*) Reviewing the existing state of knowledge and the environmental criteria being followed in other countries.

(*iii*) Recommend the most appropriate criteria ad parameters to designated various products as environment friendly, including the most important criteria or individual products that have been specified for the purpose and their inter-se priority, whenever possible

(*iv*) Review the various technologies available for determining the criteria

(*v*) Recommend various laboratories and analysts for product assessment to the Ministry of Environment and Forests

(*vi*) Evaluation of the environmental impact of the products and criteria from time to time.

(*vii*) To review from time to time the implementation of the schemes by the Bureau of Indian Standards (BIS), including the sample inspections done by it

(*viii*) Set up sub-committees for each product category if so required, including formulation of test programmes for comparative testing of products by consumer organisations.

(*ix*) The technical committee may set up expert panels to advise it for specific products.

The composition of the Committee shall be —

(*i*)	Chairman, Central Pollution Control Board	Chairman
(*ii*)	Director General, Bureau of Indian Standards, New Delhi	Member
(*iii*)	Director, National Environmental Engineering Research Institute, Nagpur	Member
(*iv*)	Direcfor, National Chemical Laboratory, Pune	Member
(*v*)	Director General, National Test House, Calcutta	Member
(*vi*)	Director, Industrial Toxicology Institute, Lucknow	Research Member
(*vii*)	Director, National Institute of Occupational Health, Ahmedabad	Member
(*viii*)	Note more than five non-officials to represent the interest of industry and consumer groups, of which atleast three will represent the Consumer groups be nominated by the Central Government.	
(*ix*)	Officer in charge, (Eco-Mark Scheme) Control Pollution Control Board.	Member-Secretary

The Committee may co-opt experts on different products, as special invitees.

The terms of the Committee shall be for three years or until reconstituted.

(3 1 3) *Administration*

The Bureau of Indian Standards (BIS) shall implement the scheme.

Following shall be functions of the BIS —

1. Assess the product or Ecomark, certify the product for award of the Ecomark;
2 Review suspend or cancel a licence, for the use of the Ecomark;
3 Mark inspections, and take such samples for analysis of any material or substances as may be necessary to see whether any article or product in relation to which the Ecomark has been used, conforms to the contract or whether the Ecomark is improperly used in relation to any article or process with or without a licence;

(4) *Certification and Licencing* ·

4.1 Under the scheme the manufactures shall apply for testing and certification of products which fall under the notified categories in terms of their compliance with published environmental criteria in the prescribed form The terms and conditions governing operations of licences including fees shall be as per the Bureau of Indian Standards Act and the regulations framed there under

4.2 Testing and certification shall be carried out by the Bureau of Indian Standards For product categories which have the Indian Standards mark, the Bureau of Indian Standards will ordinarily complete the task of certification within a period of three months Products certified as eligible for the ECOMARK shall be licenced to carry the ECOMARK for a prescribed time period

4.3 The product shall be reassessed after the prescribed period and the licence fee shall have to be paid again for the mark

(5) *The Criteria for Ecomark*

Environmental criteria for each product category will be notified by the Central Government and later on shall be translated into Indian Standards by the Bureau of Indian Standards The criteria shall be for board environmental levels and aspects, but will be specific at the product level Products will be examined in terms of the following main environmental impacts —

(*a*) That they have substantially less potential for pollution than other comparable products in production, usage and disposal.

(*b*) That they are recycled, recyclable, made from recycled products or biodegradable, where comparable products are not.

(*c*) That they make significant contribution to saving non-renewable resources, including non-renewable energy sources and natural resources, compared with comparable products.

(*d*) That the product must contribute to a reduction of the adverse primary criteria which has the highest environmental impact associated with the use of the product, and which will be specifically set for each of the product categories.

In determining the primary criteria for a product the following shall be taken into account .—

(*a*) Production process including source of raw material;

(*b*) Case of Natural Resources;

(*c*) Likely impact on the environment;

(*d*) Energy conservation in the production of the product;

(*e*) Effect and extent of waste arising from the production process,

(*f*) Disposal of the product and its container;

(*g*) Utilization of "Waste" and recycled materials;

(*h*) Suitability for recycling or packaging

(*i*) Biodegradability;

The criteria shall be reviewed from time to time. The draft criteria shall be release for public comments for a period of sixty days.

(6) *Period of Award* :

The label shall be awarded for a minimum period of one year and shall roll forward annually. The Bureau of Indian Standards have the powers to withdraw the licence at any time if they find any misleading information. The award may also be withdrawn in case of any change in criteria due to the advancement of technology or any other valid reasons, in consultation with the technical committee. The time period of the award may be reviewed from time to time

(7) *The Logo* .

The Logo for the "ECOMARK" shall be as notified by the Central Government

(8) *Consumer Awareness* :

The Ministry of Environment and Forests shall take appropriate measures to launch a country wide mass awareness campaign, including encouraging consumer groups Assistance will be given to consumer organisations for comperative testing of products and dissemination of information to the public

* * *

LOGO USED FOR PRODUCTS TO BE CERTIFIED AS ENVIRONMENT FRIENDLY PRODUCTS

G.S.R. 831 (E), dated 23rd October 1992.[1]—Whereas in exercise of the decision recorded in Paragraph 7 of the Resolution No 71 of the Government of India in the Ministry of Environment and Forests *vide* G S R No. 85 (E), dated 21-2-1991, the Central Government hereby notify the logo to be used for products to be certified as environment friendly products. The design and specification of the logo shall be as given in the annexure,

The size of the above said logo can be increased or decreased keeping the proportion of the dimensions given in the Annexure as decided by the authority duly notified by the Ministry of Environment and Forests in the Gazette of the Government of India, for administering the ECO-Mark Scheme for a product The Bureau of Indian Standards (BIS) has already been notified in administer the scheme through the resolution referred to above. For the scheme to be operated by BIS under the BIS Act, 1986, a product to be eligible for Marking with the Eco Logo shall also carry the [ISI] Mark of the BIS for quality prescribed with respect to the relevant Indian Standard(s) besides meeting additional optional environment friendly requirements For this purpose the standard mark of the BIS would be a single mark being a combination of the [ISI] mark and the ECO Logo

BIS shall separately notify its Standard Mark including ECO Logo with respect to each relevant Indian Standard under the BIS Act, 1986

1. CRITERIA FOR LABELLING OF AEROSOL PROPELLANTS

G.S.R. 219 (E), dated 17th May, 1996.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85 (E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Aerosol Propellants as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 90 (E), dated 8-2-94.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Aerosol Propellants as Environment Friendly Products as under :

1. General Requirements :

(*i*) Propellants used in aerosol products shall meet the relevant Standards of BIS (Bureau of Indian Standards) pertaining to safety, quality and performance.

(*ii*) The manufacturer must produce the consent clearance as *per* the provisions of Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 alongwith the authorisation, if required under environment (Protection) Act, 1986 and the rules made thereunder to BIS while applying for Ecomark.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 18th May, 1996.

(*iii*) The product package shall be suitably marked that the Ecomark label is applicable only to the propellants used in Aerosol sprays, if the product package is not separately covered under the Ecomark scheme.

(*iv*) Product package or leaflet accompanying it may display instructions of proper use, storage and disposal so as to maximise the product performance, safety and minimise wastage.

(*v*) The material used for product packaging shall be made from recyclable or biodegradable material.

2. Product Specific Requirements for Acerosol Propellants ·

(*i*) The aerosol propellants shall not contain any Ozone Depleting Substances (ODS) relevant to Aerosol industry as identified under Montreal Protocol. List enclosed

Note : Use of mechanical devices for generation of aerosols shall be encouraged for Ecomark.

3 BIS may formulate/incorporate optional standards for environment friendly characteristics.

List of Controlled Substances (CDS) as Identified under Montreal Protocol**

ANNEXURE A

Controlled Substances

Group	Substance	Ozone Depleting Potential*
Group I		
$CFCl_3$	(CFC-11)	1.0

* Where a range of ODPs is indicated, the highest value in that range shall be used for the purposes of the Protocol. The ODPs listed as a single value have been determined from calculations based on laboratory measurements. Those listed as a range are based on estimates and are less certain. The range pertains to an isomeric group. The upper value is the estimate of the ODP of the isomer with the highest ODP, and the lower value is the estimate of the ODP of the isomer with the lowest ODP.

** Identifies the most commercial viable substances with ODP values listed against them to be used for the purposes of the Protocol.

4. The criteria are subject to review after three years from the date of its publication in the Gazette of India. However, the Steering Committee is empowereal to review the criteria earlier as and when need arises.

2. CRITERIA FOR LABELLING OF ARCHITECTURAL PAINTS AND POWDER COATINGS

G.S.R. 623 (E) dated 6th September, 1995[1].—Whereas a notification in exercise of the decision recorded in Paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Architectural Paints and Powder Coatings as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 728 (E), dated 3-12-1993.

And whereas all objections received within the said period of sixty days have been examined Now therefore, after duly considering the objections received, Central Government notifies the criteria for Architectural Paints and Powder Coatings as Environment Friendly Products as under :

1. **Definition of Terms :**

1 In the following criteria :

"aromatic hydrocarbons" means organic substances that have a benzene ring in their molecular structure;

"halogenated solvent" means any organic solvent containing halogens including fluorine, chlorine, bromine and iodine;

"solvent based" means paints and coatings that use an organic solvent as the primary volatile component;

"volatile organic compound" means any organic compound which has a vapour pressure more than 13.3 Pa at 25°C in accordance with ASTN test method D 3960-90

2. **General Requirements :**

2.1. All formulations of paints shall meet relevant standards of Bureau of Indian Standards pertaining to quality and performance.

2.2 The product manufacture must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act 1974, and Air (Prevention and Control of Pollution) Act, 1981 along with the authorisation, if required, under Environment (Protection) Act 1986 and the rules made thereunder to Bureau of Indian Standards while apply for the ECOMARK

2.3 The product must display a list of critical ingredients in descending order of quantity present The list of such ingredients shall be identified by Bureau of Indian Standard

2.4 The product packaging may display in brief the criteria based on which the product has been labelled as Environment Friendly.

2.5 The product may be sold along with instructions for proper use so as to maximise product performance and minimise wastage.

2.6 The material uses for product packaging shall be recyclable, reusable or biodegradable

3. **Product Specific Requirements :**

3.1 Water Based Coasting (Inclusive of Dry Distemper and Cement Paints) :

3.1.1 The product shall not contain more than 5 per cent. volatile organic compounds. (VOC).

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 7th September, 1995 *see* also G.S.R. 110 (E), dated 19th February, 1992 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 19th February, 1992.

3.1.2 Product shall be formulated with mercury and mercury compounds or be tinted with pigments of lead, cadmium, chromium VI and their oxides. Excluded are natural impurities or impurities entailed by the production process up to the amount of 0.1 per cent by weight which are contained in the raw material.

3.1.3 The product shall not be formulated or manufactured with :—

(*a*) free formaldehyde in excess of 10 mg per kg. of paint,

(*b*) halogenated solvents,

(*c*) benzene and poly-aromatic hydrocarbons, and

(*d*) other aromatic hydrocarbons.

Note : The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark

3 2 Powder Coatings

3.2.1 The product shall be free from any VOC (Volatile Organic Compounds)

3.2.2 Product shall not be formulated with mercury or mercury compounds or be tinted with pigments of lead, cadmium, chromium VI and their oxides. Excluded are natural impurities or impurities entailed by the production process up to the amount of 0.1 per cent. by weight which are contained in the raw material.

3.2.3 The product shall not be formulated or manufactured with free formaldehyde in excess of 10 mm per kg. of paint.

Note.—The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark

3.3 Solvent Based High Solid Coatings :

3 3 1 The product shall not contain volatile organic compounds (VOC) in excess of 380 g/l

3 3 2 Product shall not be formulated with mercury or mercury compounds or be tined with pigments of lead, cadmium, chromium VI and their oxides Excluded are natural impurities or impurities entailed by the production process up to the amount of 0 1 per cent by weight which are contained in the raw material

3 2 3 The product shall not be formulated or manufactured with —

(*a*) free formaldehyde in excess of 10 mg per kg of paint.

(*b*) halogenated solvents

(*c*) benzene and poly-aromatic hydrocarbons, and

(*d*) other aromatic hydrocarbons in excess of 10 per cent. by weight.

Note.—The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

4. Bureau of Indian Standards shall formulate/incorporate optional standards for ecological and environmental friendly characteristics.

The criteria are subject to review after three years from the date of its publication in the Gazette of India. However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

* * *

3. CRITERIA FOR LABELLING OF BEAVERAGES,·INFANT FOOD, PROCESSED FRUITS AND VEGETABLE PRODUCTS

G.S.R. 624 (E), dated 6th September, 1995.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 17th September, 1995.

Environment and Forests, *vide* G.S.R. 85 (E). dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Food Items Part II Beverages, Infant Foods, Processed Fruits and Vegetable Products as Environment Friendly was published by the Ministry of Environment and Forests in G.S R No. 789 (E), dated 30-9-92.

And whereas all objections received within the said period of sixty days have been examined Now therefore, after duly considering the objections received, Central Government notifies the criteria for Food items Part II, Beverages, Infant Food, Processed Fruits and Vegetable Products as Environment Friendly Products as under ·

1. **General Requirements :**

1.1 All products of Beverages, Baby Foods and Processed Fruit and Vegetable Products shall meet the relevant standards for BIS pertaining to quality

Note.— Bureau of Indian Standards shall formulate/incorporate optional standard for ecological and environment friendly characteristics

1 2 The product manufacturer must produce the consent clearance as per the provisions of Water (PCP) Act, 1974, Water (PCP) Cess Act, 1977 and Air (PCP) Act, 1981 along with the authorisation if required under Environment (Protection) Act, 1986 and the rules made thereunder to Bureau of Indian Standards while applying for the ECOMARK and the product shall also be in accordance with the Prevention of Food Adulteration Act, 1954 and the rules made thereunder Additionally FPO 1955 (Fruit Product Order), framed under Essential Commodities Act, 1995, Standards of Weight and Measures Act, 1976 and 1985 requirements wherever applicable has to be complied with.

1 3 The product/packaging may also display in brief the criteria based on which the product has been labelled environment friendly

1.4 The material used for product packing shall be recyclable, or biodegradable.

1 5 The date of manufacture and date of expiry shall be declared on the product package by the manufacturer

1.6 The product must be microbiologically safe when tested as per IS · 5403 and IS 5887 (Part-V) and should be free from bacterial and fungal toxins.

1.7 The pesticide residues (if any) in the product shall not exceed the limit as prescribed in PFA Act, 1954 and the rules made thereunder

Note · The rules under PFA Act, 1954 does not cover the tolerance limits for all the important pesticide residues commonly found in Food Items. The CCFS, DGHS, Ministry of Health, Government of India would be requested by CPCB through Ministry of Environment and Forests to provide an elaborate list of pesticide residues along with their tolerance limits for ECOMARK.

1.8 The product package or leaflet accompanying it may display instructions of proper use, storage and transport (including refrigeration temperature compliance) so as to maximise the product performance, safety and minimise wastage. The applicability of this clause to the specific products shall be decided by BIS.

2. **Product Specific Requirements :**

2.1 Beverages :

IS 2346 : 1992 Carbonated beverages.
IS 13019 : 1991 Non alcoholic beverages bases (concentrates) for domestic use.

2.1.1 Arsenic content of the product shall not exceed 0.1 ppm.

2.1.2 The material used inside the metal cap of the product shall conform with the relevant Indian Standards of food grade plastics. Caps and closures shall not be treated as labels.

2.1.3 The percentage of fruit juice/pulp, if any added shall be mentioned on the product package.

2.1.4 No synthetic colour and artificial sweetener shall be added or used in the product manufacturing ·

2.2 Infant Foods :

IS 1547 : 1985 Infant milk food
IS 1656 : 1985 Milk Cereal based weaning food
IS 11156 · 1985 Infant Formulae
IS 13471 : 1992 Low fat infant formula
IS 6387 . 1987 Vegetable protein infant food with milk.

2.2.1 Arsenic content of the product shall not exceed 0.1 ppm

2.2.2 The material used inside the metal cap of the product shall conform with relevant Indian Standards of food grade plastics Caps and closures shall not be treated as labels

2.2.3 The percentage of fruit juice/pulp, if any added shall be mentioned on the product package.

2.2.4 No synthetic colour and artificial sweetener shall be added or used in the product manufacturing.

2.2.5 Product shall be free from Aflatoxins.

2.3 Processed Fruits and Vegetable Products excluding Beverages ·

(*a*) Canned fruits and vegetables :

IS 2867 · 1964 Canned Mangoes
IS 2868 1964 Canned Pineapples
IS 2869 1964 Canned Orange Segments
IS 3445 1965 Canned Peas
IS 3246 1965 Canned Okra (Bhindi)
IS 3247 1976 Canned Bitter Gourd (Kerala)
IS 3248 1993 Canned Tomatoes
IS 3500 1966 Mango Chutney
IS 3501 1966 Pickles
IS 8786 1978 Canned Okra (Bhindi) in Tomato Sauce
IS 9789 1981 Canned Apricot
IS 9790 1981 Canned Fresh Beans
IS 9791 1981 Canned Tinda
IS 9811 . 1981 Canned Kundri
IS 9812 . 1981 Canned Spinach
IS 9822 : 1981 Canned Parwal
IS 9823 : 1981 Canned Potatoes
IS 10252 : 1982 Canned Carrot in Brine
IS 10253 : 1982 Canned Papaya in Syrup
IS 13474 : 1993 Canned Green Pepper in Brine

(*b*) Dehydrated fruits and vegetable

IS 4452 : 1967 Dehydrated Onion
IS 4624 : 1987 Dehydrated Peas
IS 4625 : 1968 Dehydrated Carrots

IS 4626: 1978 Dehydrated Potatoes
IS 4627: 1968 Dehydrated Cabbage
IS 4628 1978 Dehydrated Okra (Bhindi)
IS 5452 : 1991 Dehydrated Garlic
IS 9486 : 1980 Dehydrated Green Pepper

(c) Jams, jellies and marmalades
IS 5861 : 1993 Jams, Jellies and Marmalades

(d) Juices and concentrates
IS 3547 . 1976 Mango Nectar
IS 3880 · 1976 Canned Mango Pulp
IS 3881 : 1966 Tomato Juice
IS 3882 · 1966 Tomato Ketchup
IS 3883 : 1993 Tomato Puree
IS 3884 . 1993 Tomato Paste
IS 4935 1968 Synthetic Syrups
IS 4936 : 1968 Fruit Squashes
IS 5800 . 1970 Orange Juice
IS 7732 : 1975 Apple Juice
IS 8713 . 1978 Mango Juice

2.3.1 The limit of heavy metal contaminants in the products shall be in accordance with the Indian Standards or as per CODEX standards and whichever is lower will apply. The list of such contaminants shall be identified by BIS

The criteria are subject to review after three years from the date of its publication in the *Gazette of India* However the Steering Committee is empowered to review the criteria earlier as and when need arises

* * *

4. CRITERIA FOR LABELLING OF COSMETICS

G.S.R. 218 (E), dated 17th May, 1996[1].—Where as a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S R. 85 (E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Cosmetics as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R No. 768 (E), dated 24-8-1992

And whereas, all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Cosmetics as Environment Friendly Products as under

1. **General Requirements :**

(i) All the products manufactured shall meet the requirements of following Indian Standards of BIS pertaining to safety, quality and performance :

Sl. No.	Item	IS Code No
1	2	3
1	Skin Powder	IS 3050 : 1978
2.	Skin Powder for infant	IS 5339 : 1978
3.	Tooth	IS 5383 : 1978

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 18th May, 1996.

1	2	3
4.	Tooth Paste	IS 6356 : 1993
5.	Skin Cream	IS 6608 : 1978
6.	Hair Oil	IS 7123 1993
7.	Shampoo Soap based	IS 7669 1990
8.	Shampoo Synthetic Detergent based	IS 7884 . 1992
9	Hair Cream	IS 7679 : 1978
10.	Oxidation Hair dye liquid	IS 8481 1993
11.	Cologne	IS 8482 : 1977
12.	Nail Polish (nail Enamel)	IS 9245 1993
13.	After shave lotion	IS 9255 1979
14	Pomades and Brilliantıes	IS 9339 1988
15.	Depilatories, chemical	IS 9636 1988
16	Shaving cream	IS 9740 1981
17.	Cosmetic pencil	IS 9832 . 1981
18.	Lipstick	IS 9875 : 1990

(*ii*) All the ingredients that go into formulation of cosmetics shall comply with the provisions prescribed in IS 4707 (Part-I) . 1988 and IS 4707 (Part-II) 1993 as well as the product specific requirements.

(*iii*) The product package shall display a list of critical ingredients in descending order of quantity present. This list of such ingredients shall be identified by BIS

(*iv*) The material used for product packaging shall be as per the provisions of Water (Prevention and Control of Pollution) Act, 1974, Water (Prevention and Control of Pollution) Cess Act, 1977 and Air (PCP) Act, 1981 along with the authorisation, if required under Environment (Protection) Act, 1986 and rules made thereunder to BIS while applying for ECOMARK Additionally provisions of the Drugs and Cosmetics Act 1940 and rules made thereunder shall also be complied with

(*v*) The product package shall be suitable marked that ECOMARK label is applicable only to the contents, if the product package is not separately covered under the ECOMARK Scheme

(*vi*) The material used for product packaging shall be recyclable, reusable or biodegradable.

(*vii*) The product packaging may display in brief the criteria based on which the product has been labelled environment friendly.

2. **Product Specific Requirements :**

All the cosmetic formulations shall comply with the requirements given below under (*i*) to (*iii*). Further in addition to compliance with the requirements under (*i*) to (*iii*) the respective cosmetics namely; Tooth paste/tooth power, Hair dyes and Nail Polish shall comply with the requirements given below under (*iv*), (*v*) and (*vi*) respectively

(*i*) Product shall be dermatological safe when tested by the method prescribed by IS 4011 : 1982.

(*ii*) Biodegradability of surfactant agents wherever used in cosmetics formulation shall be as *per* the limit financial for Ecomark for synthetic detergents.

(*iii*) Have metals calculated as Lead (Pb) and Arsenic (As) shall not exceed 20ppm and 2 ppm respectively when tested by the respective methods prescribed in Indian Standards.

(*iv*) Tooth Paste Tooth Powder : For the purpose of formulation of these products, the ingredients listed in IS 6356 : 1993 and IS 5383 : 1978 shall only he used. However, tooth paste shall not be fluoridated and presence of fluoride (F) as impurity shall not exceed the limit of 25 ppm when tested by the method prescribed in Indian Standards

Note : This has been done with a view to ensure safety of these products from oral toxicity as the ingredients listed in the relevant Indian Standards are based on the considerations that they are generally regarded as safe for such formulations.

(*v*) Hair Dyes : Lead based dyes shall not be used

(*vi*) Nail Polish . Haloganated organic solvents shall not be used.

Note : The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark for requirements under (*v*) and (*vi*) above

3. BIS may formulate, incorporate optional standards for environment friendly characteristics

4. The criteria are subject to review after three years from the date of its publication in the *Gazette of India* However, the Steering Committee is empowered to review the criteria earlier as and when the need arises

* * *

5. CRITERIA FOR LABELLING OF DETERGENTS

G.S.R. 440 (E), dated 27th April 1992.[1]—Whereas a notification, in exercise of the decision recorded in paragraph 5 of Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S R. No. 85 (E), dated 21-2-1991, inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling Detergents as Environment Friendly, was published by the Ministry of Environment and Forests in G.S.R. No. 706 (E), dated 29-11-1991.

And whereas all objection received within the said period of sixty days have been examined. Now, therefore, after duly considering the objection received, Central Government notifies the criteria for Detergents as Environment Friendly Products as under :—

1. General requirement :

(*i*) All detergent formulations for household and industrial use shall meet relevant standards of Bureau of Indian Standards (BIS) as amended from time to time, pertaining to quality safety and performance as listed below .—

- IS : 4955-1982 House-hold laundry detergent powers (Second Revision)
- IS : 4956-1977 Synthetic detergents for industrial purposes (First Revision).
- IS : 8180-1982 House-hold laundry detergent bars (First Revision).
- IS : 9458-1980 Synthetic detergents for washing woollen and other delicate fabrics.

(*ii*) The manufactures must produce the consent clearance from the concerned State Pollution Control Board as *per* the provisions of Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 respectively along with the authorization, if required under the Environment (Protection) Act, 1986 to BIS while applying for ECOMARK.

(*iii*) The product must display a list of critical ingredients in decending order of quantity present in per cent. by weight. The list of such critical ingredients shall be identified by the BIS.

---

[1] Published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*i*), dated 28th April, 1992.

(*iv*) The product packaging may display in brief the criteria based on which the product has been labelled as Environment Friendly;

(*v*) The product may be accompanied by detailed instructions for proper use so as to maximise product performance and minimising wastage; and

(*vi*) The product packaging material shall be made from recyclable reusable or bio-degradable material.

Note.—For conformity to this requirement, the manufacturer shall give the declaration with supporting data.

2. Product Specific Requirements :

(*a*) Product shall not contain phosphates. Any other substitutes may be used which shall be environment friendly;

(*b*) The safety on use of the product shall be evaluated as *per* the methods given in the BIS standards as amended from time to time as listed below :

(*i*) The safety evaluation pertaining to irritant potential : according to IS : 11601 (Part I)-1990, and

(*ii*) Skin sensitization potential according to IS . 11601 (Part II)-1991, and

(*c*) Product shall be formulated or manufactured with surfactants which shall be at least 97 per cent bio-degradable.

3. BIS may formulate/incorporate optional standards for environment friendly characteristics

* * *

6. CRITERIA FOR LABELLING OF DRY CELL BATTERIES

G.S.R. 217 (E), dated 17th May, 1996.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G S.R. 85(E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Dry Cell Batteries as Environment Friendly was published by the Ministry of Environment and Forests in G S R No. 415 (*E*), *dated* 12-5-93

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Dry Cell Batteries as Environment Friendly Products as under :

1. **General Requirements :**

1.1 The dry cell batteries shall meet relevant standards of Bureau of Indian Standards

Note : BIS may formulate/incorporate optional standards for environment friendly characteristics.

1.2 The product manufacture must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act, 1974, Water (Prevention and Control of Pollution) Cess Act, 1977 and Air (Prevention and Control of Pollution) Act, 1981 along with the authorisation, if required, under Environment (Protection) Act, 1986 and the rules made thereunder.

1.3 The product packaging may display in brief the criteria based on which the product has been labelled environment friendly.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 18th May, 1996.

1.4 The product may be sold along with instructions for proper use so as to maximise the product performance and safe disposal.

1.5 The material used for product packaging shall be recyclable, reusable or biodegradable

1.6 The manufacturer shall organise the collection payback system for the used batteries and provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

2. **Product Specific Requirements :**

2.1 Dry Cell Batteries :

2.1 1 Non-rechargeable :

The amount of mercury in batteries shall not exceed 0.005 per cent. by weight.

3. The criteria are subject to review after three years from the date of its publication in the *Gazette of India* However, the Steering Committee is empowered to review the criteria earlier as and when need arises

* * *

7. CRITERIA FOR LABELLING OF EDIBLE OIL, TEA AND COFFEE

G.S.R. 678 (E), dated 30th August, 1994.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S R. 85 (E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Edible Oils, Tea and Coffee as Environment Friendly was published by the Ministry of Environment and Forest in G.S R No. 600, dated 18-6-1992.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received. Central Government notifies the criteria for Edible Oils Tea and Coffee as Environment Friendly Products as under

1. **General Requirements :**

(*i*) All formulation of edible oils, tea and coffee shall meet relevant standards of Bureau of Indian Standards pertaining to quality

(*ii*) The product manufacturer must produce the consent clearance as *per* the provisions of Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981. Water (Prevention and Control of Pollution) Cess Act, 1977 respectively along with the authorisation, if required, under Environment (Protection) Act, 1986 and the rules made thereunder to Bureau of Indian Standards while applying for the Eco-Mark: and the product shall be in accordance with the Prevention of Food Adulteration Act, 1954 and the rules made thereunder unless otherwise specified. Additionally, in case of Vanaspati, the manufacturer shall comply with the provisions under Vegetable Oil Products Control Order, 1975 issued by the Director of Vanaspati, Ministry of Civil Supplies, Government of India.

(*iii*) The product must display a list of critical ingredients in descending order of quantity present (C/o W/W, or V/V). The list of such ingredients shall be identified by the Bureau of Indian Standards.

(*iv*) The product packing may display in brief the criteria based on which the product has been labelled environment friendly

---

1. Published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*i*), dated 6th September 1994.

(*v*) The material used for product packaging shall be recyclable (i e, which can be reprocessed to manufacture any other useful product) or biodegradable and the parameters evolved under the SLEEP on the specific subject of packaging shall apply.

2. **Product Specific Requirement :**

A. EDIBLE OILS

Category 1 . Raw and Refined Edible Vegetable Oil

(*i*) The product shall not contain aflatoxin more than 5 ppb

(*ii*) The pesticide resides (if any), in the product shall not exceed the limits as prescribed in Prevention of Food Adulteration Act, 1954 and rules made thereunder.

(*iii*) The toxic metal concentration (if any) shall not exceed the following limits,

Toxic Metals	Concentrations
Lead	5.0 ppm
Arsenic	0.5 ppm
Cadmium	1.0 ppm
Mercury	0.25 ppm.

(*iv*) Antioxidants are permitted under Prevention of Food Adulteration Act, 1954 in specified quantities shall be used

(*v*) Shelf life shall be declared and marked by the manufacturer

Category 2 :Vanaspati (Hydrogenated Vegetable Oil)

(*i*) Nickel concentration in the product shall not exceed 0 5 part per million

(*ii*) The product shall be free from obnoxious chemicals

(*iii*) The pesticides resides (if any) in the product shall not exceed the limits as prescribed in Prevention of Food Adulteration Act, 1954 and Rules made thereunder

(*iv*) The toxic metal concentration (if any) shall not exceed the following limits,

Toxic Metals	Concentrations
Lead	5 0 ppm
Arsenic	0 5 ppm
Cadmium	1 0 ppm
Mercury	0 25 ppm

(*v*) Shelf life shall be declared and marked by the manufacturer.

(*vi*) Only permitted antioxidants under Prevention of Food Adulteration Act, 1954 shall be used, if required.

B. TEA

(*i*) Product shall be free from adulterants like spent tea leaves, grit, sand, leaves of other plants.

(*ii*) Product shall be free from off-odour and shall have its characteristic flavour.

(*iii*) Lead content shall not exceed 6.5 ppm.

(*iv*) The product shall be free from any added colouring and no extraneous flavour shall be added, however, for exports this may be allowed as per the provisions of PFA Act, 1954 and rules made thereunder.

(*v*) Product shall be free from mould growth.

(*vi*) The pesticides residues (if any) shall not exceed the limits as specified in the Prevention of Food Adulteration Act, 1954 and Rules made thereunder.

C. COFFEE

(*i*) Coffee beans shall be free from infestation due to insect, fungus and rodents.

(*ii*) Product shall be free from any extraneous matter like strings, stone, dirt, wood, glass and metallic pieces

(*iii*) Product shall be free from any added colouring, flavouring and also free, from rancidity and should have its characteristic flavour.

(*iv*) Product shall be free from adulterants like dandelion and other roots nerons, fig, date, stones and cereals.

(*v*) The pesticides residues (if any) in the product shall not exceed the limits as prescribed in Prevention of Food Adulteration Act, 1954 and Rules made thereunder.

3. BIS may formulate/incorporate optional standards for environment friendly characteristics.

4. The criteria are subject to review after three years from the date of his publication in the *Gazette of India*, However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

* * *

8. CRITERIA FOR LABELLING OF ELECTRIC/ELECTRONIC GOODS

G.S.R. 214 (E), dated 17th May, 1996.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labeling of Electric/Electronic Goods as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 789 (E), dated 28-9-92.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Electric/Electronic Goods as Environment Friendly Products as under :

1. **General Requirements :**

1.1 All products manufactured shall meet the requirements of following Indian Standards of BIS pertaining to quality, safety and performance :

S. No.	Item	IS Code No
1	2	3
1.	Tubular fluorescent lamps	IS 2418 (Pt-1) : 1977
2.	Electrical Iron	IS 366 : 1985
3.	Steam Iron	IS 6290 : 1986
4.	Immersion water heater	IS 368 : 1983
5.	Electric radiater	IS 369 . 1983
6.	Electric Stoves	IS 2994 : 1986

---

[1] Published in *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 18th May, 1996.

1	2	3
7.	Ceiling fans including regulators	IS 374 : 1979
8.	Pedestal fans	IS 1169 : 1967
9.	Table fans	IS 555 : 1979
10.	Exhaust fans	IS 2312 : 1967
11.	Desert coolers	IS 3315 : 1974
12.	Gysers	IS 2082 : 1985
13.	Electric toasters	IS 1287 : 1986
14.	Refrigerators	IS 1476 : 1979
15.	Colour Televisions	IS 10662 : 1992
16.	Black and White Televisions	IS 4547 · 1992
17.	Food Mixers	IS 4250 1980
18.	Instantaneous water heaters	IS 8978 : 1985
19.	Electronic fan regulators	IS 11037 : 1984
20.	Manually operated voltage regulator for domestic use	IS 8447 : 1989
21.	Automatic line voltage corrector	IS 8448 : 1989
22.	Servo motor operated line voltage corrector	IS 9815 : 1989
23.	Hot plates	IS 365 . 1983
24.	Single phase electric motors	IS 996 1979

Note : BIS may formulate/incorporate optional standards for environment friendly characteristics

1 2 The product manufacturer must produce the consent clearance as per the provision of Water (Prevention and Control of Pollution) Act, 1974, Water (Prevention and Control of Pollution) Cess Act, 1977 and Air (Prevention and Control of Pollution) Act, 1981 along with the authorisation if required under Environment (Protection) Act, 1986 and rules made thereunder to Bureau of Indian Standards while applying for the ECOMARK.

1 3 The product must display a list of critical components/cautionary notes, as applicable, which shall be decided by BIS.

1.4 The product packaging may display in brief the criteria based on which the product has been labelled environment friendly.

1.5 The product may be sold along with instructions for proper use so as to maximise product performance, minimise wastage and method of safe disposal of used product

1.6 The materiel used for product packaging shall be recyclable or biodegradable

1.7 Domestic electrical/electronic appliances shall conform to the noise levels s notified under the Environment (Protection) Act, 1986 from time to time for individual appliance if any.

Note : The Central Pollution Control Board may provide copies of uptodate notification to BIS from time to time.

2. Product Specific Requirements :

2.1 Television (Colour and Black and White) :

2.1.1 CFC and other automatic-halogenated hydrocarbons shall not be used for cleaning purpose during manufacturing assembly.

2.1.2 The electro magnetic radiation from colour television shall not exceed the limit specified in IS 6842 : 1977 when tested as prescribed in IS 4546 : 1983.

2.1.3 The rated maximum power consumption in watts for Colour and Black and White television receivers shall be as specified below :

S. No.	Type	Maximum Power Consumption in Watts (size-wise)	
		51 cm and above	36 cm and above but below 51 cm
1.	CIV	100	75
2.	R&WIV	75	50

Energy Efficiency/Reduced Power Consumption 'for Electrical Appliances (Refer Appendix-I) :

2.2.1 The product shall have at least 5 per cent. improvement in energy efficiency or 5 per cent. reduction in power consumption over and above, the limit prescribed in the relevant Indian Standards. Alternatively equipment using solar energy shall be eligible for ECOMARK under this clause. In case where both energy efficiency and power consumption have been specified in the Indian Standards, the Ecomark criteria shall be based on improved energy efficiency. However, in cases where product of energy efficiency and power factor has been specified, 5 per cent improvement in the specified limit shall be the criteria for Ecomark.

2.2.2 In case of refrigerators, the refrigerants and foam blowing agents shall not contain any Ozone Depleting. Substances (ODG) relevant to refrigeration industry as identified under Montreal Protocal (refer appendix-II).

2.3 Electric type fan regulators, Manual operated voltage stabilizers, Automatic voltage stabilizers and Servo Motor-operated voltage stabilizers :

2.3.1 The product shall have at least 96 per cent. energy efficiency.

2.3.2 In case of electronic type fan regulators, compliance with the relevant Indian Standard together with compliance with the General Requirements prescribed under clause 1, are adequate for considering them under ECOMARK.

Note : The respective sectional committee of BIS may be requested to take up the issue for prescribing requirements for energy efficiency or power consumption or any other requirement with a view to ensure energy conservation in usage of this iron.

2.4 Tubular Fluorescent Lamps :

2.4.1 Slim line fluorescent tubes with 36 watts (as against 40 watts for 38 mm dia fluorescent tubes) and 18 watts (as against 20 watts for 38 mm dia fluorescent tubes) rated power consumption shall be considered for Ecomark.

APPENDIX-I

List of Electrical Appliances Covered under Clause 2.2

1. Electric iron
2. Steam iron
3. Immersion rod
4. Electric radiator
5. Electric stoves
6. Ceiling fans
7. Pedestal fans
8. Table fans
9. Exhaust fans

10. Desert coolers
11. Gysers
12. Electric toasters
13. Refrigerators
14. Electric food mixer
15. Instantaneous water heater
16. Hot plates
17. Single phase electric motors

3. The criteria are subject to review after three years from the date of its publication in the *Gazette of India* However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

* * *

9. CRITERIA FOR LABELLING OF FIRE EXTINGUISHERS

G.S.R. 30 (E), dated 8th December, 1994.[1]— In exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21-2-1991, in the *Gazette of India, Extraordinary,* Part II, the Central Pollution Control Board (CPCB), Ministry of Environment and Forests, Govt. of India propose to publish the criteria for Eco-friendly product specification in respect of Fire Extinguisher.

1. **General Requirements :**

(*i*) Any fire extinguisher having BIS standard mark qualifies for consideration of Ecomark. Following are the existing BIS Standards for portable and mobile fire extinguishers :

IS 940	· 1989	Portable Fire Extinguishers Water Type (Gast Cartridge)
IS 2171	. 1985	Portable Fire Extinguishers Dry Powder (Cartridge Type)
IS 2878	: 1986	Fire Extinguishers Carbon Dioxide Type (Portable and Trolly Mounted)
IS 6234	. 1986	Portable Fire Extinguishers Water Type (Stored Pressure)
IS 10204	1982	Portable Fire Extinguishers Mechanical Foam Type
IS 10658	· 1983	Higher Capacity Dry Powder Fires Extinguishers (Trolly Mounted)
IS 11833	1986	Dry Powder Fire Extinguishers for Metal Fires
IS 13385	1992	Specifications for Fire Extinguishers 50 litre wheel Mounted Water type (Gas Catridge)
IS 13385	. 1992	Specifications for Fire Extinguishers 50 litre Mechanical Foam Type.
IS 13849	: 1993	Portable Fire Extinguishers Dry Powder Type (Constant Pressure)

(*ii*) The product manufacturer must produce the consent clearance as per provision of Water (Prevention & Control of Pollution) Act, 1974, Water (Prevention and Control of Pollution) Cess Act, 1977 and Air (Prevention and Control of Pollution) Act, 1981, respectively, along with authorization if required under Environment (Protection) Act, 1986, and the rules made thereunder to the Bureau of Indian Standards while applying for Ecomark.

(*iii*) The product may display in brief the criteria based on which the product has been awarded Ecomark.

(*iv*) The product may be sold along with instructions for proper use so as to maximise product performance with statutory warning if any, minimise waste and method of safe disposal.

---

[1] Published in the *Gazette of India, Extraordinary,* Pt. II, Sec. 3 (*ii*), dated 16th January, 1998.

(*v*) The material used for product packaging (excluding refills) shall be recyclable, reusable or biodegradable.

(*vi*) The product must display a list of critical ingredients in decending order of quantity present in per cent. by weight. The list of such critical ingredients shall be identified by Bureau of Indian Standards

2. **Product Specific Requirements :**

(*i*) The fire extinguishers shall not contain any Ozone Depleting Substances (ODS) relevant to fire extinguishers Industry as identified under the Montreal Protocal (Annexure A)

(*ii*) Gas based extinguishing media once discharged in the atmosphere should not have life time of more than a year (Annexure B)

(*iii*) Chemicals used should not have global warming potential (Annexure C)

(*iv*) The metallic body and other metal parts of the fires extinguishers shall be free of lead or lead alloys.

(*v*) The coatings used for the metallic part shall not be formulated with mercury and mercury compounds or be tinted with pigments of lead, cadmium, chromium VI and their oxides. Excluded are national impurities or impurities entailed by the production process upto the amount of 0.1 per cent by weight which are contained in the raw material

Note : CO_2 extinguishers may be permitted until such time that suitable substitutes are available.

ANNEXURE A

List of Ozone Depleting Substances (ODS) Controlled by Montreal Protocol

Trade Name	ODP	Trade Name	ODP
Halon 1211	3.0	CFC-111	1.0
Halon 1301	10.0	CFC-112	1.0
Halon 2402	6.0	CFC-211	1.0
CFC-11	1.0	CFC-212	1.0
CFC-12	1.0	CFC-213	1.0
CFC-113	0.8	CFC-214	1.0
CFC-114	1.0	CFC-215	1.6
CFC-115	0.6	CFC-216	1.0
CCl_4	1.10	CFC-217	1.0
$C_2H_3Cl_3$	0.10	Methyl Bromide	0.6
CFC-13	1.0		

Note : ODP values are relative to CFC-11 which has been assigned arbitrary values of 1.0

ANNEXURE B

List of Atmospheric Life Time of Gas Based Agents

Trade Name	Designation	Atmospheric Life Time (Year)	Trade Name	Designation	Atmospheric Life Time (Year)
Halon-13001	(CF 31)	< 1 day	FM 200	HFC-227 EA	41
NAFS III	HCFC (Blend A)	12	CEA 410	FC-3-1-10	2600
FE 25	HCFC-125	36	Halon 1301	Halon 1301	65
FE 241	FCFC-124	6	Inergen	IG 541	—
FE 36	HFC-227 fa	250	Argonite	IG 55	—
FE 13	HFC-23	250	Argon	IG 01	—

ANNEXURE C

List of substances having Global Warming Potential (GWP)

Trade Name	GWP (100 years) Vs CO_2	Trade Name	GWP (100 years) Vs CO_2
Halon 1301	5600	FE 13	12100
Inergen	—	FE 36	8000
Argonite	—	FE 241	480
Argon	—	FE 25	3200
CEA 410	5500	NAFS III	1450
FM 200	3300	CF 31	< 5

10. CRITERIA FOR LABELLING OF FOOD ADDITIVES

G.S.R. 215 (E), dated 17th May, 1996.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991 inviting objects, *vide* G S.R. 85 (E) dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Food Additives as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 68 (E), dated 8th February, 1993.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Food Additives as Environment Friendly Products as under

1. **General Requirements :**

1.1. All the food additives mentioned below shall meet the relevant standards of BIS.

1. Acetic Acid Glacial
2 Vinegar
3. Sodium benzoate
4. Citric acid
5. Sodium metabisulphite
6. Potassium metabisulphite
7. Sodium bicarbonate and Sodium Carbonate
8. Natural Colourants : Caramel
9. Baking Powder.

Note : Bureau of Indian Standards shall incorporate optional standards for environment friendly characteristics.

1.2 The product manufacture must produce the consent clearance as per the provisions of Water (PCP)*Act, 1974, Water (PCP) Cess Act, 1977 and Air (PCP) Act, 1981 along with the authorisation if required under Environment (Protection) Act, 1986 and the rules made thereunder to Bureau of Indian Standards while apply for the ECOMARK and the product shall also be in accordance with the Prevention of Food Adulteration Act, 1954 and the rules made thereunder.

1.3 The product/packing may display in brief the criteria based on which the product has been labelled as Environment Friendly.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated18th May, 1996.

1.4 The material uses for product packing shall be recyclable or biodegradable.

1.5 The date of manufacture and date of expiry shall be declared on the product package by the manufacturer.

1.6 The product package or leaflet accompanying it may display instructions of proper use and storage so as to maximise the product performance, safety and minimise wastage.

2. **Product Specific Requirements :**

2.1 Acetic Acid, Glacial : It shall conform with the following standards :

(*a*) Assay : Not less than 99.5 per cent. by weight, of $C_2H_4O_2$.

(*b*) Arsenic : Not more than 1.5 ppm.

(*c*) Heavy Metals (as Pb) : Not more than 10 ppm.

(*d*) Non-volatile Residue : Not more than 0.005 per cent.

2.2 Vinegar : Vinegar shall conform with the following standards :

(*a*) It shall contain at least 3.75 grammes of acetic acid per 100 ml.

(*b*) It shall contain at least 1.5 per cent. w./v. of total solids 0.18 per cent. of ash

(*c*) It shall not contain (*i*) any mineral acid (*ii*) lead and copper (*iii*) arsenic in amounts exceeding 1.5 parts per million, and (*iv*) any foreign substance or colouring matter except caramel.

(*d*) Malt vinegar, in addition, shall have at least 0.05 per cent. of phosphorus pentoxide (P O) and 0.04 per cent. of nitrogen.

Note : Brewed vinegar shall not be fortified with acetic acid.

2.3 Sodium Benzoate : It shall conform with the following standards :

(*a*) Assay : Not less than 99.5 per cent. of $C_7H_2NaO_2$ calculated on the dry basis.

(*b*) Arsenic : Not more than 1.5 ppm.

(*c*) Heavy Metals (as Pb) : Not more than 10 ppm.

(*d*) Moisture : Not more than 1.5 per cent.

2.4 Citric Acid : It shall conform with the following standards :

(*a*) Assay : Minimum 99.5 per cent. by weight, of Citric Acid.

(*b*) Water Insoluble matter : Not more than 30 ppm.

(*c*) Sulphated ash : Not more than 100 ppm.

(*d*) Chloride (as Cl) : Not more than 5 ppm.

(*e*) Phosphate (as P_2O_5) : Not more than 5 ppm.

(*f*) Calcium : Not more than 25 ppm.

(*g*) Heavy metals (as Pb) : Not more than 10 ppm.

(*h*) Tridodecyclamine : Not more than 0.1 ppm.

2.5 Sodium Metabisulphite : It shall conform with the following standards :

(*a*) Assay : Not less than 95.0 per cent, by weight of $Na_5S_2O_5$

(*b*) Arsenic : Not more than 1.5 ppm.

(*c*) Heavy Metals (as Pb) : Not more than 10 ppm.

(*d*) Iron : Not more than 5 ppm.

(e) Selenium : Not more than 10 ppm.

2.6 Potassium Metabisulphite. It shall conform with the following standards

(a) Assay : Not less than 95.0 per cent. by weight of $K_2S_2O_7$

(b) Arsenic · Not more than 1.5 ppm

(c) Heavy Metals (as Pb) : Not more than 10 ppm

(d) Iron Not more than 5 ppm

(e) Selenium Not more than 10 ppm

2.7 Sodium Bicarbonate It shall conform with the following standards ·

(a) Assay Not less than 99 per cent, by weight as $NaHCO_3$

(b) Ammonium Compound as NH4 · Nil

(c) Arsenic Not more than 1.5 ppm.

(d) Heavy Metals (as Pb) : Not more than 10 ppm

2.8 Natural Colourants : Caramel

2.8.1 The product shall comply with the relevant Indian Standards and with the General Requirements prescribed under Clause-I for consideration of Ecomark.

2.8.2 Caramel Colours · These shall conform to IS 4467, 1994 with the following additional standards :

2.8.2 (A) Caramel Colour (Plain and Caustic Sulphite)

(i) Sulphur dioxide 0.1 per cent

(ii) 4-Methlimidazole Not detectable using TLC method sensitive to 25 ppm minus 20 per cent

2.8.2 (B) Caramel Colour (Ammonia and Ammonia Sulphite)

(i) Sulphur dioxide 0.1 per cent

(ii) 4-Methylimidazole : 200 ppm

2.9 Baking powder The product shall comply with the relevant Indian Standards and with the General Requirements prescribed under Clause-1 for consideration of Ecomark

Note. The limit of Heavy metals (as Pb) given in clauses 2.1 (c), 2.3 (c), 2.4 (g), 2.5 (c), 2.6 (c) and 2.7 (d) includes nine metals namely · Ag, As, Bi, Cd, Cu, Hg, Pb, Sb and Sn when tested as per method given in Food Chemical Code X. 1981, III Edition, Method No.-II on page No. 512-513

3. The criteria are subject to review after three years from the date of its publication in the Gazette of India. However, the Steering committee is empowered to review the criteria earlier as and when need arises.

* * *

11. CRITERIA FOR LABELLING OF LAUNDRY SOAPS

G.S.R. 4 (E), dated 3rd January, 1994.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991, inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling Laundry Soaps as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 67 (E), dated 8-2-1993.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 5th January, 1994.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, the Central Government notifies the criteria for Laundry Soaps as Environment Friendly products as under :

1. All laundry soaps shall meet relevant standards of Bureau of Indian Standards as amended from time to time pertaining to quality, safety and performance as listed below :

—IS 285 : 1992 Laundry Soaps

—IS 2887 : 1992 Laundry Soap Powders

Note : BIS may formulate/incorporate optional standards for environment friendly characteristics.

2. The manufacturers must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act, 1974, Water (Prevention and Control of Pollution) Cess Act, 1977 and Air (Prevention and Control of Pollution) Act, 1981 along with the authorisation, if required, under Environment (Protection) Act, 1986 and to BIS will apply for ECOMARK

3. The product must display a list of critical ingredients in descending order of quantity present in per cent by weight. The list of such critical ingredients shall be identified by Bureau of Indian Standards.

4. The material used for product packaging shall be made from recyclable, reusable or biodegradable material and the parameters evolved under the scheme of labelling environment friendly products on specific subject of packaging shall apply.

5. The product packaging may display in brief the criteria based on which the product has been labelled as Environment Friendly.

6. The product may be accompanied by detailed instructions for proper use so as to maximise product performance and minimise wastage.

7. Product formulated or manufactured shall not contain phosphates

8. The non-soapy detergent (NSD) if used in the manufacture of laundry soaps shall have a biodegradability of minimum 97% when tested as per method prescribed in IS 12795 1989.

9. The material shall pass the test when evaluated for irritant potential as per the method prescribed in IS 11601 (Part-I) : 1986 and skin sensitization potential when evaluated as per the method prescribed in IS 1601 (Part-2) : 1992.

* * *

12. CRITERIA FOR LABELLING OF LEAD ACID BATTERIES

G.S.R. 625 (E), **dated 6th September, 1995.**[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85 (E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Lead Acid Batteries as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 415 (E), dated 14-5-1993

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Lead Acid Batteries as Environment Friendly Products as under :

1. **General Requirements :**

1.1 The automotive lead-acid batteries shall meet the relevant standards of Bureau of Indian Standards.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 7th September 1995.

Note.—BIS shall formulate/incorporate optional standards for environmental friendly characteristics.

1.2 The product manufacturer must produce the consent clearance as per the Provision of Water (PCP) Act, 1974, Water (PCP) Cess Act, 1977 and Air (PCP) Act, 1981 along with the authorisation if required under Environment (Protection) Act, 1986 and rules mad thereunder

1.3 The product packaging may display in brief the criteria based on which the product has been labelled environment friendly.

1.4 The product may be sold along with instructions for proper use so as to maximise the product performance and safe disposal.

1.5 The material used for product packaging shall be recyclable or biodegradable

1.6 The manufacturer shall organise the collection payback system for the used batteries and provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

2. Product Specific Requirements :

2.1 Automotive Lead-Acid Batteries :

2.1.1 The quantity of lead used, in kg per battery (A), charged battery weight with electrolyte in kg (B) and Ratio A:B shall not exceed the limits given below :

S. No.	Type of Battery	Net lead content in kg 'A'	Charged battery weight with electrolyte in kg 'B'	Ratio A B
A.	Type of Battery in IS 7372 (Pt.—1) at 20 h rate capacity			
1	12V 32 Ah	6 11	10 5	59
2	12V 35 Ah	6 6	11 0	60
3	12V 50 Ah	6 36	16 0	53
4	12V 60 Ah	6 96	17 5	57
5.	12V 75 Ah	13 75	22.5	62
6	12V 110 Ah	17 17	30 2	57
7.	12V 120 Ah	19 32	36 0	56
8.	12V 135 Ah	20 91	36.3	58
9.	12V 150 Ah	24.8	45.0	56
B.	Type of battery in IS 13568·1992 at 10 h rate capacity			
10.	6V 4 Ah	0.5	0 85	59
11.	6V 6 Ah	0.7	1.3	54
12.	6V 14 Ah	1 51	2 8	64
13.	12V 2.5 Ah	0.7	1 15	61
14.	12V 5 Ah	1.44	2 10	69
15.	12V 6.5 Ah	1.50	2.35	64

2.1.2 Lead used in batteries shall be recovered/manufactured through a process complying under the provisions of Water (PCP) Act, 1974, Water (PCP) Cess Act, 1977 and Air (PCP) Act, 1981 along with the authorisation if required under Environment (Protection) Act, 1986 and rules made thereunder.

Note.—The manufacturer of the battery shall obtain documentary evidence from the lead manufacturer to this effect such as consent clearance from Pollution Control Board and provide the same to BIS while applying for Ecomark.

2.1 3 The manufacturer of 'Oxide' as well as 'Grid' plates of the battery shall ensure full compliance of the provision of Water (PCP) Act, Water (PCP) Cess Act, 1977 and Air (PCP) Act, 1981 along with the authorisation of required under Environment (Protection) Act, 1986 and rules made thereunder.

Note.—Manufacturer of the battery shall obtain documentary evidence from the "Oxide" and 'Grid' manufacturers to this effect such as consent clearance from Pollution Control Board and provide the same to BIS while applying for Ecomark.

2 1.4 The product shall contain the following percentage of recycled lead (from post-consumer lead) measured over a period of 3 months (as a rolling average), where 100 per cent. is the total amount of lead contained in the batteries manufactured during the quarter :

(*a*)	up to 1 year	25% minimum
(*b*)	up to 2 year	40% minimum
(*c*)	up to 3 year	50% minimum

Note.—The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

GENERAL NOTE.—The success of Ecomark scheme will largely depend on the availability of used/old batteries for recovery/recycling of lead in an environment friendly manner. In order to ensure the availability of used/old batteries the necessary arrangement may be made so that large consumers such as Defence, Railways. State Road Transport Corporations etc., are obliged to return the used/hold batteries to the manufacturers or their authorised agents who will undertake recovery of lead by complying with the provisions of Water (PCP) Act, 1974. Water (PCP) Cess Act, 1977, Air (PCP) Act, 1981 and Environment (Protection) Act, 1986 and the rules made thereunder

The criteria are subject to review after three years from the date of its publication in the *Gazette of India* However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

* * *

13. CRITERIA FOR LABELLING OF LEATHER

G.S.R. 353 (E) dated 16th June, 1998.—In exercise of the decision recorded in Paragraph 5 of the Resolution of the Government of Indiain the Ministry of Environment & Forests, published *vide* G S.R No. 85 (E), dated 21-02-1991 in the Gazette of India, Extraordinary Part II, the Central Pollution Control Board, Ministry of Environment & Forests, Government of India, propose to publish the criteria for Eco-friendly product specification in respect of Leather.

ECOMARK CRITERIA FOR LEATHER

A. General Requirements :

(*i*) All the leather manufactured shall meet relevant Indian Standards of Bureu of Indian Standards pertaining to query, safety and performance.

(*ii*) The manufacturers must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act, 1974, and Air (Prevention and Control of Pollution) Act, 1981, along with the authorisation if receved under the Environment (Production) Act, 1986 to Bureau of Indian Standards while applying for Ecomark.

(*iii*) The product packaging may display in basis the criteria based on which the product has been labelled environment friendly.

(*iv*) the criteria used for product packaging may be recyclable or reusable or biodegradable.

B. Product Specific Requirements :

S. No.	Parameters	Limits mg/kg
1.	pH of aqueous extract of leather	Not less than 3 5 & if less than 3.5 the differential Not on dilution by a factor of 10, should not be more than 0 6
2.	Formaldehyde	≤ 200 mg/kg
3.	Pentachlorophenol (PCP)	≤ 5 mg/kg
4.	Coupled amines released from Azo-dyes (Sum parameters)**	≤ 30 mg/kg
5.	Hexavalent Chromium	≤ 3 mg/kg

* International test methods for Eco-parameters will be followed and reference will be made to the specified method adopted.

** The list of Coupled Amines released from Azo-dyes is appended as Appendix-A

APPENDIX—A

Coupled Amines released from Azo-dyes

1. 4-Aminodiphenyl
2. 2-Amino-4-nitrotoluene
3. Benzidine
4 4-Chloro-o-toluidine
5 2-Naphthylamine
6 0-Aminoazotoluene
7 p-Chloraniline
8 2, 4-Diaminoanisole
4,4-Diaaminodipnenylmethane
10. 3,3-Dichlorobenzidine
11. 3,3-Dimethylbenzidine
12. 3,3-Dimethylbenzidine
13 3,3-Dimethyl-4, 4-diaminodiphenylmethane
14 p-eresidin (2-Methoxy 5-methylaniline)
15 4,4-Methylen-bias (2-chloraniline)
16. 4,4-Oxydianiline
17. 4,4-Thiodianiline
18 0-toluidine
19 2,4-Toluyendiamine
20. 2,4,5,-Trimethylaniline
21 p-Amino-azobenzene
22. 2-Methoxyaniline

* * *

14. CRITERIA FOR LABELLING OF LUBRICATING OILS

G.S.R. 620 (E), dated 6th September, 1995.[1]—Whereas a notification in exercise of the decision recorded in Paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Lubricating Oils as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 518 (E), dated 18-6-1992.

---

[1] Published in the *Gaztte of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 7th September, 1995.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Lubricating Oils as Environment Friendly Products as under :

1.0. General Requirements :

1.1 All lubricating/specialty oils shall meet relevant Indian Standards notified by Bureau of Indian Standards (BIS)

1.2 The product manufacture must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act 1974, Water (Prevention and Control of Pollution) Cess Act, 1977 and Air (Prevention and Control of Pollution) Act, 1981 respectively along with the authorisation, if required, under Environment (Protection) Act 1986 and the rules made thereunder to Bureau of Indian Standards while apply for the Ecomark

1 3 The product must display a list of critical ingredients in descending order of quantity present in per cent. by weight, to be decided by BIS

1.4 The product packaging may display in brief the criteria based on which the product has been labelled as Environment Friendly

1.5 The material uses for product packaging shall be recyclable, reusable or biodegradable

1 6 The Product package or leaflet accompanying it may display instructions of proper use, storage, transport and recommended disposal guidelines after use and safe handling precautions so as to maximise the product performance and minimise wastage

2. Product Specific Requirements :

2.1 Lubricating Oils (Virgin) . Following categories of oil are included .

—Lubricants · Vegetable Oil based

—Lubricants : Other than Vegetable oil based.

2 1.1 The product must not have toxic effect on acquatic organisms EC 50/LC 50 shall not be less than 1.0 mg/litre

Note.—The method of testing to be followed shall be decided by BIS in consultation with the Central Pollution Control Board.

2 1 2 The base oil, additives and formulated products must have per cent. biodegradability as mentioned below

Lubricants	Minimum Biodegradability
Lubricants (Vegetable Oil based)	90%
Lubricants (other than vegetable oil based)	60%

The abovementioned per cent. biodegradability shall be tested as per OECD test method CEC-L-33-T-82, 21 days.

2.1.3 The product shall not contain toxic metals such as lead and barium. Antimony shall not be used in concentration beyond 0.25% when tested as per AAS method.

2.1.4 The product must not contain halogenated products such as PCBs, PCTs and PBTs as well as Nitrites.

Note.—The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

2.2 Formulated Lubricants From Reclaimed/Re-refined Oils :

2.2.1 The product shall contain more than 50% by volume re-refined. recycled products, reclaimed through environmentally compatible re-refining process.

Note. 1—The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

Note 2.—The lubricants containing more than 2000 ppm of Halogens or more than 20 ppm of PCBs should be treated as Hazardous Waste and therefore shall not be re-refined/reclaimed.

2.2.2 The product shall meet the product specific requirements as per lubricating oils (Virgin) as mentioned at para 2.1.

3.0 BIS may formulate/incorporate optional standards for environment friendly characteristics.

The criteria are subject to review after three years from the date of its publication in the *Gazette of India*. However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

* * *

15. (i) CRITERIA FOR LABELLING OF PACKAGING MATERIAL/PACKAGE (PART I : PAPER BOARDS AND PLASTICS EXCLUDING LAMINATES)

G.S.R. 621 (E), dated 6th September, 1995.[1]—Whereas a notification in exercise of the decision recorded in Paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labeling of Packaging Material/ Package (Part I : Paper Boards and Plastics excluding laminates) as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R No 651 (E), dated 13-10-1993.

And whereas all objections received within the said period of sixty days have been examined Now therefore, after duly considering the objections received, Central Government notifies the criteria for Packaging Material/Package (Part I Paper Boards and Plastics excluding laminates) as Environment Friendly Products as under :

1. **General Requirements :**

1.1. All the packaging material/package manufactured shall meet relevant Indian Standard of BIS (Bureau of Indian Standards) pertaining to safety, quality and performance wherever applicable.

1.2 The manufacturer of packaging material/package must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act, 1974, and Air (Prevention and Control of Pollution) Act, 1981 along with the authorisation, if required, under Environment (Protection) Act 1986 and the rules made thereunder to BIS while apply for the Ecomark. Additionally the manufacturer shall also comply with the provisions under prevention of Food Adulteration Act, 1954 and rules made thereunder, wherever necessary.

1.3 The packaging material/package may display in brief the criteria based on which the product has been labelled as Environment Friendly.

1.4 The packaging material/package may be sold along with instruction for proper use and mode of safe disposal so as to maximise product performance and minimise wastage.

1.5 It shall also be suitably mentioned the ECOMARK label is applicable only to the packaging material/package, if content is not separately covered under Ecomark. It may be stated that the Ecomark is applicable to the product or packaging material or both.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 7th September, 1995.

2. **Product Specific Requirements :**

2.1 PAPER

2.1.1 The paper and paper boards packaging materials/packages shall be manufactured from the following raw materials —

(*a*) 100 per cent. waste paper or agricultural/industrial wastes;

(*b*) A minimum of 60 per cent. by mass of pulp made from materials other than bamboo, hardwood, softwood and reed;

Note.— The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark of requirements under (*a*) and (*b*) above.

(*c*) Paper and paper boards used for packaging of food materials shall be manufactured from virgin pulp and shall be free from dioxins. Printed surfaces of the paper shall not come into contact with the food and the maximum amounts of contaminants in paper intended to come into contact with food shall not exceed the limits given in the following table when tested as per the method given in Appendix-I

TABLE

Contaminant	X	Y (mg/kg of paper)	Z
Cadmium (Cd)+6	—	0.5	0.5
Chromium (Cr)	—	0.1	0 1
Lead (Pb)	—	3.0	3.0
Mercury (Hg)	—	0.3	0.3
Pentachlorophenol (PCP)	0.05	0.05	0.05
Polychlorinated biphenyls (PCBs)	2.0	2.0	2.0

X : Paper intended to come into contact with dry food.

Y : Paper intended to come into contact with wet food and food with fatty surface.

Z : Paper for filtration.

2.1.2 The paper and paper boards packaging materials/packages shall conform to the relevant Indian Standards. The paper and paper boards used for the manufacture of packaging materials/packages shall comply with the relevant Indian Standards.

2.2 PLASTICS

2.2.1 The plastic packaging materials/packages used for packaging of food, pharmaceutical, cosmetics and drinking water shall comply with the relevant Indian Standards and shall be manufactured from the plastics which shall comply with relevant Indian Standards.

2 2.2 The packaging material used for packaging of non-food, non-pharmaceutical, non-cosmetics and non-drinking water commodities shall be manufactured from recycled plastics which shall, apart from fillers and reinforcing agents, be a minimum of 30 per cent. by weight of compatible plastic wastes.

Note.—The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

3. BIS may formulate/incorporate optional standards for environment friendly characteristics.

APPENDIX I

Determination of some Contaminants from Paper Intended to come into contact with food

LEAD (Pb)

The sample from paper will be leached with extraction fluid of pH 2.88±0.05 prepared by mixing 5.7 ml of acetic acid in one litre of double distilled water for 18±2 hrs using shaker rotating/moving at 30+2 rpm

The metal content of the extract will be determined by separating the extract from the paper matrix by filtration through glass-fire filter with 45 micron pore size. The liquid fraction will be acidified and digested prior to Pb analyses as per Standard Method for the Examination of Water and Wastewater (APHA, AWWA, WPCF) 18th edition 1992 The metal content of the extract will be determined using Atomic Absorption Spectrometric and Graphite Oven technique

CADMIUM (Cd)

The sample from paper will be leached with extraction fluid of pH 2.88±0.05 prepared by mixing 5.7 ml of acetic acid in one litre of double distilled water for 18±2 hrs using shaker rotating/moving at 30±2 rpm.

The metal content of the extract will be determined by separating the extract from the paper matrix by filtration through glass-fire filter with 45 micron pore size. The liquid fraction will be acidified and digested prior to cd analyses as per Standard Method for the Examination of Water and Wastewater (APHA, AWWA, WPCF) 18th edition 1992 The metal content of the extract will be determined using Atomic Absorption Spectrometric and Graphite Oven technique

CHROMIUM (Cr+6)

The sample from paper will be leached with extraction fluid of pH 2.88±0.05 prepared by mixing 5.7 ml of acetic acid in one litre of double distilled water for 18±2 hrs using shaker rotating/moving at 30×2 rpm

The metal content of the extract will be determined by separating the extract from the paper matrix by filtration through glass-fire filter with 45 micron pore size. The Cr+3 and other interfering metals will be precipitated with aluminium sulphate Cr+6 will be determined from the extract with diphenylcarbazide using spectrophotometry (550 nm)

MERCURY (Hg)

The sample from paper will be leached with extraction fluid of pH 2.88±0.05 prepared by mixing 5.7 ml of acetic acid in one litre of double distilled water for 18±2 hrs. using shaker rotating/moving at 130[IKS1]+2 rpm.

The metal content of the extract will be determined by separating the extract from the paper matrix by filtration through glass-fire filter with 45 micron pore size. The Hg content of the extract will be determined using cold vapour atomic absorption spectrometric method.

Note.—For each metal, the metal content of the leaching fluid should be determined simultaneously and subtracted from the metal value of the extract.

PENTACHLOROPHENOL (PCP)

The sample from paper will be extracted with an organic solvent. The extract is concentrated and acetylated. The determination of PCP is done by gas chromatography.

POLYCHLORINATED BIPHENYLS (PCBs)

The sample from paper is extracted with boiling ethanolic potassium hydroxide solution. An aliquot of the extract is mixed with water and subjected to extraction with hexane. The PCBs contained in the hexane phase are quantified by capillary gas chromatography using an EC detector. The pattern of the peaks is compared with the pattern of a suitable technical PCB.

The criteria are subject to review after three years from the date of its publication in the *Gazette of India*. However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

* * *

(ii) CRITERIA FOR LABELLING OF PACKAGING MATERIAL/PACKAGE (PART II : LAMINATES AND PRODUCTS)

G.S.R. 622 (E), dated 6th September, 1995.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Packaging material/package; Part II : Laminates and products thereof as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No 425 (E), dated 21-5-1993

And whereas all objections received within the said period of sixty days have been examined Now therefore, after duly considering the objections received, Central Government notifies the criteria for Packaging material/package; Part II . Laminates and Products thereof as Environment Friendly Products as under :

1. **General Requirements :**

Following requirements will be applicable depending upon there relevance to the specific product (to be decided by BIS)

1.1. Laminates and products thereof consisting of two or more substrates mentioned below used for manufacture of packaging material/package shall meet the relevant Indian Standards of Bureau of Indian Standards (BIS).

(*a*) Aluminum
(*b*) Jute
(*c*) Paper
(*d*) Plastic

Note.—BIS shall formulate/incorporate optional standards for environmental friendly characteristics.

1 2 The manufacture of packaging material/package must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act 1974, Water (Prevention and Control of Pollution) Cess Act, 1977 and Air (Prevention and Control of Pollution) Act, 1981 along with the authorisation, if required, under Environment (Protection) Act 1986 and the rules made thereunder to BIS will apply for ECOMARK. Additionally the manufacturer shall also comply with the provisions under Prevention of Food Adulteration Act, 1954 and rules made thereunder, wherever necessary.

1 3 The packaging material/package may display in brief the criteria based on which if has been labelled as environment friendly.

1 4 The packaging material/package may be sold along with instruction for proper storage, use and mode of safe disposal so as to maximise product performance and minimise wastage

1.5 It shall also be suitably mentioned that Eco label is applicable only to the packaging material/ package, if contents is not separately covered under Ecomark, wherever is applicable. It may be stated that the Ecomark is applicable to the product or packaging material/package or both.

1.6. Packaging material/package as well as ink used for printing on it shall not contain—

(*a*) heavy metals (as Pb) more than 10 ppm where tested as per method given in IS 4006 (Part-III; 1978, and

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (i) dated 7th September, 1995.

(*b*) arsenic content shall not exceed 1.5 ppm when tested as per method given in IS 1060 (Part-II); 1960.

1.7 The compatibility of the product, process and package including its substrates and adhesives must be ensured by the manufacturer of the end product so that the product (content) quality is maintained within the specified limits till the end of its declared shelf life wherever applicable. The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to BIS while applying for Ecomark

2. **Product Specific Requirements :**

2.1 Laminates and products thereof shall be recyclable or reusable for non-food purposes which shall be demonstrated to BIS with supporting document/certificate

Note.—The products made from recycled/reused laminates and products thereof shall not be used for packaging of food, pharmaceutical, cosmetics and drinking water.

2 2 The laminates and products thereof used for packaging of food, pharmaceuticals, cosmetics and drinking water shall be manufactured from the raw material as specified in the relevant Indian Standard for this purpose.

2 3 The laminates and products thereof shall not contain any residual volatile organic compounds when tested by gas liquid chromatography method.

2.4 There shall not be any obnoxious odour in laminate and products thereof.

The criteria are subject to review after three years from the date of its publication in the Gazette of India. However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

* * *

16. CRITERIA FOR LABELLING OF PAPER

G.S.R. 109 (E), dated 19th February 1992.[1]—In exercise of the decision recorded in *paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and* Forests published *vide* G S R 85 (E), dated 20-2-1991 in the Gazette of India, Extraordinary, Part II, Sec 3, sub-section (*i*), the Central Government hereby notifies the following ceriteria for labelling Paper as Environment Friendly Products, as under —

1. **General Requirements** : (*i*) All the papers manufactured shall meet relevant Indian Standards, of Bureau of Indian Standards (BIS) pertaining to quality and performance

Note.—Bureau of Indian Standards shall formulate/incorporate optional standards for ecological environment friendly characteristics

(*ii*) The product manufacturer must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 respectively along with the authorisation, if required, under Environment (Protection) Act, 1986 and rules made thereunder to BIS while applying for ECOMARK.

(*iii*) The product packaging may display in brief the criteria based on which the product has been labelled environment friendly.

(*iv*) The material used for product packaging shall be made from recyclable, reusable or biodegradable material and the parameters evolved for the packaging shall also apply.

2. **Product specific requirement :**

In order to qualify for the ECOMARK the product specific requirement shall be as under :—

(*i*) The paper and paper boards manufactured out of pulp containing not less than 60 per cent. by weight of pulp made from materials other than bamboo, hard woods, soft woods and Reed.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 19th February, 1992.

(*ii*) Recycled paper and paper board must be made from 100 per cent. waste paper.

3. Filing of objection :

Any person interested in filing objections against these criteria for labelling detergents as environment friendly, may do so in writing to Deputy Secy., Ministry of Environment and Forests, Paryavaran Bhavan, CGO Complex, Lodi Road, New Delhi within sixty, days from the date of publication of this notification in the Official Gazette

* * *

17. CRITERIA FOR LABELLING OF PLASTIC PRODUCTS

G.S.R. 220 (E), dated 17th May, 1996.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85 (E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Plastic Products as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 518 (E), dated 10-6-1992.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Plastic Products as Environment Friendly Products as under .

1. **General Requirements :**

1.1. All produces of plastics shall meet relevant standards of Bureau of Indian Standards pertaining to quality safety and performance.

1.2 , The product manufacture must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act, 1974, and Air (Prevention and Control of Pollution) Act, 1981 along with the authorisation if required under Environment (Protection) Act, 1986 and the rules made thereunder to Bureau of Indian Standards while applying for the ECOMARK. *The manufacturers of Plastic wares shall produce documentary evidence with respect* to the compliance of regulation under Prevention of Food Adulteration Act, 1954 and Drugs and Cosmetic Act, 1940 and the rules made thereunder, wherever necessary.

1.3 The product must display a list of critical ingredients in descending order of quantity present expressed as per cent. of the total. The list of such ingredients shall be identified by Bureau of Indian Standards.

1.4 The product packaging may display in brief the criteria based on which the product has been labelled as Environment Friendly.

1 5 The material uses for product packaging shall be recyclable or biodegradable.

1.6 It shall also be suitably mentioned that Ecomark label is applicable only to the packaging material/package if content is not separately covered under Ecomark. It may be stated that the Ecomark is applicable to the product or packaging material or both.

2. **Product Specific Requirements :**

2.1 Food, Pharmaceutical and Drinking Water Grade Plastic Products :

2.1.1 For the manufacture of these items one or more of the vigin material covered in following Indian Standards shall be used :—

1. IS 10142 : 1982.
2. IS 10146 : 1982.
3. IS 10151 : 1982.

---

[1] Published inthe *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 18th May, 1996.

4 IS 10910 : 1984.

5. IS 11434 : 1985.

6. IS 11704 : 1986.

7. IS 12247 : 1988.

8. IS 12252 : 1987.

2.2 Recycled Plastic Products :

This category includes all plastic products as further defined in the following sub-categories

(*a*) Horticultural supplies.

(*b*) Produce containers.

(*c*) Office supplies

(*d*) Non-food containers.

(*e*) Recreational equipment and furniture

(*f*) Construction materials.

Horticultural supplies include all implements, containets and support structures used in gardening activities such as flower pots, garden stakes and berry trays.

Produce containers include containers for agricultural produce such as eggs, fruits and vegetables.

Office supplies include all implements, containers and support structure for use in offices such as presentation folders, file folders and binder covers

Non-food containers, not for holding the contents, include all containers for non-food products such as detergent bottles, pallets, and reusable packaging containers

Recreational equipment and furniture include all implements and support structures designed for the recreational market such as play ground equipment and patio tables

Construction materials include all materials used in the construction of structures whether stationary or transportable, such as lumber, fencing or shingles

2.2.1 The plastic products identified in sub-categories from 2.2 (*a*) to 2.2 (*e*) shall apart from fillers and reinforcing agents, be made from the minimum 90 per cent by weight, of compatible plastic wastes

Note : The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying of ECOMARK.

2.2.2 The plastic products identified in sub-category 2.2 (*f*) shall apart from fillers and reinforcing agents, be made from, the minimum 60 per cent. by weight, of compatible plastic wastes.

Note : This is specified since a higher content of recycled plastic in construction materials is difficult to maintain. A higher content would not allow the end product to achieve structural conformity and performance standards.

3. Bureau of Indian Standards shall formulate incorporate optional standards for environment Friendly characteristics.

4. The criteria are subject to review after three years from the date of its publication in the *Gazette of India*. However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

18. CRITERIA FOR LABELLING OF TEXTILES

G.S.R. 457 (E) ,dated 4th October, 1996.[1]—In exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R 85(E) dated 21-2-1991 published in the, *Gazette of India Extraordinary* Part II Sec. 3 sub-section (*i*), the Central Government hereby notifies the following criteria for labelling of Textiles as Environment Friendly Products.

1. **General Requirements :**

(*i*) All Textile products manufactured shall meet relevant standards of Bureau of Indian Standards.

(*ii*) The product manufacture must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act 1974, and Air (Prevention and Control of Pollution) Act, 1981 Water (Prevention and Control of Pollution) Cess Act, 1977 respectively, along with the authorisation, if required, under Environment (Protection) Act, 1986 and the rules made thereunder to the Bureau of Indian Standards while applying for ECOMARK Additionally, the manufacturer shall produce documentary evidence on compliance of the provisions related to noise level and occupational health under the provisions of Factories Act, 1948 and Rules made thereunder

(*iii*) The product packaging may display in brief the criteria based on which the product has been labelled as Environment Friendly

(*iv*) The material uses for product packaging shall be reusable or made from recyclable biodegradable material.

(*v*) Fatty alcohol based non-ionic as emulsifier should be used wherever required.

(*vi*) Polyhalogenated based phenolic fire retardants shall not be used

2. **Product Specific Requirements :**

A COTTON, WOOL, MAN-MADE FIBRE AND BLENDS :

		Max. limit, mg/kg (ppm)		
S No	Parameter*	Baby Clothing	Close to Skin	Outer Fabrics
1	2	3	4	5
1	Free and Releasable formaldehyde	20	75	300
2.	Extractable artificial sweat/saliva			
	Heavy Metals			
	Mercury	0.1	0.1	0.1
	Chromium III	0.1	0.1	0.1
	Chromium VI	Nil	Nil	Nil
			(Below detectable limit)	
	Sum Parameters (as lead)	10.0	10.0	10.0
3.	Pentachlorophenol (PCP)	0.5	0.5	0.5
			(Detectable limit using GC-MS)	
4.	Volatile Hydrocarbons (non-halogens)	150	150	150
5.	Volatile Halogenated Organics	200	200	200

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 8th October, 1996.

1	2	3	4	5
6.	Pesticides (Sum Parameter)**	1.0	1.0	1.0
	Banned Pesticides	Nil	Nil	Nil
			(Below detectable limit)	
7.	pH of aqueous extract	4.0—7.5	4.0—7.5	4.0—7.5
8.	Coupled Amines released from Azo-dyes (Sum parameters)***	50	50	50
			(Detectable limit using GC-MS)	

*The methods of tests for Eco-parameters are being developed by BIS and Textile Committee. Till the methods of tests are standardised, the manufacturer shall declare conformance taking into consideration the chemicals, auxiliaries and dyes used.

**The list of Pesticides used on cotton, banned, restricted or withdrawn is appended as appendix A.

***The list of Coupled amines released from Azo-dyes is appended as Appendix-B.

B. JUTE AND JUTE PRODUCTS :

S. No.	Parameter*	Max. limit, mg/kg Home Textiles and Clothing	 Hessians and Sockings
1	2	3	4
1.	Free and Releasable formaldehyde		
	Close to skin	75	NA
	Outer Fabrics	300	NA
2.	Extractable artificial sweat/saliva		
	Heavy Metals		
	Mercury	0.1	NA
	Chromium III	0.1	NA
	Chromium VI	Nil	NA
		(Below detectable limit)	
	Sum Parameters (as lead)	10.0	NA
3.	Non-halogenated Hydrocarbons	NA	3%
4.	Fatty esters based oil	1.0	1.0
5.	Pesticides (sum parameter)**	1.0	1.0
	Banned Pesticides	Nil	Nil
		(Below detectable limit)	
6.	pH of aqueous extract	6.0—7.0	6.0—7.0
7.	Coupled Amines released from Azo-dyes (Sum) parameters)***	50	50
		(Detectable limit using GC-MS)	

*The methods of tests for Eco-parameters are being developed by BIS and Textile Committee. Till the methods of tests are standardised, the manufacturer shall declare conformance taking into consideration the chemicals, auxiliaries and dyes used.

**The list of Pesticides used on cotton, banned, restricted or withdrawn is appended as appendix A.

***The list of Coupled amines released from Azo-dyes is appended as Appendix-B.

C. SILK AND SILK PRODUCTS :

S. No.	Parameter*	Max. limit, mg/kg (ppm)		
		Baby Clothing	Close to Skin	Outer Fabrics
1	2	3	4	5
1.	Free & Releasable formaldehyde	20	75	300
2.	Extractable artificial sweat/saliva Heavy metals			
	Mercury	0.1	0.1	0.1
	Chromium III	0.1	0.1	0.1
	Chromium VI	Nil	Nil	Nil
			(Below detectable limit)	
	Sum Parameters (as lead)	10.0	10.0	10.0
3.	Pentachlorophenol (PCP)	0.5	0.5	0.5
			(Detectable limit using GC-MS)	
4.	Volatile Hydrocarbons (non-halogens)	150	150	150
5.	Pesticides (Sum Parameter)**	1.0	1.0	1.0
	Banned Pesticides	Nil	Nil	Nil
			(Below detectable limit)	
6.	pH of aqueous extract	4.0—7.5	4.0—7.5	4.0—7.5
7.	Coupled Amines released from Azo-dyes (Sum parameters)***	50	50	50
			(Detectable limit using GC-MS)	

*The methods of tests for Eco-parameters are being developed by BIS and Textile Committee. Till the methods of tests are standardised, the manufacturer shall declare conformance taking into consideration the chemicals, auxiliaries and dyes used.

**The list of Pesticides used on Silk Worm rearing,, banned, restricted or withdrawn is appended as appendix A.

***The list of Coupled amines released from Azo-dyes is appended as Appendix-B.

APPENDIX—A

I. PESTICIDES REGISTERED FOR USE ON COTTON IN INDIA

Herbicides

Alachlor, Diuron, Fluchlosalin, Monosodium methanearsonate (MSMA), Paraquat Dichloride, Trifluralin.

Fungicides

Carbendazim, Cuprous oxide, Streptomycin and Oxytetracycline, Thiram.

Insecticides

Acephate, BHC, Carbaryl, Carbofturan, Chlorpyriphos, Cypermethrin, Decamethrin, Dicofol, Diflubenzuron, Dimethoate, Endosulfan, Fenitrothion, Fenthion, Fenvalerate, Fluvalinate, Lindane, Malathion, Methyl parathion, Monocrotophos, Nicotine sulphate, Oxydemeton methyl, Permethrin, Phenthoate, Phorate, Phosalone, Phosphamidon, Pyrethrum, Quinalphos, Alphamethrin, Methomyl, Triazophos, Cartap hydrochloride, Neem based products, Carbosulfan (For cotton seed), Fenpropathrin, Bacillus thuringensis.

Plant Growth Regulators

Chlorocholine Chloride (CCC) or Chlormequat Choride.

2. PESTICIDES REGISTERED FOR USE ON JUTE IN INDIA

HERBICIDES : Dalapon

FUNGICIDES : Carbendazim

INSECTICIDES : Carbaryl, Carbofuran, Endosulfan, Lindane, Phosalone, Quinalphos

3. PESTICIDES USED DURING REARING OF SILK WORM

INSECTICIDES : Dichlorvos

FUNGICIDES : Carbendazim

Dithianon

EXTRACT FROM LIST OF PESTICIDES NOT APPROVED, RESTRICTED USE, WITHDRAWN OR BANNED IN THE COUNTRY AS ON 10-04-1992

(*i*) Pesticides not approved for use :

2, 4, 5-T

(*ii*) Pesticides restricted for use :

Use of DDT in agriculture is banned. In very special circumstances warning the use of DDT for plant protection, the State or Central Government may purchase it directly from M/s. Hindustan Insecticides Ltd. to be used under expert Government supervision Use of DDT for public health programme upto 10,000 MT per annum, except in case of any major outbreak is restricted.

Use of Lieldrin shall be restricted for locust Control in desert areas by Plant Protection Adviser to the Govt Of India

(*iii*) Pesticides banned/withdrawn
Pentach/orophenol, Toxaphene and Aldrin

APPENDIX—B

Coupled Amfles released from Azo-dyes

1. 4-Aminodiphenyl
2. 2-Amino-1-introtoluene
3. Benzidine
4. 4-Chloro-o-toluidine
5. 2-Naphthylamine
6. O-Aminoazotoluene
7. p-Chloraniline
8. 2, 4-Diaminoanisole
9. 4, 4'-Diaminodiphenylmethane
10. 3, 3'-Dichlorobenzidine
11. 3, 3'-Dimethoxy-benzidine
12. 3, 3'-Dimethylbenzidine
13. 3, 3'-Dimethyl-4, 4'-diaminodiphenylmethane
14. p-kresidin (2-Methoxy 5-methylaniline)
15. 4, 4'-Methylene-bis-(2-chloraniline)

16. 4, 4'-Oxydianiline
17. 4, 4-Thiodianiline
18. O-Toluidine
19. 2, 4,-Toluyendiamine
20. 2, 4, 5-Trimethylaniline
21. p-Amino-azobenzene
22. 2-Methoxyaniline

3. BIS may formulate incorporate optional standards for environment friendly characteristics.

The criteria are subject to review after three years from the date of its publication in the *Gazette of India*. However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

* * *

19. CRITERIA FOR LABELLING OF TOILET SOAPS

G.S.R. 439 (E), dated 27th April, 1992.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of toilet soaps as Environment Friendly was published by the Ministry of Environment and Forests in G.S.R. No. 705 (E), dated 29-11-1991.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Toilet soaps as Environment Friendly Products as under :

1. **General Requirements :**

(*i*) All toilet soaps shall meet relevant standards of Bureau of Indian Standards as amended from time to time pertaining to quality, safety and performance as listed below :—

— IS 11479 : 1985 : Anti-bacterial toilet soaps.

— IS 2888 : Toilet soap.

— IS 4199 : 1990 : Liquid Toilet soap.

— IS 10523 : 1983 : Baby Toilet soap.

— IS 11303 : 1985 : Transparent Toilet soap.

— IS 5784 : 1970 : Shaving soap.

(*ii*) The manufacturer must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act, 1974, and Air (Prevention and Control of Pollution) Act, 1981 respectively along with the authorisation, if required, under Environment (Protection) Act, 1986 to BIS will apply for the ECOMARK.

(*iii*) The product must display a list of critical ingredients in descending order of quantity present in per cent by weight The list of such critical ingredients shall be identified by Bureau of Indian Standards;

(*iv*) The product packaging material shall be made for recyclable, reusable or biodegradable.

(*v*) The product packaging may display in brief the criteria based on which the product has been labelled Environment Friendly; and

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 28th April, 1992.

(*vi*) The product may be accompanied by detailed instructions for proper use so as to maximise product performance and minimize wastage.

Note.—The conformity to the requirement No. (*iv*) the manufacturer will give the declaration with supporting data.

2. **Product Specific Requirements :**

(*a*) Product formulated or manufacturer shall not contain phosphates and synthetic detergents;

(*b*) Product shall be dermatologically safe when tested by the methods given in DOC . CHD 025 (0236).

3. BIS may formulate/incorporate optional standards for environment friendly characteristics.

* * *

20. CRITERIA FOR LABELLING OF WOOD SUBSTITUTES

G.S.R. 216 (E), dated 17th May, 1996.[1]—Whereas a notification in exercise of the decision recorded in paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, *vide* G.S.R. 85(E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification, against intention for prescribing the criteria for labelling of Wood Substitutes as Environment Friendly was published by the Ministry of Environment and Forests in G S R No 589 (E), dated 10-6-1992.

And whereas all objections received within the said period of sixty days have been examined. Now therefore, after duly considering the objections received, Central Government notifies the criteria for Wood Substitutes as Environment Friendly Products as under .

1. **General Requirements :**

(*i*) Products manufactured shall meet relevant Indian Standards of BIS(Bureau of Indian Standards) pertaining to safety, quality and performance.

(*ii*) The product manufacture must produce the consent clearance as per the provisions of Water (Prevention and Control of Pollution) Act, 1974, and Air (Prevention and Control of Pollution) Act, 1981 and Water (Prevention and Control of Pollution) Cess Act, 1977 along with the authorisation, if required, under Environment (Protection) Act, 1986 and the rules made thereunder to BIS while apply for the ECOMARK, appropriate with enforced rules and regulations of the Forest Department.

(*iii*) The product packaging may display in brief the criteria based on which the product has been labelled environment friendly.

(*iv*) The material uses for product packing shall be recyclable, reusable or biodegradable.

2. **Product Specific Requirements :**

(*i*) Substitutes for fuelwood :

(*a*) Briquettes shall be made from agricultural and wood residues (like saw dust) and domestic wastes (like garbage) without synthetic binders, for industrial and domestic use. Such briquettes shall not be manufactured from any wastes material which contain any hazardous constituents as specified under Hazardous Wastes (Management and Handling) Rules, 1989.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 18th May, 1996.

Note : The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

(*b*) Biogas, LPG and natural gases.

Note : The product container shall be suitably marked that Ecomark label is applicable only to the contents if the product container is not separately covered under Ecomark Scheme. It may be stated that the Ecomark is applicable to the product or product container or both.

(*ii*) Suitables for Wood Building Material

(*a*) Building boards generality used as partitioning panelling, cladding and false-coiling shall be made from agricultural or industrial waste, (such as Phosphopypsum, red mud, baggase, cotton stalk rice bush, coir fibre, sisal fibre or wood residues etc., or wool from sources other than natural forests or environment friendly plastics as notified separately.

(*b*) Door and window frames and shutters used in buildings shall be made from agricultural or industrial wastes or wood resides or wood from sources other than natural forests or ferrocement or building boards, specified in 2 (*ii*) (*a*) above or environment friendly plastic as notified separately or frames made from enforced cement concrete.

Note 1 : The manufacturer shall provide documentary evidence by way of certificate or declaration to this effect to Bureau of Indian Standards while applying for Ecomark.

Note 2 : Wood from sources other than natural forests include wood from rubber, coconut, cashew, industrial and social forestry plantations etc, and shade trees from tea and coffiee estates.

(*iii*) Substitutes for Wood in Furniture :

The furniture (table chairs and Stool etc.,) shall be made from agricultural or industrial wastes or wood residues or wood from sources other than natural forests or building boards specified in 2 (*ii*) (*a*) above or environment friendly plastics as notified separately.

3. BIS may formulate/incorporate optional standards for environment friendly characteristics

4 The criteria are subject to review after three years from the date of its publication in the *Gazette of India*. However, the Steering Committee is empowered to review the criteria earlier as and when need arise.

PART III-4

MONTREAL PROTOCOL

NOTIFICATION

G.S.R. 142 (E), dated 6th March, 1997.[1]—Ministry of Environment and Forests have set-up a Steering Committee on the Montreal Protocol to recommend Projects for accessing the **Multilateral Fund for Implementation of the Montreal Protocol**. The Committee has been empowered to devise its own rules of procedure. The Committee has decided to follow the following procedure for recommending projects to the Multilateral Fund :

(*a*) A project proposal in the specified format (Annexure-A) either prepared by the enterprise on its own or prepared by the enterprise with the help of a consultant—should be submitted to the MOEF (Ozone Cell) The proposal should come under the signature of a full time Director of the Board or Company Secretary/Partner duly certifying all the documents. A Chartered Accountant should also certify the quantity of Ozone Depleting Substances (ODS) consumed by the enterprise in the preceding twelve months or for each of the preceding three years.

(*b*) The enterprise should satisfy itself that it has adequate means of financing project costs not funded by the Multilateral Fund.

(*c*) For proposals prepared with their help, the consultants will authenticate information as given in Annexure-B. Different Committees of MOEF would, on a case by case basis, decide what specific examination of the proposal is required alongwith the agency to do so.

(*d*) Projects will be entertained on first-cum-first served basis, i.e., adverse impact of one project, if any, on later projects will not come in the way of it being recommended

(*e*) The MOEF (Ozone Cell), will send a copy of the project to the Implementing Agency for its comments The Implementing Agencies may send their comments to the enterprise, directly or through its local consultant, with a copy to MOEF (Ozone Cell).

(*f*) The Ozone Cell will also send its commends, if any, to the enterprise

(*g*) After necessary modifications have been incorporated in the project document to address comments of the Ozone Cell and/or Implementing Agency, it will be brought to the Technology and Finance Standing Committee (TFSC) or Standing Committee of Small Scale and Tiny Enterprises (SCSS) for recommendation Cases of no 'agreement' will also be brought to the TFSC/SCSS Project shall be modified as decided by the concerned Committee

(*h*) Enterprises will not be invited to make a presentation before the concerned Standing Committee unless it is specifically decided by the Committee. In such cases, the enterprise and/or consultant involved in the project, can come for discussions during the meeting of the concerned Standing Committee.

(*i*) The project duly recommended by the concerned Standing Committee will be placed before the Steering Committed for final recommendation. The projects having unresolved policy issues will also be brought before the Steering Committee. After the project has been recommended by the Steering Committee, it will be sent to the Implementing Agency for seeking approval of the Executive Committee. It may be noted that projects in the final form are required to be reviewed by external reviewer of the Implementing Agencies.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 8th March, 1997.

(*j*) This procedure will be followed to the extent possible. In special cases, different committees will have necessary authority to make appropriate modifications. The objective will be to ensure that projects are properly prepared and reviewed without causing unnecessary delay.

(*k*) In case where the Executive Committee does not agree with the recommendations of the Govt. the enterprise would have to modify its proposal and this would be informed accordingly.

ANNEXURE — A

Cover Sheet

NAME OF COMPANY :

COUNTRY :

PROJECT TITLE :

SECTOR COVERED :

ODS CONSUMPTION
IN THE SECTOR :

PROJECT IMPACT :

PROJECT DURATION :

PROJECT ECONOMIC LIFE :

TOTAL PROJECT COST : IN US $

INCREMENTAL CAPITAL COST =
INCREMENTAL OPERATING COST =
INCREMENTAL OPERATING SAVINGS =
AGENCY SUPPORT COST =
TOTAL ODS PHASE OUT COST =
ANY OTHER PROJECT RELATED COST =

PROPOSED OTF FINANCING =
(OR GRANT REQUESTED FROM MLF)

COORDINATING MINISTRY :

IMPLEMENTING AGENCY :

1. PROJECT TITLE :

2. PROJECT SUMMARY :

It should clearly and briefly state what is proposed to be done without elaborating company details and achievements. It should also mention the source of non-ODS technology, i.e., in house/indigenous foreign one time purchase/foreign collaboration etc., and the name of technology supplier.

3. PROJECT OBJECTIVE :

It should clearly state the objective of the project, specially emphasising the quantity of ODS phaseout going to be achieved as a result of the project.

4. SECTOR BACKGROUND :

It should provide relevant details about the sector affected by the project so that the project being submitted could be placed in its proper perspective *vis-a-vis* status of ODS phaseout in that sector.

5. ENTERPRISE BACKGROUND :

Please provide information relating to :

(*a*) Nature of enterprise - Family owned/Partnership/ Private Ltd./ Public Ltd. etc.

(*b*) Products being manufactured.

(*c*) Brief history of the enterprise highlighting important achievements like oreation of capacities or addition to capacities for each product being manufactured, marketing of products etc.

(*d*) Current capacity and capacity utilisation for each product being manufactured.

(*e*) Consumption of different ODS for three preceding years in tabular form. Please also provide expected ODS consumption for the current and following two years in absence of the project.

(*f*) Expected consumption of different ODS substituted and ODS, if any, for three years after implementation of project has been completed.

6. PROJECT DESCRIPTION :

It should being with the identification of the problem, followed by formulation of objectives of the project. If the project is in more than one phase, each phase should be described separately. A good project description should explain :

(*a*) Why the project is needed-rationale, justification and explanation of the problem proposed to be addressed by the project;

(*b*) What other firms are involved/affected by the project,

(*c*) What are the project's long term objectives,

(*d*) What are the project's short term objectives, if successfully completed,

(*e*) What actions. activities are needed to accomplish the overall objectives;

(*f*) What non-monetary inputs are needed to realize the objectives;

7. JUSTIFICATION FOR SELECTION OF ALTERNATE TECHNOLOGY :

Please provide comparative assessment of technologies considered. In case you are purchasing technology, please provide source of technology, experience of technology supplier and clearly state—what exactly you are purchasing, e.g., drawings, materials, tools, expertise, chemicals and their precise blends, etc., with some justification. In case assistance of a consultant is needed, please provide brief scope of services to be provided by him.

8. PROJECT COST ·

(*a*) Incremental Capital Cost :—Please provide list of capital equipments required to be replaced or retrofitted, with cost in US $, in a tabular form. Local and imported items should be indicated as such. Basic cost and taxes and duties should be shown separately.

It should be followed by detailed justification for each items as to how it meets the incremental costs criteria as defined in the 'Indicative list of categories of Incremental Costs'.

(*b*) Incremental Operating Costs :—Please provide details of calculation of incremental operating costs along with assumption made.

(*c*) Foreign Ownership :—Percentage of shareholding held by enterprises in non-Article 5 countries should be provided.

(*d*) Exports :—Average of preceding three years exports, separately for each item in percentage terms in a tabular form, to non-Article 5 countries should be provided.

9. COST-EFFECTIVENESS :

Calculate the cost effectiveness of the project, i.e., requested grant from the Multilateral Fund divided by quantity of ODS being phased out in $/Kg

10 BENEFITS

Benefits, if any, that may accrue to the enterprise by implementation of the project should be identified and its monetary value should be calculated.

11. SAVINGS :

Savings from disposal of old equipment, if any, should be deducted.

12. FINANCIAL AND ECONOMIC ANALYSIS :

(*a*) Economic rate of return (ERR)

(*b*) Financial rate of return (FRR)

13 PROJECT TIME-FRAME

Information on the anticipated start-up date and the completion date for the implementation of the project should be mentioned along with a projected schedule for implementation of various activities designed to accomplish the objectives of the project

14. REQUIRED REGULATORY ACTION :

15. OUTPUT

It should include projected ODS phase-out and other direct or indirect impacts.

16. ENVIRONMENTAL IMPACT .

Note · 1. Please provide information as mentioned above. If it is not possible to provide information in respect of one or more points, please do provide justification for not being able to provide such information

2 Please also fill-up Annexure 2 as it is a part of the project proposal.

ANNEXURE-1

Details of Incremental Capital Cost

Sr. No.	Name of equipment proposed to be replaced or retrofitted	Imported (US $)		Local (US $)	
		CIF Cost	Duties* and Taxes	Basic Cost	Duties* and Taxes
1.					
2.					
3.					
4.					
etc.					
Total		A	B	C	D

Total 1. E = A+C

2. F = B+D

3. C = E+F

Note : * Information should be provided in these columns on the basis of current rate of duties, taxes ad exchange rates.

ANNEXURE — 2

1. Name of the enterprise :
2. Date of Incorporation/Registration :
3 Date of commencement of commercial production :
4. Name of business house/group to which the enterprise belongs :
5. Location and address (including Tehsil, District, State)
   (*i*) Registered office
   (*ii*) Factories :
   (*iii*) Factory where ODS phaseout measures are proposed to be implement .
6. Please give name and background of Managing Director or Chief Executive ·
7. Indicate various licences for which approval is required for implementing the project and status thereof
8. Name and address of the Consultant who has prepared the project :
9. Please enclose a copy each, of the Annual Report, Audited Balance Sheet and Profit and Loss Account of the enterprise for the last three years.
10. We, hereby, declare that the information given in the project and its annexures is, to the best of our knowledge and belief, true and correct in all respects We further declare that, on approval of our project, we undertake to phaseout the use of ODS in our manufacturing operations within the time frame specified in the project proposal.

Reference no. to be
used in Correspondence :

Name of Authorised Signatory ....
Designation of authorised Signatory..... . ...
Address of Authorised Signatory. ... .
....
Signature of Authorised Signatory. ....

ANNEXURE — B

Authentication of information by Consultants

Consistent with the normal practice, it is expected that as authentic and correct as possible after having verified the same from the enterprise or even confirming it by visiting the sites and shall certify that the date or other details given in the project proposal are true to the best of their knowledge and belief. Along with other items, they are further requested to give particular attention to the following points :

1 Capacity and production.
2. ODS use (Actual ODS consumption during the preceding twelve months or the preceding three years).
3. List of existing equipments that are proposed to be replaced.
4. Percentage of foreign ownership belonging to enterprises non-Article 5 countries.
5. Percentage of exports to non-Article 5 countries.

PART III-5

BIO-MEDICAL WASTE (MANAGEMENT AND HANDLING) RULES, 1998

S.O. 630 (E), dated 20th July, 1998.[1]—Whereas a notification in exercise of the powers conferred by Secs. 6, 8 and 25 of the Environment (Protection) Act, 1986 (29 of 1986) was published in the Gazette *vide* S.O. 746 (E), dated 16 October, 1997 inviting objections from the public within 60 days from the date of the publication of the said notification on the Bio-Medical Waste (Management and Handling) Rules, 1998 and whereas all objections received were duly considered :

Now, therefore, in exercise of the powers conferred by Secs. 6, 8 and 25 of the Environment (Protection) Act, 1986 the Central Government hereby notifies the rules for the management and handling of bio-medical waste.

1. ***Short Title and Commencement.***—*(1) These rules may be called the Bio-Medical Waste (Management and Handling) Rules, 1998.*

(2) They shall come into force on the date of their publication in the official Gazette.

2. ***Application.***—*These rules apply to all persons who generate, collect, receive, store, transport, treat, dispose, or handle bio-medical waste in any form.*

3. ***Definitions.***—*In these rules unless the context otherwise requires :—*

(1) *"Act" means the Environment (Protection) Act, 1986 (29 of 1986);*

(2) *"Animal House" means a place where animals are reared/kept for experiments or testing purposes;*

(3) *"Authorisation" means permission granted by the prescribed authority for the generation, collection reception, storage, transportation, treatment, disposal and/or any other form of handling of bio-medical waste in accordance with these rules and any guidelines issued by the Central Government.*

(4) *"Authorised person" means an occupier or operator authorised by the prescribed authority to generate, collect, receive, store, transport, treat, dispose and/or handle bio-medical waste in accordance with these rules and any guidelines issued by the Central Government;*

(5) *"Bio-medical waste" means any waste, which is generated during the diagnosis, treatment or immunisation of human beings or animals or in research activities pertaining thereto or in the production or testing of biologicals, and including categories mentioned in Schedule I;*

(6) *"Biologicals" means any preparation made from organisms or micro-organisms or product of metabolism and biochemical reactions intended for use in the diagnosis, immunisation or the treatment of human beings or animals or in research activities pertaining thereto;*

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. (*ii*), dated 27th July, 1998.

(7) *"Bio-medical waste treatment facility" means any facility wherein treatment disposal of bio-medical waste or processes incidental to such treatment or disposal is carried out;*

(8) *"Occupier" in relation to any institution generating bio-medical waste, which includes a hospital, nursing home, clinic dispensary, veterinary institution, animal house, pathological laboratory, blood bank by whatever name called, means a person who has control over that institution and/or its premises;*

(9) *"Operator of a bio-medical waste facility" means a person who owns or controls or operates a facility for the collection, reception, storage, transport, treatment, disposal or any other form of handling of bio-medical waste;*

(10) *"Schedule" means schedule appended to these rules;*

4. *Duty of Occupier.*—*It shall be the duty of every occupier of an institution generating bio-medical waste which includes a hospital, nursing home, clinic, dispensary, veterinary institution, animal house, pathological laboratory, blood bank by whatever name called to take all steps to ensure that such waste is handled without any adverse effect to human health and the environment.*

5. *Treatment and Disposal.*—*(1) Bio-medical waste shall be treated and disposed of in accordance with Schedule I, and in compliance with the standards prescribed in Schedule V*

(2) Every occupier, where required, shall set up in accordance with the time-schedule in Schedule VI, requisite bio-medical waste treatment facilities like incinerator, autoclave, microwave system for the treatment waste, or, ensure requisite treatment waste at a common waste treatment facility or any other waste treatment facility.

6. *Segregation, Packaging, Transportation and Storage.*—*(1) Bio-medical waste shall not be mixed with other wastes.*

(2) Bio-medical waste shall be segregated into containers/bags at the point of generation in accordance with Schedule II prior to its storage, transportation, treatment and disposal. The containers shall be labelled in accordance to Schedule III.

(3) If a container is transported from the premises where bio-medical waste is generated to any waste treatment facility outside the premises, the container shall, apart from the label prescribed in Schedule III, also carry information prescribed in Schedule IV.

(4) Notwithstanding anything contained in the Motor Vehicles Act, 1988, or rules thereunder, untreated bio-medical waste shall be transported only in such vehicle as may be authorised for the purpose by the competent authority as specified by the government.

(5) No untreated bio-medical waste shall be kept stored beyond a period of 48 hours :

Provided that if for any reason it becomes necessary to store the waste beyond such period, the authorised person must take permission of the prescribed authority *and take measures to ensure that the waste does not adversely affect human health and the environment.*

*7. **Prescribed Authority.**—(1) The Government of every State and Union Territory shall establish a prescribed authority with such members as may be specified for granting authorisation and implementing these rules. If the prescribed authority comprises of more than one member, a chairperson for the authority shall be designed.*

(2) The prescribed authority for the State or Union Territory shall be appointed within one month of the coming into force of these rules.

(3) The prescribed authority shall function under the supervision and control of the respective Government of the State or Union Territory.

(4) The prescribed authority shall on receipt of Form I make such enquiry as it deems fit and if it is satisfied that the applicant possesses the necessary capacity to handle bio-medical waste in accordance with these rules, grant or renew an authorisation as the case may be.

(5) An authorisation shall be granted for a period of three years, including an initial trial period of one year from the date of issue. Thereafter, an application shall be made by the occupier/operator for renewal. All such subsequent authorisation shall be for a period of three years. A provisional authorisation will be granted for the trial period, to enable the occupier/operator to demonstrate the capacity of the facility.

(6) The prescribed authority may after giving reasonable opportunity of being heard to the applicant and for reasons thereof to be recorded in writing, refuse to grant or renew authorisation.

(7) Every application for authorisation shall be disposed of by the prescribed authority within ninety days from the date of receipt of the application.

(8) The prescribed authority may cancel or suspend an authorisation, if for reasons, to be recorded in writing, the occupier/ operator has failed to comply with any provision of the Act or these rules :

Provided that no authorisation shall be cancelled or suspended without giving a reasonable opportunity to the occupier/operator of being heard.

*8. **Authorisation.**—(1) Every occupier of an institution generating, collecting, receiving, storing, transporting, treating, disposing and/or handling bio-medical waste in any other manner, except such occupier of clinics, dispensaries, pathological laboratories, blood banks providing treatment service to less than 1000 (one thousand) patients per month, shall make an application in Form I to the prescribed authority for grant of authorisation.*

(2) Every operator of a bio-medical waste facility shall make an application in Form I to the prescribed authority for grant of authorisation.

(3) Every application in Form I for grant of authorisation shall be accompanied by a fee as may be prescribed by the Government of the State or Union Territory.

*9. **Advisory Committee.**—The Government of every State/Union Territory shall constitute an advisory committee. The committee will include experts in the field* *of medical and health, animal husbandry and veterinary sciences, environmental management, municipal administration, and any other related department or organisation including non-governmental organisations. The State Pollution Control Board/ Pollution Control Committee shall be represented. As and when required, the committee shall advise the Government of the State/Union Territory and the prescribed authority about matters related to the implementation of these rules.*

10. *Annual Report.*—*Every occupier/operator shall submit an annual report to the prescribed authority in Form II by 31 January every year, to include information about the categories and quantities of bio-medical waste handled during the preceding year. The prescribed authority shall send this information in a compiled form to the Central Pollution Control Board by 31 March every year.*

11. *Maintenance of Records.*—*(1) Every authorised person shall maintain records related to the generation, collection, reception, storage, transportation, treatment, disposal and/or any form of handling of bio-medical waste in accordance with these rules and any guidelines issued.*

(2) All records shall be subject to inspection and verification by the prescribed authority at any time.

12. *Accident Reporting.*—*When any accident occurs at any institution or facility or any other site where bio-medical waste is handled or during transportation of such waste, the authorised person shall report the accident in Form III to the prescribed authority forthwith.*

13. *Appeal.*—*Any person aggrieved by an order made by the prescribed authority under these rules may, within thirty days from the date on which the order is communicated to him, prefer an appeal to such authority as the Government of State/Union Territory may think fit to constitute :*

Provided that the authority may entertain the appeal after the expiry of the said period of thirty days if it is satisfied that the appellant was prevented by sufficient cause from filing the appeal in time.

SCHEDULE I

(*See* rule 5)

Categories of Bio-Medical Waste

Option	Waste Category	Treatment and Disposal
Category No 1	Human Anatomical Waste (human tissues, organs, body parts)	incineration[1]/deep burial[2]
Category No. 2	Animal Waste (animal tissue, organs, body parts carcasses, bleeding parts, fluid, blood and experimental animals used in research, waste generated by veterinary hospitals colleges, discharge from hospitals, animal houses)	incineration[1]/deep burial[2]

---

[1] There will be no chemical pretreatment before incineration. Chlorinated plastics shall not be incinerated.

[2] Deep burial shall be an option available only in towns with population less than five lakhs and in rural areas.

Option	Waste Category	Treatment and Disposal
Category No. 3	Microbiology and Biotechnology Waste (wastes from laboratory cultures, stocks or specimens of micro-organisms live or attenuated vaccines, human and animal cell culture used in research and infectious agents from research and industrial laboratories, wastes from production of biologicals, toxins, dishes and devices used for transfer of cultures)	local autoclaving/micro-waving/incineration[3]
Category No 4	Waste Sharps (needles, syringes, scalpels, blades, glass, etc, that may cause puncture and cuts. This includes both used and unused sharps)	disinfection/chemical treatment[1]/auto claving/ micro-waving and mutilation/shredding[2]
Category No. 5	Discarded Medicines and Cytotoxic drugs (wastes comprising of outdated, contaminated and discarded medicines)	incineration[3]/destruction and drugs disposal in secured landfills
Category No 6	Solid Waste (Items contaminated with blood, and body fluids including cotton, dressing, soiled plaster casts, lines, beddings, other material contaminated with blood)	incineration autoclaving/ microwaving
Category No 7	Solid Waste (wastes generated from disposable items other than the waste sharps such as tubings, catheters, intravenous sets etc)	disinfection by chemical treatment[1]/autoclaving/ microwaving and mutilation/shredding[2]
Category No 8	Liquid Waste (waste generated from laboratory and washing, cleaning, house-keeping and disinfecting activities)	disinfection by chemical treatment[1] and discharge into drains
Category No 9	Incineration Ash (ash from incineration of any bio-medical waste)	disposal in municipal landfill
Category No 10	Chemical Waste (chemicals used in production of biologicals, chemicals used in disinfection, as insecticides, etc)	chemical treatment[1] and discharge into drains for liquids and secured landfill for solids

---

1. Chemicals treatment using at least 1% hypochlorite solution or any other equivalent chemical reagent. It must be ensured that chemical treatment ensures disinfection.
2. Multilation/shredding must be such so as to prevent unauthorised reuse.
3. There will be no chemical pretreatment before incineration. Chlorinated plastics shall not be incinerated

SCHEDULE II

(*See* rule 6)

Colour Coding and Type of Container for Disposal of Bio-Medical Wastes

Colour Coding	Type of Container	Waste Category	Treatment options as per Schedule I
Yellow	Plastic Bag	Cat 1, Cat 2, and Cat 3, Cat 6	Incineration/deep burial
Red	Disinfected container/plastic bag	Cat 3, Cat 6, Cat 7,	Autoclaving/Microwaving/ Chemical Treatment
Blue/White translucent	Plastic bag/puncture proof container	Cat 4, Cat 7	Autoclaving/Microwaving/ Chemical Treatment and destruction/shredding
Black	Plastic bag	Cat 5 and Cat 9 and Cat 10 (solid)	Disposal in secured landfill

Notes :

1 Colour coding of waste categories with multiple treatment options as defined in Schedule I, shall be selected depending on treatment option chosen, which shall be as specified in Schedule I

2 Waste collection bags for waste types needing incineration shall not be made of chlorinated plastics

3 Categories 8 and 10 (liquid) do not require containers/bags

4 Category 3 if disinfected locally need not be put in containers/bags

---

SCHEDULE III

SCHEDULE V

(*see* rule 5 and Schedule I)

Standards for Treatment and Disposal of Bio-Medical Wastes

STANDARDS FOR INCINERATORS :

All incinerators shall meet the following operating and emission standards .

A. Operating Standards

1. Combustion efficiency (CE) shall be at least 99.00%.
2. The Combustion efficiency is computed as follows .

$$C.E. = \frac{\%CO2}{\%\ CO2 + \%\ CO} \times 100$$

3. The temperature of the primary chamber shall be 800 ± 50 deg. C°.
4. The secondary chamber gas residence time shall be at least 1 (one) second at 1050 ± 50 C°, with minimum 3% Oxygen in the stack gas.

B. Emission Standards

Parameters	Concentration mg/Nm3 at (12% CO_2 correction)
(1) Particulate matter	150
(2) Nitrogen Oxides	450

(3) HCl 50

(4) Minimum stack height shall be 30 metres above ground

(5) Volatile organic compounds in ash shall not be more than 0.01%

Note :

- Suitably designed pollution control devices should be installed/retrofitted with the incinerator to achieve the above emission limit, if necessary.
- Wastes to be incinerated shall not be chemically treated with any chlorinated disinfectants
- Chlorinated plastics shall not be incinerated.
- Toxic metals in incineration ash shall be limited within the regulatory quantities as defined under the Hazardous Waste (Management and Handling Rules,) 1989
- Only low sulphur fuel like L.D.O./L S H.S./Diesel shall be used as fuel in the incinerator

STANDARDS FOR WASTE AUTOCLAVING :

The autoclave should be dedicated for the purposes of disinfecting and treating bio-medical waste.

(I) When operating a gravity flow autoclave, medical waste shall be subjected to :

(*i*) a temperature of not less than 121 C° and pressure of 15 pounds per square inch (psi) for an autoclave residence time of not less than 60 minutes, or

(*ii*) a temperature of not less than 135 C° and a pressure of 31 psi for an autoclave residence time of not less than 45 minutes; or

(*iii*) a temperature of not less than 149 C° and a pressure of 52 psi for an autoclave residence time of not less than 30 minutes.

(II) When operating a vacuum autoclave, medical waste shall be subjected to a minimum of one pre-vacuum pulse to purge the autoclave of all air. The waste shall be subjected to the following :

(*i*) a temperature of not less than 121 C° and pressure of 15 psi per an autoclave residence time of not less than 45 minutes; or

(*ii*) a temperature of not less than 135 C° and a pressure of 31 psi for an autoclave residence time of not less than 30 minutes;

(III) Medical waste shall not be considered properly treated unless the time, temperature and pressure indicators indicate that the required time, temperature and pressure were reached during the autoclave process. If for any reasons, time temperature or pressure indicator indicates that the required temperature, pressure or residence time was not reached, the entire load of medical waste must be autoclaved again until the proper temperature, pressure and residence time were achieved.

(IV) **Recording of operational parameters**

Each autoclave shall have graphic or computer recording devices which will automatically and continuously monitor and record dates, time of day, load identification number and operating parameters throughout the entire length of the autoclave cycle.

(V) **Validation test**

Spore testing :

The autoclave should completely and consistently kill the approved biological indicator at the maximum design capacity of each autoclave unit. Biological indicator for autoclave shall be Bacillus stearothermophilus spores using vials or spore strips, with at least 1 × 10⁴ spores per millilitre Under no circumstances will an autoclave have minimum operating parameters less than a residence time of 30 minutes, regardless of temperature and pressure, a temperature less than 121 C° or a pressure less than 15 psi

(VI) **Routine Test**

A chemical indicator strip/tape that changes colour when a certain temperature is reached can be used to verify that a specific temperature has been achieved It may be necessary to use more than one strip over the waste package at different location to ensure that the inner content of the package has been adequately autoclaved

STANDARDS FOR LIQUID WASTE ·

The effluent generated from the hospital should conform to the following limits

PARAMETERS	PERMISSIBLE LIMITS
pH	6 5-9 0
Suspended solids	100 mg/1
Oil and grease	10 mg/1
BOD	30 mg/1
COD	250 mg/1
Bio-assay test	90% survival of fish after 96 hours in 100% effluent

these limits are applicable to those hospitals which are either connected with sewers without terminal sewage treatment plant or not connected to public sewers For discharge not public sewers with terminal facilities, the general standards as notified under the Environment (Protection) Act, 1986 shall be applicable

STANDARDS OF MICROWAVING

1 Microwave treatment shall not be used for cytotoxic, hazardous or radioactive wastes, contaminated animal carcasses, body parts and large metal items

2 The microwave system shall comply with the efficacy test/routine tests and a performance guarantee may be provided by the supplier before operation of the unit

3 The microwave should completely and consistently kill the bacteria and other pathogenic organisms that is ensured by approved biological indicator at the maximum design capacity of each microwave unit. Biological indicators for microwave shall be Bacillus Subtilis spores using vials or spore strips with at least 1 × 10⁴ spores per millilitre

STANDARDS FOR DEEP BURIAL ·

1 A pit or trench should be dug about 2 metres deep It should be half filled with waste, then covered with lime with 50 cm of the surface, before filling the rest o the pit with soil

2. It must ensured that animals do not have any access to burial sites Covers of galvanised iron/wire meshes may be used.

3. On each occasion, when wastes are added to the pit, a layer of 10 cm of soil shall be added to cover the wastes.

4. Burial must be performed under close and dedicated supervision.

5. The deep burial site should be relatively impermeable and no shallow well should be close to the site.

6. The pits should be distant from habitation, and sited so as to ensure that no contamination

occurs of any surface water or ground water The area should not be prone to flooding or erosion

7 The location of the deep burial site will be authorised by the prescribed authority.

8 The institution shall maintain a record of all pits for deep burial

SCHEDULE VI

(*see* rule 5)

Schedule for Waste Treatment Facilities Like Incinerator/Autoclave/Microwave System

A Hospitals and nursing homes in towns with population of 30 lakhs and above	by 31st December, 1999 or earlier
B Hospital and nursing homes in towns with population of below 30 lakhs	
(*a*) with 500 beds and above	by 31st December, 1999 or earlier
(*b*) with 200 beds and above but less than 500 beds	by 31st December, 2000 or earlier
(*c*) with 50 beds and above but less than 200 beds	by 31st December, 2001 or earlier
(*d*) with less than 50 beds	by 31st December, 2002 or earlier
C All other institutions generating bio-medical waste not included in A and B above	by 31st December, 2002 or earlier

Form I

(*see* rule 8)

Application for Authorisation

(To be submitted in duplicate)

The Prescribed Authority
(Name of the State Govt / UT Administration)
Address

1 Particulars of Applicant

(*i*) Name of the Applicant
(In block letters and in full)

(*ii*) Name of the Institution

Address .

Tele No., Fax No. Telex No

2. Activity for which authorisation is sought ·

(*i*) Generation

(*ii*) Collection

(*iii*) Reception

(*iv*) Storage

(*v*) Transportation

(*vi*) Treatment

(*vii*) Disposal

(*viii*) Any other form of handling

3. Please state whether applying for fresh authorisation or for renewal
   (In case of renewal previous authorisation-number and date)

4. (*i*) Address of the institution handling bio-medical wastes
   (*ii*) Address of the place of the treatment facility
   (*iii*) Address of the place of disposal of the waste .

5. (*i*) Mode of transportation (in any) of bio-medical waste ·
   (*ii*) Mode(s) of treatment ·

6. Brief description of method of treatment and disposal (attach details).

7. (*i*) Category (see Schedule I) of waste to be handled
   (*ii*) Quantity of waste (category-wise) to be handled per month

8. Declaration

I do hereby declare that the statement made and information given above are true to the best of my knowledge and belief and that I have not concealed any information.

I do also hereby undertake to provide any further information sought by the prescribed authority in relation to these rules and to fulfill any conditions stipulated by the prescribed authority.

Date Signature of the applicant

Place Designation of the applicant

Form II

(*see* rule 10)

Annual Report

(To be submitted to the prescribed authority by 31 January every year)

1. Particulars of the applicant ·
   (*i*) Name of the authorised person (occupier/operator) ·
   (*ii*) Name of the institution .
   Address
   Tel. No
   Telex No.
   Fax No.

2. **Categories of waste generated and quantity on a monthly average basis :**

3. **Brief details of the treatment facility :**

In case of off-site facility .

(*i*) Name of the operator

(*ii*) Name and address of the facility

Tel No, Telex No, Fax No

4 Category-wise quantity of waste treated .

5. Mode of treatment with details .

PART III-6

HAZARDOUS WASTES (MANAGEMENT AND HANDLING) RULES, 1989

S.O. 594 (E), dated the 28th July, 1989.[1]—In exercise of the powers conferred by Secs. 6, 8 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules, namely : —

1. ***Short title and commencement.***—*(1) These rules may be called the Hazardous Wastes (Management and Handling) Rules, 1989*

(2) They shall come into force on the date of their publication in the Official Gazette.

2. ***Application.***—*These rules shall apply to hazardous wastes as specified in Schedule and shall not apply to—*

(a) waste water and exhaust gases as covered under the provisions of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974) and the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981) and rules made thereunder;

(b) wastes arising out of the operation from ships beyond five kilometers as covered under the provisions of the Merchant Shipping Act, 1958 (44 of 1958) and the rules made thereunder;

(c) radio-active wastes as covered under the provisions of the Atomic Energy Act, 1962 (33 of 1962) and rules made thereunder

3. ***Definitions.***—*In these rules, unless the context otherwise requires,-*

(a) "Act" means the Environment (Protection) Act, 1986 (29 of 1986) ,

(b) "applicant" means a person or an organisation that applies, in Form 1, for granting of authorisation to perform specific activities connected with handling of hazaradous wastes;

(c) "authorisation" means permission for collection, reception, treatment, transport, storage and disposal of hazardous wastes granted by the competent authority in Form 2;

(d) "authorised person" means a person or an organisation authorised by the competent authority to collect, treat, transport, store or dispose of hazardous wastes in accordance with the guidelines to be issued by the competent authority from time to time;

(e) "export" with its grammatical variations and cognate expression, means taking out of India to a place outside India;

(f) "exporter" means any person under the jurisdiction of the exporting country who exports hazardous wastes and the exporting country itself, who exports hazardous wastes;

---

[1] Published in *Gazette* No. 465, dated 28th July, 1989.

(g) "facility" means any location wherein the processes incidental to the waste generation collection, reception, treatment, storage and disposal are carried out;

(h) "Form" means Form appended to these rules;

(i) "hazardous wastes" means categories of wastes specified in the Schedule;

(j) "hazardous wastes site" means a place for collection, reception, treatment, storage and disposal of hazaradous wastes which has been duly approved by the competent authority;

(k) "import", with its grammatical variations and cognate expression, means bringing into India from a place outside India;

(l) "importer" means an occupier or any person who imports hazardous wastes;

(m) "operator of a facility" means a person who owns or operates a facility for collection, reception, treatment, storage and disposal of hazardous wastes;

(n) "Schedule" means Schedule appended to these rules;

(o) "State Pollution Control Board" means the Board appointed under sub-section (1) of Sec. 4 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974); and under Sec. 4 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981);

(p) "transboundary movement" means any movement of hazardous wastes or other wastes from an area under the national jurisdiction of one country to or through an area under the national jurisdiction of another country or to or through an area not under the national jurisdiction of any country provided at least two countries are involved in the movement;

(q) the words and expressions used in these rules and not defined but defined in the Act, shall have the meaning respectively assigned to them in the Act.

4. ***Responsibility of the occupier for handling of wastes.***—*(1) The occupier generating hazardous wastes listed in column (2) of the Schedule in quantities equal to or exceeding the limits given in column (3) of the said Schedule, shall take all practical steps to ensure that such wastes are properly handled and disposed of without any adverse effects which may result from such wastes and the occupier shall also be responsible for proper collection, reception, treatment, storage and disposal of these wastes either himself or through the operator of a facility.*

(2) The occupier or any other person acting on his behalf who intends to get his hazardous waste treated by the operator of a facility under sub-rule (1), shall give, to the operator of a facility, such information as may be specified by that [1][State Pollution Control Board or Committee].

Comment

Rule 4 deals with responsibility of the occupier for handling of wastes. The occupier is bound to take all practical steps to ensure that such wastes are properly handled.

---

[1] Subs. by S.O. 625 (E), dated 3rd September, 1996.

5. ***Grant of authorisation for handling hazardous wastes.***—*(1) Hazardous wastes shall be collected, treated, stored and disposed of only in such facilities as may be authorised for this purpose.*

(2) Every occupier generating hazardous wastes and having a facility for collection, reception, treatment, transport, storage and disposal of such wastes shall make an application in Form 1 to the [1]*[State Pollution Control Board or Committee] for the grant of authorisation for any of the above activities :*

Provided that the occupier not having a facility for the collection, reception, treatment, transport, storage and disposal of hazardous wastes shall make an application to the [1]*[State Pollution Control Board or Committee] in Form 1 for the grant of authorisation within a period of six months from the date of commencement of these rules.*

(3) Any person who intends to be an operator of a facility for the collection, reception, treatment, transport, storage and disposal of hazardous wastes, shall make an application in Form 1 to the [1]*[State Pollution Control Board or Committee] for the grant of authorisation for any of the above activities :*

Provided that the operator engaged in the business of the collection, reception, treatment, transport, storage and disposal of hazardous wastes shall make an application to the [1]*[State Pollution Control Board or Committee] in Form 1 for the grant of authorisation within a period of six months from the date of commencement of these rules.*

(4) The [1]*[State Pollution Control Board or Committee] shall not issue an authorisation unless it is satisfied that the operator of a facility or an occupier, as the case may be, possesses appropriate facilities, technical, capabilities and equipment to handle hazardous wastes safely*

(5) The authorisation to operate a facility shall be issued in Form 2 and shall be subject to conditions laid down therein.

(6) (i) An authorisation granted under this rule shall unless sooner suspended or cancelled, be in force for a period of two years from the date of issue or from the date of renewal.

(ii) An application for the renewal of an authorisation shall be made in Form 1, before its expiry.

(iii) The authorisation shall continue to be in force until it is renewed or revoked.

(7) The [1]*[State Pollution Control Board or Committee] may, after giving reasonable opportunity of being heard to the applicant refuse to grant any authorisation.*

6. ***Power to suspend or cancel an authorisation.***—*(1) The* [1]*[State*

---

[1] Subs. by S.O. 625 (E), dated 3rd September, 1996.

Pollution Control Board or Committee] may cancel an authorisation issued under these rules or suspend it for such period as it thinks fit, if in its opinion, the authorised person has failed to comply with any of the conditions of the authorisation or with any provisions of the Act or these rules, after giving the authorised person an opportunity to show cause and after recording reasons therefor.

(2) Upon suspension or cancellation of the authorisation and during the pendency of an appeal under rule 12, the [1][State Pollution Control Board or Committee] may give directions to the persons whose authorisation has been suspended or cancelled for the safe storage of the hazardous wastes, and such person shall comply with such directions.

Comment

Rule 6 empowers the State Pollution Control Board to cancel an authorisation if the authorised person has failed to comply with any of the conditions of the authorisation.

*7. **Packaging, labelling and transport of hazardous wastes.**—(1) Before hazardous wastes is delivered at the hazardous waste site, the occupier or operator of a facility shall ensure that the hazardous wastes is packaged in a manner suitable for storage and transport and the labelling and packaging shall be easily visible and be able to withstand physical conditions and climatic factors.*

(2) Packaging, labelling and transport of hazardous wastes shall be in accordance with the provisions of the rules issued by the Central Government under the Motor Vehicles Act, 1988 and other guidelines issued from time to time.

Comment

Rule 7 provides for packaging, labelling and transport of hazardous wastes which shall be in conformity with the provisions of the rules issued by the Central Government under the Motor Vehicles Act, 1988 and other guidelines issued from time to time.

*8. **Inventory of disposal sites.**—(1) The State Government or a person authorised by it shall undertake a continuing programme to identify the sites and compile and publish periodically an inventory of disposal sites within the State for the disposal of hazardous wastes.*

(2) The State Government or a person authorised by it shall undertake an environmental impact study before identifying a site as waste disposal site in the State.

(3) The State Government or a person authorised by it shall undertake a continuing programme to compile and publish an inventory of sites within the State at which hazardous wastes have at any time been stored or disposed of and such inventory shall contain, besides the location and description, information relating to the amount, nature and toxicity of hazardous wastes at each such site as may be associated with such site.

---

1. Subs. by S.O. 625 (E), dated 3rd September, 1996.

*9. **Records and returns.**—(1) The occupier generating hazardous waste and operator of facility for collection, reception, treatment, transport, storage and disposal of hazardous waste shall maintain records of such operations in Form 3.*

(2) The occupier and operator of a facility shall send annual returns to the [1][State Pollution Control Board or Committee] in Form 4.

Comment

Rule 9 provides for the maintenance of records in Form 3 by the occupier dealing in hazardous wastes and annual returns by the occupier shall be sent to the State Pollution Control Board in Form 4.

*10. **Accident reporting and follow-up.**—Where an accident occurs at the facility or on a hazardous waste site or during transportation of hazardous wastes the occupier or operator of a facility shall report immediately to the [1][State Pollution Control Board or Committee] about the accident in Form 5.*

*11. **Import of hazardous wastes.**—(1) Import of hazardous wastes from any country to India shall not be permitted for dumping and disposal of such wastes. However, import of such wastes may be allowed for processing or reuse as raw material, after examining each case on merit by the [1][State Pollution Control Board or Committee] or by an officer authorised in this behalf.*

(2) The exporting country or the exporter as the case may be, of hazardous wastes shall communicate in Form 6 of the Central Government (the Ministry of Environmental and Forests) of the proposed transboundary movement of hazardous wastes.

(3) The Central Government shall, after examining the communication received under sub-rule (2) and on being satisfied that the import of such hazardous wastes is to be used for processing or reuse as raw material, grant permission for the import of such wastes subject to such conditions as the Central Government may specify in this behalf and if, however the Central Government is not satisfied with the communication received under sub-rule (2), may refuse permission to import such hazardous wastes.

(4) Any importer importing hazardous wastes shall provide necessary information as to the type of hazardous wastes he is to import, in Form 6, to the concerned [1][State Pollution Control Board or Committee]/the Central Pollution Control Board in the case of Union Territories.

(5) [1][State Pollution Control Board or Committee] shall examine the information received under sub-rule (4) and issue such instruction to the importer as it considers necessary.

(6) The Central Government or the [1][State Pollution Control Board or Committee] as the case may be, shall inform the concerned Port Authority to take appropriate steps regarding the safe handling of the hazardous wastes at the time of off-loading the same.

(7) Any person importing hazardous wastes shall maintain the records of the hazardous wastes imported as specified in Form 7 and the records so maintained shall be open for inspection by the [1][State Pollution Control Board or Committee]/the Ministry of Environment and Forests/the Central Pollution Control Board in the case of Union Territories or an officer appointed by them in this behalf.

---

[1] Subs. by S.O. 625 (E), dated 3rd September, 1996.

Comment

Rule 11 deals with import policy, of hazardous wastes from any country to India. Import of such wastes may be allowed for processing or reuse as raw material after examining each case on merit by the State Pollution Control Board or by an officer authorised in this behalf.

12. Appeal.—(1) An appeal shall lie against any order of suspension or cancellation or refusal of an authorisation by the [1]*[State Pollution Control Board to the State Government or Committee to the Union Territory] and to the Ministry of Environment and Forests in the case of the Central Pollution Control Board.*

(2) Every appeal shall be in writing and shall be accompanied by a copy of the order appealed against and shall be presented within thirty days of the order passed.

Comment

Rule 12 deals with the procedure for filling appeal and limitations therefore, i.e., within thirty days of the order passed.

SCHEDULE

[*See* rule 3 (*i*), 3 (*n*) and 4]

Categories of Hazardous Wastes

Waste Categories	Types of wastes	Regulatory Quantities
1	2	3
Waste Category No. 1	Cyanide Wastes	1 kilogrammes per year calculated as cyanide
Waste Category No. 2	Metal Finishing Wastes	10 kilogrammes per year the sum of the specified substance calculated as pure metal
Waste Category No. 3	Waste containing water soluble chemical compounds of lead copper, zinc, chromium, nickel, selenium, barium and antimony	10 kilogrammes per year the sum of the specified substance calculated as pure metal.
Waste Category No. 4	Mercury, Arsenic, Thallium and Cadmium bearing wastes	5 kilogrammes per year the sum of the specified substance calculated as pure metal.
Waste Category No. 5	Non-halogenated hydrocarbons including solvents	200 kilogrammes per year calculated as non halogenated hydrocarbons
Waste Category No. 6	Halogenated [2][hydrocarbons] including solvents	50 kilogrammes per year calculated as halogenated hydrocarbons.

---

1. Subs. by S.O. 625 (E), dated 3rd September, 1996.
2. Corrigendum *vide* S.O. 116 (E), dated 15th March, 1990 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated15th March, 1990.

1	2	3
Waste Category No. 7	Wastes from paints, pigments, glue, varnish and printing ink	250 kilogrammes per year calculated as oil or oil emulsions.
Waste Category No. 8	Wastes from Dyes and Dye intermediate containing inorganic chemical compounds	200 kilogrammes per year calculated as inorganic chemicals
Waste Category No. 9	Wastes from Dyes and Dye intermediate containing organic chemical compounds	50 kilogrammes per year calculated as organic chemicals.
Waste Category No 10	Waste oil and oil emulsions	1000 kilogrammes per year calculated as oil and oil emulsions.
Waste Category No. 11	Tarry wastes from refining and tar residues from distillation or [1][pyrolytic] treatment.	200 kilogrammes per year calculated as tar.
Waste Category No 12	Sludges arising from treatment of waste waters containing heavy metals, toxic organics, oils, emulsions and [1][spent] chemicals and incineration ash	Irrespective of any quantity
Waste Category No 13	Phenols	5 kilogrammes per year calculated as phenols
Waste Category No 14	Asbestos	200 kilogrammes per year calculated as Asbestos
Waste category No 15	Wastes from manufacturing of pesticides and herbicides and residues from pesticide and herbicides formulation units	5 kilogrammes per year calculated as pesticides and their intermediate products
Waste Category No 16	Acid/Alkaline/Slurry Wastes	200 kilogrammes per year calculated as Acids/Alkalies.
Waste Category No. 17	Off-Specification and discarded products	Irrespective of any quantity.
Waste Category No 18	Discarded [1][container] and container [1][liners] of hazardous and toxic [1][chemicals and] wastes	Irrespective of any quantity.

Application for authorisation/renewal of authorisation for collection/reception/treatment/ transport/storage/disposal of hazardous wastes.

From .. ..
....
....

To

The Member Secretary
.... Pollution Control Board,
. ...
....

Sir,

I/We hereby apply for authorisation/renewal of authorisation under sub-rule (3) of Rule 5 of the Hazardous Wastes (Management and Handling) Rules, 1989 for collection/reception/ treatment/transport/storage/disposal of hazardous wastes

---

For Office Use Only

1 Code No.

2. Whether the unit is situated in a critically polluted area as identified by Ministry of Environment and Forests

---

To be filled in by Applicant

PART A

General

3. (*a*) Name of Owner/Occupier ·
   (*b*) Name and address of the unit and location of activity :
   (*c*) Authorisation required for (please tick mark appropriate activity/activities) .
      (*i*) collection
      (*ii*) reception
      (*iii*) treatment
      (*iv*) transport
      (*v*) storage
      (*vi*) disposal
   (*d*) In case of renewal of authoristion, previous authorisation number and date :
4. (*a*) Whether the unit is generating hazardous waste as defined in the Hazardous Waste (Management and Handling) Rules, 1989;
   (*b*) If so the category No.;
5. (*a*) Total capital invested on the project :
   (*b*) Year of commencement of production :
   (*c*) Whether the industry works general/2 shifts/round the clock :
6. (*a*) List and quantum of products and by-products .
   (*b*) List and quantum of raw materials used :
7. Furnish a flow diagram of manufacturing process showing input and output in terms of products and waste generated including for captive power generation and demineralised water :

---

1. Subs. by Rule 2 of the Hazardous Wastes (Management and Handling) Rules, 1989 published *vide* G.S.R. 380 (E) dated 31st March, 1992.

PART B

Pertaining to sewage and trade effluent

8. Quantity and source of water for :
   - (a) Cooling m^3/d :
   - (b) Process m^3/d :
   - (c) Domestic use m^3/d :
   - (d) Others m^3/d
9. Sewage and trade effluent discharge :
   - (a) quantum of discharge m^3/d
   - (b) Is there any effluent treatment plant
   - (c) If yes, a brief description of unit operations with capacity
   - (d) Characteristics of final effluent pH
     Suspended solids
     Dissolved solids
     Chemical Oxygen Demand (COD)
     Biochemical Oxygen Demand (BOD 5/20°C)
     Oil and grease
     (Additional parameters as specified by the concerned Pollution Control Board)
   - (e) Mode of disposal and final discharge point (enclose map showing discharge point)
   - (f) Parameters and Frequency of self-monitoring

PART C

Pertaining to stack (Chimney) and vent emissions

10. (a) Number of stacks and vents with height and dia (m)
   - (b) Quality and quantity of stack emission from each of the above stacks—particulate matter and Sulphur Dioxide (SO_2) (Additional parameters as specified by the concerned Pollution Control Board)
   - (c) A brief account of the air pollution control unit to deal with the emissions
   - (d) Parameters and Frequency of self monitoring

PART D

Pertaining to hazardous waste and hazardous chemicals

11. Solid wastes
   - (a) Total quantum of generation
   - (b) Quantum of hazardous waste generated and its nature, as defined under the Environment (Protection) Act, 1986. [*See* the Hazardous Wastes (Management and Handling) Rules, 1989].
   - (c) Mode of storage within the plant, method of disposal, and any other information sought by the concerned Pollution Control Board.
12. (a) Hazardous Chemicals as defined under Environment (Protection) Act, 1986 (*see* the Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989).
   - (b) Whether any isolated storage is involved if yes, attach details Yes/No
   - (c) Whether emergency plans are prepared for taking
     —On-site measures Yes/No
     —Off-site measures Yes/No

Yours faithfully,

Name and Signature of the applicant.

Form 2

[*See* rule 3 (*c*) and 5 (5)]

(Authorisation for operating a facility for collection, reception, treatment, storage, transport, and disposal of hazardous wastes)

1. Number of authorisation and date of issue .. ..

2 . ...of .. . .is hereby granted an authorisation to operate a facility for collection, reception, treatment, storage, transport and disposal of hazardous waste on the premises situated at . ...

3. The authorisation granted to operate a facility for collection, reception, treatment, storage, transport and disposal of hazardous wastes

4. The authorisation shall be in force for a period of . . .. .year from the date of issue

5. The authorisation is subject to the conditions stated below and to such conditions as may be specified in the rules for the time being in force under the Environment (Protection) Act, 1986.

Date.... ... .

Signature .. . .

Designation. . .. .

Terms and conditions of authorisation

1 The authorisation shall comply with the provisions of the Environment (Protection) Act, 1986, and the rules made thereunder

2. The authorisation or its renewal shall be produced for inspection at the request of an officer authorised by the [1][State Pollution Control Board or Committee].

3. The person authorised shall not rent, lend, sell, transfer or otherwise transport the hazardous wastes without obtaining prior permission of the State Pollution Control Board.

4 Any unauthorised change in personnel, equipment as working conditions as mentioned in the application by the person authorised shall constitute a breach of his authorisation.

5 It is the duty of the authorised person to take prior permission of the State Pollution Control Board to close down the facility.

6 An application for the renewal of an authorisation shall be made as laid down in rule 5 (6) (*ii*)

Form 3

[*See* rule 9 (1)]

(Format for maintaining records of hazardous wastes at the facility)

1. Name and address of the occupier or operator of a facility :

2. Date of issuance of authorisation and its reference number :

3. Description of hazardous waste :

---

[1] Subs. by S.O. 625 (E), dated 3rd September, 1996.

Physical form with description	Chemical form	Total volume and weight (in kg.)

4 Description of storage and treatment of hazardous waste :

Date	Method of storage of hazardous wastes	Date	Method of treatment of hazardous wastes

5 Details of transportation of hazardous waste :

Name and address of the consignee of the package	Mode of packing of the waste for transportation	mode of transportation to site of disposal	Date of transportation

6 Details of disposal of hazardous waste

Date of disposal	Concentration of hazardous material in the final waste form	Site of disposal (identify the location on the relevant layout drawing for reference)	Method of disposal	Persons involved in disposal

7. Data on environmental surveillance :

Date of measurement	Analysis of ground water			Analysis of soil samples			Analysis of air sampling		Analysis other samples (give) (details)
	Location of sampling	Depth of sampling	Data	Location of sampling	Depth of sampling	Data	location of sampling	Data	

Name and signature of the Head of facility

Form 4

[*See* rule 9 (2)]

Format for the submission of returns, regarding disposal of hazardous waste

(To be submitted to the [1][State Pollution Control Board or Committee])

1 Name and address of the Institution :

2 Details of waste disposal operations :

S No	Date of issuance authorisation for the disposal of hazardous waste and its reference number	Description of Hazardous Waste			Mode of transportation to the site of disposal	Site of disposal (attach a sketch showing the location (s) of disposal)	Brief description of the method of disposal	Date of disposal	Remarks (if any)
		Physical form and contents	Chemical Form	(Total Volume of the hazardous waste disposed with No. of packages					

---

[1] Subs. by S.O. 625 (E), dated 3rd September, 1996.

3. Details of environmental surveillance :

Date of measurement	Analysis of ground water samples			Analysis of soil samples			Analysis of air samping		Analysis of any other samples (give details)
	Location of sampling	Depth of sampling	Data	Location of sampling	Depth of sampling	Data	Location of sampling	Data	

Name and signature of the Head of the facility

Form 5

(*See* rule 10)

1. The date and time of the accident :
2. Sequence of events leading to accident .
3 The hazardous waste involved in accident:
4 The date for assessing the effects of the accident to health or the environment
5 The emergency measures taken
6 The steps taken to alleviate the effects of accident ·
7 The steps taken to prevent the recurrence of such an accident

Form 6

(*See* rule 11 (2) and (4)]

(Format for notification and movement document)

A. **Information to be provided on Notification**

1 Reason for waste export

2 Exporter of the waste[1]

3 Generator (s) of the waste and site of generation[1]

4. Importer of waste[1]

5. Intended carrier (s) of the waste or their agents, if known[1]

6. Exporting Country's Competent authority[2]

7. Expected countries of transit Competent authority[2]

8. Importing country's Competent authority[2]

---

[1] Full name and address, telephone, telex or telefax numbers and the name, address, telephone, telex or telefax number of the person to be contacted.

[2] Full name and address, telephone, telex and telefax number.

9. General or single notification.

10. Projected date (s) of shipment (s) and period of time over which waste is to be exported and proposed itinerary (including point of entry and exist)[1]

11. Means of transport envisaged (road, rail sea, air, inland waters)

12. Information relating to insurance[2]

13. Designation and physical description of the waster and its composition[3] and information on any special handling requirements including emergency provisions in case of accidents[3].

14. Type of packaging envisaged (e.g., bulk, drummed, tanker)

15. Estimated quantity in weight/volume[4]

16. Process by which the waste is generated[5]

17. Method of disposal

18. Declaration by the generator and exporter that the information is correct

19. Information transmitted (including technical description of the plant) to the exporter or generator from the importer or the waste upon which the latter has based his assessment that there was no reason to believe that the wastes will not be managed in an environmentally sound manner in accordance with the laws and regulations of the importing country

B. **Information to be Provided on the Movement Document**

1. Exporter of the waste[6]

2. Generator (s) of the waste and site of generation[6]

3 Importer of the waste and actual site of disposal[6]

4 Carrier (s) of the waste or the agent (s)

5 Subject of general or single notification

6. The date of the transboundry movement, started and date (s) and signature on receipt by each person who takes charge of the waste

7 Means of transport (road, rail, inland, waterway, sea, air) including countries of export, transit and import also point of entry and exit where these have been designated.

8. General description of ten waste.

9. Information on special handling requirements including emergency provision in case of accident.

---

1. In the case of a general notification covering several shipments, either the expected dates of each shipment or, if this is not known the expected frequency of the shipments will be required.

2. Information to be provided on relevant insurance requirement and how they are met by exporter, carrier and importer.

3. The nature and the concentration of the most hazardous components in terms of toxicity and other dangers presented by the waste both in handling and in relation to the proposed disposal method.

4. In the case of a general notification covering several shipments, both the estimated total quantity and the estimated quantities for each individual shipment will be required.

5. In so far as this is necessary to assess the hazard and determine the appropriateness of the proposed disposal operation.

6. Full name and address, telephone, telex or telefax number and the name, address, telephone, telex or telefax number of the person to be contacted in case of emergency.

10. Type and number of packages.
11. Quantity in weight/volume.
12. Declaration by the exporter that the information is correct.
13. Declaration by the exporter indicating no objection from the competent authorities of all States concerned which are Parties
14. Certificate by importer of receipt at designated disposal facility and indication of method of disposal and of the approximate date of disposal.

Form 7

[*See* rule 11 (7)]

(Format for maintaining records of hazardous wastes imported)

1. Name and address of the importer :
2. Date and reference number of issuance of permission to import handous wastes :
3. Description of hazardous waste :
   (*a*) Physical form;
   (*b*) Chemical form:
   (*c*) Total volume and weight (in kilogrammes) :
4. Description of storage, treatment and reuse of hazardous waste :
   (*a*) Date ·
   (*b*) Method of storage:
   (*c*) Method of treatment and reuse (give details)

NOTIFICATIONS

POWER OF CHAIRMAN, STATE POLLUTION CONTROL BOARDS/COMMITTEES RELATING TO HAZARDOUS WASTES

S.O. 23(E), dated January, 1997.[1]—In exercise of the powers conferred by Sec. 23 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby delegates the powers vested in it under Sec 5 of the said Act to the Chairman, State Pollution Control Boards/Committees as given in the Table below, to issue directions to any industry or any local or other authority for the violations of the standards and rules relating to hazardous wastes notified under the Environment (Protection) Act, 1986, subject to the conditions that the Central Government may revoke such delegation of powers or may itself invoke the provisions of Sec. 5 of the said act, if in the opinion of the Central Government such a course of action is necessary in the public interest :--

PROHIBITED HAZARDOUS WASTES

S.O. 678 (E) dated 27th, September 1995[1].—The following draft of a notification which the Central Government proposes to make in exercise of the powers conferred by Cl. (*d*) of sub-section (2) of Sec 6 of the Environment (Protection) Act, 1986 (29 of 1986), read with rule 13 of the Environment (Protection) Rules, 1986, is hereby published for information of all persons likely to be affected thereby,

And notice is hereby given that the said draft notification will be taken into consideration by the Central Government on or after the expiry of sixty days from the date of publication of this notification in the Official Gazette

Any person interested in filing any objection against the imposition of the aforesaid prohibition, may do so in writing to the Secretary, Ministry of Environment and Forests, Paryavaran Bhawan, Central Government Office Complex, New Delhi-110003, within the said period of sixty days

DRAFT NOTIFICATION

Whereas the Central Government is of the opinion that the hazardous wastes specified in the table below are toxic and detrimental to human health and the environment. it is therefore considered necessary to prohibit the import of the aforesaid hazardous wastes.

Now, therefore, in exercise of the powers conferred by Cl. (e) of sub-section (2) of Sec. 6 of the Environment (Protection) Act, 1986 (29 fo 1986), read with rule 13 of the Environment (Protection) Rules, 1986, the Central Government hereby proposes to prohibit from the date of final publication of this notification the import of the hazardous wastes, listed in the Table below, throughout India.

IMPOSITION OF PROHIBITION ON THE IMPORTS OF HAZARDOUS WASTES

S.O. 330 (E) dated 15th April, 1997.[1]—Whereas a notification of the Government of India in the Ministry of Environment and Forests was published in the *Gazette of India, Extraordinary*, Part II, Sec 3 sub-section (*ii*) *vide* No S O. 42 (E) dated the 16th January 1997 under Cl (*iii*) of sub-rule (2) of rule 13 of the Environment (Protection) Rules, 1986 inviting objections from the persons likely to be affected within a period of sixty days from the date of publication of the notification with regard in Government's intention for the imposition of prohibition on the imports of hazardous wastes specified in the Table given in the said notification;

And whereas objections received within the said period were duly considered by the Central Government,

And whereas the Central Government is of the opinion that the hazardous wastes specified in the Table below are toxic and detrimental to human health and the environment It is therefore considered necessary to prohibit the import of the aforesaid hazardous wastes

Now, therefore, in exercise of the powers conferred under sub-section 1 of Sec 3 and Cl (*d*) of sub-section (2) of Sec 6 of the Environment (Protection) Act, 1986 (29 of 1986), read with rule 13 of the Environment (Protection) Rules, 1986, the Central Government hereby prohibits from the date of publication of this notification the import of the hazardous wastes, listed in the Table below —

TABLE

Wastes containing the following as constituents or the wastes bearing the following as contaminants

Berylium
Selenium
Chromium (hexavalent)
Thallium
Wastes containing

Pesticides, herbicides and insecticides and their intermediates, residues thereof including outdated pesticides.

* * *

S.O. 899 (E), dated 13th October, 1998.[2]—In exercise of the powers conferred by sub-section (1) of Sec 3 and Cl (*d*) of sub-section (2) of Sec 6 of the Environment (Protection) Act, 1986 (29 of 1986), read with Rule 13 of the Environment (Protection) Rules, 1986, the Central Government hereby prohibits imports of hazardous wastes specified in the said table from the date and publication of this notification in the official Gazette.

TABLE

1 Wastes containing or contaminated with Polychlorinated biphenyls (PCB), Ploychlorinated terphenyls (PCT), Polybrominated biphenyls (PBB) other than the waste oil, and

2 Waste asbestos (dust and fibre).

PART III-7

MANUFACTURE, STORAGE AND IMPORT OF HAZARDOUS CHEMICALS RULES, 1989

S.O. 966 (E), dated the 27th November, 1989.[1]—In exercise of the powers conferred by Secs. 6, 8 and 25 of the Environment (Protection) Act, 1986 (29 of 1986) the Central Government hereby makes the following rules, namely :—

*1. **Short title and commencement.**—(1) These rules may be called the Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989.*

(2) They shall come into force on the date of their publication in the Official Gazette.

*2. **Definitions.**—In these rules, unless the context otherwise requires,—*

(a) "Act" means the Environment (Protection) Act, 1986 (29 of 1986);

(b) "Authority" means an authority mentioned in Column 2 of Schedule 5;

(c) "export" with its grammatical variations and cognate expression, means taking out of India to a place outside India;

(d) "exporter" means any person under the jurisdiction of the exporting country and includes the exporting country, who exports hazardous chemical;

(e) "hazardous chemical" means—

(i) any chemical which satisfies any of the criteria laid down in Part I of Schedule I and is listed in Column 2 of Part II of this Schedule ;

(ii) any chemical listed in Column 2 of Schedule 2;

(iii) any chemical listed in Column 2 of Schedule 3;

(f) "import", with its grammatical variations and cognate expression, means bringing into India from a place outside India;

(g) "importer" means an occupier or any person who imports hazardous chemicals;

(h) "industrial activity" means,—

(i) an operation or process carried out in an industrial installation referred to in Schedule 4 involving or likely to involve one or more hazardous chemicals and includes on-site storage or on-site transport which is associated with that operation or process, as the case may be; or

(ii) isolated storage; or

---

[1] Published in *Gazette* No. 787, dated 27th November, 1989; all corrections made in terms of corrigendum No S.O 115 (E), dated 5th February, 1990 published in *Gazette* No 59, dated 5th February, 1990

(iii) pipeline;

(i) "isolated storage" means storage of a hazardous chemical, other than storage associated with an installation on the same site specified in Schedule 4 where that storage involves atleast the quantities of that chemical set out in Schedule 2;

(j) "major accident" means an occurrence including any particular major emission, fire or explosion involving one or more hazardous chemicals and resulting from uncontrolled developments in the course of an industrial activity or due to natural events leading to serious effects both immediate or delayed, inside or outside the installation likely to cause substantial loss of life and property including adverse effects on the environments;

(k) "pipeline" means a pipe (together with any apparatus and works associated therewith) or system of pipes (together with any apparatus and works associated therewith) for the conveyance of a hazardous chemical other than a flammable gas as set out in Column 2 of Part II of Schedule 3 at a pressure of less than 8 bars absolute; the pipeline also includes interstate pipelines;

(l) "Schedule" means Schedule appended to these rules ;

(m) "site" means any location where hazardous chemicals are manufactured or processed, stored, handled, used, disposed of and includes the whole of an area under the control of an occupier and includes pier, jetty or similar structure whether floating or not;

(n) "Threshold quantity" means,—

(i) in the case of a hazardous chemical specified in Column 2 of Schedule 2, the quantity of that chemical specified in the corresponding entry in Columns 3 and 4,

(ii) in the case of a hazardous chemical specified in Column 2 of Part I of Schedule 3, the quantity of that chemical specified in the corresponding entry in Columns 3 and 4 of that part;

(iii) in the case of substances of a class specified in Column 2 of Part II of Schedule 3, the total quantity of all substances of that class specified in the corresponding entry in Columns 3 and 4 of that part.

[1][**3. *Duties of authorities.***—*The concerned Authority shall,—*

(a) inspect the industrial activity at least once in a calendar year;

(b) except where such authority is the Ministry of Environment and Forests, annually report on the compliance of the rules by the occupiers to the Ministry of Environment and Forests through appropriate channel;

---

[1] Subs. by S.O. 2882 (E) dated 3rd October, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 22nd October, 1994.

(c) *subject to the other provisions of these rules, perform the duties specified in Column 3 of the Schedule 5.]*

4. *General responsibility of the occupier during industrial activity.*—*(1) This rules shall apply to,—*

(a) *an industrial activity in which a hazardous chemical, which satisfies any of the criteria laid down in Part I of Schedule I and is listed in Column 2 of Part II of this Schedule is or may be involved ; and*

(b) *isolated storage in which there is involved a threshold quantity of a hazardous chemical listed in Schedule 2 in Column 2 which is equal to or more than the threshold quantity specified in the Schedule for that chemical in Column 3 thereof.*

(2) An occupier who has control of an industrial activity in terms of sub-rule (1) shall provide evidence to show that he has,—

(a) *identified the major accident hazards, and*

(b) *taken adequate steps to—*

  (i) *prevent such major accidents and to limit their consequences to persons and the environment ;*

  (ii) *provide to the persons working on the site with the information, training and equipment including antidotes necessary to ensure their safety.*

Comment

Rule 4 deals with the general responsibility of the occupier during industrial activity.

5. *Notification of major accident.*—*(1) Where a major accident occurs on a site or in a pipeline, the occupier shall [1][within 48 hours notify] the concerned authority as identified in Schedule 5 of that accident, and furnish thereafter to the concerned authority a report relating to the accidents in instalments, if necessary, in Schedule 6.*

(2) The concerned authority shall on receipt of the report in accordance with sub-rule (1) of this rule, shall undertake a full analysis of the major accident and send the [2][requisite information within 90 days to the Ministry] of Environment and Forests through appropriate channel.

[3][*(3) An occupier shall notify to the concerned Authority, steps taken to avoid any repetition of such occurrence on a site.*]

[4][*(4) The concerned Authority shall compile information regarding major*

accidents and make available a copy of the same to the Ministry of Environment and Forest through appropriate channel.

(5) The concerned Authority shall in writing inform the occupier, of any lacunae which in its opinion needs to be rectified to avoid major accidents.]

Comment

Rule 5 deals with the notification of major accidents which occurs on a site or in a pipeline and the concerned authority shall undertake a full analysis of the major accident and send the requisite information to the Ministry of Environment and Forests through appropriate channel.

6. Industrial activity to which rules 7 to 15 apply.—

(1) Rules 7 to 15 shall apply to,—

(a) an industrial activity in which there is involved a quantity of a hazardous chemical listed in Column 2 of Schedule 3 which is equal to or more than the quantity specified in the entry for that chemical in Columns 3 and 4 (rules 10-12 only for Column 4) and

(b) isolated storage in which there is involved a quantity of a hazardous chemical listed in Column 2 of Schedule 2 which is equal to or more than the quantity specified in the entry for that chemical in Column 1.

(2) For the purposes of rules 7 to 15,—

(a) "new industrial activity" means an industrial activity which—

(i) commences after the date of coming into operation of these rules, or

(ii) if commenced before that date, is an industrial activity in which a modification has been made which is likely to cover major accident hazards, and that activity shall be deemed to have commenced on the date on which the modification was made,

(b) an "existing industrial activity" means an industrial activity which is not a new industrial activity.

*7. **Notification of sites.**—(1) An occupier shall not undertake any industrial activity [1][unless he has been granted an approval for undertaking such an activity and has submitted] a written report to the concerned authority containing the particulars specified in Schedule 7 at least 3 months before commencing that activity or before such shorter time as the concerned authority may agree and for the purposes of this paragraph, an activity in which subsequently there is or is liable to be a threshold quantity or more of an additional hazardous chemical shall be deemed to be a different activity and shall be notified accordingly.*

[1][(2) The concerned Authority within 60 days from the date of receipt of the report, shall approve the report submitted and on consideration of the report if it is of the opinion that contravention of the provisions of the Act or the rules made thereunder has taken place, it shall issue notice under rule 19.]

*8. **Updating of the site notification following changes in the threshold quantity.**—Where an activity has been reported in accordance with rule 7 (1) and the*

---

1. Subs. by S.O. 2882 (E) dated 3rd October, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 22nd October, 1994.

occupier makes a change in it (including an increase or decrease in the maximum threshold quantity of a hazardous chemical to which this rule applies which is or is liable to be at the site or in the pipeline or at the cessation of the activity) which affects the particulars specified in that report or any subsequent report made under this rule, the occupier shall forthwith furnish a further report to the concerned authority.

Comment

Rule 8 deals with updating of the site notification following changes in the threshold quantity of a hazardous chemical to which this rules applies.

***9. Transitional provisions.**—Where,—*

(a) at the date of coming into operation of these rules, an occupier is in control of an existing industrial activity which is required to be reported under rule 7 (1); or

(b) within 6 months after that date an occupier commences any such new industrial activity;

it shall be a sufficient compliance with that rule if he reports to the concerned authority as per the particulars in Schedule 7 within 3 months after the date of coming into operation of these rules or within such longer time as the concerned authority may agree in writing.

Comment

Purpose of incorporating transitional provisions in any Act.—The purpose of incorporating transitional provisions in any Act or amendment is to clarify as to when and how the operative parts of the enactments are to take effect. The transitional provisions generally are intended to take care of the events during the period of transition.[1]

***10. Safety reports.**—(1) Subject to the following paragraphs of this rule, an occupier shall not undertake any industrial activity to which this rule applies, unless he has prepared a safety report on that industrial activity containing the information specified in Schedule 8 and has sent a copy of that report to the concerned authority at least ninety days before commencing that activity.*

(2) In the case of new industrial activity which an occupier commences, or by virtue of sub-rule (2) (a) (ii) of rule 6 is deemed to commence, within 6 months after coming into operation of these rules, it shall be a sufficient compliance with sub-rule (1) of this rule if the occupier sends to the concerned authority a copy of the report required in accordance with that sub-rule within ninety days after the date of coming into operation of these rules.

[2][*(3) In case of an existing industrial activity, the occupier shall prepare a safety report in consultation with the concerned authority and submit the same within one year from the date of the commencement of the Manufacture, Storage and Import of Hazardous Chemicals (Amendment) Rules, 1994, to the concerned Authority.*]

[3][*(4) After the commencement of the Manufacture, Storage and Import of*

[2] Subs. by S.O. 2882 (E) dated 3rd October, 1994 published in the *Gazette of India, Extraordinary,* Pt. II, Sec. 3 (*ii*), dated 22nd October, 1994.

[3] Ins. by *ibid*

Hazardous Chemicals (Amendment) Rules, 1994, the occupiers of both the new and the existing industrial activities shall carry out an independent safety audit of the respective industrial activities with the help of an expert, not associated with such industrial activities.

(5) The occupier shall forward a copy of the auditor's report along with his comments, to the concerned Authority within 30 days after the completion of such Audit.

(6) The occupier shall update the safety audit report once a year by conducting a fresh safety audit and forward a copy of it with his comments thereon within 30 days to the concerned Authority.

(7) The concerned Authority may if it deems fit, issue improvement notice under rule 19 within 45 days of the submission of the said report.]

11. Updating of reports under rule 10.—*(1) Where an occupier has made a safety report in accordance with sub-rule (1) of rule 10 he shall not make any modification to the industrial activity to which that safety report relates which could materially affect the particulars in that report, unless he has made a further report to take account of those modifications and has sent a copy of that report to the concerned authority at least 90 days before making those modifications.*

(2) Where an occupier has made a report in accordance with the rule 10 and sub-rule (1) of this rule and that industrial activity is continuing, the occupier shall within three years of the date of the last such report, make a further report which shall have regard in particular to new technical knowledge which has affected the particulars in the previous report relating to safety and hazard assessement, and shall within 30 days [1][***] send a copy of the report to the concerned authority

Comment

Rule 11 provides for updating of safety reports by an occupier in accordance with rule 10 (1). If the occupier has submitted his report in compliance of rule 10 (1), he shall make a further report within three years of the date of last report which shall have regard in particular to new technical knowledge affecting the particulars in the previous report relating to safety and hazard assessment, send a copy of the report to the concerned authority within 30 days.

[2]*[**12. Requirement for further information to be sent to the Authority.**—Where in accordance with rule 10 an occupier has sent a safety report and the safety audit report relating to an industrial activity to the concerned Authority, the concerned Authority may, by a notice served on the occupier, require him to provide such additional information as may be specified in the notice and the occupier shall send that information to the concerned Authority within 90 days.]*

13. Preparation of on-site emergency plan by the occupier.—*(1) An occupier shall prepare and keep up-to-date* [3]*[an on-site emergency plan containing*

1. Omitted by S.O. 2882 (E) dated 3rd October, 1994, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (ii), dated 22nd October, 1994.
2. Subs. by *ibid.*
3. *Ibid.*

details specified in Schedule 11 and detailing] how major accidents will be dealt with on the site on which the industrial activity is carried on and that plan shall include the name of the person who is responsible for safety on the site and the names of those who are authorised to take action in accordance with the plan in case of an emergency.

(2) The occupier shall ensure that the emergency plan prepared in accordance with sub-rule (1) takes into account any modification made in the industrial activity and that every person on the site who is affected by the plan is informed of its relevant provisions.

(3) The occupier shall prepare the emergency plan required under sub-rule (1)—

- *(a) in the case of a new industrial activity, before that activity is commenced;*
- *(b) in the case of an existing industrial activity within 90 days of coming into operation of these rules.*

[1]*[(4) The occupier shall ensure that a mock drill of the on-site emergency plan is conducted every six months;*

(5) A detailed report of the mock drill conducted under sub-rule (4) shall be made immediately available to the concerned Authority.]

***14. Preparation of off-site emergency plans by the authority.**—(1) It shall be the duty of the concerned authority as identified in Column 2 of Schedule 5 to prepare and keep up-to-date* [2]*[an adequate off-site emergency plan containing particulars specified in Schedule 12 and detailing] how emergencies relating to a possible major accident on that site will be dealt with and in preparing that plan the concerned authority shall consult the occupier, and such other persons as it may deem necessary.*

(2) For the purpose of enabling the concerned authority to prepare the emergency plan required under sub-rule (1), the occupier shall provide the concerned authority with such information relating to the industrial activity under his control as the concerned authority may require, including the nature, extent and likely effects off-site of possible major accidents and the authority shall provide the occupier with any information from the off-site emergency plan which relates to his duties under rule 13.

(3) The concerned authority shall prepare its emergency plan required under sub-rule (1),—

- *(a) in the case of a new industrial activity, before that activity is commenced;*
- *(b) in the case of an existing industrial activity, within six months of coming into operation of these rules.*

[3]*[(4) The concerned authority shall ensure that a rehearsal of the off-site emergency plan is conducted at least once in a calendar year.]*

---

[1] Ins. by S.O. 2882 (E) dated 3rd October, 1994 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 22nd October, 1994.

[2] Subs. by *ibid.*

[3] Ins. by *ibid.*

15. Information to be given to persons liable to be affected by a major accident.—*(1) The occupier shall take appropriate steps to inform persons outside the site either directly or through District Emergency Authority who are likely to be in an area which may be affected by a major accident about—*

(a) the nature of the major accident hazard ; and

(b) the safety measures and the 'Dos' and 'Don'ts' which should be adopted in the event of a major accident.

(2) The occupier shall take the steps required under sub-rule (1) to inform persons about an industrial activity, before that activity is commenced, except, in the case of an existing industrial activity in which case the occupier shall comply with the requirements of sub-rule (1) within 90 days of coming into operation of these rules.

Comment

It is the duty of the occupier to inform persons outside the site about an industrial activity before that activity is commenced.

16. Disclosures of information.—*(1) Where for the purpose of evaluating information notified under rule 5 or 7 to 15, the concerned authority discloses that information to some other person that other person shall not use that information for any purpose except for the purpose of the concerned authority disclosing it, and before disclosing the information the concerned authority shall inform that other person of his obligations under this paragraph.*

Comment

Rule 16 deals with disclosures of information to some other person.

17. Collection, Development and Dissemination of Information.—*(1) This rule shall apply to an industrial activity in which a hazardous chemical which satisfies any of the criteria laid down in Part I of Schedule I and is listed in Column 2 of Part II of this Schedule is or may be involved*

(2) An occupier, who has control of an industrial activity in term of sub-rule (1) of this rule, shall arrange to obtain or develop information in the form of safety data sheet as specified in Schedule 9. The information shall be accessible upon request for reference.

(3) The occupier while obtaining or developing a safety data sheet as specified in Schedule 9 in respect of a hazardous chemical handled by him shall ensure that the information is recorded accurately and reflects the scientific evidence used in making the hazard determination. In case, any significant information regarding hazard of a chemical is available, it shall be added to the material safety data sheet as specified in Schedule 9 as soon as practicable.

(4) Every container of a hazardous chemical shall be clearly labelled or marked to identify,—

(a) the contents of the container;

(b) the name and address of the manufacturer or importer of the hazardous chemical;

(c) the physical, chemical and toxicological data as per the criteria given at Part 1 of Schedule I.

(5) In terms of sub-rule (4) of this rule where it is impracticable to label a chemical in view of the size of the container or the nature of the package, provision should be made for other effective means like tagging or accompanying documents.

18. Import of hazardous chemicals.—*(1) This rule shall apply to a chemical which satisfies any of the criteria laid down in Part I of Schedule I and is listed in Column 2 of Part II of this Schedule.*

(2) Any person responsible for importing hazardous chemicals in India shall provide [1][before 30 days or as reasonably possible but not later than] the date of import to the concerned authorities as identified in Column 2 of Schedule 5, the information pertaining to—

(i) the name and address of the person receiving the consignment in India;

(ii) the port of entry in India ;

(iii) mode of transport from the exporting country to India;

(iv) the quantity of chemical (s) being imported; and

(v) complete product safety information.

[2][(3) If the concerned Authority of the State is satisfied that the chemical being imported is likely to cause major accidents, it may direct the importer to take such safety measures as the concerned Authority of the State may deem approprite.]

[3][3(A) In case the concerned Authority of the State is of the opinion that the chemical should not be imported on safety or on environmental considerations, such Authority may direct stoppage of such import.]

(4) The concerned authority at the State shall simultaneously inform the concerned Port Authority to take appropriate steps regarding safe handling and storage of hazardous chemicals while off-loading the consignment within the port premises.

(5) Any person importing hazardous chemicals shall maintain the records of the hazardous chemicals imported as specified in Schedule 10 and the records so maintained shall be open for inspection by the concerned authority at the State or the Ministry of Environment and Forests or any officer appointed by them in this behalf.

(6) The importer of the hazardous chemical or a person working on his behalf shall ensure that transport of hazardous chemicals from port of entry to the ultimate destination is in accordance with the Central Motor Vehicles Rules, 1989 framed under the provisions of the Motor Vehicles Act, 1988.

19. Improvement notices.—*(1) If the concerned authority is of the opinion that a person has contravened the provisions of these rules, the concerned authority shall serve on him a notice (in this para referred to as "an improvement notice") requiring that person to remedy the contravention or, as the case, may be, [4][the matters occasioning it within 45 days].*

---

1. Subs. by S.O. 2882 (E) dated 3rd October, 1994 published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*), dated 22nd October, 1994.
2. *Ibid.*
3. Ins. by S.O. 2882 (E) dated 3rd October, 1994 published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*), dated 22nd October, 1994.
4. Subs. by *ibid.*

(2) A notice served under sub-rule (1) shall clearly specify the measures to be taken by the occupier in remedying said contraventions.

***20. Power of the Central Government to modify the Schedules.**—The Central Government may, at any time, by notification in the Official Gazette, make suitable changes in the Schedules.*

Comment

Rule 20 empowers the Central Government to make suitable changes in the Schedules at any time by notification in the Official Gazette.

SCHEDULE 1

[*See* rule 2 (*e*) (*i*), 4 (1) (*a*), 4 (2), 17 and 18]

PART I

Indicative criteria and list of chemicals

(*a*) *Toxic Chemicals* :

Chemicals having the following values of acute toxicity and which, owing to their physical and chemical properties, are capable of producing major accident hazards.

S. No.	Degree of Toxicity	Medium lethal dose by oral route (oral toxicity) LD 50 (mg/kg body weight of test animals) animals)	Medium lethal dose by the dermal route (dermal toxicity) LD 50 (mg/kg body weight of test animals)	Medium lethal concentration by inhalation route (four hours) L C 50 (mg/l inhalation in test animals)
1	Extremely toxic	1—50	1—200	0 1—0 5
2.	Highly toxic	51—500	201—2000	0 5—2 0

(*b*) *Flammable chemicals* :

(*i*) flammable gases : chemicals which in the gaseous state at normal pressure and mixed with air become flammable and the boiling point of which at normal pressure is 20°C or below ,

(*ii*) highly flammable liquids · chemicals which have a flash point lower than 23°C and the boiling point of which at normal pressure is above 20°C.

(*iii*) flammable liquids : chemicals which have a flash point lower than 65°C and which remain liquids under pressure, where particular processing conditions, such as high pressure and high temperature, may create major accident hazards.

(*c*) *Explosives* :

Chemicals which may explode under the effect of flame, heat or photo-chemical conditions or which are more sensitive to shocks or friction than dinitrobenzene.

PART II

List of hazardous and toxic chemicals

Sl. No	Name of the Chemical
1	2
1.	Acetone
2.	Acetone Cyanohydrine
3.	Acetyl Chloride
4.	Acetylene (Ethyne)
5.	Acrolein (2-Propenal)
6.	Acrylonitrile
7.	Aldicarb
8	Aldrin
9.	Alkyl Phthalate
10.	Allyl Alcohol
11.	Allyamine
12.	Alpha Naphthyl Thiourea (Antu)
13.	Aminophenyl-4
14	Aminophenol-2
15	Amiton
16	Ammonia
17	Ammonium Nitrate
18.	Ammonium Nitrates in fertilizers
19.	Ammonium Sulfamate
20.	Anabasine
21.	Aniline
22.	Anisidine-p
23.	Antimony and Compounds
24.	Antimony Hydride (Stibine)
25	Arsenic Hydride (Arsine)
26.	Arsenic Pentoxide, Arsenic (v) Acid and Salts
27.	Arsenic Trioxide, Arsenious (iii) Acids and Salts
28.	Asbestos
29.	Azinphos-Ethyl
30.	Azimphos-Methyl
31.	Barium Azide
32.	Benzene
33.	Benzidine
34.	Benzidine Salts
35	Benzoquinone
36	Benzoyl Chloride
37.	Benzoyl Peroxide
38.	Benzyl Chloride
39.	Benzyl Cyanide
40.	Beryllium (Powders Compounds)
41.	Biphenyl
42.	Bis (2-Chloromethyl) Ketone
43.	Bis (2, 4, 6-Trinitrophenyl) Amine
44	Bis(2-Chlorothyl) Sulphide

SCHEDULE 2

[*See* rule 2 (*e*) (ii), 4 (1) (*b*), 4 (2) and 6 (1) (*b*)]

Isolated storage at installations other than those covered by Schedule 4.

(*a*) The threshold quantities set out below relate to each installation or group of installations belonging to the same occupier where the distance between installations is not sufficient to avoid, in foreseeable circumstances, any aggravation of major accident hazards These threshold quantities apply in any case to each group of installations belonging to the same occupier where the distance between the installations is less than 500 metres.

(*b*) For the purpose of determining the threshold quantity of a hazardous chemical at an isolated storage, account shall also be taken of any hazardous chemical which is—

(*i*) in that part of any pipeline under the control of the occupier having control of the site, which is within 500 metres of that site and connected to it;

(*ii*) at any other site under the control of the same occupier any part of the boundary of which is within 500 metres of the said site; and

(*iii*) in any vehicle, vessel, aircraft or hovercraft under the control of the same occupier which is used for storage purpose either at the site or within 500 metres of it;

but no account shall be taken of any hazardous chemical which is in a vehicle, vessel, aircraft or hovercraft used for transporting it.

Sl. No.	Chemicals	Threshold Quantities (tonnes)	
		For application of Rules 4, 5 and 7-9	For application of Rules 10 to 15
1	2	3	4
1.	Acrylonitrile	350	5,000
2.	Ammonia	60	600
3.	Ammonium nitrate (*a*)	350	2,500
4.	Ammonium nitrate fertilizers (*b*)	1,250	10,000
5.	Chlorine	10	25
6	Flammable gases as defined in Schedule 1, paragraph (*b*) (*i*)	50	300
7.	Highly flammable liquids as defined in Schedule 1, paragraph (*b*) (*ii*)	10,000	10,000
8.	Liquid oxygen	200	2,000
9.	Sodium chlorate	25	250
10.	Sulphure dioxide	20	500
11.	Sulphur trioxide	15	100
[1][12.	Carbonyl chloride	0.750	0.750
13.	Hydrogen Sulphide	5	50
14.	Hydrogen fluoride	5	50

---

[1] Ins. by S.O. 2882 (E) dated 3rd October, 1994 published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*), dated 22nd October, 1994.

1	2	3	4
15.	Hydrogen cyanide	5	20
16.	Carbon disulphide	20	200
17.	Bromine	50	500
18.	Ethylene oxide	5	501
19.	Propylene oxide	5	50
20.	2-Propenal (Acrolein)	20	200
21.	Bromomethane (Methyl bromide)	20	200
22.	Methyl isocyanate	0.150	0 150
23.	Tetraethyl lead or tetramethy lead	5	50
24.	1.2 Dibromoethane (Ethylene dibromide)	5	50
25	Hydrogen Chloride (liquefied gas)	25	250
26.	Diphenyl methane di-isocyanate (MDI)	20	200
27.	Toluene di-isocyanate (TDI)	10	100]

(*a*) This applies to ammonium nitrate and mixtures of ammonium nitrate where the nitrogen content derived from the ammonium nitrate is greater than 28 per cent by weight and to aqueous solutions of ammonium nitrate where the concentration of ammonium nitrate is greater than 90 per cent. by weight.

(*b*) This applies to straight ammonium nitrate fertilizers and to compound fertilizers where the nitrogen content derived from the ammonium nitrate is greater than 28 per cent. by weight (a compound-fertilizer contains ammonium nitrate together with phosphate and/or potash).

SCHEDULE 3

[*See* rule 2 (*e*) (*iii*), 5 and 6 (1) (*a*)]

List of hazardous chemicals for application of rules 5 and 7 to 15

(*a*) The quantities set-out-below relate to each installation or group of installations belonging to the same occupier where the distance between the installations is not sufficient to avoid, in forseeable circumstances, any aggravation of major accident hazards These quantities apply in any case to each group of installations belonging to the same occupier where the distance between the installation is less than 500 metres

(*b*) For the purpose of determining the threshold quantity of a hazardous chemical in an industrial installation, account shall also be taken of any chemical which is—

(*i*) in that part of any pipeline under the control of the occupier having control of the site, which is within 500 metres of that site and connected to it.

(*ii*) at any other site under the control of the same occupier any part of the boundary of which is within 500 metres of the said site; and

(*iii*) in any vehicle, vessel, aircraft or hovercraft under the control of the same occupier which is used for storage purpose either at the site or within 500 metres of it;

but no account shall be taken of any hazardous chemicals which is in a vehicle, vessel, aircraft or hovercraft used for transporting it.

PART II

Classes of chemicals not specifically named in Part I

1	2	3	4	5
GROUP 5-FLAMMABLE CHEMICALS				
1	Flammable gases			
	Substances which in the gaseous state at normal pressure and mixed with air become flammable and the boiling point of which at normal pressure is 20°C or below,	15 t	200 t	
2.	Highly flammable liquids ·			
	Substances which have a flash point lower than 23°C and the boiling point of which at normal pressure is above 20°C	1000 t	50000 t	
3.	Flammable liquids :			
	Substances which have a flash point lower than 65°C and which remain liquid under pressure, where particular processing conditions, such at high pressure and high temperature, may create major accident hazards.	25 t	200 t	

---

(1) This applies to ammonium nitrate and mixtures of ammonium nitrate where the nitrogen content derived from the ammonium nitrate is greater than 28% by weight

and aqueous solutions of ammonium nitrate where the concentration of ammonium nitrate is greater than 90% by weight.

(2) This applies to straight ammonium nitrate fertilizers and to compound fertilizers where the nitrogen content derived from the ammonium nitrate is greater than 28% by weight (a compound fertilizer contains ammonium nitrate together with phosphate and/or potash).

SCHEDULE 4

[*See* rule 2 (*h*) (*i*)]

1. Installations for the production, processing or treatment of organic or inorganic chemicals using for this purpose, among others :

    (*a*) alkylation

    (*b*) Ammation by ammonolysis

    (*c*) carbonylation

    (*d*) condensation

    (*e*) dehydrogenation

    (*f*) esterification

    (*g*) halogenation and manufacture of halogens

    (*h*) hydrogenation

    (*i*) hydrolysis

    (*j*) oxidation

    (*k*) polymerization

    (*l*) sulphonation

    (*m*) desulphurization, manufacture and tranformation of sulphur-containing compounds

    (*n*) nitration and manufacture of nitrogen-containing compounds

    (*o*) manufacture of phosphorous-containing compounds

    (*p*) formation of pesticides and of pharmaceutical products

    (*q*) distillation

    (*r*) extraction

    (*s*) solvation

    (*t*) mixing

2. Installations for distillation, refining or other processing of petroleum or petroleum products.

3. Installations for the total or pertial disposal of solid or liquid substance by incineration or chemical decomposition.

4. Installations for production, processing or treatment of energy gases, for example, LPG, LNG, SNG.

5. Installations for the dry distillation of coal or lignite.
6. Installation for the production of metals non-metals by a wet process or by means of electrical energy.

SCHEDULE 5

[*See* rules 2 (*b*) and 3]

S.No.	Authority (ies) with legal backing	Duties and corresponding Rule
1	2	3
1.	Ministry of Environment and Forests under Environment (Protection) Act, 1986.	Notification of hazardous chemicals as per rules 2 (*e*) (*i*) 2 (*e*) (*ii*) and 2 (*e*) (*iii*)
2	Chief Controller Imports and Exports under Import and Export (Control) Act, 1947.	Import of hazardous chemicals as per Rule 18
3.	Central Pollution Control Board or State Pollution Control Board under Environment (Protection) Act, 1986 as the case may be	(1) Enforcement of directions and procedure in respect of isolated storage of hazardous chemicals regarding . (*i*) Notification of major accidents as per rules 5 (1) and 5 (2) (*ii*) Notification of sites as per rules 7 to 9 (*iii*) Safety reports in respect of isolated storage as per rule 10 to 12. (*iv*) Preparation of on-site emergency plans as per rule 13 (2) Import of hazardous Chemicals and enforcement of directions and procedures on import of hazardous chemicals as per Rule 18
4.	Chief Inspector of Factories appointed under the Factories Act, 1948	Enforcement of directions and procedures in respect of industrial installations and isolated storages covered under the Factories Act, 1948 dealing with hazardous chemicals and pipelines including interstate pipeline regarding— (*i*)Notificaiton of major accident as per rule 5 (1) and 5 (2). (*ii*) Notification of sites as per rules 7-9. (*iii*) Safety reports as per rules 10 to 12. (*iv*) Preparation of on-site emergency plans as per rule 13. (*v*) Preparation of off-site emergency

1	2	3
		plans in consultation with District Collector or District Emergency Authority as per Sr. No 9 of this Schedule
5	Chief Inspector of Dock Safety appointed under the Dock Workers (Safety, Health and Welfare) Act, 1986	Enforcement of directions and procedures in respect of industrial installations and isolated storages dealing with hazardous chemicals and pipelines inside a port regarding— (*i*) Notification of major accidents as per rules 5 (1) and 5 (2). (*ii*) Notification of sites as per rules 7 to 9. (*iii*) Safety reports as per rules 10 to 12. (*iv*) Preparation of on-site emergency plans as per rule 13. (*v*) Preparation of off-site emergency plans in consultation with District Collector or District Emergency Authority as per S. No. 9 of this Schedule.
6	Chief Inspector of Mines appointed under the Mines Act, 1952.	Enforcement of directions and procedures in respect of industrial installations and isolated storages dealing with the hazardous chemicals and pipelines including inter-state pipeline regarding— (*i*) Notification of major accidents as per rules 5 (1) and 5 (2). (*ii*) Notification of sites as per rules 7 to 9. (*iii*) Safety reports as per rules 10 to 12. (*iv*) Preparation of on-site emergency plans as per rule 13 (*v*) Preparation of off-site emergency plans in consultation with District Collector or District Emergency Authority as per S. No. 9 of this Schedule.
7.	Atomic Energy Regulatory Board appointed under the Atomic Energy Act, 1972.	Enforcement of directions and procedures as per the provisions of the Atomic Energy Act, 1972.
8.	Chief Controller of Explosives appointed under theIndian Explosives Act and Rules, 1983	Enforcement of directions and procedures as per the provisions of :—

1	2	3
		[1][(*i*) The Explosives Act, 1884 (4 of 1884) and the rules made thereunder, namely — (*a*) The Gas Cylinders Rules, 1981, (*b*) The Static and Mobile Pressure Vessel (Unfired) Rules, 1981; (*c*) The Explosives Rules, 1984. (*ii*) The Petroleum Act, 1934 (30 of 1934) and the Rules made thereunder, namely — (*a*) The Petroleum Rules, 1976 (*b*) The Calcium Carbide Rules, 1987]
9.	District Collector or District Emergency Authority designated by the State Government.	Preparation of off-site emergency plans as per Rule 14.
[2][10.	Directorate of Explosives Safety (DES), Defence Research and Development of Organisation (DRDO), Department of Defence Research & Development, Ministry of Defence	Enforcement of directions and procedures in respect of laboratories, industrial establishment and isolated storages dealing with hazardous chemicals in the Ministry of Defence

SCHEDULE 6

[*See* rule 5 (1)]

Information to be furnished regarding notification of a major accident

Report number . of the particular accident

1. General data ....

(*a*) Name of the site ....

(*b*) Name and address of the manufacturer (Also state telephone/telex number) ....

(*c*) (*i*) Registration number

(*ii*) Licence number (As may have been allotted under any statute applicable to the site, *e.g.*, the Factories Act) ....

---

[1] Subs. by S.O. 2882 (E) dated 3rd October, 1994 published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*), dated 22nd October, 1994.

[2] Sl. No. 10 and entries relating thereto inserted *vide* G.S.R. 584 (E), dated 19th June, 1990 published in the *Gazette* No. 244, dated 19th June, 1990.

(*d*) (*i*) Nature of industrial activity (Mention what is actually manufactured, stored etc.) ....

(*ii*) National Industrial Classification, 1987 as the four digit level. ☐ ☐ ☐ ☐

2 Type of major accident

Explosion ☐ Fire ☐ Emissions of dangerous substance ☐

Substance (s) Emitted ....

3. Description of the major accident

(*a*) Date, shift and hour of the accident ....

(*b*) Department/Section and exact place where the accident took place. ....

(c) The process/operation undertaken in the Department/Section where the accident took place. (Attach a flow chart, if necessary) ....

(*d*) The circumstances of the accident and the danerous substance involved. ....

4. Emergency measures taken and measures envisaged to be taken to alleviate short term effects of the accident. ....
....

5 Causes of the major accident.

Known (to be specified) ☐

Not known ☐

Information will be supplied as soon as possible. ☐

6. Nature and extent of damage

(*a*) Within the establishment-casualties ....killed

....Injured

....Poisoned

Persons exposed to the major accident— ....

material damage

danger is still present

danger no longer exists

(*b*) Outside the establishment casualties

....killed

....Injured

....Poisoned

Persons exposed to the major accident ....

material damage ☐

damage to environment ☐

the danger is still present ☐

the danger no longer exists ☐

7. Data available for assessing the effects of the accident on persons and environment. ....

8. Steps already taken or envisaged ....

(*a*) to alleviate medium or long term effects of the accident. ....

(*b*) to prevent recurrence of similar major accidents, ...

(*c*) Any other relevant information. ....

SCHEDULE 7

[*See* rule 7 (1)]

Information to be furnished for the notification of sites

PART I

Particulars to be included in a notification of a site

1. The name and address of the employer making the notification.

2 The full postal address of the site where the notifiable industrial activity will be carried on

3 The area of the site covered by the notification and of any adjacent site which is required to be taken into account by virtue of *b* (*ii*) of Schedule 2 and 3.

4. The date on which it is anticipated that the notifiable industrial activity will commence, or if it has already commenced a statement to that effect.

5. The name and maximum quantity liable to be on the site of each dangerous substance for which notification is being made.

6. Organisation structure, namely organisation diagram for the proposed industrial activity and set up for ensuring safety and health.

7. Information relating to the potential for major accident namely—

   (*a*) identification of major accident hazards ;
   (*b*) the conditions or events which could be significant is bringing one about;
   (*c*) a brief description of the measures taken

8. Information relating to the site namely—

(a) a map of the site and its surrounding area to a scale large enough to show any features that may be significant in the assessment of the hazard or risk associated with the site—

(i) area likely to be affected by the major accident.

(ii) population distribution in the vicinity.

(b) a scale plan of the site showing the location and quantities of all significant inventories of the hazardous chemicals;

(c) a description of the process or storage involving the hazardous chemicals and an indication of the conditions under which it is normally held;

(d) the maximum number of persons likely to be present on site.

9. The arrangement for training of workers and equipment necessary to ensure safety of such workers.

PART II

Particulars to be included regarding pipeline-

1 The names and the address of the person making the notification

2. The full postal address of the place from which the pipeline activity is controlled, addresses of the places where the pipeline starts and finishes and a map showing the pipeline route drawn to a scale of not less than 1 · 400000.

3. The date on which it is anticipated that the notifiable activity will commence, or if it is already commenced a statement to that effect.

4. The total length of the pipeline, its diameter and normal operating pressure and the name and maximum quantity liable to be in the pipeline of each hazardous chemical for which notification is being made.

SCHEDULE 8

[*See* rule 10 (1)]

Information to be furnished in a safety report

1. The name and address of the person furnishing the information.

2. Description of the industrial activity, namely—

(a) site,
(b) construction design,
(c) protection zones explosion protection, separation distances,
(d) accessibility of plant,
(e) maximum number of persons working on the site and particularly of those persons exposed to the hazard.

3. Description of the processes, namely—

(a) technical purpose of the industrial activity,
(b) basic principles of the technological process,

(*c*) process and safety-related data for the individual process stages,
(*d*) process description,
(*e*) safety-related types of utilities.

4. Description of the hazardous chemicals, namely—

(*a*) chemicals (quantities, substance data, safety-related data, toxicological data and threshold values),
(*b*) the form in which the chemical may occur on or into which they may be transformed in the event of abnormal conditions,
(*c*) the degree of purity of the hazardous chemical

5. Information on the preliminary hazard analysis, namely—

(*a*) type of accident,
(*b*) system elements or events that can lead to a major accident.
(*c*) hazards,
(*d*) safety-relevant components.

6. Description of safety-relevant units, among others ;

(*a*) Special design criteria
(*b*) controls and alarms,
(*c*) special relief systems,
(*d*) quick-acting valves.
(*e*) collecting tanks/dump tank,
(*f*) sprinkler system,
(*g*) fire-fighting etc.

Information on the hazard assessment, namely—

(*a*) identification of hazards,
(*b*) the cause of major accidents,
(*c*) assessment of hazards according to their occurrence frequency,
(*d*) assessment of accident consequences,
(*e*) safety systems,
(*f*) known accident history

8. Description of information on organisational systems used to carry on the industrial activity safety, namely—

(*a*) maintenance and inspection schedules,
(*b*) guidelines for the training of personnel,
(*c*) allocation and delegation of responsibility for plant safety,
(*d*) implementation of safety procedures.

9. Information on assessment of the consequences of major accidents, namely

(*a*) assessment of the possible release of hazardous chemical or of energy
(*b*) possible dispersion of released chemical
(*c*) assessment of the effects of the releases (size of the affected area, health effects, property damage).

10. Information on the mitigation of major accidents, namely—

- (*a*) fire brigade
- (*b*) alarm systems..
- (*c*) emergency plan containing system of organisation used to fight the emergency, the alarm and the communication routes, guidelines for lighting the emergency information about hazardous chemicals examples of possible accident sequences.
- (*d*) coordination with the District Emergency Authority and its off-site emergency plan.
- (*e*) notification of the nature and scope of the hazard in the event of an accident.
- (*f*) antidote in the event of a release of a hazardous chemical.

SCHEDULE 9

[*See* Rule 17]

Safety data sheet

1. CHEMICAL IDENTITY

Chemical Name	Chemical Classification

10. DISCLAIMER

Information contained in this material data sheet is believed to be reliable but no representation guarantee or warranties of any kind are made as to its accuracy suitability for a particular application or result to be obtained from them. It is upto the manufacturer/seller to ensure that the information contained in the material safety data sheet is relevant to the product manufactured/handled or sold by him as the case may be. The Government makes no warranties expressed or implied in respect of the adequacy of this document for any particular purpose.

SCHEDULE 10

[*See* rule 18 (5)]

(Format for maintaining records of hazardous chemicals imported)

1 Name and address of the importer

2 Date and reference numbers of issuance of permission to import hazardous chemicals .

3. Description of hazardous chemicals

 (*a*) Physical form

 (*b*) Chemical form

 (*c*) Total volume and weight (in kilogrammes/tonnes)

4 Description of purpose of import

5 Description of storage of hazardous chemicals

 (*a*) Date :

 (*b*) Method of storage.

[1][SCHEDULE 11

[*See* rule 13 (1)]

Details to be furnished in the on-side emergency plan

1 Name and address of the person furnishing the information.

2. Key personnel of the organisation and responsibilities assigned to them in case of an emergency

3 Outside organisations if involved in assisting during on-site emergency

 (*a*) Type of accidents

 (*b*) Responsibility assigned

4 Details of liasion arrangement between the organisations

5 Information on the preliminary hazard analysis

 (*a*) Type of accidents

 (*b*) System elements or events that can lead to a major accident

 (*c*) Hazards

 (*d*) Safety relevant components

6 Details about the site .

 (*a*) Location of dangerous substances.

 (*b*) Seat of key personnel.

 (*c*) Emergency control room.

7. Description of hazardous chemicals at plant site

 (*a*) Chemicals (Quantities and toxicological data).

 (*b*) Transformation if any which could occur.

 (*c*) Purity of hazardous chemicals.

8. Likely dangers to the plant.

---

9 Enumerate effects of :

(*i*) stress and strain caused during normal operation;

(*ii*) fire and explosion inside the plant and effect if any, of fire explosion outside

10. Details regarding :

(*i*) warning, alarm and safety and security systems

(*ii*) alarm and hazard control plans in line with disaster control and hazard control planning, ensuring the necessary technical and organizational precautions.

(*iii*) reliable measuring instruments, control units and servicing of such equipments.

(*iv*) precautions in designing of the foundation and load bearing parts of the building.

(*v*) continuous surveillance of operations.

(*vi*) maintenance and repair work according to the generally reorganised rules of good engineering practices.

11 Details of communication facilities available during emergency and those required for an off-side emergency

12. Details of fire fighting and other facilities available and those required for an off-site emergency

13 Details of first aid and hospital services available and its adequacy.

SCHEDULE 12

[*See* rule 14 (1)]

Details to be furnished in the off-site emergency plan

1. The types of accidents and release to be taken into account.
2. Organisations involved including key personnel and responsibilities and liasion arrangements between them.
3. Information about the site including likely locations of dangerous substances, personnel and emergency control rooms.
4 Technical information such as chemical and physical characteristics and dangers of the substances and plant.
5 Identify the facilities and transport routes.
6. Contact for further advice e.g., meteorological information, transport, temporary food and accommodation, first aid and hospital services, water and agricultural authorities.
7. Communication links including telephones, radios and stand by methods
8. Special equipment including fire fighting materials, damage control and repair items
9 Details of emergency response procedures.
10. Notify the public.
11. Evacuation arrangements.
12 Arrangements for dealing with the press and other media interests.
13. Longer term clean up.]

PART III-8

THE HAZARDOUS MICRO-ORGANISMS AND GENETICALLY MODIFIED ORGANISMS (MANUFACTURE, USE, IMPORT, EXPORT AND STORAGE) RULES, 1999

(DRAFT RULES)

G.S.R. 98 (E), dated 19th February, 1999.[1]—In exercise of the powers conferred by Secs. 6, 8, 10 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby publishes the following draft of certain rules in supersession of the Rules for Manufacture, Use, Import, Export and Storage of Hazardous Micro-Organisms/Genetically Modified Organisms or Cells 1993 except as respect things done or omitted to be done before such supersession for the information of all persons likely to be affected thereby and notice is hereby given that the said draft rules will be taken into consideration after the expiry of a period of 60 days from the date on which the Gazette copies containing this notification are made available to the public

G.S.R. No.—In exercise of the powers conferred by Secs. 6, 8, 10 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules, namely :—

1. ***Short title and commencement.***—*(1) These Rules may be called the Hazardous Micro-Organisms and Genetically Modified Organisms (Manufacture, Use, Import, Export and Storage) Rules, 1999.*

(2) They shall come into force on the date of their publication in the Official Gazette.

2. ***Application.***—*(1) These rules shall be applicable to*

   (a) hazardous micro-organisms and genetically modified organisms including their products for the purpose of .

      (i) import and export :

      (ii) manufacture, use and storage, if the capacity is of 20 litres and above culture volume.

   (b) new gene technologies apart from those referred to in clause (h) of rule 3 and to micro-organisms generated by the utilisation of such other gene technologies and to substances and products of which such organisms form part.

(2) These rules shall not apply to the pesticides governed by the Insecticides Act, 1968 (46 of 1968).

3. ***Definitions.***—*In these rules, unless the context otherwise requires :—*

   (a) "accident" has the meaning assigned to it by Cl. (a) of Sec. 2 of the Public Liability Insurance Act, 1991 (6 of 1991);

   (b) "Act" means the Environment (Protection) Act, 1986 (29 of 1986);

   (c) "biotechnology" means the exploitation of biological processes for

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated February, 1999.

industrial and other purposes, especially genetic manipulation of micro-organisms (for the production of antibiotics, hormones and the like;

(d) *"contained use" means any operation in which micro-organisms are genetically modified or in which such genetically modified micro-organisms are cultured, stored, used, transported, destroyed or disposed of and for which physical barriers or a combination of physical barriers together with chemical and/or biological barriers, are used to limit contact with the environment;*

(e) *"deliberate release" means any international introduction into the environment of hazardous micro-organisms or genetically modified organisms or their combination without provisions for containment such as physical barriers or a combination of physical barriers together with chemical and/or biological barriers used to limit their contact with the general population and the environment;*

(f) *"export" with its grammatical variations and cognate expressions : means taking out of India to a place outside India;*

(g) *"Form" means a form annexed to these rules :*

(h) *"genetically modified micro-organisms (GMOs)" means a micro-organisms in which the genetic meterial has been altered, in a way that does not occur naturally by mating and/or recombination by genetic modification through the use of the techniques listed in Part I of Schedule I but does not include a modification through a technique listed in Part II or Part III of the said Schedule;*

(i) *"hazardous micro-organisms" means any microscopic living entity-cellular or non-cellular capable of replication or of transferring genetic material hazardous to health and environment as listed in Schedule II.*

(j) *"import", with its grammatical variations and cognate expression, means bringing into India from a place outside India;*

(k) *"product" means a preparation consisting of or containing a hazardous micro-organisms or GMO or a combination of these and the resulting material placed on the market;*

(l) *"Schedule" means a schedule annexed to these rules.*

4. ***Expert Committees.***—*(1) Recombinant DNA Advisory Committee (RDAC).—*

(i) *The Central Government may, by order, constitute a committee to be called the Recombinant DNA Advisory Committee (RDAC), in the Department dealing with biotechnology.*

(ii) *The RDAC shall review developments in biotechnology at national and international levels and recommend appropriate safety guidelines for India in recombinant research, use and applications from time to time.*

(2) *Review Committee on Genetic Manipulation (RCGM).—*

(i) *The Review Committee on Genetic Manipulation (RCGM) shall consist of—*

(a) representatives of—

(1) Department dealing with Biotechnology.

(2) Indian Council of Medical Research.

(3) Indian Council of Agricultural Research.

(4) Council of Scientific and Industrial Research, and

(b) other expert or experts nominated by the Department dealing with biotechnology in his or their individual capacity

(ii) The RCGM shall function in the Department dealing with Biotechnology to monitor the safety related aspect in respect of on-going research projects and activities involving hazardous micro-organisms or GMOs.

(iii) The RCGM shall bring out Manuals or Guidelines specifying the procedure for regulatory process with respect to activities involving genetically modified organisms in research and their use and applications in industry and other areas with a view to ensure environmental safety.

(iv) The RCGM shall also review all on-going projects involving high risk category and controlled field experiments to ensure that adequate precautions and containment conditions are followed as per its guidelines.

(v) The RCGM shall lay down procedures restricting or prohibiting production, sale, importation and use of such hazardous micro-organisms or GMOs as mentioned in Schedule II.

(vi) On the recommendation of the RCGM, the Central Government may, by notification in the official Gazette :—

(a) recognise one or more laboratories or institutes for conducting tests on hazardous micro-organisms or GMOs; and

(b) prescribe special tests to be conducted for hazardous micro-organisms or GMOs.

(3) Institutional Bio-safety Committee (IBSC).—

(i) The Institutional Bio-safety Committee (IBSC) shall be constituted by an occupier including research institutions handling hazardous micro-organisms or GMOs.

(ii) The IBSC shall be constituted as required under para (i) of this sub-rule :—

(a) in case of a new activity before the activity is commenced; and

(b) in case of an existing activity, within ninety days of coming into operation of these rules.

(iii) The IBSC in respect of an institution shall consists of head of that institution, scientists engaged in the work on hazardous micro-organisms or GMOs, a medical expert and a nominee of the Department dealing with biotechnology.

(iv) *The occupier including research institutions handling hazardous micro-organisms or GMOs, shall prepare, with the assistance of IBSC, an up-to-date- on-site emergency plan according to the guidelines issued from time-to-time.*

(v) *The occupier including research institutions shall make available copies of its plan the concerned District Level Committee and State Biotechnology Co-ordination Committee.*

(vi) *The occupier including research institutions handling hazardous micro-organisms or GMOs shall prepare on-site plan required under para (v).—*

(a) *in case of a new industrial or research activity before that activity is commenced; and*

(b) *in case of an existing industrial or research activity, within ninety days of coming into operation of these rules.*

(4) *Genetic Engineering Approval Committee (GEAC) :—*

(i) *The Central Government may constitute a Committee to be called the Genetic Engineering Approval Committee (GEAC) in the Ministry of Environment and Forests consisting of the following, namely :—*

1. *Additional Secretary or Joint Secretary, Ministry of Environment and Forests — Chairman.*
2. *Nominee of the Department of Biotechnology—Co-Chairman.*
3. *A representative each of the Ministry of Industrial Development and the Department dealing with Biotechnology and the Department dealing with Atomic Energy—Members*

4. (a) *A representative of :—*

(1) *Director-General, Indian Council of Medical Research; (2) Director-General, Indian Council of Agricultural Research; (3) Director-General, Council of Scientific and Industrial Research; (4) Director-General, Health Services; (5) Plant Protection Adviser, Directorate of Plant Protection, Quarantine and Storage, (6) Chairman. Central Pollution Control Board; and*

(b) *three outside experts in biotechnology nominated by the Central Government in individual capacity—Members*

5. *An officer of the Ministry of Environment and Forests—Member-Secretary.*

(ii) *The GEAC may, with the approval of its Chairman a, co-opt members/ experts.*

(iii) *The GEAC shall be responsible for approval of activities involving large-scale (20 liters and above culture volume) manufacture, use and storage of hazardous micro-organisms or GMOs in research and industry from environmental angle.*

(iv) *The GEAC shall also be responsible for environmental approval of proposals relating to large-scale release (20 litres and above culture volume) of hazardous micro-organisms or GMOs and products including deliberate release in the environment including experimental or field trials.*

(v) *The GEAC shall also be responsible for environmental approval of proposals relating to import and export of hazardous micro-organisms or GMOs.*

(5) *State Biotechnology Co-ordination Committee (SBCC) :*

(i) *The State Government may constitute a State Biotechnology Co-ordination Committee (SBCC) consisting of—*

(a) *Chief Secretary* —*Chairman.*

(b) *Secretary, Department of Environment* —*Member,*

(c) *Secretary, Department of Agriculture* —*Member,*

(d) *Secretary, Department of Agriculture* —*Member,*

(e) *Secretary, Department of Industries* —*Member,*

(f) *Secretary, Department of Labour* —*Member,*

(g) *Secretary, Department of Forests* —*Member,*

(h) *Secretary, Department of Public Works* —*Member,*

(i) *State Microbiologist and Pathologist* —*Member,*

(j) *Member Secretary, State Pollution Control Board or on officer of SPCB authorized by it.* — *Member-Secretary*

(ii) *The SBCC shall coordinate and monitor the inspection and investigation of violations of the provisions of the Act and these rules and advise the concerned State Pollution Control Board to take necessary corrective steps.*

(iii) *The SBCC shall review periodically the safety and control measures in various industries and institutions handling hazardous micro-organisms or GMOs.*

(iv) *The SBCC may, with the approval of its Chairman, co-opt. members/ experts.*

(6) *District Level Committee (DLC):*

(i) *The District Level Committee shall consist of such members as the State Government may deem fit.*

(ii) *In such districts where installations engaged in the activity involving hazardous micro-organisms or GMOs are located, the State Government may constitute a District Level Committee to monitor the safety regulations in installations engaged in the use of hazardous micro-organisms or GMOs and its applications in the environment.*

(iii) *The DLC may, with the permission of the occupier, visit the installations engaged in the activity involving hazardous micro-*

organisms or GMOs, collect information, find out hazards and risks associated with each of these installations and co-ordinate activities with a view to meet any emergency.

5. *Classification of hazardous micro-organisms or GMOs.—*

(i) *The hazardous micro-organisms or GMOs shall, for the purpose of these rules, be classified to the risk group(s) an specified in Schedule II.*

(ii) *If any of the hazardous micro-organisms or GMOs falls within the limits of more than one risk group as specified in Schedule II, it shall be deemed to be of the higher order of such groups.*

6. *Containment measures.*—*(1) In order to ensure safety in handing hazardous micro-organisms or GMOs, principles of good micro-biological practices, occupational safety and hygiene and other containment measures as provided in the guidelines issued by the Government from time to time shall be applied.*

(2) The safety practices and containment measures applied shall be periodically reviewed by the occupier/Biosafety Committee or the person handling hazardous micro-organisms or GMOs to take into account new scientific and technical knowledge related to risk assessment treatment and disposal of wastes.

7. *Hazardous micro-organisms or GMOs not to be handled without approval.*—*(1) No person shall manufacture, use, import, export, store or undertake deliberate release of any hazardous micro-organisms or GMOs without obtaining the approval of GEAC.*

(2) A person seeking approval of GEAC, as required under sub-rule (1), shall submit his application in Form I for clinical, veterinary and food products, in Form II for transgenic plants and in Form III for other products including products used in pollution control.

(3) An application for approval shall be disposed of by the GEAC after considering all material facts : Provided that no such application shall be rejected without giving the applicant a reasonable opportunity of being heard.

(4) The data to be generated by a person before undertaking a deliberate release of hazardous micro-organisms or GMOs or any combination of them shall follow step-by-step principle that is where the scale of release increases, evaluation of the earlier step becomes necessary.

(5) The experiments for generation of data referred to in sub-rule (4) shall be done sequentially from controlled laboratory conditions to the growth chamber and the green-house testing to small-scale fields trials and finally to large-scale field trials. The GEAC/RCGM shall if necessary carry out tests in the approved laboratories or inspections for control purposes.

(6) In the event of any modification of the deliberate release of hazardous micro-organisms or GMOs or a combination of any two or more of them which could have consequence with regard to the risks of human health or the environment or if new information has become available on such risks, either while the data is being examined by the GEAC or after the GEAC has given the environmental clearance, the person seeking approval shall immediately—

(a) *revise the measures specified in the report;*

(b) inform the GEAC of any modification and soon as the new information is available and

(c) take the measure necessary to protect human health and the environment.

(7) (a) An application for approval, complete in all respects shall be disposed of by the GEAC with 90 days.

(b) Where the GEAC requires any additional information in case of an application of the application is incomplete in any respect, it shall require the applicant to supply such additional information or complete the application form in all respects within a period specified by it, before such application is disposed of

Explanation.— The approval under this sub-rule shall not be construed as a clearance, approval or licence as may be required under any other law.

(8) The GEAC may give directions to the occupier to determine and take measures concerning the discharge of hazardous micro-organisms or GMOs mentioned in Schedule II including prohibition of such discharges and laying down measures to be taken to prevent such discharges.

8. Terms and conditions of Approval.—*(1) In connection with the granting of approval under rule 7, the terms and conditions shall be stipulated, including terms and conditions relating to the control to be exercised by the applicant, supervision, restriction on use, layout of the enterprise and the information to be furnished to the RCGM, SBCC and to the DLC.*

(2) The environment approval of GEAC shall be for a specified period not exceeding four years at the first instance, renewable for two years at a time. The GEAC shall have powers to revoke such approval in the following cases, namely —

(a) if there is any information as to the harmful effects of the hazardous micro-organisms organisms or GMOs, or

(b) If the hazardous micro-organisms or GMOs cause such damage to the environment, nature or health as could not be envisaged when the approval was given : or

(c) non-compliance of any of the terms and conditions stipulated by the GEAC.

9. Supervision.— *(1) The GEAC shall supervise the implementation of the terms and conditions laid down in connection with the approval accorded by it.*

(2) The GEAC may carry out the supervision with the assistance of SBCC or the Central or State Pollution Control Board, RCGB or DLC.

10. Responsibility to notify interruption or accidents.— *(1) Any person who under rules 7 and 8 is responsible for complying with the terms and conditions of the approval shall immediately notify the GEAC, DLC and SBCC and the State Pollution Control Board of any interruptions or accidents that may lead to discharge of hazardous micro-organisms or GMOs which may be harmful to the environment.*

(2) Any notice given under sub-rule (1) shall not absolve the person who is responsible to minimise or prevent the effects of interruptions of operations or accidents from such responsibilities.

11. ***Preparation of off-site Emergency Plan by the DLC.****—(1) It shall be the duty of the DLC to prepare an off-site emergency plan detailing how emergencies relating to possible major accident at a site will be dealt with and in preparing the plan the DLC shall see that there are adequate containment facilities with the occupier.*

(2) The DLC shall prepare the off-set emergency plan required under sub-rule (1), in the case of.—

(a) a new activity before that activity has commenced; and

(b) an existing activity within nine months of coming into operation of these rules.

(3) For the purpose of enabling the DLC to prepare the off-site emergency plan required under sub-rule (1) the copier shall provide the DLC with such information relating to the steps taken for containment and handling of hazardous micro-organisms or GMOs under his control as the DLC may require including the nature, extent and likely off-site effects of a possible major accident and the preventive steps and the DLC shall provide the occupier with any information from the off-site emergency plan which relates to his duties under rule 10.

12. Inspections.—*(1) Any member of the SBCC, GEAC or DLC duly empowered under Sec. 10 of the Act may, at all reasonable times, enter and inspect any premises for carrying out the functions assigned to the committee to which he is a member.*

(2) The SBCC or GEAC or DLC may call from the occupier information, data or report about its activities relating to manufacture, use, import, export and storage of any hazardous micro-organisms or GMOs.

13. ***Maintenance of Record.****—The occupier or any person handling hazardous micro-organisms or GMO shall be required to keep records of the work carried out by him and be made available to the concerned authority or request.*

14. ***Appeal.****—(1) Any person aggrieved by a decision made by the GEAC or SBCC or DLC in pursuance of these rules may within thirty days from the date on which the decision is communicated to him prefer an appeal to the Central Government :*

Provided that an appeal may be admitted after expiry of the said period if the appellant has sufficient reasons or not preferring the appeal within stipulated time but no such appeal shall be admitted after 45 days.

(2) An appeal under sub-rule (1) shall be addressed and sent to the Secretary to the Government of India. Ministry of Environment and Forests, New Delhi, and shall clearly and precisely specify the grounds on which the appeal is preferred. The appeal shall after giving an opportunity of being heard to the appellant, be disposed of as expeditiously as possible.

SCHEDULE I

(*See* rule 3 (*h*))

PART I

Techniques of genetic modification are :

(1) recombinant DNA techniques involving in-vitro introduction of different segments of DNA (one being the vector and others normally unrelated DNA sequences) that are capable of replication in a host cell either autonomously or as an integral part of host's genome and maintenance of their continued propagation;

(2) techniques involving the direct introduction into a micro-organism of heritable material prepared outside the micro-organisms including micro-injection, macro-injection and micro-encapsulation;

(3) cell fusion or hybridization techniques where live cells with new combinations of heritable genetic material are formed through the fusion of two or more cells by means of methods that do not occur naturally; and

(4) genetic engineering including self-cloning and deletion, transformation and other types of virus or pathogen introduction into unnatural hosts.

PART II

Techniques which are not considered to result in genetic modification, on condition that they do not involve the use of recombinant-DNA molecules or genetically modified organisms :

(1) in-vitro fertilization

(2) conjugation, transaction, transformation or any other natural process, and

(3) polyploidy induction

PART III

Techniques of genetic modification to be excluded from the Rules on condition that they do not involve the use of genetically modified micro-organisms as recipient or parental organisms .

(1) mutagenesis;

(2) the construction and use of somatic animal hybridoma cells (e g , for the production of monoclonal antibodies);

(3) cell fusion (including protoplast fusion) of cells from plants which can be produced by traditional breeding methods; and

(4) Self-cloning of non-pathogenic naturally occurring micro-organisms

---

SCHEDULE II

(*See* rule 3 (*i*) and 5)

PART I : ANIMAL AND HUMAN PATHOGENS

A BACTERIAL AGENTS

(*a*) Risk Group II

1. Acinetobacter calcoacctius
2. actinobacillus-all species except A mallel which is in Risk Group III
3. Aeromonas hydrophila
4. Arizona hinshawil-all serotypes
5. Bacillus anthracis
6. Bordetella all species
7. Borrella recurrentis B. Vincenti
8. Compylobacter fetus
9. Campylobacter jejuni
10. Chlamydia psittaci
11. Chlamydia trachomatis
12. Clostridium chauvoel. C. difficile, C. fallax, C. haemolyticum, C. histolyticum, C. novyi, (= C. oedematiens), C. perfringen, C. septicum, C. sordellii

13. Corynebacterium diphtheriae, C. equi, C. haemolyticum, C. pseudotuberuculosis, C. pyogenes, C. renale
14. Diplococcus (Streptococcus) pneumoniae
15. Edwardsiela tarda
16. Erysipelothrix insidiosa
17 Escherichia Coli-all enteropathogenic serotypes, enterotoxigenic
18 Heamophilus ducreyi, H. influenzae, H. pneumoniae
19. Herellea vaginicola
20. Klabsiella—all species and all serotypes
21. Legionella pneumophilla
22. Lettonella
23. Leptospira interrogans all serotypes reported in India
24. Listeria—all species
25. Mima polymorpha
26. Moraxella—all species
27. Mycobacteria—all species including Mycobacterium avium
28. M. bovis. M tuberculosis. M. leprae
29. Mycoplasma—all species except M. mycoides and M. agalactiae
30. Neisseria gonorrhoeae N. meningitis
31. Pasteurella—all species except those listed in Risk Group III
32. Salmonella—all species and all serotypes
33. Shigella—all species and all serotypes
34. Sphaerophorus necrophorus
35 Staphylococcus aureus
36 Streptobacillus moniliformis
37. Steptococcus pneumoniae
38. Streptococcus pyogenes. S. equal
39. Streptomyces madurae, S. pelletierii, S. somaliensis
40. Treponema carateum. T. pallidium and T. pertenue
41. Vibrio foetus
42. V. parahaemolyticus
43. Vibro cholorae (or V. comma, including two biotypes-eltor (= EL Tor) and cholerae (= classical biotype))

(b) **Risk Group III**

44. Actinobacillusmallei
45. Bartonella—all species
46. Brucella—all species
47. Clostridium botuline, Cl. tetani
48. Francisella tularensis
49. Mycobacterium avium. M. bovis; M. tuberculosis, M. leprae
50. Pasteurella multocida type B ("buffalo" and other foreign virulent strains)
51. Pseudomonas pseudomallei
52. Yersinia pestis
53. Actinomycetes (including Nocardia SP. Actinomyees species and Arachnia propionica)

B. FUNGAL AGENTS

(a) **Risk Group II**

54. Aspergillus fumigatus
55. Blastomyces dermatitidis
56 Cryptococcus neoformans, C fersiminosos
57. Epidermophyton madurella, Microsporum
58 Paracoccidioides brasilliensis
59. Sporothrix
60. Trichoderma
61. Trichophyton

(b) **Risk Group III**

62 Coccidioides immitis
63 Histoplasma capsulatum
64 Histoplasma capsulatum var duboisii

C. PARASITIC AGENTS

(a) **Risk Group II**

65 Entamoeba histolytica
66 Lieshmania species
67 Naegleria gruberi
68 Plasmodium theilera P fabesia, P. falciparum
69. Plasmodium fabesia
70 Schistosoma
71 Toxoplasma gendii
72 Toxocara canis
73 Trichinella spiralis
74 Trichomonas
75 Trypanosoma cruzi

(b) Risk Group III

76 Schistosoma mansoni

D. VIRAL RICKETTSIAL AND CHLAMYDIAL AGENTS

(a) Risk Group II

77 Adenoviruses—Human, all types
78. Avian leukosis
79. Cache Valey virus
80. CELO (avian adenovirus)
81. Coxsackie A and B viruses
82. Corona viruses
83. Cytomegalo viruses (CMV)
84. Dengue virus, when used for transmission experiment
85 Echo viruses—all types
86. Encephalomyocarditis virus (EMCV)
87. Flanders virus
88. Hart Park virus

89. Hepatitis associated antigen material-hepatitis A and B virues, non-A and non-B hepatitis virues, HDV (Delta virus)
90 Herpes viruses—except herpesvirus simiae (monkey B virus) which is in Risk Group IV
91 Infectious Bovine Rhinotracheitis virus (IBR)
92. Infectious Bursal diseases of poultry and infectious Bronchitis
93. Infectious Laryngotracheitis (ILT)
94. Influenza virus—all types, except A/PR8/34 which is in Risk Group I
95. Langur virus leucosis Complex
96. Lymphogranuloma venereum agent
97. Mareks Disease virus
98. Measles virus
99. Mumps virus
100 Newcastle disease virus (other than licensed strain for vaccine use)
101 Parainfluenza viruses—all types except parainfluenza virus 3 SF4 strain, which is in Risk Group I
102. Polio viruses—all types, wild and attenuated
103. Poxviruses—all types except Alastrim, monkey-pox, sheep pox and white pox, which depending on experiments are in Risk Group III or IV
104 Rabies virus—all strains except rabies street virus, which should be classified in Risk Group III when inoculated into cornivores
105. Reoviruses—all types
106. Respiratory synytial virus
107. Rhinoviruses—all types
108. Rinderpest (other than vaccine strain in use)
109. Rubella virus
110. Stimian viruses—all types except herpesvirus similae (Monkey Virus) which is in Risk Group IV
111. Simian virus 40 Ad 7 SV 40 (Defective)
112. Sindbis virus (SIN Virus)
113. Tensaw virus
114. Turlock virus
115. Vaccinia virus
116. Varicella virus
117. Vole rickettsia
118. Yellow fever virus. 17 D vaccine strain

(b) **Risk Group III**

119. African Horse Sickness (attenuated strain except animal passage)
120. Alastrim, monkey pox and white pox, when used in vitro
121. Arboviruses—All strains except those in Risk Group II and IV
122. Blue-tongue virus (only serotypes reported in India)
123. Ebola fever virus
124. Epstein-Barr virus (EBV)
125. Feline Leukaemia Virus (Fel V)
126. Feline sarcoma viruses
127. Foot and mouth Disease virus (all serotypes and subtypes)

128. Gibbon Ape Lymphosarcoma
129 Herpesvirus ateles
130 Herpes virus saimiri
131. Herpes simplex 2
132 HIV-1 and HIV-2 and strains of SIV
133 Infectious Equine Anaemia
134 Lympho cytic choriomeningitis virus (LCM)
135. Monkey pox, when used in vitro
136. Non-defective Adeno-2 SV-40 hybrids
137 Psittacosis-ornithosis-trachoma group of agents
138 Pseudorabies virus
139. Rabies street virus, when used inoculations of carnivores
140. Rickettsia—all species except Vole rickettsia and Coxiella burnetii, when used for vector transmission or animal inoculation experiments
141. Sheep pox (field strain)
142. Swine Fever virus
143. Vasicular stomatitis virus
144. Wooly monkey Fibrosarcoma
145. Yoba Pox virus

(c) **Risk Group IV**

146. Alastrim monkeypox, whitepox, when used for transmission or animal inoculation experiments
147 Haemorrhagic fever agents including Crimcan haemorrhagic fever (congo)
148. Korean haemorrhagic fever and others as yet undefined
149 Herpesvirus simiae (monkey B virus)
150 Tick-borne encephalitis virus complex, including—Russian Spring-Summer Encephalitis, Kyasanur Forest Disease, omsk haemorrhagic fever and Central European encephalitis viruses

SPECIAL CATEGORY

(a) **Bacterial**

151 Contagious Equine Metritis (H equigenitalis)
152 Peste des-petits ruminants

(b) **Viral, Rickettsial and Chlamydial :**

153. African Horse Sickness virus (scrotypes not reported in India and challenge strains)
154. African Swine Fever
155. Bat rabies virus
156. Blue-tongue virus (serotypes not reported in India)
157. Exotic FMD virus types and sub-types
158. Junin and Machupo viruses
159. Lassa virus
160. Marburg virus
161. Murray valley encephalitis virus
162. Rift Valley fever virus
163. Smallpox virus—Archieval storage and propagation

164 Swine Vesicular Disease

165. Venezuelan equine encephalitis virus—epidemic strains

166. Western Equine encephalitis virus

167 Yellow fever virus—Wild strain

168 Other Arboviruses causing epizootics and so far not recorded in India

PART II. PLANT PESTS

Any living stage (including active and dormant forms) of insects, mites, nematodes, slugs, snails, bacteria, fungi, protozoa, other parasitic plants or reproductive parts thereof, viruses; or any organisms similar to or allied with any of the foregoing; or any infectious agents or substances, which can directly or indirectly injure or cause disease or damage in or to any plants or parts thereof, or any processed, manufactured, or other products of plants are considered plant pests Organisms belonging to all lower-taxa, contained within the group listed are also included.

A. VIRUSES

All Viroids

All bacterial, funcal, algal, plant, insect and nematode viruses, special care should be taken for—

(*i*) Geminiviruses

(*ii*) Caulimoviruses

(*iii*) Nuclear Polyhedrosis viruses

(*iv*) Granulosis viruses

(*v*) Cytoplasmic polyhedrosis viruses

B. BACTERIA

1 Family Pseudomonadceae

(*i*) Genus Pseudomonas
(*ii*) Genus Xanthomonas

2. Family Azotobacteriaceae

(*i*) Genus Azotobacter

3. Family Rhizobiaceae

(*i*) Genus Rhizobium/Azorhizobium
(*ii*) Genus Bradyrhizobium
(*iii*) Genus Agrobacterium
(*iv*) Genus Phyllobacterium

4. Family Enterobacteriaceae

(*i*) Genus Erwinia
(*ii*) Genus Enterobacter
(*iii*) Genus Klebsiellea

5. Family Spirillaceae

(*i*) Genus Azospirillum
(*ii*) Genus Aquaspirillum
(*iii*) Genus Oceanospirillum

6. Family Steptomycetaceae

(*i*) Genus Streptomyces
(*ii*) Genus Nocardia

7. Family Actinomycetaceae

(*i*) Genus Actinomyces

8 Coryneform Group
  - (*i*) Genus clavibacter
  - (*ii*) Genus Arthrobacter
  - (*iii*) Genus Curtobacterium
  - (*iv*) Genus Bdellovibrio

9 Family Rickettsiaceae
  - (*i*) Rickettsial-like organisms associated with insect diseases
  - (*ii*) Gram-negative phoemlinteed bacteria associated with plant diseases
  - (*iii*) Gram-negative xylem-limited bacteria associated with plant diseases
  - (*iv*) Cyanobacteria—All members of blue-green algea
  - (*v*) Mollicutes

10. Family Sptroplasmataceae
  - (*i*) Mycoplasma-like organisms associated with plant diseases
  - (*ii*) Mycoplasma-like organisms associated with insect diseases

C. ALGAE

11. Family Chlorophyceae
12. Family Euglenophyceae
13. Family Pyrrophyceae
14. Family Chrysophycea
15. Family Phacophyceae
16. Family Rhodophyceae

D. FUNGI

17 Family Plasmodiophoraceae
18 Family Chytridiaceae
19 Family Olpidiopsidaceae
20 Family Synchytriaceae
21 Family Catenariaceae
22 Family Coelomycetaceae
23 Family Saprolegniaceae
24 Family Zoopagaceae
25 Family Albuginaceae
26. Family Peronosporaceae
27 Family Phythiaceae
28 Family Mycoraceae
29. Family Choaneophoraceae
30 Family Mortierellaceae
31. Family Endogoniaceae
32. Family Syncephalastraceae
33. Family Dimargaritaceae
34. Family Kickxellaceae
35. Family Saksenaeaceae
36. Family Entomophythoraceae
37. Family Ecerinaceae
38. Family Taphrinaceae
39. Family Endomycetaceae
40. Family Saccharomycetaceae
41. Family Eurotiaceae
42. Family Gymnoascaceae
43. Family Ascosphaeriaceae
44 Family Onygenaceae
45. Family Micgoascaceae
46. Family Protomycetaceae
47. Family Elsinoaceae
48. Family Myriangiaceae
49. Family Dothidiaceae
50. Family Chaetothyrlaceae
51 Family Parmulariaceae
52 Family Phillipslellaceae
53. Family Hysterlaceae
54 Family Pleosporaceae
55 Family Melanomataceae
56 Family Ophiostomataceae
57 Family Ascosphaeriaceae
58 Family Erysiphaceae
59 Family Meliolaceae
60 Family Xylariaceae
61 Family Diaporthaceae
62 Family Hypocreaceae
63 Family Clavicipitaceae
64 Family Phacidiaceae
65. Family Ascocorticiaceae
66. Family Hemiphacidiaceae
67. Family Dermataceate
68. Family Sclerotiniaceae
69. Family Cyttariaceae
70. Family Helotiaceae
71. Family Sarcosomataceae
72. Family Sarcoscyphaceae
73. Family Auriculariaceae
74. Family Ceratobasidiaceae
75. Family Corticiaceae

202. Family Lonchaeidae
203. Family Muscidae
204 Family Otitidae
205. Family Syrphidae
206 Family Tephritidae
207 Family Tipulidae
208 Family Apidae
209 Family Cephidae
210 Family Chaloididae
211. Family Cynipidae
212 Family Eurytomidae
213 Family Formicidae
214 Family Psilidae
215. Family Siricidae
216. Family Tenthredinidae
217. Family Torymidae

218. Family Xylocopdiae and also unclassified organisms and/or organisations whose classification is unknown and all other organisms associated with plant and insert diseases.

Note : The risk groups given in this schedule conform to the World Health Organisation classification.

Form I

(*See* rule 7 (2))

Application for Environmental Approval of Clinical Veterinary and Food Products based on Hazardous Micro Organisms/GMO

Part A

(*a*) No all the points included will apply to every case. it is to be expected, therefore that individual applicant will address only the particular parameters that are appropriate to individual situations. In each case where it is not technically possible or it does not appear necessary to give the information, the reasons shall be stated

(*b*) The details required in response to each parameters is also likely to vary according to the nature and scale of the proposed release.

(*c*) The description of the methods used or the reference to the standardised or internationally recognised methods shall also be mentioned in the form together with the name of the body or bodies responsible for carrying out the studies

(*d*) A 1-2 page summary of the proposal shall be appended with application.

Part B

1. Name of the Applicant

2. Name of the organisation/firm

3. Approval Required

    (*i*) Manufacture
    (*ii*) Import
    (*iii*) Marketing

4 Quantity per year of the product to be manufactured imported/marketed

Part C

1. Name of the product :

    (*i*) Human Medicine
    (*ii*) Veterinary Medicine
    (*iii*) Food Product
    (*iv*) Others (please specify)

2 Intended Use (Pathological, Metabolic and Immune Response)

3. SAFETY CONCERN :

    (*i*) Donor (heterologous Nucleic acid segments from sources)
    (*ii*) Vector (DNA) molecules to which heterologous nucleic acid segments are joined for transfer to hosts)
    (*iii*) Hostes (living cells or organism into which r-DNA molecules are introduced).

4. Production Method (the production method should given the details of the cell lines used, the information on the production of the recombinant proteins within or outside the cells, the concentration of the products in units per litre of the fermented broth as well as the concentration in physical weights. The description should also include in brief the methods applied for reducing the genomic particles proteins and living contaminants including virus bacteria, fungi, parasites, etc).

    (*a*) Characterisation of the system of production used

(i) Details of the expression system

- Description of the host cell line
- Identification of the genera and the species.
- The risks involved in handling the cell lines
- The classification of the cell line according to the Government of India's Biosafety guidelines or any other accepted Recombinant cell line usage guideline.
- The method (s) of maintenance and growth of the cell line.
- The nature and hazards of using substrates, inducing agents, etc.

(ii) Characteristics of the target gene and vector

- The full description of the source of the target gene.
- The composition of the vector used indicating the promoter sequence as well as the regulatory mechanisms utilized in the expression cassette
- Schematic diagrams of the expression cassette to describe fully the marker genes used.
- The restriction sites related to specified endonucleases and the cell lines used for shuttling and amplification of the expression cassette.
- The method of constructing the target gene alongwith all the sequences added or deleted.
- The extent of target gene amplification into the hostgenome
- The target gene should also contain, alongwith the nucleotide sequence, the description of the amino acids below the codons.

(iii) Approaches adopted for expression of the gene

- The description of the transcripted messenger RNA with its analysis of sequence and identification procedure
- The translation information indicting whether the protein product is Chimaeric, whether the expression is found as inclusion bodies or as intracellular protein or whether the protein is secreted out
- The extent of the target protein produced as the percentage of the total cell dry mass as well as its percentage compared to the total proteins of the cell.
- The quantity of the target protein produced after the cell growth per litre of the fermented both.
- The full sequence of the recombinant gene alongwith the promoters the marker genes and the terminater sequence.

(b) Description of the production process

(i) Production setup

- The handling of the stock cell lines.
- The evaluation and uses of the cell lines in pre-formentor processes

- The preparation of the seed vessel
- The main production fermentation conditions need to be described in brief

(ii) Growth Kinetics

- Graphical plots of the versus substrate usage, optical density change, biomass formation, protein products formation, inducing agents used and their effects on the target protein formation.
- The effects of change of standard parameters like pH, dissolved oxygen, temperature etc., in the main production fermentor.

(iii) Fermentation parameters

- The pH temperature aeration and rpm of the shaft
- Volume of seed to the volume of main fermentor.
- Main Substrates used inducing agents used if any.
- The fermentation time and the concentration of the target protein in the fermented broth

(c) In-process Control methods

- All the analytical methods used for this in-process control must be described to ensure regulatory authorities that the chances of entry of unwanted products have been minimised

(d) Description of the raw and processing materials used

- Description of all the raw materials and processing materials used starting from the stock cells handling to the finished dosage form must be in a tabular form.
- Grades of materials used and their usual sourcing.

(e) Description of the Plant and Machinery used

- List of all the equipment alongwith the indicative capacity
- Names of the manufacturers.
- List of Main production equipment and the quality control equipment.

(f) Description f the building and facilities created for the manufacture

- The manufacturing area.
- The flow of the process/operation starting from the stock culture area to the finishing area.
- The pot plan of various floors used in the manufacture and processing.
- The building diagram in the plan and/or elevation in the outline indicating the cleanliness maintained in different sections such as class 10,000 class 1000 and class 100 areas etc.
- Description of the air handling system which is very important.
- A separate write up indicating the movement of operating personne' in the area.

5. Approaches for the extraction and purification of the product. The purification methods should particularly indicate the modes of elimination of viruses, bacteria fungi, parasites etc., if the cell lines are mammalian origin. it should also include methods for the removal of genomic particles, and proteins irrespective of cell lines/hosts used for production, removal of adjuvants, reagents chemicals including vectors, donor and recipient organisms foreign DNA and adventitious materials associated with production methods

   * The methods of handling the cells.
   * The methods of isolating the cell soup containing the target protein the methods of enzyme treatment if any
   * The methods of concentration, precipitation (if applied), reconstitution, salt separation (if applicable), absorption and desorption methods, chromatographic methods used if any ultracentrifugation methods if used
   * Sterilization and final dosage formulation
   * Processes to obtain the product in the finished dosage form

6. Quality Control and Quality Assurance

   (*a*) Bulk material :

   * Test relating to the identification of the stock cells
   * The plasmid construct retention in the cells during cell growth
   * the media used
   * The procedures adopted for testing and the percentage retention of the target plasmid.
   * Description of the contamination test of the stock culture to assess and monitor the microbial contamination including the media used and the procedures adopted
   * The criteria of acceptance of contamination free culture characterisation of the bio-active molecule produced by monitoring physical an chemical properties of the molecules by the following or more authentic methods should be provided

     (*a*) Microscopic examination including light, phase contract and electron microscopic studies.

     (*b*) UV Spectroscopic analysis to show the absorption spectra or the product and comparison of this with authentic material

     (*c*) Density gradient centrifugation to show single peak.

     (*d*) Pattern in High performance liquid chromatography to indicate how many peaks or if only one peak is noticed in the produced and purified bulk.

     (*e*) Iso-electric focussing analysis to show the pl values.

     (*f*) West Blot and SDS-PAGE to mape the peptide/target protein.

     (*g*) Existence of special bonds like disulfide bonds by breaking the protein and subjecting to SDS-PAGE mapping.

     (*h*) Immunodiffusion Test to find out the absence of contaminants or the extent of the presence of contaminants.

     (*i*) Amino acid composition of the purified protein and its comparison with the authentic material.

(*j*) N-Terminal Amino Acid Sequence analysis and its comparison with the gene construct used.

(*k*) Determination of the biological activity in the animal model.

(*l*) Determination of contaminants per milligram or any covenient unit of the manufacturing bulk purified protein is also to be carried out to indicate the extent of contaminant nucleic acid stretches, proteins, carbohydrates lipids, detergents, salts and other processing chemicals used in the purification. The impacts of the presence of these contaminants are also to be indicated with authentic reference if any to ensure that the risks associated with their presence are minimal. The limits of contaiminants and the acceptance criteria need to be quantified for each contaminant.

(*b*) Formulated Material :

- The ingredients incorporated subsequently in the manufacture The specification of the final product.
- The Quality Control Department would have to certify that the final product has the results within the specifications prescribed and accepted by the regulatory Authorities.
- The documentation should therefore indicate the following specifically :

(*i*) Product presentaiton.

(*ii*) Physical appearance

(*iii*) Product inserts, literature and label claim

(*iv*) Volume/Quantity per pack/dose.

(*v*) Potency of the product.

(*vi*) Particulate matter limits for liquid.

(*vii*) Preservation usage percentage.

(*viii*) pH

(*ix*) Other extraneous materials used their extent such as contents of DNA RNA carbohydrates, lipids, processing materials like detergents, salts etc.

(*x*) Protein content in the product

(*xi*) Sterility status

(*xii*) Toxicity information

(*xiii*) Pyrogen status.

7. Possible Hazards to environment from releaseof GMO/nucleic acid/micro-organisms or products.
8. Clinical field trials done in India/abroad (whether permission of Institutional Ethics Committee obtained).
9. Stability and Shelf Life of product.
10. Method of disposal of vials of syringes/wastes matter.
11. Regulatory status in India/abroad (enclose certificates like free sale certificate/ GMP certificate/certificates granted by Health and Environment Authorities of the

country of origins signed by applicant In case the certificate is issued by the concerned authority of country of origin, the certificate should be endorsed/ authenticated by Indian Embassy/High Commission/Counsulate in that country

- Every certificate shall be accompanied by other statutory information like manufacturing batch No. date of manufacture date of analysis, date of release of the certificate, signatory to the certificate etc
- The final formulated product needs to be certified for acceptance by the manufacturer.

12. Quantity of the product to be imported and the foreign exchange involved

Part D

Additional Information Required in the case of Micro-organism or GMO based product is to be placed in Market.

1 The following information shall be provided for placing on the market of products :

(*i*) Name of the product and names of GMOs contained therein

(*ii*) Name of the manufacturer or distributor and his address

(*iii*) Specifically of the product exact conditions of use including when appropriate the type of environment and/or the geographical area(s).

2 The following information shall also be provided :

(*i*) measures to take in case of unintended release or misuse

(*ii*) specific instructions or recommendations for storage and handling

(*iii*) estimated production and/or imports.

(*iv*) proposed packaging and labelling requirement.

Applicants, Signature with Seal

Form II

(*See* rule 7 (2))

Application for Environmental Approval of Transgenic Plants (Genetically Modified Plants)

Part A

(*a*) An applicant will address only the particular parameters that are appropriate in his case In each case where it is not technically possible or it does not appear necessary to give the information, the reasons shall be stated or the column may be filled up by stating "Not applicable"

(*b*) The details required in response to each parameter is also likely to vary according to the nature and scale of the proposed release.

(*c*) The description of the methods used or the reference to the standardised or internationally recognised methods shall also be mentioned in the proforma together with the name of the body or bodies responsible for carrying out the studies.

(*d*) A 1-2 page summary of the proposal shall be appended with application

Part B

1. Name of the Applicant
2. Name of Organisation/firm
3. Type of Release :

(*i*) Movement

(*a*) Import
(*b*) Export

(*ii*) Release of

(*a*) Imported Material
(*b*) Indigenously Developed Material

4 Identification of the Transgenic Plant

(*i*) Donor species
(*ii*) Receipient Plant Species

5 Risk Assessment

(*i*) Are they harmful species or closely related to any such species ?
(*ii*) Are they harmful to man, animal, plant or environment ?

6. Anticipated or actual expression of the incorporated genetic material in the plant :

(*i*) Modified plant

(*ii*) Non-modified plant

(*a*) Morphology
(*b*) Physiology
(*c*) Number of copies of the genes incorporated
(*d*) products

7 Purpose of the experimental design :

(*i*) Resistance of pesticides
(*ii*) Resistance to biotic stress
(*iii*) Resistance to abiotic stress
(*iv*) Metabolites
(*v*) Any other

8 Details of the experimental system

(*i*) Nature of gene
(*ii*) Vector/Vector agent used for gene transfer
(*iii*) Testing procedure for trans-gene

9 Safeguards required for field release

(*i*) Biological
(*ii*) Physical.

10 Site for Field Trials

11 Quantity, schedule and number of Releases

12 Mode of Propagation/Pollination .

13 Regulatory status in India/abroad (enclose certificates duly signed by applicant)

Applicants, Signature with Seal

Form III

(*See* rule 7 (2))

Application for Environmental Approval of Hazardous Microorganisms or GMO used in Pollution Control

Part A

(*a*) An applicant will address only the particular parameters that are appropriate in his case. In each case where it is not technically possible or it does not appear necessary to give the information, the reasons shall be stated or the column may be filled up by stating "Not applicable".

(*b*) The details required in response to each parameter is also likely to vary according to the nature and scale of the proposed release.

(*c*) The description of the methods used or the reference to the standardised or internationally recognised methods shall also be mentioned in the proforma together with the name of the body or bodies responsible for carrying out the studies.

(*d*) A 1-2 page summary of the proposal shall be appended with application.

Part B : Contained Use

1. Characteristics of the donor recipient or (where appropriate) parent organism(s)

   (*a*) names and designation

   (*b*) degree of relatedness

   (*c*) sources of the organisms(s)

   (*d*) information on reproductive cycles (sexual/assexual) of the parental organism(s) or, where applicable, of the recipient micro-organism,

   (*e*) history of prior genetic modification;

   (*f*) stability of parental or of recipieht organism in terms of relevant genetic traits :

   (*g*) nature of pathogenicity and virulene infectivity toxicity and vectors of disease transmission.

   (*h*) nature of indigenous vector :

   —sequence

   —frequency of mobilization

   —specificity

   —presence of genes which confer resistance

   (*i*) host range,

   (*j*) other potentially significant physiological traits,

   (*k*) stability of these traits;

   (*l*) natural habitat and geographic distribution,

   Climatic characteristics of original habitates,

   (*m*) significant involvement in environmental processes (such as nitrogen fixation or pH regulation);

   (*n*) interaction with, and effects on, other organisms in the environment (including likely competitive or symbiotic properties);

   (*o*) ability to form survival structures (such as spores or sclerotia)

2. Characteristics of the modified micro-organism

   (*a*) The description of the modification including the method for introducing the vector insert into the recipient organism or the method used for achieving the genetic modification involved;

   (*b*) the function of the genetic modification and/or of the new nucleic acid;

   (*c*) nature and source of the vector;

   (*d*) structure and amount of any vector and/or donor nucleic acid remaining in the final construction of the modified micro-organism;

(*e*) stability of the micro-organism in terms of genetic traits,

(*f*) frequency of mobilisation of inserted vector and/or genetic transfer capability,

(*g*) rate and level of expression of the new genetic material. Method and sensitivity of measurement;

(*h*) activity of the expressed protein.

3. Health considerations

(*a*) toxic or allegenic effects of non-viable organisms and/or their metabolic products,

(*b*) product hazards;

(*c*) comparison of the modified micro-organism to the donor, recipient or (where appropriate) parental organism regarding pathogenicity,

(*d*) capacity for coloniztion,

(*e*) if the micro-organism is pathogenic to humans who are immunocompetent,

(*i*) disease caused and mechanism of pathogenicity including invasiveness and virulence,

(*ii*) communicability;

(*iii*) infective does,

(*iv*) host range, possibility of alteration;

(*v*) possibility of survival outside of human host,

(*vi*) presence of vectors or means of dissemination;

(*vii*) biological stability,

(*viii*) antibiotic-resistance patterns;

(*ix*) allergenicity,

(*x*) availability of appropriate therapies.

4. Environmental considerations

(*a*) factors affecting survival, multiplication and dissemination of micro-organism or GMO in the environment (self application);

(*b*) available techniques for detection, identification and monitoring of micro-organism or GMO;

(*c*) available techniques for detecting transfer of the new genetic material to other organisms;

(*d*) known and predicted habitats of the micro-organism or GMO,

(*e*) description of ecosystems to which the micro-organism could be accidentally disseminated;

(*f*) anticipated mechanism and result of interaction between-the modified micro-organism or micro-organisms which might be exposed in case of release into the environment;

(*g*) known or predicted effects on plants and animals such as pathogenicity, infectivity toxicity, virulence, vector of pathogen, allergenicity, colonization;

(*h*) known or predicted involvement in biogeochemical processes;

(*i*) availability of methods for decontamination of the area in case of release to the environment

Part C

Additional Information required for Deliberate Release

1 Potential Environmental Impact

(*a*) potential for excessive population increase in the environment

(*b*) competitive advantage of the GMOs in relation to the unmodified recipient of potential organisms (s)

(*c*) identification and description of the target organism;

(*d*) anticipated mechanism and result of interaction between the released micro-organisms or GMOs and the target organism

(*e*) identification and description of non-target organisms which may be affected unwittingly;

(*f*) likelihood or post-release shifts in biological interactions or in host range

(*g*) known or predicted effects on non-target organisms in the environment, impact on population levels of competitors, preys, hosts symbiots, predators, parasites and pathogens

(*h*) known or predicted involvement in biogeochemical processes

(*i*) other potentially significant interactions with the environment

(*j*) potential of vertical transmission of microorganism or GMOs and effect on the offspring

(*k*) extent of transfusion of the test material into the animal products like milk, meat skin (hides), eggs etc, and likely effect of their consumption/contact with by man/animals including other members of the biosphere

The impact on human/animal health from the continued consumption over a specified period/periods

2. Information on Monitoring, Control, Waste Treatment and Emergency Response Plans

(*a*) Monitoring techniques

(*i*) methods for tracing the microorganisms or GMOs, and for monitoring their effects.

(*ii*) specificity (to identify the GMOs, and to distinguish them from the donor recipient or, where appropriate, the parental organisms), sensitivity and reliability of the monitoring techniques.

(*iii*) techniques for detecting transfer of the donated genetic material to other organisms.

(*iv*) duration and frequency of the monitoring

(*b*) Control of the Release :

(*i*) methods and procedures to avoid and/or minimize the spread of the microorganism or GMOs beyond the site of release or the designated area for use.

(*ii*) methods and procedures to protect the site from intrusion by unauthorised individual.

(*iii*) methods and procedures to prevent other organisms from entering the site.

(*c*) Waste Treatment :

(*i*) type of waste generated

(*ii*) expected amount of waste

(*iii*) possible risks

(*iv*) description of treatment envisaged

(*v*) techniques of testing the efficacy of the waste treatment

(*vi*) mode of final disposal of the treated waste and impact on environment.

(*d*) Emergency Response plans

(*i*) methods and procedures for controlling the microorganisms or GMOs in case of unexpected spread,

(*ii*) methods for decontamination of the areas affected, e.g., eradication of the microorganisms or GMOs,

(*iii*) methods for disposal or sanitation of plants, soils, etc, that were exposed during or after the spread,

(*iv*) methods for isolation of the area affected by the spread

(*v*) plans for protecting human health, all life forms and the environment in case of the occurrence of an undesirable effect

Part D

Additional Information required in the case of Microorganism or GMOs based product is to be placed in Market

1 The following information shall be provided for placing on the market of products

(*i*) name of the product and names of Microorganisms or GMOs contained therein

(*ii*) name of the manufacturer or distributor and the address

(*iii*) specificity of the product, exact conditions of use including when appropriate the type of environment and/or the geographical area(s)

(*iv*) type of expected use : industry, agriculture and skilled trades, consumer use by public at large

2. The following information shall also be provided :

(*i*) measures to take in case of unintended release or misuse

(*ii*) specific instructions or recommendations for storage and handling

(*iii*) estimated production and/or imports

(*iv*) proposed packaging requirement. This must be appropriate so as to avoid unintended release of microorganisms or GMOs during storage or at a later stage

(*v*) proposed labelling requirements.

3. Regulatory status in India/abroad (enclose certificates duly signed by the applicant)

Applicants, Signature with Seal

PART III-9

CHEMICAL ACCIDENTS (EMERGENCY PLANNING, PREPAREDNESS AND RESPONSE) RULES, 1996

G.S.R. 347 (E), dated 1st August, 1996.[1]—In exercise of the powers conferred by Secs. 6, 8 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules, namely :—

1. *Short title and commencement.*—*(1) These rules may be called the Chemical Accidents (Emergency Planning, Preparedness, and Response) Rules, 1996.*

(2) They shall come into force on the date of their publication in the Official Gazette.

2. *Definitions.*—*In these rules unless the context otherwise requires,—*

(a) "chemical accident" means an accident involving a fortuitous, or sudden or unintended occurrence while handling any hazardous chemicals resulting in continuous, intermittent or repeated exposure to death, or injury to, any person or damage to any property but does not include an accident by reason only of war or radioactivity;

(b) "hazardous chemical" means,—

(i) any chemical which satisfies any of the criteria laid down in Part I of Schedule 1 or is listed in Part 2 of the said Schedule;

(ii) any chemical listed in Column 2 of Schedule 2;

(iii) any chemical listed in Column 2 of Schedule 3;

(c) "industrial activity" includes an operation or process,—

(i) carried out in an industrial installation referred to in Schedule 4 involving or is likely to involve one or more hazardous chemicals;

(ii) on-site storage or on-site transport which is associated with that operation or process as the case may be;

(iii) isolated storage;

(iv) pipeline;

(d) "industrial pocket" means any industrial zone earmarked by the Industrial Development Corporation of the State Government or by the State Government.

(e) "isolated storage" means—storage of a hazardous chemical other than storage associated with an installation on the same site specified in Schedule 4 where that storage involves at least the quantities of that chemical set out in Schedule 2;

(f) "major chemical accident" means—an occurrence including any particular major emission, fire or explosion involving one or more

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 2nd August, 1996.

hazardous chemicals and resulting from uncontrolled development in the course of industrial activity or transportation or due to natural events leading to serious effects both immediate or delayed, inside or outside the installation likely to cause substantial loss of life and property including adverse effects on the environment;

(g) *"Major Accident Hazards (MAH) Installations"—means, isolated storage and industrial activity at a site, handling (including transport through carrier or pipeline) of hazardous chemicals equal to or, in excess of the threshold quantities specified in Column 3 of Schedules 2 and 3 respectively;*

(h) *"Manufacture, Storage and Import of Hazardous Chemicals Rules" means—the Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989, published in the notification of Government of India in the Ministry of Environment and Forests, No. S.O. 966 (E), dated 27th November, 1989;*

(i) *"off-site emergency plan" means—the off-site emergency plan prepared under rule 14 of the Manufacture, Storage and Import of Hazardous Chemicals Rules;*

(j) *"pipeline" means—a pipe (together with any apparatus and works associated therewith) or system of pipes (together with any apparatus and works associated therewith) for the conveyance of a hazardous chemical other than a flammable gas as set out in Column 2 of Part II of Schedule 1, at a pressure of less than 8 bars absolute;*

(k) *"site" means—any location where hazardous chemicals are manufactured or processed, stored, handled, used, disposed of and includes the whole of an area under the control of an occupier and includes pier, jetty or similar structure whether floating or not;*

(l) *"transport" means—movement of hazardous chemicals by any means over land, water or air.*

3. ***Constitution of Central Crisis Group.***—*(1) The Central Government shall constitute a Central Crisis Group for management of chemical accidents and set up a Crisis Alert System in accordance with the provisions of rule 4 within thirty days from the date of the commencement of these rules.*

(2) The composition of the Central Crisis Group shall be as specified in Schedule 5.

(3) The Central Crisis Group shall meet at least once in six months and follow such procedure for transaction of business as it deems fit.

(4) Notwithstanding anything contained in sub-rule (2), the Central Crisis Group may co-opt any person whose assistance or advice is considered useful in performing any of its functions to participate in the deliberations of any of its meetings.

4. ***Constitution of Crisis Alert System.***—*The Central Government shall,—*

(a) *set up a functional control room at such place as it deems fit;*

(b) set up an information net working system with the State and district control rooms;

(c) appoint adequate staff and experts to man the functional control room;

(d) publish a list of Major Accident Hazard installations;

(e) publish a list of major chemical accidents in chronological order,

(f) publish a list of members of the Central, State and District Crisis Groups;

(g) take measures to create awareness amongst the public with a view to preventing chemical accidents.

5. Functions of the Central Crisis Group.—(1) The Central Crisis Group shall be the apex body to deal with major chemical accidents and to provide expert guidance for handling major chemical accidents.

(2) Without prejudice to the functions specified under sub-rule (1), the Central Crisis Group shall,—

(a) continuously monitor the post-accident situation arising out of a major chemical accident and suggest measures for prevention and to check recurrence of such accidents;

(b) conduct post-accident analysis of such major chemical accidents and evaluate responses;

(c) review district off-site emergency plans with a view to examine its adequacy in accordance with the Manufacture, Storage and Import of Hazardous Chemicals Rules and suggest measures to reduce risks in the Industrial, pockets;

(d) review the progress reports submitted by the State Crisis Groups,

(e) respond to queries addressed to it by the State Crisis Groups and the District Crisis Groups;

(f) publish a State-wise list of experts and officials who are concerned with the handling of chemical accidents;

(g) render, in the event of a chemical accident in a State, all financial and infrastructural help as may be necessary

6. Constitution of State Crisis Group.—(1) The State Government shall constitute a State Crisis Group for management of chemical accidents within thirty days from the date of the commencement of these rules.

[1][Explanation.—For the purpose of these rules "State Government" in relation to Union Territory means the Administrator thereof appointed under Art. 239 of the Constitution.]

(2) The composition of the State Crisis Group shall be as specified in Schedule 6.

(3) The State Crisis Group shall meet at least once in three months and follow such procedure for transaction of business as it deems fit.

(4) Notwithstanding anything contained in sub-rule (2), the State Crisis Group may co-opt any person whose assistance or advice is considered useful in performing any of its functions, to participate in the deliberation of any of its meetings.

---

1. Ins. by G.S.R. 578 (E) dated 9th September, 1998 published in the *Gazette of India (Extraordinary)* Pt. II, Sec. 3 (*i*), dated 14th September, 1998.

*7. **Functions of the State Crisis Group.**—(1) The State Crisis Group shall be the apex body in the State to deal with major chemical accidents and to provide expert guidance for handling major chemical accidents.*

(2) Without prejudice to the functions specified under sub-rule (1), the State Crisis Group shall,—

- *(a) review all district off-site emergency plans in the State with a view to examine its adequacy in accordance with the Manufacture, Storage and Import of Hazardous Chemicals Rules and forward a report to the Central Crisis Group once in three months;*
- *(b) assist the State Government in managing chemical accidents at a site;*
- *(c) assist the State Government in the planning, preparedness and mitigation of major chemical accidents at a site in the State,*
- *(d) continuously monitor the post-accident situation arising out of a major chemical accident in the State and forward a report to the Central Crisis Group,*
- *(e) review the progress report submitted by the District Crisis Groups;*
- *(f) respond to queries addressed to it by the District Crisis Groups;*
- *(g) publish a list of experts and officials in the State who are concerned with the management of chemical accidents.*

*8. **Constitution of the District and Local Crisis Group.**—(1) The State Government shall cause to be constituted within thirty days from the date of commencement of these rules,—*

- *(a) District Crisis Groups;*
- *(b) Local Crisis Groups;*

(2) The composition of the District Crisis Groups and the Local Crisis Groups shall be as specified in Schedules 7 and 8 respectively.

(3) The District Crisis Group shall meet every forty-five days and send a report to the State Crisis Group;

(4) The Local Crisis Group shall meet every month and forward a copy of the proceedings to the District Crisis Group.

*9. **Functions of the District Crisis Group.**—(1) The District Crisis Group shall be the apex body in the district to deal with major chemical accidents and to provide expert guidance for handling chemical accidents;*

(2) Without prejudice to the functions specified under sub-rule (1), the District Crisis Group shall,—

- *(a) assist in the preparation of the district off-site emergency plan;*
- *(b) review all the on-site emergency plans prepared by the occupier of Major Accident Hazards installation for the preparation of the district off-site emergency plan;*
- *(c) assist the district administration in the management of chemical accidents at a site lying within the district;*
- *(d) continuously monitor every chemical accident;*

(e) *ensure continuous information flow from the district to the Central and State Crisis Groups regarding accident situation and mitigation efforts;*

(f) *forward a report of the chemical accident within fifteen days to the State Crisis Group;*

(g) *conduct at least one full scale mock-drill of a chemical accident at a site each year and forward a report of the strength and the weakness of the plan to the State Crisis Group.*

10. Functions of the Local Crisis Group.—*(1) The Local Crisis Group shall be the body in the industrial pocket to deal with chemical accidents and coordinate efforts in planning, preparedness and mitigation of a chemical accident;*

(2) Without prejudice to the functions specified under sub-rule (1), the Local Crisis Group shall,—

(a) *prepare local emergency plan for the industrial pocket;*

(b) *ensure dovetailing of the local emergency plan with the district off-site emergency plan;*

(c) *train personnel involved in chemical accident management;*

(d) *educate the population likely to be affected in a chemical accident about the remedies and existing preparedness in the area;*

(e) *conduct at least one full scale mock-drill of a chemical accident at a site every six months and forward a report to the District Crisis Group;*

(f) *respond to all public inquiries on the subject.*

11. Powers of the Members of the Central, State and District Crisis Groups.—*(1) The Members of the Central Crisis Group, State Crisis Groups and District Crisis Groups shall be deemed to be persons empowered by the Central Government in this behalf under sub-section (1) of Sec. 10 of the Environment (Protection) Act, 1986.*

12. Aid and assistance for the functioning of the District and Local Crisis Groups.—*(1) The Major Accident Hazard installations in the industrial pockets in the district shall aid, assist and facilitate functioning of the District Crisis Group;*

(2) The Major Accident Hazard installations in the industrial pockets shall also aid, assist and facilitate the functioning of the Local Crisis Group.

13. Information to the public.—*(1) The Central Crisis Groups shall provide information on request regarding chemical accident prevention, preparedness and mitigation in the country.*

(2) The State Crisis Group shall provide information on request regarding chemical accident prevention, preparedness and mitigation to the public in the State.

(3) The Local Crisis Group shall provide information regarding possible chemical accident at a site in the industrial pocket and related information to the public on request.

(4) The Local Crisis Group shall assist the Major Accident Hazard installations in the industrial pocket in taking appropriate steps to inform persons likely to be affected by a chemical accident.

SCHEDULE 1

[*See* rule 2 (*b*) and 2 (*j*)]

PART I

(*a*) **Toxic Chemicals.**—Chemicals having the following values of acute toxicity and which owing to their physical and chemical properties, are capable of producing major accident hazards

Sl. No.	Degree of Toxicity	Oral Toxicity LD 50 (mg/kg)	Dermal Toxicity (Dermal LD 50) (mg/kg)	Inhalation toxicity by dust and mists (mg/l)
1.	Extremely toxic	1-50	1-200	0.1-0.5
2.	Highly toxic	51-500	201-2000	0.5-2.0

(*b*) **Flammable Chemicals.**—(*i*) Flammable gases : chemicals which in the gaseous state at normal pressure and mixed with air become flammable and the boiling point of which at normal pressure is 20°C or below;

(*ii*) Highly flammable liquids : chemicals which have a flash point lower than 23°C and the boiling point of which at normal pressure is above 20°C;

(*iii*) Flammable liquids : chemicals which have a flash point lower than 65°C and which remain liquids under pressure, where particular processing conditions, such as high pressure and high temperature, may create major accident hazards

(c) **Explosives.**—Chemicals which may explode under the effect of flame, heat or photo-chemical conditions or which are more sensitive to shocks or friction than dinitro-benzene

PART II

List of Hazardous and Toxic Chemicals

Sl. No	Name of the Chemical
1	2
1	Acetone
2.	Acetone cyanohydrine
3	Acetyl chloride
4.	Acetylene (Ethyne)
5.	Acrolein (2-propenal)
6	Acrylonitrile
7	Aldicarb
8.	Aldrin
9.	Alkyl phthalate
10.	Allyl Alcohol
11.	Allylamine
12.	Alpha Naphthyl Thiourea (ANTU)
13.	Aminodiphenyl-4
14.	Aminophenol-2
15.	Amiton
16.	Ammonia
17.	Ammonium Nitrate
18.	Ammonium Nitrates in fertilizers
19.	Ammonium sulfamate
20.	Anabasine
21.	Aniline
22.	Anisidine-p
23.	Antimony and compounds
24.	Antimony Hydride (Stibine)
25.	Aresenic Hydride (Arsine)
26.	Arsenic Pentoxide, (Arsenic) (v) Acid and Salts
27.	Arsenic Trioxide, Arsenious (iii) Acids and Salts
28.	Asbestos

1	2
29.	Azinphos-Ethyl
30	Azinphos-Methyl
31.	Barium Azide
32.	Benzene
33.	Benzidine
34.	Benzidine Salts
35.	Benzoquinone
36.	Benzoyl Chloride
37	Benzoyl Peroxide
38	Benzyl Chloride
39.	Benzyl Cyanide
40.	Beryllium (Powers, Compounds)
41.	Biphenyl
42.	Bis (2-chloromethyl) Ketone
43.	Bis (2, 4, 6-Trinitrophenyl) Amine
44.	Bis (2-chloroethyl) Sulphide
45.	Bis (Chloromethyl) ether
46.	Bis (tert-Butylkperoxy) Butane, -2, 2
47	Bis (tert-Butylperoxy) butane, 1, 1
48.	Bis, 1, 2 Tribromophenoxy-Ethane
49	Bisphenol
50	Boron and compounds
51	Bromine
52	Bromine Pentafluoride
53	Bromoform
54	Butadiene-1, 3
55	Butane
56	Butanone-2
57	Butoxy Ethanol
58	Butylglycidal Ether
59	Butyl peroxyacetate, tert
60.	Butyl peroxyisobutyrate, tert
61.	Butyl peroxy isopropyl carbonate, tert
62.	Butyl peroxymaleate, tert
63.	Butyl peroxypivalate, -tert
64.	Butyl vinyl Ether
65.	Butul-n-Mercaptan
66.	Butylamine
67.	C9 Aromatic Hadrocarbon Fraction
68.	Cadmium and Compounds
69.	Cadmium oxide (fumes)
70.	Calcium Cyanide
71.	Captan
72.	Captofol
73.	Carbaryl (Sevin)
74.	Carbofuran
75	Carbon Disulphide
76.	Carbon Monoxide
77.	Carbon Tetrachloride
78	Carbophenothion
79	Cellulose Nitrate
80.	Chlorates (used in explosives)
81	Chlordane
82	Chlorfenvinphos
83	Chlorinated Benzenes
84.	Chlorine
85.	Chlorine Dioxide
86	Chlorine Oxide
87	Chlorine Trifluoride
88.	Chlormequat Chloride
89.	Chloroacetal Chloride
90.	Chloroacetaldehyde
91.	Chloroaniline, -2
92.	Chloroaniline, -4
93.	Chlorobenzene
94.	Chlorodiphenyl
95.	Chloroepoxypropane
96	Chloroethanol
97	Chloroethyl Chloroformate
98	Chlorofluorocarbons
99	Chloroform
100	Chloroformyl, -4, Morpholine
101	Chloromethane
102.	Chloromethyl Ether
103	Chloromethyl Methyl Ether
104.	Chloronitrobenzene
105	Chloroprene
106	Chlorosulphonic Acid
107	Chlorotrinitrobenzene
108	Chloroxuron
109.	Chromium and Compounds
110.	Cobalt and Compounds
111.	Copper and Compound
112.	Coumafuryl
113.	Comaphos
114.	Coumatetralyl
115.	Cresals
116.	Crimidine
117.	Cumene
118.	Cyanophos

1	2
119	Cyanothoate
120	Cyanuric Fluoride
121	Cyclohexane
122.	Cyclohexanol
123	Cyclohexanone
124	Cycloheximide
125	Cyclopentadiene
126	Cyclopentane
127	Cyclotetamethylenee-tranitramine
128.	Cyclotrimethylene Trinitramine
129	DDT
130	Decabromodiphenyl Oxide
131	Demeton
132	Di-Isobutyl Peroxide
133.	Di-n-propyl proxydicarbonate
134	Di-sec-Butyl Peroxydicarbonate
135	Dialifos
136	Diazodinitrophenol
137	Diazomethane
138	Dibenzyl Peroxydicarbonate
139	Dichloroacetylene-o
140	Dichloro obenzene-o
141	Dichlorobenzene-p
142.	Dichloroethane
143	Dichloroethyl Ether
144	Dichlorophenol, -2, 4
145	Dichlorophenol, -2, 6
146.	Dichlorophenboxy Acetic Acid, -2, 4 (2, 4-D)
147	Dichloropropane, -1, 2
148	Dichlorosalicylic Acid, -3, 5
149	Dichlorvos (DDVP)
150	Dicrotophos
151.	Dieldrin
152.	Diepoxybutane
153	Diethyl Peroxydicarbonate
154	Diethylene Glycol dinitrate
155.	Dietylene Triamine
156.	Diethyleneglycol Butyl Ether/ Diethyleneglycol Butyl Acetate
157.	Diethylenetriamine (DETA)
158.	Diglycidyl Ether
159.	Dithydroperoxypropane, -2, 2
160	Di-isobutyryl peroxide
161	Dimefox
162	Dimethoate
163	Dimethyl Phosphoramidocyanidic Acid
164	Dimethyl Phthalate
165	Dimethylcarbomyl
166.	Dimethylnitrosamine
167	Dinitrophenol, Salts
168.	Dinitrotoluene
169	Dintro-o-Cresol
170.	Dioxane
171	Dioxathion
172	Dioxolane
173	Diphacinone
174	Diphosphoramide Octamethyl
175	Dipropylene Glycolmethylether
176	Disulfoton
177	Endosulfan
178	Endrin
179	Epichlorohydrine
180	EPN
181	Epoxypropane, 1, 2
182	Ethion
183	Ethyl Carbamate
184	Ethyl Ether
185	Ethyl Hexanol, -2
186.	Ethyl Mercaptan
187	Ethyl Methacrylate
188	Ethyl Nitrate
189	Ethylamine
190.	Ethylene
191.	Ethylene Chlorohydrine
192	Ethylene Diamine
193.	Ethylene Dibromide
194.	Ethylene Dichloride
195.	Ethylene Glycol Dinitrate
196.	Ethylene Oxide
197.	Ethyleneimine
198.	Ethylthiocyanate
199.	Fensulphothion
200.	Fluenetil
201.	Fluoro,-4, -2-Hydroxybutyric Acid and Salts Esters, Amides.
202.	Fluoracetic Acid and salts, Esters, Amides

1	2
203	Fulorobytyric Acid, -4, and Salts, Esters, Amides
204.	Fluorocotonic Acid, -4, Salts, Esters, Amides
205.	Formalodehyde
206.	Glyconitrile (Hydroxyacetonitrile)
207.	Guanyl, -1, -4-Nitrosaminoguyny 1-1-Tetrazene
208.	Heptachlor
209.	Hexachloro Cyclopentadiene
210.	Hexachlorocyclohexane
211.	Hexachlorocyclomethane
212.	Haxachlorodibenzo-p-Dioxin, 1, 2, 3, 7, 8, 9
213.	Hexafluoropropene
214.	Hexamethylphosphoramide
215.	Hexamethyl, -3, 3, 6, 9, 9-1, 2, 4, 5-Tetraoxacyclononane
216.	Hexamethylenediamine
217.	Hexane
218.	Hxanitrostibene, -2, 2, 4, 4, 6, 6
219.	Haxavalent Chromium
220.	Hydrazine
221	Hydrazine Nitrate
222.	Hydrochloric Acid
223	Hydrogen
224	Hydrogen Bromide (Hydrobromic Acid)
225	Hydrogen Chloride (Liquified Gas)
226	Hydrogen Cyanide
227.	Hydrogen Fluoride
228.	Hydrogen Selenide
229.	Hydrogen Sulphide
230	Hydroquinone
231.	Iodine
232.	Isobenzan
233.	Isodrin
234.	Isophorone Diisocyanate
235.	Isopropyl Ether
236.	Juglone (5-Hydroxynaphthalene-1, 4-Dione)
237.	Lead (inorganic fumes and dusts)
238.	Lead 2, 4, 6-Trinitroresorcinoxide (Lead Styphnate)
239	Lead Azide
240	Leptophos
241.	Lindane
242.	Liquified Petroleum Gas (LPG)
243.	Maleic Anhydride
244	Managenese and Compounds
245.	Mercapto Benzothiazole
246	Mercury Alkyl
247.	Mercury Fulminate
248.	Mercury Methyl
249.	Methacrylic Anhydride
250.	Methacrylonitrile
251.	Methacryloyl Chloride
252.	Methamidophos
253.	Methanesuphonyl Fluoride
254.	Methanthiol
255.	Methoxy Ethanol
256.	Methoxyethylmercuric Acetate
257.	Methyl Acrylate
258.	Methyl Alocohol
259.	Methyl Amylketone
260	Methyl Bromide (Bromomethane)
261	Methyl Chloride
262	Methyl Chloroform
263	Methyl Cyclohexene
264	Methyl ethyl Ketone Peroxide
265.	Methyl Hydrazine
266	Methyl Isobutyl Ketone
267	Methyl Isobutyl Ketone Peroxide
268	Methyl isocyanate
269.	Methyl Isothiocyanate
270.	Methyl Mercaptan
271.	Methyl Methacrylate
272.	Methyl Parathion
273.	Methyl Phoshonic Dichloride
274.	Methyl -N, 2, 4, 6-Tetranitroaniline
275.	Methylene Chloride
276.	Methylenebis, -4, 4, (2,-chloroaniline)
277.	Methyltrichlorosilane
278.	Mevinphos
279.	Molybdenum and Compounds
280.	N-Methyl-N, 2,4, 6-Tetranitrosnaline
281.	Naptha (Coal Tar)

1	2
282	Napthylamine, 2
283	Nickel and Compounds
284.	Nickel Tetracarbonyl
285	Nitroaniline-o
286	Nitroaniline-P
287.	Nitrobenzene
288.	Nitrochlorobenzene-P
289.	Nitrocyclohexane
290	Nitroethane
291.	Nitrogen Dioxide
292.	Nitrogen Oxides
293	Nitrogen Trifluoride
294	Nitroglycerine
295	Nitrophenol-P
296	Nitropropane-1
297.	Nitropropane-2
298.	Nitrosodimethylamine
299.	Nitrotoluene
300.	Octabromophenyl Oxide
301	Oleum
302	Oleylamine
303	OO-Diethyl S-Ethysulphonylmethyl
304	OO-Diethyl S-Ethylsulphonylmethyl Phosphorothioate
305.	OO-Diethyl S-Ethylthiomethyl Phosphorothioate
306	OO-Diethyl S-Isoprophylthiomethyl Phosphorothioate
307	OO-Diethyl S-propylthiomethyl Phophorodithioate
308	Oxyamyl
309	Oxydisulfoton
310.	Oxygen (liquid)
311	Oxygen Difluoride
312	Ozone
313	Paroxon (diethyl 4-Nitrophenyl Phosphate)
314.	Paraquat
315.	Parathion
316.	Paris green
317.	Pentaborane
318.	Pentabromodiphenyl Oxide
319.	Pentabromophenol
320	Pentachloro Napthalene
321	Pentachloroethane
322	Pentachlorophenol
323	Pentaerythritol Tetranitrate
324.	Pentane
325	Pentanone, 2, 4-Methyl
326.	Peradetic Acid
327	Perchloroethylene
328.	Perchloromethyl Mercaptan
329	Phenol
330	Phenyl Glycidal Ether
331	Phenylene p-Diamine
332	Phenylmercury Acetate
333	Phorate
334	Phosacetim
335	Phosalone
336	Phosfolan
337	Phosgene (carbonyl chloride)
338	Phosmet
339	Phosphamidon
340	Phosphine (Hydrogen Phosphide)
341.	Phosphoric Acid and Esters
342.	Phosphoric Acid, Bromoethyl Bromo (2, 2-Dimethylpropyl) Bromoethyl Ester
343.	Phosphoric Acid, Bromoethyl Bromo (2, 2-Dmethylpropyl) Chloroethyl Ester
344	Phosphoric Acid, Cloroethyl Bromo (2, 2-Dimethoxylpropyl Chloroethylester)
345.	Phosphorous and Compounds
346.	Phostalan
347.	Picric Acid (2, 4, 6-Trinitrophenol)
348.	Polybrominated Biphenyls
349.	Potassium Arsenite
350.	Potassium Chlorate
351.	Promurit (1- (3,4-Dichlorophenyl)-3 Triazenethiocarboxamide)
352.	Propanesultone-1, 3
353.	Propen-1, -2-Chloro-1, 3-Diol-Diacetate
354.	Prophylene Oxide

1	2
355	Propyleneimine
356.	Pyrazoxon
357.	Selenium Hexafluoride
358	Semicarbazide Hydrochloride
359.	Sodium Arsenite
360	Sodium Azide
361	Sodium Chlorate
362.	Sodium Cyanide
363.	Sodium Picramate
364.	Sodium Selenite
365.	Styrene, 1, 1, 3, 2-Tetrachloroethane
366.	Sulfotep
367.	Sulphur dichloride
368.	Sulphur Dioxide
369.	Sulphur Trioxide
370.	Sulphuric Acid
371.	Sulphoxide, 3-chloroprophyloctyl
372.	Tellurim
373	Tellurium Hexafluoride
374	Tepp
375	Terbufos
376	Tetrabromobisphenol-A
377	Tetrachloro, 2, 2, 5, 6, 2, 5-Cyclohexadiene, 4-Dione
378	Tetrachlorodibenzo-p Dioxin, 2, 3, 7, 8 (TCDD)
379.	Tetraerthyle Lead
380.	Tetrafluoroethane
381	Tetremethylenedisulphotetramine
382	Tetramethyl Lead
383	Tetramnitromethane
384.	Thallium and Compounds
385.	Thionazin
386	Thinoyl Chloride
387.	Tirpate
388.	Toluene
389.	Toluene-2-4-Diisocyanate
390.	Toluidine-o
391.	Toluene 2, 6-Diisocyanate
392.	Trans-1, 4-dichlorobutene
393.	Tri-1 (cyclohexyl) Stannyl-1-H-1, 2, 3-Triazole
394.	Triamino, -1, 3, 5, 2, 4, 6-Trinitrobenzene
395	Tribromophenol, 2, 4, 6
396	Trichloro Acetyl Chloride
397	Trichloro Ethane
398	Trichloro Napthalene
399.	Trichloro (Chloromethyl) Silane
400	Trichlorodichlorophenylsilane
401	Trichloroethane, 1, 1, -1
402	Trichloroethyl Silane
403	Trichloroethylene
404.	Trichloromethanesulphenyl chloride
405.	Trichlorophenol, 2, 2, 6
406.	Trichlorophenol, 2, 4, 5
407.	Triethylamine
408.	Triethylenemelamine
409.	Trimethyl Chlorosilane
410.	Trimethylpropane Phosphite
411	Trinitroaniline
412	Trinitroanisole, 2, 2, 4, 6
413	Trinitrobenzene
414	Trinitrobenzoic Acid
415	Trinitrocresol
416	Trinitrophenetole, 2, 5, 6
417	Trinitroresorcinol, 2, 4, 6 (Styphinic Acid)
418	Trinitrotoluene
419	Triorthocresyl Phosphate
420	Triphenyl Tin Chloride
421.	Turpentine
422.	Uranium and Compounds
423	Vanadium and Compounds
424.	Vinyl Chloride
425.	Vinyl Fluoride
426.	Vinyl Toluene
427.	Warfarin
428.	Xylene
429.	Xylidine
430.	Zinc and Compounds
431.	Zirconium and Compounds

SCHEDULE 2

[*See* rule 2 (*b*), 2 (*c*) 2 (*g*)]

Sl No	Chemicals	Threshold Planning Quantities (M T)
1	2	3
1	Acrylonitrile	350
2	Ammonia	60
3	Ammonium nitrate (c)	350
4	Ammonium nitrate fartilizers (d)	1,250
5	Chlorine	10
6	Flammable gases as defined in Schedule 1, paragraph (*b*) (*i*)	50
7	Highly flammable liquids as defined in Schedule I, paragraph (*b*) (*ii*)	10,000
8	Liquid oxygen	200
9	Sodium chlorate	25
10	Sulphur dioxide	20
11.	Sulphur trioxide	15
12	Carbonyl chloride	0.750
13	Hydrogen Sulphide	5
14	Hydrogen fluoride	5
15	Hydrogen cyanide	5
16	Carbon disulphide	20
17	Bromine	50
18	Ethylene oxide	5
19	Propylene oxide	5
20	2-Propenal (Acrolein)	20
21.	Bromomethane (Methyl Bromide)	20
22.	Methyl isocyanate	0.150
23	Tetraethy Lead or tetramethyl lead	5
24	1, 2 Dibromoethane (Ethylene dibromide)	5
25	Hydrogen chloride (Liquified gas)	25
26	Diphenyl methane di-isocyanate (MDI)	20
27	Toluene di-isocyanate (TDI)	10

Note : (*a*) The threshold quantities set out above relate to each installation or group of installations belonging to the same occupier where the distance between installations is not sufficient to avoid, in foreseeable circumstances, any aggravation of major accident hazards. These threshold quantities apply in any case to each group of installations belonging to the same occupier where the distance between the installations is less than 500 metres.

(*b*) For the purpose of determining the threshold quantity of a hazardous chemical at an isolated storage, account shall also be taken of any hazardous chemical with is :—

(*i*) in the part of any pipeline under the control of the occupier having control of the site, which is within 500 metres of that site and connected to it;

(*ii*) at any other site under the control of the same occupier any part of the boundary of which is within 500 metres of the said site; and

(*iii*) in any vehicle, vessel, airecraft or hovercraft under the control of the same occupier which is used for storage purpose either at the site or within 500 metres of it;

But no account shall be taken of any hazardous chemical which is in a vehicle, vessel, aircraft or hovercraft used for transporting it

(*c*) This applies to ammonium nitrate and mixtures of ammonium nitrate where the nitrogen content derived from the ammonium nitrate is greater than 28 per cent by weight and to aqueous solutions of ammonium nitrate where the concentration of ammonium nitrate is greater than 90 per cent by weight

(*d*) This applies to straight ammonium nitrate fertilizers and to compound fertilizers where the nitrogen content derived from the ammonium nitrate is greater than 28 per cent. by weight (a compound fertilizer contains ammonium nitrate together with phosphate and/or potash)

SCHEDULE 3

[*See* rule (*b*), 2 (*e*), 2 (*g*)]

PART I

Named Chemicals

Sl. No.	Chemical	Threshold	CAS
1	2	3	4
GROUP 1—TOXIC CHEMICALS			
1	Aldicarb	100 kg	116-06-3
2	4-Aminodiphenyl	1 kg	96-67-1
3	Amiton	1 kg	78-53-5
4	Anabasine	100 kg	494-52-0
5	Arsenic pentoxide Arsenic (V) acid and salts	500 kg	—
6.	Arsenic trioxide Arsenious (III) acid and salts	100 kg	—
7	Arsine (Arsenic hydride)	10 kg	7784-42-1
8	Azinpho-ethyl	100 kg	2642-71-9
9	Azinpho-methyl	100 kg	86-50-0
10	Benzidine	1 kg	92-87-5
11	Benzidine salts	1 kg	—
12	Beryllium (powers and "compounds")	10 kg	—
13	Bis (2-chloroethyl) Sulphide	1 kg	505-06-2
14	Bis (chloromethyl) ether	1 kg	542-88-1
15.	Carbofuran	100 kg	1563-66-2
16	Carbophenothion	100 kg	786-19-6
17.	Chlorofenvinphos	100 kg	470-90-6
18.	4-(Chloroformyl) morpholine	1 kg	15159-40-7
19.	Chloromethyl methyl ether	1 kg	107-30-2
20.	Cobalt (metal, oxides, carbonates, sulphides, as powers)	1000 kg	—
21.	Crimidine	100 kg	535-89-7
22	Cyanothoate	100 kg	3734-90-0
23.	Cycloheximide	100 kg	66-81-9
24.	Demeton	100 kg	8065-48-3
25.	Dialifos	100 kg	10311-84-9

1	2	3	4
26	OO-Diethyl S-ethylsuphinylmethyl phosphorothioate	100 kg	2588-06-8
27	OO-Diethyl S-ethylsulphonymethyl phosphorothioate	100 kg	2588-06-9
28	OO-Diethyl S-ethylthiomethyl phosphorothioate	100 kg	2600-69-3
29.	OO-Diethyl S-isopropylthiomethyl phosphorodithioate	100 kg	—
30.	OO-Diethyl S-propylthiomethyl phosphorodithioate	100 kg	3309-68-0
31	Dimefox	100 kg	115-26-4
32	Dimethylcarbamoyl chloride	1 kg	79-44-7
33	Dimethylnitrosamine	1 kg	62-75-9
34	Dimethyl phospho amidocyanide acid	1000 kg	7781-6
35	Diphacinone	100 kg	82-66-6
36	Disulfolon	100 kg	298-04-4
37	EPN	100 kg	2104-64-5
38.	Ethion	100 kg	563-12-2
39.	Fensulfothin	100 kg	115-90-2
40.	Fluenetil	100 kg	4301-50-2
41	Fluoroacetic acid	1 kg	144-49-0
42	Fluoroacetic acid, salts	1 kg	
43	Fluoroacetic acident,	1 kg	
44	Fluoroaectic acid, amides	1 kg	
45	4-Fluorobutyric acid	1 kg	
46	S-Fluorobutyric acid, salts	1 kg	
47	4-Fluorobutyric acid, esters	1 kg	
48	4-Fluorobutyric acid	1 kg	
49	4-Fluorocrotonic acid	1 kg	37759-72-1
50.	4-Fluorocrotonic acid, salts	1 kg	
51.	4-Fluorocrotonic acid, esters	1 kg	
52	4-Flurocrotonic Acid, amides	1 kg	
53.	4-Fluro-2-hydroxybutyric acid	1 kg	
54	4-Fluro-2-hydroxy butyric acid, salts	1 kg	
55.	4-Fluro-2-hydroxybutinc acid, esters	1 kg	
56.	4-Fluro-2-hydroxybutyric acid, amides	1 kg	
57.	Glyconitrile (Hydroxyacetonitrile)	100 kg	107-16-4
58	1, 2, 3, 7, 8, 9-Hexachlorodibenozo-p-dioxin	100 kg	19408-74-3
59.	Hexamethylphosphoramide	1 kg	680-13-9
60.	Hydrogen selenide	10 kg	7783-07-5
61.	Isobenzan	100 kg	297-78-9
62.	Isodrin	100 kg	465-73-6
63.	Juglone (5-Hydroxynaphthalne) 1, 4-dione)	100 kg	481-39-0
64	4,4-Methylenebis (2-chloroaniline)	10 kg	101-14-4
65.	Methyl isocyanate	150 kg	624-83-9
66.	Mevinphos	100 kg	7786-34-7
67.	2-Naphthylamine	1 kg	99-59-8

1	2	3	4
68.	Nickel (metal oxides, carbonates, sulphides, as powders)	1000 kg	—
69	Nickel tetracarbonyl	10 kg	13463-39-3
70.	Oxydisulfoton	100 kg	2497-07-6
71	Oxygen difluoride	10 kg	7783-41-7
72.	Paraoxan (Deithyl 4-nitrophenyl phosphate)	100 kg	311-45-5
73.	Parathion	100 kg	56-38-2
74.	Parathion-methyl	100 kg	298-00-0
75.	Pentaborane	100 kg	19624-22-7
76.	Phorate	100 kg	298-02-2
77.	Phosazetim	100 kg	4104-14-7
78	Phosgene (carbonyl chloride)	750 kg	75-55-5
79	Phoshamidon	100 kg	13171-21-6
80.	Phosphine (Hydrogen phosphide)	100 kg	5836-73-7
81	Promurit (1-(3, 4-Dichlorophenyl)-3 -triazenethiocarboxamide	100 kg	5836-73-7
82	1, 3- Propanesultone	1 kg	1120-71-4
83	1-Propene-2-chloro-1, 3-diol diacetate	10 kg	10188-72-6
84	Pyrazoxom	100 kg	108-34-9
85	Selenium haxafluoride	10 kg	7783079-1
86	Soduum selenite	100 kg	10102-18-8
87	Stibine (Artimony hydride)	100 kg	7803-52-3
88	Sulfotep	100 kg	3689-24-5
89	Sulphur dichloride	1000 kg	10545-99-0
90	Tellurium hexafloride	100 kg	7783-80-4
91	TEPP (Tetraethyl pyrophoshate)	100 kg	107-49-3
92	2, 3, 7, 8-Tetrachlorodibenozo-p-dioxin (TCDD)	1 kg	1746-01-6
93	Tetramethylendisulphotetramine	1 kg	80-12-6
94	Thinazin	100 kg	297-72-2
95	Tirpate (2, 4-Dimethyl-1, 3-dithiolane-2-carboxaldehyde O-methylcarbamoyloxime)	100 kg	26419-73-8
96	Trichloromethanesulphenyl chloride	100 kg	594-42-3
97	1-Tri (Cyclohexyl) v stamyl IH-1, 2, 3-triazole	100 kg	40183-11-8
98	Triethylenemelamine	10 kg	51-18-3
99	Warfarin	100 kg	81-81-2
GROUP 2-TOXIC CHEMICALS			
100	Acetone cycanohydrin (2-Cyanopropan-2-1)	200	T 75-86-5
101	Acrolein (2-Propenal)	20	T 107-02-3
102.	Acrylonitrile	20	T 107-13-1
103.	Allylalcobol (propen-1-01)	200	T 107-18-6
104.	Allyamine	200	T 107-11-9
105.	Ammonia	50	T 7664-41-7
106.	Bromine	40	T 7726-95-6
107.	Carbon disulphide	20	T 75-15-0
108.	Chlorine	10	T 7782-50-5
109.	Diphenyl methane di-isocyanste (MDI)	20	T 101-68-8

1	2	3	4
110	Ethylene dibromide (1, 2-Dibromethane)	5	T 106-94-4
111	Ethyleneimine	50	T 151-56-4
112	Formaldehyde (Conentration > 90%)	5	T 50-00-0
113.	Hydrogen Chloride (liquified gas)	25	T 7547-01-0
114	Hydrogen cyanide	5	T 74-90-8
115	Hydrogen fluoride	5	T 7664-39-3
116	Hydrogen sulphide	5	T 7786-06-4
117	Methyl bromide (bromomethane)	20	T 74-83-9
118	Nitrogen oxides	50	T 11104-93-1
119	Propyleneimine	50	T 75-55-8
120.	Sulphur dioxide	20	T 7446-09-5
121	Sulphur trioxide	15	T 7446-11-9
122	Tetraethyl lead	5	T 78-00-2
123	Tetramethyl lead	5	T 75-74-1
124	Toluene 2, 4, di-isocyanate (TDI)	10	T 584-84-9
GROUP 3-HIGHLY REACTIVE CHEMICALS			
125	Acetylene (ethyne)	5	T 74-86-2
126	I Ammonium nitrate (c)	350	T 6484-52-2
	II Ammonium nitrate in the form of fertilizer (d)	250	T —
127	2, 2-Bis (tert-butylperoxy) butane (concentration > 70%)	5	T 2167-23-9
128	1, 1-Bis (tert-butylperoxy) cyclohexane (concentration-80%)	5	T 3006-86-8
129	tert-Butyl peroxyacetate (concentration-70%)	5	T 107-71-1
130	tert-Butyl peroxyisobutyrate (concentration-80%)	5	T 109-13-7
131	tert-Butyl peroxy isopropyl carbonate (concentration-80%)	5	T 2372-21-6
132	Tert-Butyl peroxymaleate (concentration-80%)	5	T 1931-62-0
133	tert-Butyl peroxypivalate (concentration-770%)	50	T 927-07-1
134	Dibenzyl peroxydicarbonate (concentration-90%)	5	T 2144-45-8
135	Di-sec.butyl peroxydicarbonate (concentration-80%)	5	T 19910-45-7
136	Diethyl peroxydicarbonate (concentration-30%)	50	T 1466-78-5
137	2, 2-Dihydroperoxypropone (concentration-30%)	5	T 2614-76-8
138.	Di-isobutryl peroxide (concentration-80%)	5	T 3437-84-1
139.	Di-n-propyl peroxydicarbonate (concentration-80%)	5	T 16066-38-9

1	2	3	4
140	Ethylene oxide	5	T 75-21-8
141.	Ethyl nitrate	50	T 625-58-1
142	3, 3, 6, 6, 9, 9-Hexamethyl-1, 2, 3, 4 5-tetra-oxacyclononanane (concentration-75%)	5	T 22397-33-7
143	Hydrogen	2	T 1333-74-0
144	Methyl ethyl ketone peroxide (concentration-60%)	5	T 1339-23-4
145	Methyl isobutyl ketone peroxide (concentration-60%)	5	T 37206-2-5
146.	Oxygen Liquid	200	T 7782-44-7
147	Peraoetic acid (concentration-60%)	5	T 79-21-0
148	Propylene oxide	5	T 75-56-9
149.	Sodium chlorate	25	T 7775-09-9
GROUP 4-EXPLOSIVE CHEMICALS			
150.	Barium azide	50	T 18810-58-7
151.	Bis (2, 4, 6,-trinitrophenyl amine)	50	T 131-73-7
152.	Chlorotrinitrobenzene	50	T 28260-61-9
153.	Celluouse nitrate (Containing 12.6% Nitrogen)	50	T 9004-70-0
154	Cyclotetramethylenetetra nitramine	50	T 2691-41-0
155.	Cyclotrimethylenetrinitramine	50	T 121-82-4
156	Diazodinitrophenol	10	T 87-31-0
157.	Diethylene glycol dinitrate	10	T 693-21-0
158.	Dinitrophenol salts	50	T —
159.	Ethylene glycol dinitrate	10	T 628-96-6
160	1-Guanyl-4-nitrosaminoguanyl-1-tetrazene	10	T 109-27-3
161.	2, 2, 4, 4, 6, 6-Hexanitrostibene	50	T 20062-22-0
162	Hydrazine nitrate	50	T 13464-97-6
163.	Lead azide	50	T 13424-46-9
164.	Lead styphnate (lead 2, 4 6-trinitroresorcinoxide)	50	T 15424-40-9
165.	Mercury fulminate	10	T 628-86-4
166	N-Methyl-N, 2, 4, 6-tetranitroaniline	50	T 479-45-8
167.	Nitroglycerine	10	T 55-63-0
168.	Pentaerythritol tetranitrate	50	T 78-11-5
169.	Picric acid (2, 4, 6-Trinitrophenol)	50	T 88-89-1
170.	Sodium picramate	50	T 831-52-7
171.	Styphnic acid (2, 4, 6-Trinitroresorcinol)	50	T 82-71-3
172.	1, 3, 5-Triamino-2, 4, 6-trinitrobenzene	50	T 3058-38-9
173.	Trinitroaniline	50	T 26952-42-1
174.	2, 4, 6-Trinitroanisole	50	T 606-95-9
175.	Trinitrobenzene	50	T 9935-42-6
176.	Trinitrobenzoic acid	50	T 129-66-8
177.	Trinitrocresol	50	T 602-99-3
178.	2, 4, 6-Trinitrophenitole	50	T 4732-14-3
179.	2, 4, 6-Trinitrotoluene	50	T 118-96-7

PART-II

Classes of Substance not specially named in Part-I

1	2	3
GROUP 5-FLAMMABLE CHEMICALS		
1.	Flammable gases :	
	Substances which in the gaseous state at normal pressure and mixed with air become flammable and the boiling point of which at normal pressure is 20° C or below,	15 t
2.	Highly flammable liquids :	
	Substances which have a flash point lower than 23° C and the boiling point of which at normal pressure is above 20° C,	1000 t
3.	Flammable liquids;	
	Substances which have a flash point lower than 65°C and which remain liquid under pressure, where particular processing conditions, such as high pressure and high temperature, may create major accident hazards.	25 t

(*a*) The quantities set-out-above relate to each installation or group of installation belonging to the same occupier where the distance between the installation is not sufficient to avoid, in foreseeable circumstances, any aggravation of major accident hazards. These quantities apply in any case to each group of installations belonging to the same occupier where the distance between the installation is less than 500 metres

(*b*) For the purpose of determining the threshold quantity of a hazardous chemical in an industrial installation, account shall also be taken of any hazardous chemicals which is :

(*i*) in that part of any pipeline under the control of the occupier having control of the site, which is with 500 metres of that site and connected to it,

(*ii*) at any other site under the control of the same occupier any part of the boundary of which is within 500 metres of the said site; and

(*iii*) in any vehicle, vessel, aircraft or hovercraft under the control of the same occupier which is used for storage purpose either at the site or within 500 metres of it;

but no account shall be taken of any hazardous chemical which is in a vehicle, vessels, aircraft or hovercraft used for transporting it

(*c*) This applies to ammonium nitrate and mixtures of ammonium nitrate where the nitrogen content derived from the ammonium nitrate is greater than 28% by weight and aqueous solutions of ammonium nitrate where the concentration of ammonium nitrate is greater than 90% by weight.

(*d*) This applies to straight ammonium nitrate fertilizers and to compound fertilizers where the nitrogen content derived from the ammonium nitrate is greater than 28% by weight (a compound fertilizer contains ammonium nitrate together with phosphate and/or potash).

SCHEDULE 4

[*See* rule 2 (*c*), 2 (*e*)]

1 Installations for the production, processing or treatment of organic or inorganic chemicals using for this purpose, among other

(*a*) alkylation
(*b*) Amination by ammonolysis
(*c*) carbonylation
(*d*) condensation
(*e*) dehydrogenation
(*f*) esterification
(*g*) halogenation and manufacture of halogens
(*h*) hydrogenatation
(*i*) hydrolysis
(*j*) oxidation
(*k*) polymerization
(*l*) sulphonation
(*m*) desulphurization, manufacture and transformation of sulphur-containing compounds
(*n*) nitration and manufacture of nitrogen-containing compounds
(*o*) manufacture of phosphorous containing compounds
(*p*) formulation of pesticides and of pharmaceutical products
(*q*) distillation
(*r*) extraction
(*s*) solvation
(*t*) mixing

2 Installation for distillation, refining or other processing of petroleum or petroleum products

3 Installations for the total or partial disposal of solid or liquid substances by incineration or chemical decomposition

4 Installations for production, processing or treatment of energy gases, for example, LPG, LNG, SNG

5 Installations for the dry distillation of coal or lignite

6 Installations for the production of metals or non-metals by a wet process or by means of electrical energy

SCHEDULE 5

[*See* rule 3 (2)]

Composition of the Central Crisis Group

(*i*)	Secretary, Govt. of India. Ministry of Environment and Forests	Chairperson
[1][(*ii*)	Additional Secretary, Government of India, Ministry of Environment and Forests	Member]
(*iii*)	Joint Secretary (labour)	"
(*iv*)	Joint Secretary Adviser (Chemical and Petrochemicals)	"
(*v*)	Director General, Civil Defence	"
(*vi*)	Fire Advisor, Directorate General Civil Defence	"

---

1. Subs. by G.S.R. 578 (E) dated 9th September, 1998 published in the *Gazette of India, (Extraordinary)*, Pt. II, Sec. 3 (*i*), dated 14th September, 1998.

(*vii*)	Chief Controller of Explosives	Member
(*viii*)	Joint, Secretary (Deptt of Industries)	"
(*ix*)	Director General, Indian Council of Medical Research	"
(*x*)	Joint Secretary (Health)	"
(*xi*)	Chairman, Central Pollution Control Board	"
(*xii*)	Director General, Indian Council of Agriculture Research	"
(*xiii*)	Director General, Council of Scientific and Industrial Research	"
(*xiv*)	4 Experts (Industrial Safety and Health)	"
(*xv*)	Joint Secretary (Fertilizers)	"
(*xvi*)	Director General (Telecom.)	"
(*xvii*)	2 Representatives of Industries to be nominated by the Central Govt.	"
(*xviii*)	Joint. Secretary (surface Transport)	"
(*xix*)	General Manager (Rail safety)	"
(*xx*)	Adviser, centre for environment and Explosive safety	"
(*xxi*)	One Representative of Indian Chemical Manufacturer Association to be nominated by the Central Govt.	"
[1][(*xxii*)	Joint Secretary, Ministry of Oil and Natural Gas	"
(*xxiii*)	Director General, Factory Advice Service & Labour Institute	"
(*xxiv*)	Director General, Nation, Safety Council, Mumbai	"
(*xxv*)	Joint Secretary/Advisor, Environment and Forests	—Member Secretary]

SCHEDULE 6

[*See* Rule 6 (2)]

Composition of the State Crisis Group

(*i*)	Chief Secretary,	Chair person
(*ii*)	Secretary (Labour)	Member-Secretary
(*iii*)	Secretary (Environment)	Member
(*iv*)	Secretary (Health)	"
(*v*)	Secretary (Industries)	"
(*vi*)	Secretary (Public Health Engg)	"
[2][(*vii*)	Chairman State Pollution Control Board/ Pollution Control Committee in case of Union Territories	"]
(*viii*)	4-Experts (Industrial Safety and Health) to be nominated by the State Government.	"
(*ix*)	Secretary/Commissioner (Transport)	"
(*x*)	Director (Industrial, Safety)/ Chief Inspector of Factories	"
(*xi*)	Fire Chief	"
(*xii*)	Commissioner of Police	"
(*xiii*)	One Representative from the Industry to be nominated by the State Govt.	"

---

[1] Ins. by G.S.R. 578 (E) dated 9th September, 1998, published in the *Gazette of India* (*Extraordinary*), Pt. II, Sec. 3 (*i*), dated 14th September, 1998.

[2] Subs. by G.S.R. 578 (E) dated 9th September, 1998 published in the *Gazette of India*, (*Extraordinary*), Pt. II, Sec. 3 (*i*), dated 14th September, 1998.

SCHEDULE 7

[*see* rule 8]

Composition of the District Crisis Group

(*i*)	District Collector	Chairperson
(*ii*)	Inspector of Factories	Member-Secretary
(*iii*)	District [1][Emergency] Officer	Member
(*iv*)	Chief Fire Officer	"
(*v*)	District Information Officer	"
(*vi*)	Controller of Explosives	"
(*vii*)	Chief, Civil Defence	"
(*viii*)	One Representative of Trade Unions to be nominated by the District collector	"
(*ix*)	Deputy Superintendent of Police	"
(*x*)	District Health Officer/Chief Medical Officer	"
(*xi*)	Commissioner, Municipal Corporations	"
(*xii*)	Representative of the Department of Public Health Engineering	"
(*xiii*)	Representative of Pollution Control Board	"
(*xiv*)	District Agriculture Officer	"
(*xv*)	4 Experts (Industrial Safety and Health) to be nominated by the District Collector	"
(*xvi*)	Commissioner (Transport)	"
(*xvii*)	One Representative of Industry to be nominated by the District Collector	"
(*xviii*)	Chair-person/Member-Secretary of Local Crisis Groups	"

SCHEDULE 8

[*See* rule 8]

Composition of the Local Crisis Group

(*i*)	Sub-divisional Magistrate/District Emergency Authority	Chairperson
(*ii*)	Inspector of Factories	Member-Secretary.
(*iii*)	Industries in the District/Industrial area/industrial pocket	Member
(*iv*)	Transporters of Hazardous Chemicals (2 Numbers)	"
(*v*)	Fire officer	"
(*vi*)	Station House Officer (Police)	"
(*vii*)	Block Development Officer	"
(*viii*)	One Representative of Civil Defence	"
(*ix*)	Primary Health Officer	"
(*x*)	Editor of local News paper	"
(*xi*)	Community leader/Sarpanch/Village Pradhan nominated by Chair-person	"
(*xii*)	One Representative of Non-Government Origination to be nominated by the Chair-person	" " "
(*xiii*)	Two Doctors eminent in the Local area, to be nominated by chair-person	"
(*xiv*)	Two Social Workers to be nominated by the Chair-person	"

[1] Subs. for the word "Energy" by G.S.R. 578 (E) dated 9th September, 1998 published in the *Gazette of India* (*Extraordinary*), Pt. II, Sec. 3 (*i*) dated 14th September, 1998.

PART III-10

THE NATIONAL ENVIRONMENT TRIBUNAL ACT, 1995

[ACT NO. 27 OF 1995[1]]

[17th June, 1995]

An Act to provide for strict liability for damages arising out of any accident occurring while handling any hazardous substance for the establishment of a National Environment Tribunal for effective and expeditious disposal of cases arising from such accident, with a view to giving relief and compensation for damages to persons, property and the environment and for matters connected therewith or incidental thereto.

WHEREAS decisions were taken at the United Nations Conference on Environment and Development held at the Rio de Janeiro in June 1992, in which India participated, calling upon the States to develop national laws regarding liability and compensation for the victims of pollution and other environment damage;

AND WHEREAS it is considered expedient to implement the decisions of the aforesaid Conference so far as they relate to the protection of environment and payment of compensation for damage to persons, property and the environment while handling hazardous substances;

BE it enacted by Parliament in the Forty-sixth Year of the Republic of India as follows :—

CHAPTER I

PRELIMINARY

1. *Short title and commencement.*—*(1) This Act may be called the National Environment Tribunal Act, 1995.*

(2) It shall come into force on such date or dates as the Central Government may, by notification, appoint, and different dates may be appointed for different States and any reference in any provision of this Act to the commencement of this Act shall be construed in relation to any State or part thereof as a reference to the coming into force of that provision in that State or part thereof.

2. *Definition.*—*In this Act, unless the context otherwise requires,—*

(a) "accident" means an accident involving a fortuitous or sudden or unintended occurrence while handling any hazardous substance resulting in continuous or intermittent or repeated exposure to death of, or injury to, any person or damage to any property or environment but does not include an accident by reason only of war or radio-activity;

(b) "Bench" means a Bench of the Tribunal;

(c) "Chairperson" means the Chairperson of the Tribunal;

(d) "environment" includes water, air and land and the inter-relationship

---

[1] Received the assent of the President on 17th June, 1995 and was published in the *Gazette of India, Extraordinary*, Part II, Sec. 1, dated 17th June, 1995.

which exists among and between water, air and land, and human beings, other living creatures, plants, micro-organisms and property;

(e) *"handling" in relation to any hazardous substance, means the manufacture, processing, treatment, package, storage, transportation by vehicle, use, collection, destruction, conversion, offering for sale, transfer or the like of such hazardous substance;*

(f) *"hazardous substance" means any substance or preparation which is defined as a hazardous substance in the Environment (Protection) Act, 1986 (29 of 1986), and exceeding such quantity as specified by the Central Government under the Public Liability Insurance Act, 1991 (6 of 1991);*

(g) *"Judicial Member" means a Member of the Tribunal appointed assuch under this Act, and includes the Chairperson or a Vice-Chairperson who possesses any of the qualifications specified in sub-section (3) of Sec. (10) :*

(h) *"Member" means a Member (whether Judicial or Technical) of the Tribunal and includes the Chairperson and a Vice-Chairperson;*

(i) *"notification" means a notification published in the Official Gazette;*

(j) *"prescribed" means prescribed by rules made under this Act;*

(k) *"rules" means the rules made under this Act;*

(l) *"Technical Member" means a Member of the Tribunal who is not Judicial Member within the meaning of Cl. (g);*

(m) *"Tribunal" means the National Environment Tribunal established under Sec. 8 :*

(n) *"Vice-Chairperson" means the Vice-Chairperson of the Tribunal.*

Explanation.—In the case of the Tribunal having two or more Vice-Chairperson, reference to the Vice-Chairperson in this Act shall be constructed as a reference to each of those Vice-Chairpersons;

(o) *"owner" means a person who owns, or has control over handling any hazardous substance at the time of accident and includes,—*

  (i) *in the case of a firm, any of its partners;*

  (ii) *in the case of an association, any of its directors, managers, secretaries or other officers who is directly in charge of, and is responsible to the company for the conduct of the business of the company.*

CHAPTER II

COMPENSATION FOR DEATH OF, OR INJURY TO, A PERSON AND DAMAGE TO PROPERTY AND ENVIRONMENT

3. Liability to pay compensation in certain cases on principle of no limit.—*(1) Where death of, or injury to, any person (other than a workman) or damage to any property or environment has resulted from an accident, the owner shall be liable to pay compensation for such death, injury or damage under all or any of the heads specified in the Schedule.*

(2) In any claim for compensation under sub-section (1), the claimant shall not be required to plead and establish that the death, injury or damage in respect of which the claim has been made was due to any wrongful act, neglect or default of any person.

Explanation.—For the purposes of this section,—

(i) "workman" has the meaning assigned to it in the Workman's Compensation Act, 1923 (6 of 1923);

(ii) "injury" includes permanent total or permanent partial disability or sickness resulting out of an accident.

(3) If the death, injury or damage caused by an accident cannot be attributed to any individual activity but is the combined or resultant effect of several such activities, operations and processes, the Tribunal may apportion the liability for compensation amongst those responsible for such activities, operations and processes on an equitable basis.

4. Application for claim for compensation.—*(1) An application for claim for compensation may be made—*

(a) by the person who has sustained the injury;

(b) by the owner of the property to which the damage has been caused;

(c) where death has resulted from the accident, by all or any of the legal representatives of the deceased;

(d) by any agent duly authorised by such person or owner of such property or all or any of the legal representatives of the deceased as the case may be;

(e) by any representative body or organisation, functioning in the field of environment and recognised in this behalf by the Central Government, under all or any of the heads specified in the Schedule; or

(f) by the Central Government or a State Government or a local authority under all or any of the heads specified in the Schedule :

Provided that where all the legal representatives of the deceased have not joined in any such application for compensation, the application shall be made on behalf of or for the benefit of all the legal representatives of the deceased and the legal representatives who have not so joined shall be impleaded as respondents to the application.

(2) The Tribunal may, if it thinks fit, take up the cases for claims for compensation suo motu.

(3) Any claimant making an application under sub-section (1) may also make an application before the Tribunal for such relief as is provided in the Public Liability Insurance Act, 1991 (6 of 1991);

Provided that no such application shall be made if the relief has been received by the claimant earlier or an application made by the claimant to the Collector under the said Act is pending and has not been withdrawn.

(4) The Tribunal shall have, and exercise, the same jurisdiction powers and authority in respect of the matters specified in the Public Liability Insurance Act,

1991 (6 of 1991), as the Collector has and may exercise and, for this purpose, the provisions of that Act shall have effect subject to the modification that the references therein to the Collector shall be construed as including a reference to the Tribunal.

(5) Every application under sub-section (1) shall be made to the Tribunal and shall contain such particulars and shall be accompanied by such documents and such fee, not exceeding one thousand rupees, as may be prescribed :

Provided that no fee shall be payable by a person whose annual income is below the prescribed limit or by a representative body or organisation referred to in Cl. (e) of sub-section (1) or by the Central Government, a State Government or a local authority.

(6) No application for compensation shall be entertained unless it is made within five years of the occurrence of the accident.

***5. Procedures and powers of Tribunal.**—(1) On receipt of an application under sub-section (1) of Sec. 4, the Tribunal may, after such inquiry it may deem fit, reject the application summarily.*

(2) When the Tribunal does not reject the application under sub-section (1), the Tribunal may, after giving notice of the application to the owner and after giving the parties an opportunity of being heard, hold an enquiry into the claim or each of the claims and may make an award determining the amount of compensation which appears to be just and specifying the person or persons to whom such amount of compensation shall be paid.

(3) The Tribunal shall not be bound by the procedure laid down by the Code of Civil Procedure, 1908 (5 of 1908), but shall be guided by the procedure of natural justice and, subject to the other provisions of this Act and of any rules, the Tribunal shall have power to regulate its own procedure including the fixing of places and times of its inquiry.

(4) The Tribunal shall have, for the purpose of discharging its functions under this Act, the same powers as are vested in a civil court under the Code of Civil Procedure, 1908 (5 of 1908), while trying a suit, in respect of the following matters, namely :—

(a) summoning and enforcing the attendance of any person and exacting him on oath;

(b) requiring the discovery and production of documents;

(c) receiving evidence on affidavits;

(d) subject to the provisions of Secs. 123 and 124 of the Indian Evidence Act, 1872 (1 of 1872), requisitioning any public record or document or copy of such record or document from any office;

(e) issuing commissions for the examination of witnesses or documents;

(f) reviewing its decisions;

(g) dismissing an application for default or deciding it ex-parte;

(h) setting aside an order of dismissal of any application for default any order passed by it ex-parte; and

(i) *any other matter which is to be, or may be prescribed.*

6. Conditions as to making of interim orders.—*Notwithstanding anything contained in any other provision of this Act or in any other law for the time being in force, no interim order (whether by way of injunction or stay or in any other manner) shall be made on, or in any proceedings relating to, an application unless—*

(a) *copies of such application and of all documents in support of the plea for such interim order are furnished to the party against whom such application is made or proposed to be made; and*

(b) *opportunity is given to such party to be heard in the matter :*

Provided that the Tribunal may dispense with the requirements of Cls. (a) and (b) and make an interim order as an exceptional measure if it is satisfied, for reasons to be recorded in writing, that it is necessary so to do for preventing any loss or damage being caused to the applicant which cannot be adequately compensated in money but any such interim order shall, if it is not sooner vacated, cease to have effect on the expiry of a period of fourteen days from the date on which it is made unless the said requirements have been complied with before the expiry of that period and the Tribunal has continued the operation of the interim order.

7. Reduction of amount of relief paid under any other law.—*Where in respect of death of, or injury to, any person or damage to any property, the owner, liable to pay compensation under this Act, is also liable to pay any amount as relief under the Public Liability Insurance Act, 1991 (6 of 1991) or any other compensation under any other law, the amount of compensation payable under this Act shall be reduced by the amount of relief and other compensation paid under any other law.*

CHAPTER III

ESTABLISHMENT OF NATIONAL ENVIRONMENT TRIBUNAL AND BENCHES THEREOF

8. Establishment of National Environment Tribunal.—*The Central Government shall, by notification, establish a Tribunal, to be known as the National Environment Tribunal, to exercise the jurisdiction, powers and authority conferred on it by or under this Act.*

9. Composition of Tribunal and Benches thereof.—*(1) The Tribunal shall consist of a Chairperson and such number of Vice-Chairpersons, Judicial Members and Technical Members as the Central Government may deem fit and, subject to the other provisions of this Act, the jurisdiction, powers and authority of the Tribunal may be exercised by Benches thereof.*

(2) Subject to the other provisions of this Act, a Bench shall consist of one Judicial Member and one Technical Member.

(3) Notwithstanding anything contained in sub-section (1), the Chairperson—

(a) *may, in addition to discharging the functions of the Judicial Member of the Bench to which he is appointed, discharge the functions of the Judicial Member or, as the case may be, the Technical Member, of any other Bench;*

(b) may transfer the Vice-Chairperson or other Member from one Bench to another Bench;

(c) may authorise the Vice-Chairperson or the Judicial Member or the Technical Member appointed to one Bench to discharge also the function of the Vice-Chairperson or, as the case may be, the Judicial Member or the Technical Member of another Bench; and

(d) may, for the purpose of securing that any case or cases with having regard to the nature of the questions involved, requires or require, in his opinion or under the rules made by the Central Government in this behalf to be decided by a Bench composed of more than two Members, issue such general or special orders, as he may deem fit :

Provided that every Bench constituted in pursuance of this clause shall include at least one Judicial Member and one Technical Member.

(4) Notwithstanding anything contained in the foregoing provisions of this section, it shall be competent for the Chairperson or any other Member authorised by the Chairperson in this behalf to function as a Bench consisting of a single Member and exercise the jurisdiction, powers and authority of the Tribunal in respect of such classes of cases or such matters pertaining to such classes of cases as the Chairperson may, by general or special order specify :

Provided that if any stage of the hearing of any such case or matter, it appears to the Chairperson or such Member that the case or matter is of such a nature that it ought to be heard by a Bench consisting of two Members, the case or matter may be transferred by the Chairperson or, as the case may be, referred to him for transfer to such Bench as the Chairperson may deem fit.

(5) Subject to the other provisions of this Act, the Benches of the Tribunal shall ordinarily sit at New Delhi (which shall be known as the principal Bench) and at such other places as the Central Government may, by notification, specify.

10. Disqualifications for appointment as Chairperson, Vice-Chairperson or other Member.*—(1) A person shall not be qualified for appointment as the Chairperson unless he—*

(a) is, or has been a Judge of the Supreme Court or a High Court; or

(b) has for at least two years, held the office of Vice-Chairperson.

(2) A person shall not be qualified for appointment as the Vice-Chairperson unless he—

(a) is, or has been, a Judge of a High Court; or

(b) has, for at least two years, held the post of a Secretary to the Government of India or any other post under the Central or a State Government carrying a scale of pay which is not less than that of a Secretary to the Government of India; or

(c) (i) has, for at least five years, held the post of an Additional Secretary to the Government of India or any other post

under the Central or a State Government carrying a scale of pay which is not less than that of an Additional Secretary to the Government of India; and

(ii) has adequate knowledge of, or experience in, legal, administrative, scientific or technical aspects of the problems relating to environment; or

(d) has for at least three years, held officers Judicial Member or a Technical Member.

(3) A person shall not be qualified for appointment as a Judicial Member unless he—

(a) is or has been, or is qualified to be, a Judge of a High Court; or

(b) has been a member of the Indian Legal Service and has held a post in Grade I of that service for at least three years.

(4) A person shall not be qualified for appointment as a Technical Member unless he has adequate knowledge of, or experience in, or capacity to deal with, administrative, scientific or technical aspects of the problems relating to environment.

(5) Subject to the provisions of sub-sections (6) and (7), the Chairperson, Vice-Chairperson and every other Member of the Tribunal shall be appointed by the President.

(6) No appointment of a person possession the qualifications specified in this section as the Chairperson or the Vice-Chairperson shall be made except after consultation with the Chief Justice of India.

(7) No appointment of a person as a Judicial Member or a Technical Member shall be made except on the recommendation of a Selection Committee appointed by the Central Government consisting of the following, namely :—

(a)	*Chairperson of the Tribunal*	*Chairperson of the Committee, ex officio;*
(b)	*Secretary to the Government of India in the Ministry of Environment and Forests*	*Member, ex officio;*
(c)	*Secretary to the Government of India in the Ministry of Law, Justice and Company Affairs (Department of Legal Affairs)*	*Member, ex officio;*
(d)	*Director-General, Council of Scientific and Industrial Research*	*Member, ex officio;*
(e)	*an Environmentalist to be nominated by the Central Government*	*Member.*

11. Vice-Chairperson to act as Chairperson or to discharge his functions in certain circumstances.—*(1) In the event of the occurrence of any vacancy in the* *office of the Chairperson by reason of his death, resignation or otherwise, the vice-chairperson or, as the case may be, such one of the Vice-Chairpersons, as the Central Government may, by notification, authorise in this behalf, shall act as the Chairperson until the date on which a new Chairperson, appointed in accordance with the provisions of this Act to fill such vacancy, enters upon this office.*

(2) When the Chairperson is unable to discharge his functions owing to absence, illness or any other cause, the Vice-Chairperson or, as the case may be, such one of the Vice-Chairpersons, as the Central Government may, by notification, authorise in this behalf, shall discharge the functions of the Chairperson until the date on which the Chairperson resumes his duties.

*12. **Term of office.**—The Chairperson, Vice-Chairperson and other Member shall hold office as such for a term of five years from the date on which he enters upon his office, but shall be eligible for reappointment for another term of five years :*

Provided that no Chairperson, Vice-Chairperson or other Member shall hold office as such after he has attained,—

(a) in the case of the Chairperson, the age of seventy years;

(b) in the case of the Vice-Chairperson, the age of sixty-five years, and

(c) in the case of any other Member, the age of sixty-two years.

*13. **Resignation and removal.**—(1) The Chairperson, Vice-Chairperson or other Member may, by notice in writing under his hand addressed to the President, resign his office :*

Provided that the Chairperson, Vice-Chairperson or other Member shall unless he is permitted by the President to relinquish his office sooner, continue to hold office until the expiry of three months from the date of receipt of such notice or until a person duly appointed as his successor enters upon his office or until the expiry of his term of office, whichever is the earliest.

(2) The Chairperson, Vice-Chairperson or any other Member shall not be removed from his office except by an order made by the President on the ground of proved misbehaviour or incapacity after an inquiry made by a Judge of the Supreme Court in which such Chairperson, Vice-Chairperson or other Member has been informed of the charges against him and given a reasonable opportunity of being heard in respect of those charges.

(3) The Central Government may, by rules, regulate the procedure for the investigation of misbehaviour or incapacity of the Chairperson, Vice-Chairperson or other Member referred to in sub-section (2).

*14. **Salaries and allowances and other terms and conditions of service of Chairperson, Vice-Chairperson and other Members.**—The salaries and allowances payable to, and the other terms and conditions of service (including pension, gratuity and other retirement benefits) of the Chairperson, Vice-Chairperson and other Member shall be such as may be prescribed :*

Provided that neither the salary and allowances nor the other terms and conditions of service of the Chairperson, Vice-Chairperson or other Member shall be varied to his disadvantage after his appointment.

15. *Provision as to the holding of office by Chairperson, etc. on ceasing to be such Chairperson, etc.*—*On ceasing to hold office,—*

(a) the Chairperson of the Tribunal shall be ineligible for further employment either under the Government of India or under the Government of a State;

(b) the Vice-Chairperson of the Tribunal shall, subject to the other provisions of this Act, be eligible for appointment as the Chairperson of the Tribunal, but not for any other employment either under the Government of India or under the Government of a State;

(c) a Member (other than the Chairperson or Vice-Chairperson) of the Tribunal shall, subject to the other provisions of this Act, be eligible for appointment as the Chairperson or Vice-Chairperson of the Tribunal or as the chairperson, Vice-Chairperson or Member of any other Tribunal, but not for any other employment either under the Government of India or under the Government of a State;

(d) the Chairperson, Vice-Chairperson or other Member shall not appear, act or plead before the Tribunal.

Explanation.—For the purposes of this section, employment under the Government of India or under the Government of a State includes employment under any local or other authority within the territory of India or under the control of the Government of India or under any corporation or society owned or controlled by the Government.

16. *Financial and administrative powers of Chairperson.*—*The Chairperson shall exercise such financial and administrative powers over the Benches as may be vested in him under the rules :*

Provided that the Chairperson shall have authority to delegate such of his financial and administrative powers as he may think fit to the Vice-Chairperson or any other offices of the Tribunal subject to the condition that the Vice-Chairperson or such officer shall, while exercising such delegated powers, continue to act under the direction, control and supervision of the Chairperson.

17. *Staff of the Tribunal.*—*(1) The Central Government shall determine the nature and categories of the officers and other employees required to assist the Tribunal in the discharge of its functions and provide the Tribunal with such officers and other employees as it may think fit.*

(2) The officers and other employees of the Tribunal shall discharge their functions under the general superintendence of the Chairperson.

(3) The salaries and allowances and conditions of service of the officers and other employees of the Tribunal shall be such as may be prescribed.

18. *Distribution of business amongst the Benches.*—*(1) Where any Benches of the Tribunal are constituted, the Central Government may, from time to time, by notification, make provisions as to the distribution of the business of the Tribunal amongst the Benches and specify the matters which may be dealt with by each Bench.*

(2) If any question arises as to whether any matter falls within the purview of the business allocated to a Bench, the decision of the Chairperson shall be final.

Explanation.—For the removal of doubts, it is hereby declared that the expression "matters" includes applications for interim relief.

CHAPTER IV

JURISDICTION AND PROCEEDINGS OF THE TRIBUNAL

*19. **Bar of jurisdiction.**—On and from the commencement of this Act, no court or other authority except the Tribunal shall have, or be entitled to exercise, any jurisdiction, powers or authority to entertain any application or action for any claim for compensation which may be entertained or dealt with by the Tribunal.*

*20. **Power of Chairperson to transfer cases from one Bench to another.**— On the application of any of the parties and after notice to the parties, and after hearing such of them as he may desire to be heard, or on his own motion without such notice, the Chairperson may transfer any case pending before one Bench, for disposal, to any other Bench.*

*21. **Decision to be taken by majority.**—If the Members of a Bench differ in opinion on any point, the point shall be decided according to the opinion of the majority, if there is a majority, but if the Members are equally divided, they shall state the point or points on which they differ, and make a reference to the Chairperson who shall either hear the point or points himself or refer the case for hearing on such point or points by one or more of the other Members and such point or points shall be decided according to the opinion of the majority of the Members who have heard the case including those who first heard it.*

*22. **Deposit of amount payable for damage to environment.**—(1) Where any amount of compensation is ordered to be paid under any award by the Tribunal on the ground of any damage to environment, that amount shall be remitted to the authority specified under sub-section (3) of Sec. 7A of the Public Liability Insurance Act, 1991 (6 of 1991), for being credited to the Environmental Relief Fund established under that section.*

(2) The amount of compensation credited to the Environmental Relief Fund under sub-section (1) may be utilised by such person or authority, in such manner and for such purposes of environment as may be prescribed.

*23. **Execution of award or order of Tribunal.**—(1) An award made by the Tribunal under this Act shall be executable by the Tribunal as a decree of a civil court, and for this purpose, the Tribunal shall have all the powers of a civil court.*

(2) Notwithstanding anything contained in sub-section (1), the Tribunal may transmit to the Collector having jurisdiction over the area in which the accident has occurred the copy of the order made by it for payment of relief as provided in the Public Liability Insurance Act, 1991 (6 of 1991), and the Collector shall execute the order in the same manner as if it were an order made by him under that Act.

(3) Where the owner against whom the award or order is made by the Tribunal fails to make the payment or deposit the amount as directed by the Tribunal within the period specified in the award or order, such amount shall be recoverable from the owner as arrears of land revenue or of public demand.

24. *Appeals.*—*(1) Save as provided in sub-section (2) and notwithstanding anything contained in the Code of Civil Procedure, 1908 (5 of 1908), or in any other law, an appeal shall lie against any award or other order, not being an interlocutory order, of the Tribunal to the Supreme Court on one or more of the grounds specified in Sec. 100 of that Code.*

(2) No appeal shall lie against an award or other order made by the Tribunal with the consent of the parties.

(3) Every appeal under this section shall be preferred within a period of ninety days from the date of the award or other order appealed against :

Provided that no appeal by the person who is required to pay any amount in terms of such award shall be entertained by the Supreme Court unless he has deposited with it the amount so awarded in the manner directed by the Supreme Court :

Provided further that the Supreme Court may entertain the appeal after the expiry of the said period of ninety days, if it is satisfied that the appellant was prevented by sufficient cause from preferring the appeal in time.

CHAPTER V

MISCELLANEOUS

25. *Penalty for failure to comply with orders of Tribunal.*—*Whoever fails to comply with any order made by the Tribunal shall be punishable with imprisonment for a term which may extend to three years, or with fine which may extend to ten lakh rupees, or with both.*

26. *Offences by companies.*—*(1) Where an offence under this Act has been committed by a company, every person who at the time the offence was committed, was directly in charge of and was responsible to the company for the conduct of the business of the company, as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this sub-section shall render any such person liable to any punishment provided in this Act, if he proves that the offence was committed without his knowledge or that he had exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1) where an offence under this Act has been committed by a company and it is proved that the offence has been committed with the consent or connivance of, or attributable to any neglect on the part of, any director, manager, secretary or other officers of the company, such director, manager, secretary or other officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

Explanation.—For the purposes of this section,

- *(a) "company" means any body corporate and includes a firm or other association of individuals ; and*
- *(b) "director", in relation to a firm, means a partner in the firm.*

27. Proceedings before the Tribunal to be judicial proceedings.—*All proceedings before the Tribunal shall be deemed to be judicial proceedings within the meaning of Secs. 193, 219 and 228 of the Indian Penal Code, 1860 (45 of 1860).*

28. Members and staff of Tribunal to be public servants.—*The Chairperson, Vice-Chairperson and other Members and the officers and other employees of the Tribunal shall be deemed to be public servants within the meaning of Sec. 21 of the Indian Penal Code, 1860 (45 of 1860).*

29. Protection of action taken in good faith.—*No suit, prosecution or other legal proceedings shall lie against the Central Government or against the Chairperson, Vice-Chairperson or other Member of the Tribunal or any other person authorised by the Chairperson, Vice-Chairperson or other Member for anything which is in good faith done or intended to be done in pursuance of this Act or any rule or order made thereunder.*

30. Act to have overriding effect.—*Save as provided in the Public Liability Insurance Act, 1991 (6 of 1991), the provisions of this Act shall have effect notwithstanding anything inconsistent therewith contained in any other law for the time being in force or in any instrument having effect by virtue of any law other than this Act.*

31. Power to make rules.—*(1) The Central Government may, by notification make rules for carrying out the purposes of this Act.*

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely .—

- *(a) the particulars which an application shall contain, the documents and the fee which shall be accompanied with it and the limit of annual income of a person so as to enable him to make application without paying any fee, under sub-section (5) of Sec. 4;*
- *(b) any such matter in respect of which the Tribunal shall have powers of a civil court, under Cl. (i) of sub-section (4) of Sec. 5;*
- *(c) the case or cases which, having regard to the nature of the questions involved, requires or require to be decided by a Bench of more that two Members, under Cl. (d) of sub-section (3) of Sec. 9;*
- *(d) procedure for the investigation of misbehaviour or incapacity of the Chairperson, Vice-Chairperson or other Member of the Tribunal under sub-section (3) of Sec. 13;*
- *(e) the salaries and allowances payable to, and the other terms and conditions of service of, the Chairperson, Vice-Chairperson and other Members under Sec. 14;*
- *(f) financial and administrative powers of the Chairperson over the Benches under Sec. 16;*
- *(g) the salaries and allowances and conditions of service of the officers and other employees of the Tribunal under sub-section (3) of Sec. 17;*

(h) *the person or the authority by whom, the manner in which and the purposes of environment for which the amount of compensation credited to the Environment Relief Fund shall be utilised under sub-section (2) of Sec. 22; and*

(i) *any other matter which is required to be, or may be, prescribed*

(3) Every rule made under this Act shall be laid, as soon as may be after it is made, before each House of Parliament, while it is in session, for a total period of thirty days which may be comprised in one session or in two or more successive sessions, and if, before the expiry of the session immediately following the session or the successive sessions aforesaid both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, the rule shall thereafter have effect only in such modified form or be of no effect, as the case may be so, however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rules.

THE SCHEDULE

[*See* Sec 3 (1)]

Heads under which compensation for damages may be claimed

(*a*) Death,

(*b*) Permanent, temporary, total or partial disability or other injury or sickness,

(*c*) Loss of wages due to total or partial disability or permanent or temporary disability

(*d*) Medical expenses incurred for treatment of injuries or sickness,

(*e*) Damage to private property,

(*f*) Expenses incurred by the Government or any local authority in providing relief and and rehabilitation to the affected persons,

(*g*) Expenses incurred by Government for any administrative or legal action or to cope with any harm or damage, including compensation for environmental degradation and restoration of the quality of environment,

(*h*) Loss to Government or local authority arising out of, or connected with, the activity causing any damage;

(*i*) Claims on account of any harm, damage or destruction to the fauna including milch and draught animals and aquatic fauna,

(*j*) Claims on account of any harm, damage or destruction to the flora including aquatic flora, crops, vegetables, trees and orchards;

(*k*) Claim including cost of restoration on account of any harm or damage to environment including pollution of soil, air, water, land and eco-system,

(*l*) Loss and destruction of any property other than private property,

(*m*) Loss of business or employment or both;

(*n*) any other claim arising out of or connected with, any activity of handling of hazardous substance.

PART III-11

THE NATIONAL ENVIRONMENT APPELLATE AUTHORITY ACT, 1997[1]

[ACT NO. 22 OF 1997]

[*26th March, 1997*]

An Act to provide for the establishment of a National Environment Appellate Authority to hear appeals with respect to restriction of areas in which any industries, operations or processes or class of industries, operations or processes shall not be carried out or shall be carried out subject to certain safeguards under the Environment (Protection) Act, 1986 and for matters connected therewith or incidental thereto.

BE it enacted by Parliament in the Forty-eighth Year of the Republic of India as follows :—

CHAPTER I

PRELIMINARY

1. *Short title and commencement.*—*(1) This Act may be called the National Environment Appellate Authority Act, 1997.*

(2) It shall be deemed to have come into force on the 30th day of January, 1997.

2. *Definitions.*—*In this Act, unless the context otherwise requires,—*

(a) "Act" means the Environment (Protection) Act, 1986 (29 of 1986);

(b) "Authority" means the National Environment Appellate Authority established under sub-section (1) of Sec. 3;

(c) "Chairperson" means the Chairperson of the Authority,

(d) "Member" means a Member of the Authority;

(e) "prescribed" means prescribed by rules made under this Act;

(f) "Vice-Chairperson" means the Vice-Chairperson of the Authority.

CHAPTER II

ESTABLISHMENT OF AUTHORITY

3. *Establishment of Authority.*—*(1) The Central Government shall, by notification in the Official Gazette, establish a body to be known as the National Environment Appellate Authority to exercise the powers conferred upon, and to perform the functions assigned to it under this Act.*

(2) The head office of the Authority shall be at Delhi.

4. *Composition of Authority.*—*The Authority shall consist of a Chairperson, a Vice-Chairperson and such other Members not exceeding three, as the Central Government may deem fit.*

---

[1] Received the assent of the President on March 26, 1997 and published in the *Gazette of India, Extraordinary* Pt. II, Sec. 1, dated 26th March, 1997, pp. 1-6, No. 36.

5. *Qualifications for appointment as Chairperson, Vice-Chairperson or Member.*—*(1) A person shall not be qualified for appointment as a Chairperson unless he has been—*

(a) a Judge of the Supreme Court; or

(b) the Chief Justice of a High Court.

(2) A person shall not be qualified for appointment as a Vice-Chairperson unless he has—

(a) for at least two years held the post of a Secretary to the Government of India or any other post under the Central or State Government carrying a scale of pay which is not less than that of a Secretary to the Government of India; and

(b) expertise or experience in administrative, legal, managerial or technical aspects of problems relating to environment.

(3) A person shall not be qualified for appointment as a Member unless he has professional knowledge or practical experience in the areas pertaining to conservation, environmental management, law or planning and development.

(4) The Chairperson, the Vice-Chairperson and the Members shall be appointed by the President.

6. *Vice-Chairperson to act as Chairperson or to discharge his functions in certain circumstances.*—*(1) In the event of the occurrence of any vacancy in the office of the Chairperson by reason of his death, resignation or otherwise, the Vice-Chairperson shall act as the Chairperson until the date on which a new Chairperson appointed in accordance with the provisions of this Act to fill such vacancy enters upon his office.*

(2) When the Chairperson is unable to discharge his functions owing to absence, illness or any other cause, the Vice-Chairperson or, as the case may be, such one of the Member as the Central Government may, by notification, authorise in this behalf, shall discharge the functions of the Chairperson until the date on which the Chairperson resumes his duties.

7. *Term of office.*—*The Chairperson, the Vice-Chairperson or a Member shall hold office as such for a term of three years from the date on which he enters upon his office, but shall be eligible for re-appointment for another term of three years :*

Provided that no Chairperson, Vice-Chairperson or Member shall hold office as such after he has attained,—

(a) in the case of the Chairperson, the age of seventy years; and

(b) in the case of the Vice-Chairperson or a Member the age of sixty-five years.

8. *Resignation and removal.*—*(1) The Chairperson, the Vice-Chairperson or a Member may, by notice in writing under his hand addressed to the President, resign his office :*

Provided that the Chairperson, the Vice-Chairperson or a Member shall, unless he is permitted by the President to relinquish his office sooner, continue to hold office until the expiry of three months from the date of receipt of such notice or until a person duly appointed as his successor enters upon his office or until the expiry of his term of office, whichever is the earliest.

(2) The Chairperson, the Vice-Chairperson or a Member shall not be removed from his office except by an order made by the President on the ground of proved misbehaviour or incapacity after an inquiry made by a Judge of the Supreme Court in which such Chairperson, the Vice-Chairperson or a Member had been informed of the charges against him and given a reasonable opportunity of being heard in respect of those charges

(3) The President may suspend from office the Chairperson, the Vice-Chairperson or a Member in respect of whom a reference has been made to the Supreme Court under sub-section (2) until the President has passed orders on receipt of the report of the Supreme Court on such reference.

(4) The Central Government may, by rules, regulate the procedure for the investigation of misbehaviour or incapacity of the Chairperson, the Vice-Chairperson or a Member referred to in sub-section (2).

9. Salaries and allowances and other terms and conditions of service of Chairperson, Vice-Chairperson and Members.*—The salaries and allowances payable to, and the other terms and conditions of service (including pension, gratuity and other retirement benefits) of, the Chairperson, the Vice-Chairperson and the Members shall be such as may be prescribed by the Central Government.*

10. Vacancy in Authority not to invalidate acts or proceedings.*—No act or proceedings of the Authority shall be questioned or shall be invalid merely on the ground of existence of any vacancy or defect in the establishment of the Authority.*

CHAPTER III

JURISDICTION AND POWERS OF AUTHORITY

11. Appeals to Authority.*—(1) Any person aggrieved by an order granting environmental clearance in the areas in which any industries, operations or processes or class of industries, operations and processes shall not be carried out or shall be carried out subject to certain safeguards may, within thirty days from the date of such order, prefer an appeal to the Authority in such form as may be prescribed :*

Provided that the Authority may entertain any appeal after the expiry of the said period of thirty days but not after ninety days from the date aforesaid if it is satisfied that the appellant was prevented by sufficient cause from filing the appeal in time.

(2) For the purposes of sub-section (1), "person" means—

- *(a) any person who is likely to be affected by the grant of environmental clearance;*
- *(b) any person who owns or has control over the project with respect to which an application has been submitted for environmental clearance;*
- *(c) any association of persons (whether incorporated or not) likely to be affected by such order and functioning in the field of environment;*
- *(d) the Central Government, where the environmental clearance is granted by the State Government and the State Government, where the environmental clearance is granted by the Central Government; or*
- *(e) any local authority, any part of whose local limits is within the neighbourhood of the area wherein the project is proposed to be located.*

(3) On receipt of an appeal preferred under sub-section (1), the Authority shall, after giving the appellant an opportunity of being heard, pass such orders, as it thinks fit.

(4) The Authority shall dispose of the appeal within ninety days from the date of filing the appeal :

Provided that the Authority may for reasons to be recorded in writing, dispose of the appeal within a further period of thirty days.

12. *Procedure and powers of Authority.*—*(1) The Authority shall not be bound by the procedure laid down in the Code of Civil Procedure, 1908 (5 of 1908), but shall be guided by the principles of natural justice and subject to the other provisions of this Act and of any rules made by the Central Government, the Authority shall have power to regulate its own procedure including the fixing of places and times of its inquiry and deciding whether to sit in public or in private.*

(2) The Authority shall have, for the purposes of discharging its functions under this Act, the same powers as are vested in a civil court under the Code of Civil Procedure, 1908 (5 of 1908), while trying a suit, in respect of the following matters, namely :—

- *(a) summoning and enforcing the attendance of any person and examining him on oath;*
- *(b) requiring the discovery and production of documents;*
- *(c) receiving evidence on affidavits;*
- *(d) subject to the provisions of Secs. 123 and 124 of the Indian Evidence Act, 1872 (1 of 1872), requisitioning any public record or document or copy of such record or document from any office;*
- *(e) issuing commissions for the examination of witnesses or documents;*
- *(f) reviewing its decisions;*
- *(g) dismissing a representation for default or deciding it, ex parte;*
- *(h) setting aside any order of dismissal of any representation for default or any order passed by it ex parte; and*
- *(i) any other matter which is required to be, or may be, prescribed by the Central Government.*

13. *Financial and administrative powers of Chairperson.*—*The Chairperson shall exercise such financial and administrative powers as may be vested in him under the rules :*

Provided that the Chairperson shall have authority to delegate such of his financial and administrative powers as he may think fit to the Vice-Chairperson or any other officer subject to the condition that the Vice-Chairperson or such other officer shall, while exercising such delegated powers, continue to act under the direction, control and supervision of the Chairperson.

14. *Staff of Authority.*—*(1) The Central Government shall determine the nature and categories of the officers and other employees required to assist the Authority in the discharge of its functions and provide the Authority with such officers and other employees as it may think fit.*

(2). The officers and other employees of the Authority shall discharge their functions under the general superintendence of the Chairperson.

(3) The salaries and allowances and conditions of service of the officers and other employees shall be such as may be prescribed.

CHAPTER IV

MISCELLANEOUS

***15. Bar of jurisdiction.**—With effect from the date of establishment of the Authority, no civil court or other authority shall have jurisdiction to entertain any appeal in respect of any matter with which the Authority is so empowered by or under this Act.*

***16. Proceedings before the Authority to be judicial proceedings.**—All proceedings before the Authority shall be deemed to be judicial proceedings within the meaning of Secs. 193, 219 and 228 of the Indian Penal Code (45 of 1860).*

***17. Members and staff of Authority to be public servants.**—The Chairperson, the Vice-Chairperson and the Members and the officers and other employees of the Authority shall be deemed to be public servants within the meaning of Sec. 21 of the Indian Penal Code (45 of 1860).*

***18. Protection of action taken in good faith.**—No suit, prosecution or other legal proceeding shall lie against the Central Government or against the Chairperson, the Vice-Chairperson or a Member of the Authority or any other person authorised by the Chairperson, the Vice-Chairperson or a Member for anything which is in good faith done or intended to be done in pursuance of this Act or any rule or order made thereunder.*

***19. Penalty for failure to comply with orders of Authority.**—Whoever fails to comply with any order made by the Authority, he shall be punishable with imprisonment for a term which may extend to seven years, or with five which may extend to one lakh rupees, or with both.*

***20. Offences by companies.**—(1) Where any offence under this Act has been committed by a company, every person who, at the time the offence was committed, was directly in charge of, and was responsible to, the company for the conduct of the business of the company, as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this sub-section shall render any such person liable to any punishment provided in this Act, if he proves that the offence was committed without his knowledge or that he has exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence under this Act has been committed by a company and it is proved that the offence has been committed with the consent or connivance of, or is attributable to any neglect on the part of, any director, manager, secretary or other officer of the company, such director, manager, secretary or other officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

Explanation.—For the purposes of this section,—

- *(a) "company" means any body corporate and includes a firm or other association of individuals; and* *(b) "director", in relation to a firm, means a partner in the firm.*

21. *Power to remove difficulties.*—*(1) If any difficulty arises in giving effect to the provisions of this Act, the Central Government may, by order published in the Official Gazette, make such provisions, not inconsistent with the provisions of this Act, as appear to it to be necessary or expedient for removing the difficulty :*

Provided that no such order shall be made after the expiry of the period of three years from the date on which this Act receives the assent of the President.

(2) Every order made under this section shall, as soon as may be after it is made, be laid before each House of Parliament.

22. *Power to make rules.*—*(1) The Central Government may, by notification, make rules for carrying out the provisions of this Act.*

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely :

- *(a) the procedure under sub-section (4) of Sec. 8 for the investigation of misbehaviour or incapacity of the Chairperson, the Vice-Chairperson or a Member;*
- *(b) the salaries and allowances payable to and the other terms and conditions of service of the Chairperson, the Vice-Chairperson and the Members under Sec. 9;*
- *(c) the form which an appeal shall contain under sub-section (1) of Sec 11;*
- *(d) financial and administrative powers of the Chairperson under Sec. 13;*
- *(e) the salaries and allowances and conditions of service of the officers and other employees of the Authority;*
- *(f) any other matter which is required to be, or may be, prescribed.*

(3) Every rule made under this Act shall be laid, as soon as may be after it is made, before each House of Parliament, while it is in session, for a total period of thirty days which may be comprised in one session or in two or more successive sessions, and if, before the expiry of the session immediately following the session or the successive sessions aforesaid both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, the rule shall thereafter have effect only in such modified form or be of no effect, as the case may be; so, however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule.

23. *Repeal and saving.*—*(1) The National Environment Appellate Authority Ordinance, 1997 (Ordinance No. 12 of 1997), is hereby repealed.*

(2) Notwithstanding such repeal, anything done or any action taken under the said Ordinance, shall be deemed to have been done or taken under the corresponding provisions of this Act.

PART III-12

THE NATIONAL ENVIRONMENT APPELLATE AUTHORITY (APPEAL) RULES, 1997[1]

S.O. 775 (E), dated 11th November, 1997.—In exercise of the powers conferred by Sec. 22 of the National Environment Appellate Authority Act, 1997 (22 of 1997) the Central Government hereby makes the following rules, namely :—

1. ***Short title and commencement.***—*(1) These rules may be called the National Environment Appellate Authority (Appeal) Rules, 1997.*

(2) They shall come into force on the date of their publication in the Official Gazette.

2. ***Definitions.***—*In these Rules unless the context otherwise requires,—*

(a) "Act" means the National Environment Appellate Authority Act, 1997;

(b) "appeal" means a Memorandum of Appeal to the Appellate Authority filed under sub-section (1) of Sec. 11 of the Act;

(c) "appellant" means a person who, prefers an appeal to the Authority under sub-section (1) of Sec. 11 of the Act and also includes the authorised representative of the appellant;

(d) "authorised representative" means any person authorised in writing by the appellant or the respondent, as the case may be, to represent him before the Authority;

(e) "Authority" means the National Environment Appellate Authority, constituted under the Act;

(f) "member" means a member of the authority and includes the Chairperson and Vice-Chairperson thereof;

(g) "party" in relation to an appeal, means an appellant or the respondent and the expression "parties" shall be construed to mean the appellant and the respondent;

(h) "Register" means the principal administrative officer of the Authority;

(i) "section" means section of the Act;

(j) Words and phases not defined in these rules but defined in the National Environment Appellate Authority Act, 1997 shall have the same meaning respectively assigned to them in the Act.

3. ***Language of the Authority.***—*(1) The pleadings before the Authority may, at the option of the respective parties, be in English or in Hindi.*

(2) All orders and other proceedings of the Authority may, at the option of the Authority, be in English or in Hindi.

4. ***Headquarters of the Authority.***—*(1) The Headquarters of the Authority shall be at Delhi.*

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 11th November, 1997.

(2) Appeals may be heard at the Headquarters or at the discretion of the Chairperson, at any other place.

(3) The office of the Authority shall observe such public and other holidays as are observed by the offices of the Central Government.

5. Form of Memorandum of Appeal and its presentation before the Authority.—*(1) Memorandum of Appeal to be presented to the Authority shall be in Form A specified in these rules and shall contain the particulars required thereunder. The Memorandum of Appeal shall be in English or in Hindi and shall set forth concisely and under distinct heads, the grounds of appeal without any argument or narrative and such grounds shall be numbered consecutively.*

(2) Every Memorandum of Appeal shall be presented by the appellant in person, or when there are more appellants than one, by any of them, or by his authorised representative before the Registrar or any other officer authorised in this behalf by the Chairman or may be sent by registered post with acknowledgment due, addressed to the Registrar.

(3) Where Memorandum of Appeal is sent by registered post, the date of receipt of the said memorandum at the Head Office, as endorsed by either of them, shall be taken as the date of filing of the appeal by the appellant.

(4) Where there is a delay in the presentation of the Memorandum of Appeal before the Authority, such Memorandum of Appeal shall be accompanied by a separate application of condonation of delay and the supporting affidavit of such application.

(5) Every Memorandum of Appeal and the attested copy of the order appealed against and the application for condonation of delay and the supporting affidavit to be filed before the Authority shall be accompanied by five sets of their copies for the Authority and one set of copies for each of the Respondents.

(6) In every appeal, the competent authority which passed the order appealed against shall be impleaded as one of the respondents.

6. Registration of appeal.—*(1) Every Memorandum of Appeal duly filed under these rules shall be registered as an appeal filed before the Authority and numbered by the Registrar. If the appeal is registered and numbered or if not so registered or numbered, the appellant or his representative shall be informed accordingly by an intimation sent in this regard by the Registrar or other authorised officer within fifteen days of the receipt of the appeal. If the intimation so sent is of non-registering and non-numbering, it shall be in Form B specified to these rules and time not exceeding thirty days shall be given for removing of such causes. On removal of such causes the appeal shall be registered and numbered and intimation given.*

(2) After registration and numbering of the appeal, notices of appeal along with the set of copies of Memorandum of Appeal and other annexures thereto, shall be sent to every respondent, under registered post, acknowledgment(s) due, intimating the date and place of hearing of the appeal by the Authority. Intimation of the date and place of hearing of the appeal shall also be given to appellant or his representative by registered post with acknowledgment due. In addition to above, such intimations shall also be given to parties, under certificate of posting duly addressed, as found in the Memorandum of Appeal. Due service of such notices shall be presumed by the Authority if sent to addressees, found in the Memorandum of Appeal, before fifteen days from the date fixed for hearing.

(3) Notices of intimation to be sent to the parties by the Authority shall be in Form 'C' specified to these rules.

7. ***Adjournment.***—*The Authority may adjourn the hearing of the appeal and intimate the parties to appear on the next date and place of hearing of the appeal.*

8. ***Clubbing of appeals.***—*Appeals against a common order, can be clubbed and heard together by the Authority.*

9. ***Default of appearance of parties at the hearing.***—*When the appellant or his representative fails to be present at the hearing of the appeal before the Authority, the appeal may be dismissed for such default of appearance or may be decided ex parte. Similarly, when the respondent or his representative does not appear at the hearing of the appeal, the appeal may be heard ex parte and decided finally. Where the appeal is dismissed for default of appearance or the appeal is allowed ex parte, the order so made may be set aside, if the defaulting party shows sufficient cause for non-appearance by filing an application supported by affidavit, with the required number of copies given for the Authority and served on opposing parties and appeal heard afresh with notice to all parties and decided on merits.*

10. ***Proceedings Open to Public.***—*Hearing of the appeals by the Authority shall be open to public unless otherwise ordered by the Chairperson for security or other reasons.*

11. ***Orders of the Authority.***—*After hearing of the appeals, the orders of the Authority may be pronounced on the same day or may be postponed to a future date. Where the order is postponed, the same shall be delivered on the date to be fixed for the purpose by the Authority and copies thereof shall be sent to parties to the appeal by the Registrar or any other authorised officer.*

12. ***Orders of the Authority and time-frame for disposal of appeal.***—*(1) The Authority shall dispose of the appeal within ninety days from the date of filling of the appeal; "Provided that the authority may for reasons to be recorded in writing, extend it by a further period of thirty days". Every order of the Authority disposing of an appeal finally shall be in writing, signed and dated by the Chairperson, or Vice Chairperson and Member or Members, who have heard the appeal.*

(2) Where the order of the Authority finally disposing of the appeal is unanimous, an order shall be pronounced by the Authority.

(3) If the members of the Authority differ in opinion on any point, the point shall be decided according to the opinion of the majority, if there is a majority, but if the members are equally divided, they shall state the point or points on which they differ and make a reference to the Chairperson of the Authority and his opinion on the point shall be the opinion of the majority.

(4) No order of the Authority shall be questioned on the ground merely of the existence of any vacancy or defect in the constitution of the Authority or any defect in the appointment of a person acting as the member of the Authority.

13. ***Additional evidence.***—*If at any stage of hearing of the appeal, the Authority considers that additional evidence needs to be taken by it for a proper disposal of the appeal, it can either take on record such evidence directly or obtain the same from the authority against the order of which the appeal is filed.*

14. Principles of Natural Justice.**—*When there are no specific rules governing the hearing of the appeal, Principles of Natural Justice shall be observed.*

PART III-16

THE INDIAN FORESTS ACT, 1927

(ACT 16 OF 1927)[1]

[21st September, 1927]

An Act to consolidate the law relating to forests, the transit of forest-produce and the duty leviable on timber and other forest-produce.

WHEREAS it is expedient to consolidate the law relating to forests, the transit of forest produce and the duty leviable on timber and other forest-produce,

IT is hereby enacted as follows :

CHAPTER I

PRELIMINARY

1. Short title and extent.—*(1) This Act may be called the Indian Forest Act, 1927.*

[2]*[(2) It extends to the whole of India except the territories which, immediately before the 1st November, 1956, were comprised in Part B States.*

(3) It applies to the territories which, immediately before the 1st November, 1956, were comprised in the State of Bihar, Bombay, Coorg, Delhi, Madhya Pradesh, Orissa, Punjab, Uttar Pradesh and West Bengal, but the Government of any State may, by notification in the official Gazette bring this Act into force,[3] *in the whole or any specified part of that State in which this Act extends and where it is not in force.]*

2. Interpretation clause.—*In this Act, unless there is anything repugnant in the subject or context,—*

(1) "cattle" includes elephants, camels, buffaloes, horses, mares, geldings, ponies, colts, fillies, mules, asses, pigs, rams, ewes, sheep, lambs, goats and kids;

(2) "Forest officer" means any person whom [4]*[* * *], the* [5]*[State Government] or any officer empowered by* [4]*[* *] the* [5]*[State Government] in this behalf, may*

---

[1] For Statement of Objects and Resons, *see Gazette of India*, 1926, Pt. V, p 165.

[2] Subs by A L.O. (No. 3) Order, 1956, for sub-sections (2) and (3).

[3] This Act has been declared to be in force in the Khondmals District (now in Orissa) by the Khondmals Laws Regulation, 1936 (4 of 1936), Sec. 3 and Schedule, and in the Angul District by the Angul Laws Regulation, 1936 (5 of 1936), Sec. 3 and Schedule. Angul is now a sub-division of the District of Dhenakanal in Orissa.
This Act has been extended to—
(1) Berar (*partially*) by the Berar Laws Act, 1941 (4 of 1941);
(2) the Provinces of Coorg, *see Coorg Gazette*, 1930, Pt. 1, p. 94;
(3) the Delhi Province, *see Gazette of India*, 1933. Pt. II-A, p. 293; and
(4) Ajmer-Merwara, *see Gazette of India*, 1948 Extraordinary, Pt. IV, p. 333.
Berar now forms part of the State of Maharashtra, Coorg of the State of Karnataka and Ajmer-Merwara has merged with the State of Rajasthan.
Extended to the State of Sikkim (*vide* S.O. 1138 (E), dated 1st December, 1988) (enforced from 20th April, 1989).
Extended to the State of M.P. *vide* M.P. Act, 23 of 1958.
This Act now extended to the Union territories of—(1) Dadra and Nagar Haveli by Regulation 6 of 1963;
(2) Pondicherry by Regulation 7 of 1963;
(3) Goa, Daman and Diu by Regulation 11 of 1963; and
(4) Laccadive, Minicoy and Amindivi Islands (now known as Lakshadweep) by Regulation 8 of 1965.
The Act has been repealed in Orissa by Orissa Act 14 of 1972, Sec. 91 (w.e.f 14th July, 1972).

[4] The words "the Governor-General in Council or" omitted by A.O., 1937.

[5] Subs. by A.L.O., 1950 for the words "Provincial Government".

appoint to carry out all or any of the purposes of this Act or to do anything required by this Act or any rule made thereunder to be done by a Forest Officer;

(3) "forest offence" means an offence punishable under this Act or under any rules made thereunder;

(4) "forest-produce" includes—

(a) the following whether found in, or brought from, a forest or not, that is to say,—

timber, charcoal, caoutchouc, catechu, woodoil, resin, natural varnish, bark, lac, mahua flowers, mahua seeds, [1][kuth], and myrabolans, and

(b) the following when found in, or brought from, a forest, that is to say,—

(i) trees and leaves, flowers and fruits, and other parts or produce not herein before mentioned, of trees;

(ii) plants not being trees (including grass, creepers, reeds and moss), and all parts or produce of such plants;

(iii) wild animals and skins, tusks, horns, bones, silk, cocoons, honey and wax, and all other parts or produce of animals, and

(iv) peat, surface soil, rock and minerals (including limestone, laterite, mineral oils, and oil products of mines or quarries);

[2]*[(4-A) "owner" includes a Court of Wards in respect of property under the superintendence of charge of such Court;]*

(5) "river" includes any stream, canal, creek or other channels, natural or artificial;

(6) "timber" includes trees when they have fallen or have been felled and all wood whether cut up or fashioned or hollowed out for any purpose or not; and

(7) "tree" includes plams, bamboos, stumps, brush-wood and canes.

CHAPTER II

OF RESERVED FORESTS

3. *Power to reserve forests.*—*The [3][State Government] may constitute any forest-land or waste-land which is the property of Government, or over which the government has proprietary rights, or to the whole or any part of the forest produce of which the Government is entitled, a reserve forest in the manner hereinafter provided.*

4. *Notification by State Government.*—*(1) Whenever it has been decided to constitute any land, a reserved forest., the [3][State Government] shall issue a notification in the [4][Official Gazette]*

(a) declaring that it has been decided to constitute such land a reserved forest;

---

[1] Ins. by the Indian Forest (Amendment) Act, 1930 (26 of 1930), Sec. 2.

[2] Ins. by Forest (Amendment) Act, 1933 (3 of 1933), Sec. 2.

[3] Subs. by A.L.O. 1950, for the words "Provincial Government."

[4] Subs. by A.O. 1937, for the words "local official Gazette".

(b) *specifying, as nearly as possible, the situation and limits of such land; and*

(c) *appointing an officer (hereinafter called "the Forest Settlement Officer") to inquire into and determine the existence, nature and extent of any rights alleged to exist in favour of any person in or over any land comprised within such limits, or in or over any forest-produce, and to deal with the same as provided in this Chapter.*

Explanation.—For the purpose of Cl. (b), it shall be sufficient to describe the limits of the forest by roads, rivers, ridges or other well-known or readily intelligible boundaries.

(2) The officer appointed under Cl. (c) of sub-section (1) shall ordinarily be a person not holding any forest-office except that of Forest Settlement Officer.

(3) Nothing in this section shall prevent the [1][State Government] from appointing any number of officers not exceeding three, not more than one of whom shall be a person holding any forest-office except as aforesaid, to perform the duties of a Forest Settlement Officer under this Act.

5. *Bar of accrual of forest rights.*—*After the issue of notification under Sec. 4, no right shall be acquired in or over the land comprised in such notification except by succession or under a grant or contract in writing made or entered into by or on behalf of the [2][Government] or some person in whom such right was vested when the notification was issued; and no fresh clearings for cultivation or for any other purpose shall be made in such land except in accordance with such rules as may be made by the [3][State Government] in this behalf.*

6. *Proclamation by Forest Settlement Officer.*—*When a notification has been issued under Sec. 4, the Forest Settlement Officer shall publish in the local vernacular in every town and village in the neighbourhood of the land comprised therein, proclamation—*

(a) *specifying, as nearly as possible, the situation and limits of the proposed forest;*

(b) *explaining the consequences which, as hereinafter provided, will ensure on the reservation of such forest; and*

(c) *fixing a period of not less than three months from the date such proclamation, and requiring every person claiming and right mentioned in Sec. 4 or Sec. 5 within such period either to present to the Forest Settlement Officer a written notice specifying, or to appear before him and state the nature of such right and the amount and particulars of the compensation (if any) claimed in respect thereof.*

7. *Inquiry by Forest Settlement Officer.*—*The Forest Settlement Officer shall take down in writing all statements made under Sec. 6, and shall at some covenient*

[3] Subs. by A.L.O. 1950, for the words "Provincial Government".

place inquire into all claims duly preferred under that section, and the existence of any rights mentioned in Sec. 4 or Sec. 5 and not claimed under Sec. 6 so far as the same may be ascertainable from the records of Government and the evidence of any person likely to be acquainted with the same.

8. Powers of Forest Settlement Officer.*—For the purpose of such inquiry, the Forest Settlement Officer may exercise the following powers, that is to say,—*

- *(a) power to enter, by himself or any officer authorised by him for the purpose, upon any land, and to survey, demarcate and make a map of the same; and*
- *(b) the powers of a Civil Court in the trial of suits.*

9. Extinction of rights.*—Rights in respect of which no claim has been preferred under Sec. 6; and of the existence of which no knowledge has been acquired by inquiry under Sec. 7, shall be extinguished unless, before the notification under Sec 20 is published, the person claiming them satisfies the Forest Settlement Officer that he had sufficient cause for not preferring such claim within the period fixed under Sec. 6.*

10. Treatment of claims relating to practice of shifting cultivation.*—(1) In the case of a claim relating to the practice of shifting cultivation, the Forest Settlement Officer shall record a statement setting forth the particulars of the claim and of any local rule or order under which the practice is allowed or regulated, and submit the statement to the* [1]*[State Government], together with his opinion as to whether the practice should be permitted or prohibited wholly or in part.*

(2) On receipt of the statement and opinion, the [1]*[State Government], may make an order permitting or prohibiting the practice wholly or in part.*

(3) If such practice is permitted wholly or in part, the Forest Settlement Officer may arrange for its exercise—

- *(a) by altering the limits of the land under settlement so as to exclude land of sufficient extent, of a suitable kind, and in a locality reasonably convenient for the purposes of the claimants, or*
- *(b) by causing certain portions of the land under settlement to be separately demarcated, and giving permission to the claimants to practice shifting cultivation therein under such conditions as he may prescribe.*

(4) All arrangements made under sub-section (3) shall be subject to the previous sanction to the [1]*[State Government].*

(5) The practice of shifting cultivation shall in all cases be deemed a privilege subject to control, restriction and abolition by the [1]*[State Government].*

11. Power to acquire land over which right is claimed.*—(1) In the case of a claim to a right in or over any land, other than a right of way, or a right of pasture, or a right to forest-produce or a watercourse, the Forest Settlement Officer shall pass an order admitting or rejecting the same in whole or in part.*

---

[1] Subs. by A.L.O. 1950, for the words "Provincial Government".

(2) If such claim is admitted in whole or in part, the Forest Settlement Officer shall either—

(i) exclude such land from the limits of the proposed forest; or

(ii) come to an agreement with the owner thereof for the surrender of his rights; or

(iii) proceed to acquire such land in the manner provided by the Land Acquisition Act, 1894 (1 of 1894).

(3) For the purpose of so acquiring such land,—

(a) the Forest Settlement Officer shall be deemed to be a Collector proceeding under the Land Acquisition Act, 1894 (1 of 1894),

(b) the claimant shall be deemed to be a person interested and appearing before him in pursuance of a notice given under Sec. 9 of the Act;

(c) the provisions of the preceding sections of that Act shall be deemed to have been complied with; and

(d) the Collector, with the consent of the claimant, or the Court with the consent of both parties, may award compensation in land, or partly in land and partly in money.

12. Order on claims to rights of pasture or to forest-produce.*—In the case of a claim to rights of pasture or to forest-produce, the Forest Settlement Officer shall pass an order admitting or rejecting the same in whole or in part*

13. Record to be made by Forest Settlement Officer.*—The Forest Settlement Officer, when passing any order under Sec 12, shall record, so far as may be practicable,—*

(a) the name, father's name, caste, residence and occupation of the person claiming the right; and

(b) the designation, position and area of all fields or groups of fields (if any), and the designation and position of all buildings, (if any), in respect of which the exercise of such rights is claimed.

14. Record where he admits claim.*—If the Forest Settlement Officer admits in whole or in part any claim under Sec. 12 he shall also record the extent to which the claim is so admitted, specifying the number and description of the cattle which the claimant is from time to time entitled to graze in the forest, the season during which such pasture is permitted, the quantity of timber and other forest-produce which he is from time to time authorised to take or receive, and such other particulars as the case may require. He shall also record whether the timber or other forest-produce obtained by the exercise of the rights claimed may be sold or bartered.*

15. Exercise of rights admitted.*—(1) After making such record the Forest Settlement Officer shall, to the best of his ability, and having due regard to the maintenance of the reserved forest in respect of which the claim is made, pass such orders as will ensure the continued exercise of the rights so admitted.*

(2) For this purpose the Forest Settlement Officer may—

(a) set out some other forest tract of sufficient extent, and in a locality reasonably convenient, for the purposes of such claimants, and record an order conferring upon them a right of pasture or to forest-produce (as the case may be) to the extent so admitted; or

(b) so alter the limits of the proposed forest as to exclude forest land of sufficient extent, and in a locality reasonably convenient for the purposes of the claimants; or

(c) record an order continuing to such claimants a right of pasture or to forest-produce, as the case may be, to the extent so admitted, at such seasons, within such portions of the proposed forest, and under such rules, as may be made in this behalf, by the [1][State Government].

16. Commutation of rights.*—In case if the Forest Settlement Officer finds it impossible, having due regard to the maintenance of the reserved forest, to make such settlement under Sec. 15 as shall ensure the continued exercise of the said rights to the extent so admitted, he shall, subject to such rules as the [1][State Government] may make in this behalf, commute such rights, by the payment to such persons of a sum of money in lieu thereof, or by the grant of land, or in such other manner as he thinks fit.*

17. Appeal from order passed under Sec. 11, Sec. 12, Sec. 15, or Sec. 16.*—Any person who has made a claim under this Act, or any Forest Officer or other person generally or specially empowered by the [1][State Government] in this behalf, may, within three months from the date of the order passed on such claim by the Forest Settlement Officer under Sec 11, Sec. 12, Sec 15 or Sec. 16, present an appeal from such order to such officer of the Revenue Department, of rank not lower than that of a Collector, as the [1][State Government] may, by notification in the [2][Official Gazette], appoint to hear appeals from such orders] :*

Provided that the [1][State Government] may establish a Court (hereinafter called the Forest Court) composed of three persons to be appointed by the [1][State Government], and when the Forest Court has been so established, all such appeals shall be presented to it.

18. Appeal under Sec. 17.*—(1) Every appeal under Sec. 17 shall be made by petition in writing, and may be delivered to the Forest Settlement Officer, who shall forward it without delay to the authority competent to hear the same.*

(2) If the appeal be to an officer appointed under Sec. 17 shall be heard in the manner prescribed for the time being for the hearing of appeals in matters relating to land revenue.

(3) If the appeal be to the Forest Court, the Court shall fix a aay and a convenient place in the neighbourhood of the proposed forest for hearing the appeal, and shall give notice thereof to the parties, and shall hear such appeal accordingly.

(4) The order passed on the appeal by such officer or Court, or by the majority of the members of such Court, as the case may be, shall, subject only to revision by the [1][State Government], be final.

---

[1] Subs. by A.L.O., 1950, for the words "Provincial Government".

[2] Subs. by A.O., 1937, for the words "local official Gazette".

*19. **Pleaders.**—The [1][State Government] or any person who has made a claim under this Act, may appoint any person to appear, plead and act on its or his behalf before the Forest Settlement Officer, or the Appellate Officer or Court, in the course of any inquiry or appeal under this Act.*

*20. **Notification declaring forest reserved.**—(1) When the following events have occurred, namely :—*

(a) the period fixed under Sec. 6 for preferring claims has elapsed, and all claims if any made under that section or Sec. 9 have been disposed of by the Forest Settlement Officer;

(b) if any such claims have been made, the period limited by Sec. 17 for appealing from the orders passed on such claims has elapsed, and all appeals (if any) presented within such period have been disposed of by the Appellate Officer or Court; and

(c) all lands (if any) to be included in the proposed forest, which the Forest Settlement Officer has, under Sec. 11, elected to acquire under the Land Acquisition Act, 1894 (1 of 1894), have become vested in the Government under Sec 16 of that Act,

the [1][State Government] shall publish a notification in the [2][Official Gazette] specifying definitely, according to boundary marks erected or otherwise, the limits of the forest which is to be reserved, and declaring the same to be reserved from a date fixed by the notification.

(2) From the date so fixed such forest shall be deemed to be a reserved forest.

*21. **Publication of translation of such notification in neighbourhood of forest.**—The Forest Officer shall, before the date fixed by such notification, cause a translation thereof into the local vernacular to be published in every town and village in the neighbourhood of the forest.*

*22. **Power to revise arrangement made under Sec. 15 or Sec. 18.**—The [1][State Government] may, within five years from the publication of any notification under Sec. 20, revise any arrangement made under Sec. 15 or Sec. 18, and may for this purpose rescind or modify any order made under Sec. 15 or Sec. 18 and direct that any one of the proceedings, specified in Sec. 15 be taken in lieu of any other of such proceedings, or that the rights admitted under Sec. 12 be commuted under Sec. 16.*

*23. **No right acquired over reserved forest except as here provided.**—No right of any description shall be acquired in or over a reserved forest except by succession or under a grant or contract in writing made by or on behalf of the [3][Government] or some person in whom such right was vested when the notification under Sec. 20 was issued.*

[2] Subs. by A.O. 1937, for the words "local official Gazette".

[3] Subs. by A.L.O. 1950, for the word "Crown".

24. *Rights not to be alienated without sanction.*—*(1) Notwithstanding anything contained in Sec. 23 no right continued under Cl. (c) of sub-section (2) of Sec. 15 shall be alienated by way of grant, sale, lease, mortgage or otherwise without the sanction of the [1][State Government] :*

Provided that, when any such right is appendant to any land or house, it may be sold or otherwise alienated with such land or house.

(2) No timber or other forest-produce obtained in exercise of any such right shall be sold or bartered except to such extent as may have been admitted in the order recorded under Sec. 14.

25. *Power to stop ways and watercourses in reserved forests.*—*The Forest Officer may, with the previous sanction of the [1][State Government] or of any officer duly authorized by it in this behalf, stop any public or private way or watercourse in a reserved forest, provided that a substitute for the way or watercourse so stopped, which the [1][State Government] deems to be reasonably convenient, already exists, or has been provided or constructed by the Forest Officer in lieu thereof.*

26. *Acts prohibited in such forests.*[2]—*(1) Any person who,—*

(a) makes any fresh clearing prohibited by Sec. 5; or

(b) sets fire to a reserved forest, or, in contravention of any rules made by the [1][State Government] in this behalf, kindles any fire or leaves any fire, burning, in such manner as to endanger such a forest;

or who, in a reserved forest—

(c) kindles, keeps or carries any fire except at such seasons as the Forest Officer may notify in this behalf;

(d) trespasses or pastures cattle, or permits cattle to trespass;

(e) causes any damage by negligence in felling any tree or cutting or dragging any timber;

(f) fells, girdles, lops, taps or burns any tree or strips off the bark or leaves from, or otherwise damages, the same;

(g) quarries stone, burns lime or charcoal, or collects, subjects to any manufacturing process, or removes any forest-produce;

(h) clears or breaks up any land for cultivation or any other purpose;

(i) in contravention of any rules made in this behalf by the [1][State Government] hunts, shoots, fishes, poisons water or sets traps or snares; or

---

[1] Subs. by A.L.O., 1950, for the words "Provincial Government".

[2] Section is applicable to Damodar Valley Corporation Forests, *vide* Act 14 of 1948, Sec. 52.

(j) *in any area in which the Elephants' Preservation Act, 1879 (VI of 1879), is not in force, kills or catches elephants in contravention of any rules so made;*

shall be punishable with imprisonment for a term which may extend to six months, or with fine which may extend to five hundred rupees, or with both in addition to such compensation for damage done to the forest as the convicting Court may direct to be paid.

(2) *Nothing in this section shall be deemed to prohibit—*

(a) *any act done by permission in writing of the Forest Officer, or under any rule made by the* [1]*[State Government]; or*

(b) *the exercise of any right continued under Cl. (c) of sub-section (2) of Sec. 15, or created by grant or contract in writing made by or on behalf of the* [2]*[Government] under Sec. 23.*

(3) *Whenever fire is caused wilfully or by gross negligence in a reserved forest, the* [1]*[State Government] may (notwithstanding that any penalty has been inflicted under this section) direct that in such forest or any portion thereof the exercise of all rights of pasture or to forest-produce shall be suspended for such period as it thinks fit.*

27. *Power to declare forest no longer reserved.*—(1) *The* [1]*[State Government] may,* [3]*[* * *] by notification, in the* [4]*[official Gazette], direct that, from a date fixed by such notification, any forest or any portion thereof reserved under this Act shall cease to be a reserved forest.*

(2) *From the date so fixed, such forest or portion shall cease to be reserved, but the rights (if any) which have been extinguished therein shall not revive in consequence of such cessation.*

CHAPTER III

OF VILLAGE-FORESTS

28. *Formation of village-forests.*—(1) *The* [1]*[State Government] may assign to any village community the rights of Government to or over any land which has been constituted a reserved forest, and may cancel such assignment. All forests so assigned shall be called village-forests.*

(2) *The* [1]*[State Government] may make rules for regulating the management of village-forests, prescribing the conditions under which the community to which any such assignment is made may be provided with timber or other forest-produce or pasture, and their duties for the protection and improvement of such forest.*

(3) *All the provisions of this Act relating to reserved forests shall (so far as they are not inconsistent with the rules so made) apply to village-forests.*

---

2. Subs. by A L.O., 1950, for the word "Crown".

3 The words "subject to the control of the Governor-General-in-Council" omitted by A.O. 1937.

4. Subs. by A.L O. 1950 for the words "local official Gazette".

CHAPTER IV

OF PROTECTED FORESTS

29. ***Protected forests.***—*(1) The [1][State Government] may by notification in the [2][Official Gazette] declare the provisions of this Chapter applicable to any forest-land or waste-land which is not included in a reserve forest but which is the property of Government, or over which the Government has proprietary rights, or to the whole or any part of the forest-produce of which the Government is entitled.*

(2) The forest-land and waste-lands comprised in any such notification shall be called a "protected forest".

(3) No such notification shall be made unless the nature and extent of the rights of Government and of private persons in or over the forest-land or waste-land comprised therein have been inquired into and recorded at a survey settlement, or in such other manner as the [1][State Government] thinks sufficient. Every such record shall be presumed to be correct until the contrary is proved :

Provided that if, in the case of any forest-land or waste-land, the [1][State Government] thinks that such inquiry and record are necessary, but that they will occupy such length of time as in the meantime to endanger the rights of Government, the [1][State Government] may, pending such inquiry and record, declare such land to be a protected forest, but so as not to abridge or affect any existing rights of individuals or communities.

30. ***Power to issue notification reserving trees,***[3]***etc.***—*The [1][State Government] may, by notification in the [2][Official Gazette],—*

(a) declare any trees or class of trees in a protected forest to be reserved from a date fixed by the notification;

(b) declare that any portion of such forest specified in the notification shall be closed for such term, not exceeding thirty years as the [1][State Government] thinks fit, and that the rights of private persons, if any, over such portion shall be suspended during such terms, provided that the remainder of such forest be sufficient, and in a locality reasonably convenient, for the due exercise of the rights suspended in the portion so closed; or

(c) prohibit, from a date fixed as aforesaid, the quarrying of stone or the burning of lime or charcoal, or the collection or subjection to any manufacturing process, or removal of, any forest-produce in any such forest. and the breaking up or clearing for cultivation, for buildings, for herding cattle or for any other purpose, of any land in any such forest.

---

[1] Subs. by A.L.O., 1950, for the words "Provincial Government".

[2] Subs. by A.L.O. 1950 for the words "local official Gazette".

[3] Sections 30, 32, 33, 34 and 68 have been applied to specified lands in the district of Hoshiarpur, *vide*, Punjab Government Gazette, dated 31st July, 1959.

31. Publication or translation of such notification in neighbourhood.—*The Collector shall cause a translation into the local vernacular of every notification issued under Sec. 30 to be affixed in a conspicuous place in every town and village in the neighbourhood of the forest comprised in the notification.*

32. ***Power to make rules for protected forests.***—*The [1][State Government] may make rules to regulate the following matters, namely :*

(a) the cutting, sawing, conversion and removal of trees and timber, and the collection, manufacture and removal of forest-produce, from protected forests;

(b) the granting of licences to the inhabitants of towns and villages in the vicinity of protected forests to take trees, timber or other forest-produce for their own use, and the production and return of such licences by such persons;

(c) the granting of licences to the persons felling or removing trees or timber or other forest-produce from such forests for the purposes of trade, and the production and return of such licences by such persons;

(d) the payments, if any, to be made by the persons mentioned in Cls. (b) and (c) for permission to cut such trees, or to collect and remove such timber or other forest-produce;

(e) the other payments, if any, to be made by them in respect of such trees, timber and produce, and the places where such payment shall be made;

(f) the examination of forest-produce passing out of such forests;

(g) the clearing and breaking up of land for cultivation or other purposes in such forests;

(h) the protection from fire of timber lying in such forests and of trees reserved under Sec. 30;

(i) the cutting of grass and pasturing of cattle in such forests;

(j) hunting, shooting, fishing, poisoning water and setting traps or snares in such forests, and the killing or catching of elephants in such forests in areas in which the Elephants' Preservation Act, 1879 (VI of 1879) is not in force;

(k) the protection and management of any portion of a forest closed under Sec. 30; and

(l) the exercise of rights referred to in Sec. 29.

33. Penalties for acts in contravention of notification under Sec. 30 or of rules under Sec. 32.—*(1) Any person who commits any of following offences, namely :—*

---

1. Subs. by A.L.O., 1950, for the words "Provincial Government".

(a) *fells, girdles, lops, taps or burns any tree reserved under Sec. 30 or strips off the barks or leaves from, or otherwise damages, any such trees;*

(b) *contrary to any prohibition under Sec. 30, quarries any stone, or burns any lime or charcoal, or collects, subjects to any manufacturing process, or removes, any forest-produce;*

(c) *contrary to any prohibition under Sec. 30, breaks up or clears for cultivation or any other purpose any land in any protected forest;*

(d) *sets fire to such forest, or kindles a fire without taking all reasonable precautions to prevent its spreading to any tree reserved under Sec. 30, whether standing, fallen, or felled, or to any closed portion of such forest;*

(e) *leaves burning any fire kindled by him in the vicinity of any such tree or closed portion;*

(f) *fells any tree or drags any timber so as to damage any tree reserved as aforesaid;*

(g) *permits cattle to damage any such tree; and*

(h) *infringes any rule made under Sec. 32;*

shall be punishable with imprisonment for a term which may extended to six months, or with fine which may extend to five hundred rupees, or with both.

(2) Whenever fire is caused wilfully or by gross negligence in a protected forest, the [1][State Government] may, notwithstanding that any penalty has been inflicted under this section, direct that in such forest or any portion thereof the exercise of any right of pasture or to forest-produce shall be suspended for such period as it thinks fit.

34. *Nothing in the Chapter to prohibit acts done in certain cases.*—*Nothing in this Chapter shall be deemed to prohibit any act done with the permission in writing of the Forest Officer, or in accordance with rules made under Sec. 32, or, except as regards any portion of a forest closed under Sec. 30, or as regards any rights the exercise of which has been suspended under Sec. 33, in the exercise of any right recorded under Sec. 29.*

CHAPTER V

OF THE CONTROL OVER FORESTS AND LANDS NOT BEING THE PROPERTY OF GOVERNMENT

35. *Protection of forests for special purposes.*—*(1) The [1][State Government] may by notification in the [2][Official Gazette], regulate or prohibit in any forest or waste-land,—*

(a) *the breaking up or clearing of land for cultivation;*

---

[1] Subs. by A.L.O., 1950, for the words "Provincial Government".

[2] Subs. by A.O., 1937 for the words "local official Gazette".

(b) the pasturing of cattle; or

(c) the firing or clearing to the vegetation;

when such regulation or prohibition appears necessary for any of the following purposes :

(i) for protection against storms, winds, rolling stones; floods and avalanches;

(ii) For the preservation of the soil on the ridges and slopes and in the valleys of hilly tracts, the prevention of landslips or of the formation of ravines and torrents, or the protection of land against erosion or the deposit thereon of sand, stones or gravel;

(iii) for the maintenance of a water supply in springs, rivers and tanks;

(iv) for the protection of roads, bridges, railways and other lines of communication;

(v) for the preservation of public health.

(2) The [1][State Government] may, for any such purpose, construct at its own expense, in or upon any forest or waste-land, such work as it thinks fit

(3) No notification shall be made under sub-section (1) nor shall any work be begun under sub-section (2), until after the issue of a notice to the owner of such forest or land calling on him to show cause, within a reasonable period to be specified in such notice, why such notification should not be made or work constructed, as the case may be, and until his objections, if any, and any evidence he may produce in support of the same, have been heard by an officer duly appointed in that behalf and have been considered by the [1][State Government].

36. Power to assume management of forests.—*(1) In case of neglect of or wilful disobedience to any regulation or prohibition under Sec. 35, or if the purposes of any work to be constructed under that section so require, the [1][State Government] may, after notice in writing to the owner of such forest of land and after considering his objections, if any, place the same under the control of a Forest Officer, and may declare that all or any of the provisions of this Act relating to reserved forests shall apply to such forest or land.*

(2) The net profits, if any, arising from the management of such forest or land shall be paid to the said owner.

37. Expropriation of forests in certain cases.—*In any case under this Chapter in which the [1][State Government] considers that, in lieu of placing the forest or land under the control of a Forest Officer the same should be acquired for public purposes, the [1][State Government] may proceed to acquire it in the manner provided by the Land Acquisition Act, 1894 (1 of 1894).*

(2) The owner of any forest or land comprised in any notification under Sec. 35 may, at any time not less than three or more than twelve years from the date

---

[1] Subs. by A.L.O., 1950, for the words "Provincial Government".

thereof, require that such forest or land shall be acquired for public purposes, and the [1][State Government] shall acquire such forest or land accordingly.

***38. Protection of forests at request of owners.**—(1) The owner of any land or if there be more than one owner thereof, the owners of shares therein amounting in the aggregate to at least two-thirds thereof may, with a view to the formation or conservation of forests thereon, represent in writing to the Collector their desire—*

- *(a) that such land be managed on their behalf by the Forest Officer as a reserved or a protected forest on such terms as may be mutually agreed upon; or*
- *(b) that all or any of the provisions of this Act be applied to such land.*

(2) In either case, [1][State Government] may, be notification in the [2][official Gazette], apply to such land and such provisions of this Act as it thinks suitable to the circumstances thereof and as may be desired by the applicants.

CHAPTER VI

OF THE DUTY ON TIMBER AND OTHER FOREST-PRODUCE

***39. Power to impose duty on timber and other forest-produce.**—(1) The [3][Central Government] may levy a duty in such manner, at such places and at such rates as it may declare by notification in the [4][Official Gazette] on all timber or other forest-produce—*

- *(a) which is produced in [5][the territories to which this Act extends] and inrespect of which [6][the Government] has any right;*
- *(b) which is brought from any place outside [5][the territories to which this Act extends].*

[7][* * * * *].

(2) In every case in which such duty is directed to be levied ad valorem, the [8][Central Government] may fix by like notification the value on which such duty shall be assessed.

(3) All duties on timber or other forest-produce which, at the time when this Act comes into force in any territory, are levied therein under the authority of the [9][State Government] shall be deemed to be and to have been duly levied under the provisions of this Act

[10][*(4) Notwithstanding anything in this section, the [9][State Government] may, until provision to the contrary is made by the [11][Parliament] continue to levy any duty which it was lawfully levying before the commencement of the [12][Constitution], under this section as then in force :*

4. Subs by A.O 1937, for the words "local official Gazette"
5. Subs. by A.L O. (No. 3) Order, 1956, for "Part A States and Part C States".
6. Subs. by A.L.O. 1950, for the word "Crown".
7. The proviso was omitted by A.O., 1937.
8. Subs. by A.O., 1937 for the words "Local Government".
9. Subs. for "Provincial Government" by A.L.O. 1950.
10. Ins. by A.O. 1937.
11. Subs. by A.L.O. 1950, for "the Central Legislature".
12. Subs. by A.L.O. 1950, for the words "Part III of the Government of India Act, 1935".

Provided that nothing in this sub-section authorizes the levy of any duty which as between timber or other forest-produce of the [1][State] and similar produce of the locality outside the [1][State], discriminates in favour of the former, or which, in the case of timber or other forest-produce of localities outside the [1][State] discriminates between timber or other forest-produce of one locality and similar timber or other forest-produce of another locality]

40. Limit not to apply to purchase-money or royalty.—*Nothing in this Chapter shall be deemed to limit the amount, if any, chargeable as purchase-money or royalty on any timber or other forest-produce, although the same is levied on such timber or produce while in transit, in the same manner as duty is levied.*

CHAPTER VII

OF THE CONTROL OF TIMBER AND OTHER FOREST-PRODUCE IN TRANSIT

41. Power to make rules to regulate transit of forest-produce.—*(1) The control of all rivers and their banks as regards the floating of timber as well as the control of all timber and other forest-produce in transit by land or water, is vested in the [2][State Government] and it may make rules to regulate the transit of all timber and other forest-produce.*

(2) In particular and without prejudice to the generality of the foregoing power, such rules may—

- *(a) prescribe the routes by which alone timber or other forest-produce may be imported, exported or moved into, from or within [3][the State];*
- *(b) prohibit the import or export or moving of such timber or other produce without a pass from an office duly authorized to issue the same, or otherwise than in accordance with the conditions of such pass;*
- *(c) provide for the issue, production and return of such passes and for the payment of fees therefor;*
- *(d) provide for the stoppage, reporting, examination and marking of timber or other forest-produce in transit, in respect of which there is reason to believe that any money is payable to [4][the Government] on account of the price thereof, or on account of any duty, fee, royalty or charge due thereon, or to which it is desirable for the purposes of this Act to affix a mark;*
- *(e) provide for the establishment and regulation of deposits to which such timber or other produce shall be taken by those in charge of it for examination, or for the payment of such money, or in order that such marks may be affixed to it; and the conditions under which such*

[4] Subs. by A.L.O., 1950, for the words "Central Legislature".

timber or other produce shall be brought to, stored at and removed from such depots;

- (f) *prohibit the closing up or obstructing of the channel or banks of any river used for the transit of timber or other forest-produce, and the throwing of grass, brushwood, branches or leaves into any such river or any act which may cause such river to be closed or obstructed,*
- (g) *provide for the prevention or removal of any obstruction of the channel or banks of any such river, and for recovering the cost of such prevention or removal from the person whose acts or negligence necessitated the same;*
- (h) *prohibit absolutely or subject to conditions, within specified local limits, the establishment of saw-pits, the converting, cutting, burning, concealing or marking of timber, the altering or effacing of any marks on the same, or the possession of or carrying of marking hammers or other implements used for marking timber;*
- (i) *regulate the use of property marks for timber, and the registration of such marks; prescribe the time for which such registration shall hold good; limit the number of such marks that may be registered by any one person, and provide for the levy of fees for such registration.*

(3) The [1][State Government] may direct that any rule made under this section shall not apply to any specified class of timber or other forest-produce or to any specified local area.

[2][**41-A. *Powers of Central government as to movements of timber across customs frontiers.***—*Notwithstanding anything in Sec 41, the Central Government may make rules to prescribe the route by which alone timber or other forest-produce may be imported, exported or moved into or from [3][the territories to which this Act extends] across any customs frontier as defined by the Central Government, and any rules made under Sec. 41 shall have effect subject to the rules made under this section.]*

42. *Penalty for breach of rules made under Sec. 41.*—*The [4][State Government] may by such rules prescribe as penalties for the contravention thereof imprisonment for a term which may extend to six months, or fine which may extend to five hundred rupees, or both.*

(2) Such rules may provide that penalties which are double of those mentioned in sub-section (1) may be inflicted in cases where the offence is committed after sunset and before sunrise, or after preparation for resistance to lawful authority, or where the offender has been previously convicted of a like offence.

---

1. Subs. by A.L.O., 1950, for the words "Provincial Government".
2. Ins. by A.O., 1937.
3. Subs. by A.O. (No. 3) of 1956, for "Part A States and Part C States".
4. Subs. by A.L.O., 1950, for the words "Provincial Government".

43. Government and Forest Officers not liable for damage to forest-produce at depot.—*The [1][Government] shall not be responsible for any loss or damage which may occur in respect of any timber or other forest-produce while at a depot established under a rule made under Sec. 41, or while detained elsewhere for the purposes of this Act, and no Forest officer shall be responsible for any such loss or damage, unless he causes such loss or damage negligently, maliciously or fraudulently.*

44. All persons bound to aid in case of accident at depot.—*In case of any accident or emergency involving danger to any property at any such depot, every person employed at such depot, whether by the [1][Government] or by any private person, shall render assistance to any Forest Officer or Police Officer demanding his aid in averting such danger or securing such property from damage or loss.*

CHAPTER VIII

OF THE COLLECTION OF DRIFT AND STRANDED TIMBER

45. Certain kinds of timber to be deemed property of Government until title thereto proved, and may be collected accordingly.—*(1) All timber found adrift, beached, stranded or sunk :*

All wood or timber bearing marks which have not been registered in accordance with the rules made under Sec. 41, or on which the marks have been obliterated, altered or defaced by fire or otherwise; and in such areas as the [2][State Government] directs all unmarked wood and timber; shall be deemed to be the property of Government, unless and until any person establishes his right and title thereto, as provided in this Chapter.

(2) Such timber may be collected by any Forest Officer or other person entitled to collect the same by virtue of any rule made under Sec. 51 and may be brought to any depot which the Forest Officer may notify as a depot for the reception of drift timber.

(3) The [2][State Government] may , by notification in the [3][Official Gazette], exempt any class of timber from the provisions of this section

46. Notice to claimants of drift timber.—*Public notice shall from time to time be given by the Forest Officer of timber collected under Sec. 45. Such notice shall contain a description of the timber and shall require any person claiming the same to present to such officer within a period not less than two months from the date of such notice, a written statement of such claim.*

47. Procedure on claim preferred to such timber.—*(1) When any such statement is presented as aforesaid, the Forest Officer may, after making such inquiry, as he thinks fit, either reject the claim after recording his reasons for so doing, or deliver the timber to the claimant.*

(2) If such timber is claimed by more than one person, the Forest Officer may either deliver the same to any of such persons whom he deems entitled thereto, or may refer the claimants to the Civil Court, and retain the timber pending the receipt of an order from any such Court for its disposal.

---

[1] Subs. by A.L.O., 1950, for "Crown".

[2] Subs by A.L.O., 1950, for the words "Provincial Government".

[3] Subs. by A.O. 1937, for the words "local official Gazette".

(3) Any person whose claim has been rejected under this section may, within three months from the date of such rejection, institute a suit to recover possession of the timber claimed by him; but no person shall recover any compensation or costs against the [1][Government], or against any Forest Officer, on account of such rejection, or the detention or removal of any timber, or the delivery thereof to any other person under this section.

(4) No such timber shall be subject to process of any Civil, Criminal or Revenue Court until it has been delivered, or a suit has been brought, as provided in this section.

48. Disposal of unclaimed timber.—*If no such statement is presented as aforesaid, or if the claimant omits to prefer his claim in the manner and within the period fixed by the notice issued under Sec. 46, or on such claim having been so preferred by him and having been rejected, omits to institute a suit to recover possession of such timber within the further period fixed by Sec. 47, the ownership of such timber shall vest in the Government, or, when such timber has been delivered to another person under Sec. 47, in such other person free from all encumbrances not created by him.*

49. Government and its officers not liable for damage to such timber.—*The [1][Government] shall not be responsible for any loss or damage which may occur in respect of any timber collected under Sec. 45 and no Forest Officer shall be responsible for any such loss or damage, unless he causes such loss or damage negligently, maliciously or fraudulently.*

50. Payments to be made by claimant before timber is delivered to him.—*No person shall be entitled to recover possession of any timber collected or delivered as aforesaid until he has paid to the Forest Officer or other person entitled to receive it such sum on account thereof as may be due under any rule made under Sec. 51.*

51. Power to make rules and prescribe penalties.—*(1) The [2][State Government] may make rules to regulate the following matters, namely :*

(a) the saving, collection and disposal of all timber mentioned in Sec. 45;

(b) the use and registration of boats used in salving and collecting timber;

(c) the amounts to be paid for salving, collecting, moving, storing or disposing of such timber, and

(d) the use and registration of hammers and other instruments to be used for making such timber.

(2) The [2][State Government] may prescribe, as penalties for the contravention of any rules made under this section, imprisonment for a term which may extend to six months, or fine which may extend to five hundred rupees, or both.

---

1. Subs. by A.L.O., 1950, for the word "Crown".
2. Subs. by A.L.O., 1950, for the words "Provincial Government".

CHAPTER IX

PENALTIES AND PROCEDURE

52. ***Seizure of property liable to confiscation.***—*(1) When there is reason to believe that a forest offence has been committed in respect of any forest-produce, such produce, together with all tools, boats, carts or cattle used in committing any such offence, may be seized by any Forest Officer or Police Officer.*

(2) Every office seizing any property under this section shall place on such property a mark indicating that the same has been so seized, and shall, as soon as may be, make a report of such seizure to the Magistrate having jurisdiction to try the offence on account of which the seizure has been made :

Provided that, when the forest-produce with respect to which such offence is believed to have been committed is the property of Government, and the offender is unknown, it shall be sufficient if the officer makes, as soon as may, be a report of the circumstances to his official superior.

53. ***Power to release property seized under Sec. 52.***—*Any Forest Officer of a rank not inferior to that of a Ranger who; or whose subordinate, has seized any tools, boats, carts, or cattle under Sec. 52, may release the same on the execution by the owner thereof of a bond for the production of property so released, if and when so required, before the Magistrate having jurisdiction to try the offence on account of which the seizure has been made.*

54. ***Procedure thereupon.***—*Upon the receipt of any such report, the Magistrate shall, with all convenient despatch, take such measures as may be necessary for the arrest and trial of the offender and the disposal of the property according to law.*

55. ***Forest-produce, tools, etc., when liable to confiscation.***—*(1) All timber or forest-produce which is not the property of Government and in respect of which a forest-offence has been committed, and all tools, boats, carts and cattle used in committing any forest-offence, shall be liable to confiscation.*

(2) Such confiscation may be in addition to any other punishment prescribed for such offence.

56. ***Disposal on conclusion of trial for forest-offence, or produce, in respect of which it was committed.***—*When the trial of any forest-offence is concluded, any forest-produce in respect of which such offence has been committed shall, if it is the property of Government or has been confiscated, be taken charge of by a Forest Officer, and, in any other case, may be disposed of in such manner as the Court may direct.*

57. ***Procedure when offender not known, or cannot be found.***—*When the offender is not known or cannot be found, the Magistrate may, if he finds that an offence has been committed, order the property in respect of which the offence has been committed to be confiscated and taken charge of by the Forest Officer, or to be made over to the person whom the Magistrate deems to be entitled to the same :*

Provided that no such order shall be made until the expiration of one month from the date of seizing such property, or without hearing the person, if any, claiming any right thereto, and the evidence, if any, which he may produce in support of his claim.

58. *Procedure as to perishable property seized under Sec. 52.*—*The Magistrate may, notwithstanding anything hereinbefore contained, direct the sale of any property seized under Sec. 52 and subject to speedy and natural decay, and may deal with the proceeds as he would have dealt with such property if it had not been sold.*

59. *Appeal from orders under Sec. 55, Sec. 56 or Sec. 57.*—*The officer who made the seizure under Sec. 52, or any of his official superiors, or any person claiming to be interested in the property so seized, may, within one month from the date of any order passed under Sec. 55, Sec. 56 or Sec. 57, appeal therefrom to the Court to which orders made, by such Magistrate are ordinarily appealable, and the order passed on such appeal shall be final.*

60. *Property when to vest in Government.*—*When an order for the confiscation of any property has been passed under Sec. 55 or Sec. 57, as the case may be, and the period limited by Sec. 59 for an appeal from such order has elapsed, and no such appeal has been preferred, or when, on such an appeal being preferred, the Appellate Court confirms such order in respect of the whole or a portion of such property, such property or such portion thereof, as the case may be, shall vest in the Government free from all incumbrances.*

61. *Saving of power to release property seized.*—*Nothing herein before contained shall be deemed to prevent any officer empowered in this behalf by the [1][State Government] from directing at any time the immediate release of any property seized under Sec. 52.*

62. *Punishment for wrongful seizure.*—*Any Forest Officer or Police Officer who vexatiously and unnecessarily seizes any property on pretence of seizing property liable to confiscation under this Act shall be punishable with imprisonment for a term which may extend to six months, or with fine which may extend to five hundred rupees, or with both.*

63. *Penalty for counterfeiting or defacing marks on trees and timber and for altering boundary-marks.*—*Whoever, with intent to cause damage or injury to the public or to any person, or to cause wrongful gain as defined in the Indian Penal Code (XLV of 1860),—*

- (a) *knowingly counterfeits upon any timber or standing tree a mark used by Forest Officers to indicate that such timber or tree is the property of the Government or of some person, or that it may lawfully be cut or removed by some person ; or*
- (b) *alters, defaces or obliterates any such mark placed on a tree or timber by or under the authority of a Forest officer; or*
- (c) *alters, moves, destroys or defaces any boundary-mark of any forest or waste-land to which the provisions of this Act are applied;*

shall be publishable with imprisonment for a term which may extend to two years, or with fine, or with both.

64. *Power to arrest without warrant.*—*(1) Any Forest Officer or Police Officer may, without orders from a Magistrate and without a warrant, arrest any*

---

[1] Subs. by A.L.O., 1950, for the words "Provincial Government".

person against whom a reasonable suspicion exists of his having been concerned in any forest-offence punishable with imprisonment for one month or upwards.

(2) Every officer making an arrest under this section shall, without unnecessary delay and subject to the provisions of this Act as to release on bond, take or send the persons arrested before the Magistrate having jurisdiction in the case, or to the Officer-in-charge of the nearest police station.

(3) Nothing in this section shall be deemed to authorize such arrest for any act which is an offence under Chapter IV unless such act has been prohibited under Cl. (c) of Sec. 30.

65. Power to release on a bond a person arrested.—*Any Forest Officer of a rank not inferior to that of a Ranger, who, or whose subordinate has arrested any person under the provisions of Sec. 64, may release such person on his executing a bond to appear, if and when so required, before the Magistrate having jurisdiction in the case, or before the Officer-in-charge of the nearest police station.*

66. Power to prevent commission of offence.—*Every Forest Officer and Police Officer shall prevent, and may interfere for the purpose of preventing the commission of any forest-offence.*

67. Power to try offences summarily.—*The District Magistrate or any Magistrate of the first class specially empowered in this behalf by the [1][State Government] may try summarily, under the Code of Criminal Procedure, 1898 (V of 1898),[2] any forest-offence punishable with imprisonment for a term not exceeding six months, or fine not exceeding five hundred rupees, or both*

68. Power to compound offences.—*The [1][State Government] may by notification in the [3][official Gazette], empower a Forest Officer—*

- *(a) to accept from any person against whom a reasonable suspicion exists that he has committed any forest-offence, other than an offence specified in Sec. 62 or Sec. 63, a sum of money by way of compensation for the offence which such person is suspected to have committed, and*
- *(b) when any property has been seized as liable to confiscation, to release the same on payment of the value thereof as estimated by such officer.*

(2) On the payment of such sum of money, or such value, or both, as the case may be, to such officer, the suspected person, if in custody, shall be discharged, the property, if any, seized shall be released, and no further proceedings shall be taken against such person or property.

(3) A Forest Officer shall not be empowered under this section unless he is a Forest Officer of a rank not inferior to that of a Ranger and is in receipt of a monthly salary amounting to at least one hundred rupees, and the sum of money accepted as compensation under Cl. (a) of sub-section (1) shall in no case exceed the sum of fifty rupees.

[2] *See* now the Code of Criminal Procedure,1973 (2 of 1974).
[3] Subs. by A.L.O. 1937, for the words "local official Gazette".

69. ***Presumption that forest-produce belongs to Government.****—When in any proceedings taken under this Act, or in consequence of anything done under this Act, a question arises as to whether any forest-produce is the property of the Government, such produce shall be presumed to be the property of the Government, until the contrary is proved.*

CHAPTER X

CATTLE TRESPASS

70. ***Cattle Trespass Act, 1871, to apply.****—Cattle trespassing in a reserved forest or in any portion of the protected forest which has been lawfully closed to grazing shall be deemed to be cattle doing damage to a public plantation within the meaning of Sec. 11 of the Cattle Trespass Act, 1871 (1 of 1871), and may be seized and impounded as such by any Forest Officer or Police Officer.*

71. ***Power to alter fines fixed under that Act.****—The [1][State Government] may, by notification in the [2][official Gazette], direct that, in lieu of the fines fixed under Sec. 12 of the Cattle Trespass Act, 1871 (1 of 1871), there shall be levied for each head of cattle impounded under Sec. 70 of this Act, such fines as it thinks, but not exceeding the following, that is to say,—*

For each elephant	.... *Ten rupees*
For each buffalo or camel	.... *Two rupees*
For each horse, mare, gelding, pony, colt, filly, mule, bull, bullock, cow or heifer	.... *One rupee.*
For each calf, ass, pig, ram, ewe, sheep, lamb, goat or kid	.. .. *eight annas.*

CHAPTER XI

OF FOREST OFFICER

72. ***State Government may invest Forest Officer with certain powers.****—(1) The [3][State Government] may invest any Forest Officer with all or any of the following powers, that is to say,—*

(a) power to enter upon any land and to survey, demarcate and make a map of the same;

(b) the powers, of a Civil Court to compel the attendance of witnesses and the production of documents and material objects;

(c) power to issue a search-warrant under the Code of Criminal Procedure, 1898 (V of 1898);[4] or

(d) power to hold an inquiry into forest-offences, and, in the course of such inquiry, to receive and record evidence.

(2) Any evidence recorded under Cl. (d) of sub-section (1) shall be admissible in any subsequent trial before a Magistrate, provided that it has been taken in the presence of the accused person.

3. Subs. by A.L.O., 1950, for the words "Provincial Government".
4. *See* now the Code of Criminal Procedure, 1973 (2 of 1974).

73. ***Forest Officers deemed to be public servants.****—All Forest Officers shall be deemed to be public servants within the meaning of the Indian Penal Code (XLV of 1860).*

74. ***Indemnity for acts done in good faith.****—No suit shall lie against any public servant for anything done by him in good faith under this Act.*

75. ***Forest Officers not to trade.****—Except with the permission in writing of the [1][State Government] no Forest Officer, shall, as principal or agent, trade in timber or other forest-produce, or become interested in any lease of any forest or in any contract for working any forest, whether in or outside [2][the Territories to which this Act extends].*

CHAPTER XII

SUBSIDIARY RULES

76. ***Additional powers to make rules.****— The [3][State Government] may make rules,—*

(a) to prescribe and limit the powers and duties of any Forest Officer under this Act;

(b) to regulate the rewards to be paid to officers and informers out of the proceeds of fines and confiscation under this Act;

(c) for the preservation, reproduction and disposal of trees and timber belonging to Government, but grown on lands belonging to or in the occupation of private persons; and

(d) generally, to carry out the provisions of this Act

77. ***Penalties for breach of rules.****—Any person contravening any rule under this Act, for the contravention of which no special penalty is provided, shall be punishable with imprisonment for a term which may extend to one month, or fine which may extend to five hundred rupees, or both.*

78. ***Rules when to have force of law.****—All rules made by the [1][State Government] under this Act shall be published in the [4][Official Gazette], and shall thereupon, so far as they are consistent with this Act, have effect as if enacted therein.*

CHAPTER XIII

MISCELLANEOUS

79. ***Persons bound to assist Forest Officers and Police Officers.****— (1) Every person who exercises any right in a reserved or protected forest or who is permitted to take any forest-produce from, or to cut and remove timber or to pasture cattle in, such forest, and every person who is employed by any such person in such forest, and every person in any village contiguous to such forest who is employed by the [5][Government], or who receives emoluments from the [5][Government] for the services to be performed to the community, shall be bound to furnish without unnecessary delay to the nearest Forest Officer or Police Officer any information he may possess respecting the commission of, or intention to commit, any forest-offence,*

and shall forthwith take steps, whether so required by any Forest Officer or Police Officer or not,—

(a) to extinguish any forest fire in such forest of which he has knowledge or information;

(b) to prevent by any lawful means in his power any fire in the vicinity of such forest of which he has knowledge or information from spreading to such forest,

and shall assist any Forest Officer or Police Officer demanding his aid—

(c) in preventing the commission in such forest of any forest offence; and

(d) when there is reason to believe that any such offence has been committed in such forest, in discovering and arresting the offender.

(2) Any person who, being bound so to do, without lawful excuse (the burden of proving which shall lie upon such person) fails—

(a) to furnish without unnecessary delay to the nearest Forest Officer or Police Officer any information required by sub-section (1);

(b) to take steps, as required by sub-section (1) to extinguish any forest, fire in a reserved or protected forest;

(c) to prevent, as required by sub-section (1), any fire in the vicinity of such forest from spreading to such forest; or

(d) to assist any Forest Officer or Police Officer demanding his aid in preventing the commission in such forest of any forest-offence, or, when there is reason to believe that any such offence has been committed in such forest, in discovering and arresting the offender,

shall be punishable with imprisonment for a term which may extend to one month, or with fine which may extend to two hundred rupees, or with both.

***80. Management of forests the joint property of Government and other persons.**—(1) If the Government and any person be jointly interested in any forest or waste-land, or in whole or any part of the produce thereof, the [1][State Government] may either,—*

(a) undertake the management of such forest, waste-land or produce accounting to such person for his interest in the same; or

(b) issue such regulations for the management of the forest, waste-land or produce by the person so jointly interested as it deems necessary for the management thereof and the interests of all parties therein.

(2) When the [1][State Government] undertakes under Cl. (a) of sub-section (1) the management of any forest, waste-land or produce, it may, by notification in the [2][Official Gazette], declare that any of the provisions contained in Chapters II and IV shall apply to such forest, waste-land or produce, and thereupon such provisions shall apply accordingly.

***81. Failure to perform service for which a share in produce of Government forest is employed.**—If any person be entitled to a share in the*

---

1. Subs. by A.L.O. 1950, for the words "Provincial Government".
2. Subs. by A.O. 1937, for the words" local official Gazette".

produce of any forest which is the property of Government or over which the Government has proprietary rights or to any part of the forest-produce of which the Government is entitled, upon the condition of duly performing any service connected with such forest, such share shall be liable to confiscation in the event of the fact being established to the satisfaction of the [1]*[State Government] that such service is no longer so performed ·*

Provided that no such share shall be confiscated until the person entitled thereto, and the evidence, if any, which he may produce in proof of the due performance of such service, have been heard by an officer duly appointed in that behalf by the [1]*[State Government].*

82. *Recovery of money due to Government.*—*All money payable to the Government under this Act, or under any rules made under this Act, or on account of the price of any forest-produce, or of expenses incurred in the execution of this Act in respect of such produce, may, if not paid when due, be recovered under the law for the time being in force as if it were an arrear of land revenue*

83. *Lien on forest-produce for such money.*—*(1) When any such money is payable for or in respect of any forest-produce, the amount thereof shall be deemed to be a first charge on such produce, and such produce may be taken possession of by a Forest Officer until such amount has been paid*

(2) If such amount is not paid when due, the Forest Officer may sell such produce by public auction, and the proceeds of the sale shall be applied first in discharging such amount.

(3) The surplus, if any, if not claimed within two months from the date of the sale by the person entitled thereto, shall be forfeited to [2]*[Government]*

84. *Land acquired under this Act to be deemed to be needed for a public purpose under the Land Acquisition Act, 1894.*—*Whenever it appears to the* [1]*[State Government] that any land is required for any of the purposes of this Act, such land shall be deemed to be needed for a public purpose within the meaning of Sec. 4 of the Land Acquisition Act, 1894 (1 of 1894).*

85. *Recovery of penalties due under bond.*—*When any person, in accordance with any provision of this Act, or in compliance with any rule made thereunder, binds himself by any bond or instrument to perform any duty or act or covenants by any bond or instrument that he, or that he and his servants and agents will abstain from any act, the whole sum mentioned in such bond or instrument as the amount to be paid in case of a breach of the conditions thereof may, notwithstanding anything in Sec. 74 of the Indian Contract Act, 1872 (IX of 1872), be recovered from him in case of such breach as if it were an arrear of land-revenue.*

[3]*[**85-A. Saving for rights of Central Government.**—Nothing in this Act shall authorize a Government of any State to make any order or do anything in relation to any property not vested in that State or otherwise prejudice any rights of the Central Government or the Government of any other State without the consent of the Government concerned.]*

86. *Repeals.*—*[Repealed by Sec. 2 and Schedule of the Repealing and Amending Act, 1948 (2 of 1948)]*

THE SCHEDULE—*[Repealed by Sec. 2 and Schedule of the Repealing and Amendment Act, 1948 (2 of 1948)].*

PART III-17

THE FOREST (CONSERVATION) ACT, 1980

(ACT NO. 69 OF 1980)[1]

[*27th December, 1980*]

An Act[2] to provide for the conservation for forest and for matters connected therewith or ancillary or incidental thereto

BE it enacted by Parliament in the Thirty-first year of the Republic of India as follows :

1. ***Short title, extent and commencement.***—*(1) This Act may be called the Forest (Conservation) Act, 1980.*

(2) It extends to the whole of India except the State of Jammu and Kashmir.

(3) It shall be deemed to have come into force on the 25th day of October, 1980.

2. ***Restriction on the dereservation of forests or use of forest land for non-forest purpose.***—*Notwithstanding anything contained in any other law for the time being in force in a State, no State Government or other authority shall make, except with the prior approval of the Central Government, any order directing—*

(i) that any reserved forest (within the meaning of the expression "reserved forest" in any law for the time being in force in that State) or any portion thereof, shall cease to be reserved,

(ii) that any forest land or any portion thereof may be used for any non-forest purpose;

[3]*[(iii) that any forest land or any portion thereof may be assigned by way of lease or otherwise to any private person or to any authority, corporation, agency or any other organisation not owned, managed or controlled by Government;*

(iv) that any forest land or any portion thereof may be cleared of trees which have grown naturally in that land or portion, for the purpose of using it for re-afforestation.]

[4]*[Explanation.—For the purpose of this section "non-forest purpose" means the breaking up or clearing of any forest land or portion thereof for —*

(a) the cultivation of tea, coffee, spices, rubber, palms, oil-bearing plants, horticultural crops or medicinal plants.

(b) any purpose other than re-afforestation.

but does not include any work relating or ancillary to conservation, development and management of forest and wild life, namely, the establishment of check-posts, firelines, wireless communications and construction of fencing, bridges and culverts, dams, water-holes, trench marks, boundary marks, pipelines or other like purposes.]

[3] Ins. by Act 69 of 1988, Sec. 2 (*a*) (w.e.f. 15th March, 1989).

[4] Subs. by Act 69 of 1988, Sec. 2 (*b*) (w.e.f. 15th March, 1989).

SYNOPSIS

1. The purpose of .. 903
2. Provisions of the Act—Not violated .. 903
3. Deforestation—Permissibility of ... 904
4 Lease in question is void . 904
5 Forest land defined ... 905
6 Procedure for obtaining approval for preservation of forest ... 905
7. Mining lease in reserved forest area cannot be granted without prior approval of the Central Government 905
8. Power of State Government/authorities to put reserved forest land for non-forest purpose . 905
9. Ban not applicable to private plantation ... 906
10. Lease not to be renewed to prevent deforestation . 906
11. Guide lines issued by the Govt not to override statutory provisions . 906
12 No licence for opening saw mill . 906
13 Prior permission from Central Govt. for non forest activity 907
14. Felling of deceased trees 907
15 Appointment of Committee to ascertain large scale mining in forest area and denuding of forests 907

1. The purpose of.—The Forest Conservation Act, 1980 was enacted with a view to check further deforesation which ultimately results in ecological imbalance, and therefore, the provisions made therein for the conservation of forests and for matters connected therewith, must apply to all forests irrespective of the nature of ownership or classification thereof. The word "forest" must be understood according to its dictionary meaning. This description covers all statutorily recognised forests, whether designated as reserved, protected or otherwise for the purpose of Sec. 2 (*i*) of the Forest Conservation Act. The term "forest land", occurring in Sec. 2, will not only include "forest" as understood in the dictionary sense, but also any area recorded as forest in the Government record, irrespective of the ownership. This is how it has to be understood for the purpose of Sec. 2 of the Act. The provisions enacted in the Forest Conservation Act, 1980 for the conservation of forests and the matters connected therewith must apply clearly to all forests so understood irrespective of the ownership or classification thereof.[1]

2. Provision of the Act—Not violated.—If any forest land is cleared off or broken for cultivation of tea, coffee etc., including horticultural crops of medicinal plants, such act of clearing or breaking the forest land for such purpose could be termed as non-forest purpose. The impugned letter contains the proposal not for plantation after breaking the forest or clearing the forest, but in the nature gaps within the forest without disturbing the existing root streak. It is also pertinent to note that under Sec. 2 of the Act, absolute ban is not imposed, but with the approval of the Central Government what is prohibited, in the Act could still be done. On the other hand in Cl. 5 of Item F, the choice of species for plantation has to be decided by the members of the VVS and its has to be in accordance with the Forest policy of the Government of India, 1988. This will go to show that sufficient check and counter-checks are provided so as not to transgress the purview of law and the consequent policy of the Government of India, 1988. His Lordship is therefore, not convinced that the proposals made in the impugned letter could be termed as contravening any provisions of the Act.[2]

---

[1] **T.N. Godavarman Thirumulkpad *v.* Union of India, (1997) 2 S.C.C. 267 at pp. 269, 270.**

[2] **M.R.S. Srinivas *v.* Union of India, 1997 (2) A.L.D. 102 at p. 109.**

3. Deforestation—Permissibility of.—The admitted position is that the respondents are displaced persons and they sought for and were granted assignment of the land in reserved forest by the State Government on various dates between 1982 and 1985, for cultivation. One of the conditions for the grant was that the trees standing on the land allotted to them "shall be the property of the state Government". It is clear from Sec. 2 of the Forest Conservation Act, 1980 that it contemplates restrictions on the dereservation of forests of use of forest land for non-forest purpose and postulates thus :

> "Notwithstanding anything contained in any other law for the time being in force in a state, no State Government or other authority shall make, except with the prior approval of the Central Government any order directing —
>
> (*i*) that any reserved (within the meaning of the expression "reserved forest" in any law for the time being in force in that state) or any portion thereof shall cease to be reserved;
>
> (*ii*) that any forest land or any portion thereof may be used for any non-forest purpose;
>
> (*iii*) that any forest land or any portion thereof may be assigned by way of lease or otherwise to any private person or to any authority, corporation, agency or any other organisation not owned, managed or controlled by Government;
>
> (*iv*) that any forest land or any portion thereof may be cleared of trees which have grown naturally in that land or portion, for the purpose of using it for reafforestation".

Having overlooked these crucial statutory provisions, the High Court has directed, by the impugned order, at the behest of the respondents, by way of writ of mandamus, issuance of Timber Transit Permits to the respondents. The question is · whether the impugned direction issued by the High Court is correct in law ? Except with prior permission of the Central Government, deforestation is impermissible It is seen that it cannot be disputed that lands are situated within reserved forest area. In the lands assigned to the petitioner, the trees are standing. In terms of the grant made to them, the trees belong to the Government. Under these circumstances, for the reason that it is a reserved forest area since the grant was made only for the purpose of cultivation the respondents have no manner of right, whatsoever to deforest the land and to cut and carry the trees belonging to the Government much less without the permission of the authority.[1]

4. Lease in question is void.—The State Government has assigned a portion of the forest land by way of lease or otherwise thereby creating a right in the properties in question which forms a part of the "National Park"-Cum-"reserve forest" in favour of the fifth respondent, which is a private company, without seeking prior approval of the Central government. There is an absolute prohibition on the grant of such rights under Sec. 20 read with Sec. 35 (3) of the Wildlife (Protection) Act, 1972. As such the grant of lease in question is void and cannot be acted upon by the fifth respondent. Further, the transaction is also hit by Sec. 2 of the Forest (Conservation) Act, for want of prior approval of the Central Government.[2]

---

[1] **State of Orissa *v.* Duti Sahu, A.I.R. 1997 S.C. 1040 at p. 1041 : (1997) 3 S.C.C. 501 at p. 502.**

[2] **Nagarahole-Budakattu Hakku Sthapana Samithi, Virijjpet, Coorg *v.* State of Karnataka, 1997 (3) Kant. L.J. 279 at p. 295.**

5. **Forest land defined.**—The term 'forest land' occurring in Sec. 2 will not only include 'forest' as understood in the dictionary sense, but also any area recorded as forest in the Government record irrespective of the ownership. This is how it has to be understood for the purpose of Sec. 2 of the Act. The provisions enacted in the Forest Conservation Act, 1980 for the conservation of forests and the matters connected therewith must apply clearly to all forests so understood irrespective of the ownership or classification thereof. The Court also in the aforesaid case gave a general direction to the following effect : "In view of the meaning of the word 'forest' in the Act, it is obvious that prior approval of the Central Government is required for any non-forest activity within the area of any 'forest'."[1]

6. **Procedure for obtaining approval for preservation of forest.**—It is essential to marshal the priorities : instantly on one side those of the tourist department and on the other of the forest department. For this purpose, Sec. 3 of the Forest (Conservation) Act, 1980 has envisaged the constitution of an Advisory Committee to advise the Government in the matter of grant of approval under Sec 2 and on any other matter connected with the conservation of forest which may be referred to it by the Central Government. All current streams of thought lead towards protection of environment and preservation of forest wealth. On the other hand there are demands in justification of other use telling on the forests. A balance would have to be struck, in a cool and dispassionate manner. As a way out, therefore, their lordships of the Apex Court directed that the proposal as mooted by the Collector and approved by his action, together with the objection of the Conservator of Forests be sent by the former to the Central Government under Sec. 2 of the Forest (Conservation) Act, 1980 read with the rules framed thereunder.[2]

7. **Mining lease in reserved forest area cannot be granted without prior approval of the Central Government.**—The law is well-settled that any non-forest activity in the forest area without prior approval of the Central Government is banned. For grant of mining lease or renewal of mining lease for non-forest activity, the provisions of Sec. 2 of the Act has to be complied with before grant or renewal of mining lease. There is no distinction as to whether the mining area has been broken or not, even if the area has been broken in terms of earlier lease unless mining lease is renewed after complying with the requirement of Sec. 2 of the Act meaning thereby after prior approval of the Central Government no mining operation can be carried out by any person by taking recourse to the legal fiction as contained in Sec. 24-A (6) of the rules. In other words, the provision of Sec. 2 of the Act will prevail over the provision of the Mining Act and the Rules and Rule 24-A (6) has to yield to the provision of the Act.[3]

8. **Power of State Government/authorities to put reserve forest land for non-forest purpose.**—It is not disputed that the lands on which the petitioners/appellants are laying their claim falls within the Reserved Forest. If that be, so provisions of the Forest (Conservation) Act, 1980 places restriction on the State Government or other authorities to put any part of the Reserved Forest land or any portion thereof for any non-Forest purpose except with the prior approval of the Central Government. There is no pleading in the Civil Rule that in case of

---

[1] **Samatha v. State of Andhra Pradesh, A.I.R. 1997 S.C. 3297 at p. 3381.**

[2] Union of India v Kamath Holiday Resorts Pvt. Ltd., A.I.R. 1996 S.C. 1040 at pp. 1040, 1041.

[3] **State of Bihar v. M/s. R.MC. Dill Co. (P.) Ltd., A.I.R. 1998 Pat. 20 at p. 22.**

the lands on which the petitioners/appellants are laying their claims there is prior approval of the Central Government. On the materials which have been in the Civil Rule, therefore, Gauhati High Court in exercise of its extraordinary jurisdiction under Art. 226 of the Constitution of India cannot grant any relief in favour of the petitioners/appellants in respect of the lands which fall within the Reserved Forest and which is covered by the Forest (Conservation) Act, 1980.[1]

9. Ban not applicable to private plantation.—In view of the specific direction of the Supreme Court[2] in this respect, the order of the Supreme Court has to be given effect including the ban in forests and the non-application of the ban in non-forest private plantations notwithstanding any deviating order in this respect which might have been made or may be made by any Government, authority, tribunal or Court including the High Court. In other words, the direction of the Supreme Court regarding the application of ban on felling of trees in forests and non-application of the same in non-forest private plantations has to prevail over any other deviating order even if such order has been or is passed by the High Court.[3]

10. Lease not to be renewed to prevent deforestation.—In view of the matter, it can safely be held that the land, in question, is a forest land. Even the land belonged to a private person, it is well known principle of law that irrespective of the ownership, whether it is a private or public, will come within the mischief of the provisions of the Act. The Forest (Conservation) Act was enacted for conservation of forest and the provisions thereto will apply to all such forest irrespective of the ownership whether it is a private or public Admittedly, the lease has not been renewed in favour of the petitioner Corporation and the petitioner Corporation cannot claim the renewal of lease as a matter of right. Lease cannot be renewed if the renewal will lead to further deforestation. In order to prevent ecological imbalance and also, to prevent deforesation.[4]

11. Guidelines issued by the Govt. not to override statutory provisions.—It is quite well settled that the guidelines issued by way of executive instructions cannot override the statutory provisions nor any statutory order passed in violation of such guidelines can be held to be illegal, void or inoperative. Non-statutory guidelines framed by enforcing authorities can be pressed into service only to ensure that any deviation from those do not lead to discrimination defeating the equality clause as enshrined in Article 14 of the Constitution of India, which is a constitutional mandate against the States and its instrumentalities.[5]

12. No licence for opening saw mill.—All unlicensed saw mills, veneer and plywood industries in the State of Maharashtra and the State of Uttar Pradesh are to be closed forthwith and the State Government would not remove or relax the condition for grant of permission/licence for the opening of any such saw mill, veneer and plywood industry and it shall also not grant any fresh permission/licence for this purpose. The Chief Secretary of the State will ensure strict compliance of this direction and file a compliance report within two weeks.[1]

---

[1] Lakshmi Chowhan *v.* State of Assam, A.I.R. 1996 Gau. 35 at p. 35.

[2] A.I.R. 1997 S.C. 1228.

[3] Sriram Saha *v.* State of West Bengal, A.I.R. 1999 Cal. 90 at p. 93.

[4] The Bihar State Mineral Development Corporation *v.* The State of Bihar, 1998 (3) B.L.J.R. 1676 at p. 1679.

[5] National Mineral Development Corpn. Ltd. *v.* State, A.I.R. 1997 Kant. 331 at p. 338.

13. Prior permission from Central Govt. for non-forest activity.—It is, therefore, clear that the running of saw mills of any kind including veneer or plywood mills, and mining of any mineral are non-forest purposes and are, therefore, not permissible without prior approval of the Central Government. Accordingly, any such activity is *prima facie* violation of the provisions of the Forest Conservation Act, 1980. Every State Government must promptly ensure total cessation of all such activities forthwith.[2]

Approval of—

The Forest (Conservation) Act would be applicable only prospectively from the date the forest area it identified. In case the area was forest it could not be put into non-forest use without prior permission of the Central Government and if no such approval is obtained, the action taken in changing the use from forest to non-forest use has to be quashed.[3]

14. Felling of deceased trees.—In the instant case, keeping in view the submissions made by the learned *amicus curiae* and with a view to see that no illegal felling of trees takes place, Supreme Court restrained the State Government of Madhya Pradesh and its functionaries to cut any of these trees hereafter, even if in the opinion of the State Government, the particular tree or trees are considered to be deceased trees, till further orders[4]

15. Appointment of Committee to ascertain large scale mining in forest area and denuding of forests.—Secretary, Ministry of Environment, who is personally present, also informs the Court of illegal mining activity continuing in Doon Valley in spite of the orders made by Apex Court to prevent the illegal activity. These are matters which require urgent directions after ascertaining full facts. For this purpose their lordships appointed a Committee consisting of Shri A.M. Khanwilkar and Shri Gopal Singh, Advocates of Apex Court and an officer of the Ministry of Environment to be nominated by the Secretary. The Committee is requested to immediately visit those villages in Mirzapur District as well as the Doon Valley and to submit its report at the earliest regarding large scale mining in forest area and reckless denuding of forests which is violation of the orders passed by Apex Court.[5]

*3. **Constitution of Advisory Committee.**—The Central Government may constitute a Committee consisting of such number of persons as it may deem fit to advise that Government with regard to—*

- *(i) the grant of approval under Sec. 2; and*
- *(ii) any other matter connected with the conservation of forests which may be referred to it by the Central Government.*

[6]*[3-A. **Penalty for contravention of the provisions of the Act.**—Whoever contravenes or abets the contravention any of the provisions of Sec. 2, shall be punishable with simple imprisonment for a period which may extend to fifteen days.]*

[1][3-B. ***Offences by authorities and Government departments.***—(1) *Where any offence under this Act has been committed—*

(a) by any department of Government, the head of the department; or

(b) by any authority, every person, who at the time the offence was committed, was directly in charge, of, and was responsible to, the authority for the conduct of the business of the authority as well as the authority; shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :

Provided that nothing contained in this sub-section shall render the head of the department, or any person referred to in Cl. (b), liable to any punishment if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence punishable under the Act has been committed by a department of Government or any authority referred to in Cl. (b) of sub-section (1) and it is proved that the offence has been committed with the consent or connivance of, or is attributable to any neglect on the part of any officer, other than the head of the department or in the case of any authority any person other than the persons referred to in Cl. (b) of sub-section (1), such officer or persons shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.]

4. Power to make rule.—*(1) The Central Government may, by notification in the Official Gazette, make rules for carrying out the provisions of this Act.*

(2) Every rule made under this Act shall be laid, as soon as may be, after it is made, before each House of Parliament, while it is in session, for a total period of thirty days which may be comprised in one session or in two or more successive sessions and if, before the expiry of the session immediately following the session or the successive sessions aforesaid, both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, the rule shall thereafter have effect only in such modified form or be of no effect, as the case may be; so, however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule.

5. Repeal and saving.—*(1) The Forest (Conservation) Ordinance, 1980, is hereby repealed.*

(2) Notwithstanding such repeal, anything done or any action taken under the provisions of the said Ordinance shall be deemed to have been done or taken under the corresponding provisions of this Act.

---

[1] Ins. by Act 69 of 1988, Sec. 3 (w.e.f. 15th March, 1989).

PART III-18

THE FOREST (CONSERVATION) RULES, 1981

G.S.R. 719, dated 20th July, 1981.[1]—In exercise of the powers conferred by sub-section (1) of Sec. 4 of the Forest (Conservation) Act, 1980 (69 of 1980), the Central Government hereby makes the following rules, namely :

*1. **Short title, extent and commencement.**—(1) These rules may be called the Forest (Conservation) Rules, 1981.*

(2) They shall extend to the whole of India except the State of Jammu and Kashmir.

(3) They shall come into force on the date of their publication in the official Gazette.

2. ***Definitions.**—In these rules unless the context otherwise requires,—*

(a) "Act" means the Forest (Conservation) Act, 1980 (69 of 1980);

(b) "Committee" means the Committee constituted under Sec. 3;

(c) "Chairman" means the Chairman of the Committee;

(d) "Member" means a member of the Committee;

(e) "Section" means a section of the Act.

[2][2-A. ***Composition of the Committee.**—(1) The Committee shall be composed of the following members :*

(i) Inspector-General of Forests, Ministry of Environment and Forests —Chairman

(ii) Additional Inspector-General of Forests, Ministry of Environment and Forests —Member

(iii) Joint Commissioner (Soil Conservation), Ministry of Agriculture —Member

(iv) Three Eminent Environment Scientists (non-officials) —Members

(v) Deputy Inspector-General of Forests (Forests Conservation), Ministry of Environment and Forests. —Member-Secretary

(2) Additional Inspector-General of Forests shall act as the Chairman in the absence of Inspector-General of Forests.

***2-B. Terms of appointment of non-official members.**—Terms of appointment of non-official members shall be as follows :*

(i) A non-official member shall hold his office for a period of two years.

(ii) A non-official member shall cease to hold office if he dies, resigns, becomes of unsound mind, becomes insolvent or is convicted by a court of law on a criminal offence involving moral tirpitude.

(iii) Any vacancy in the membership caused by any reason mentioned in

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*) dated 1st August, 1981.

[2] Ins. by G.S.R. 14, dated 28th December, 1987.

sub-rule (ii) shall be filled by the Government for the unexpired portion of 2 year's term.

(iv) Travelling and daily allowances shall be payable to the non-official members of the Committee at the highest rate admissible to the Government servants of Group A under the rules and orders made by the Central Government and for the time being in force :

Provided that the payment of travelling allowance and daily allowance to a member who is a member of the Parliament or a member of a State Legislature shall be regulated in accordance with the Salary, Allowance and Pension of Members of Parliament Act, 1954 or the respective provisions of law pertaining to the members of the concerned State Legislature.]

3. ***Conduct of business of the committee.***—[1][(1) *The Chairman shall call the meeting of the committee as often as necessary, but not less frequently than only in a month.]*

(2) The meetings of the committee shall normally be held at New Delhi, however, in a case where the Chairman is satisfied that inspection of site or sites of forest land proposed to be used for non-forest purposes would be necessary or expedient in connection with the consideration of the proposal or proposals received under sub-rule (1) of rule 4, he may direct that the meetings of the committee will be held at a place other than Delhi from where such inspection of site or sites can be undertaken conveniently.

(3) The Chairman shall preside over every meeting of the Committee at which he is present :

Provided that if the Chairman is absent from a meeting and it is not expedient to adjourn the meeting, the senior-most member of the committee shall preside over the meeting.

[1][*(4) Every question upon which the committee is required to advise shall be considered at its meeting provided that in urgent cases if the meeting of the committee cannot be convened within a month, the Chairman may direct that necessary papers may be sent to the members for their opinion by a stipulated date.]*

[2][*(5) The quorum for the meeting of the committee shall be three.]*

4. ***Procedure to make proposal by a State Government of to other authority.***— [3][*(1) Every State Government or other authority seeking the prior approval under Sec. 2 shall send its proposal to the Central Government in the Form appended to these rules :*

Provided that all proposals involving clearing of naturally grown trees in forest land or portion thereof for the purpose of using it for reforestation shall be sent in the form of Working Plan/Management Plan.

(2) Every proposal referred to in sub-rule (1) shall be sent to the following address, namely :

---

[1] Subs. by G.S.R. 14, dated 28th December, 1987.

[2] Ins. by *ibid.*

[3] Subs. by G.S.R. 563 (E), dated 21st May, 1992.

Secretary to the Government of India,
Ministry of Environment and Forests,
Paryavaran Bhavan, C.G.O. Complex,
Lodhi Road,
New Delhi-110003 :

Provided that all proposals involving forest land upto twenty hectares and proposals involving clearing of naturally grown trees in forest land or portion thereof for the purpose of using it for reafforestation shall be sent to the Chief Conservator of Forests/Conservator of Forests of the concerned Regional Office of the Ministry of Environment and Forests.]

5. *Committee to advise on proposals received by the Central Government.*—[1]*[(1) The Central Government shall refer every proposal received by it under sub-rule (1) of rule 4 to the Committee for its advice thereon if the area of the forest land involved is more than twenty hectares :*

Provided that all proposals involving forest land upto twenty hectares and proposals involving clearing of naturally grown trees in forest land or portion thereof for the purpose of using it for reforestation shall not be referred to the Committee for its advice.]

(2) The committee shall have due regard to all or any of the following matters while tendering its advice on the proposals referred to it under sub-rule (1), namely :

- *(a) Whether the forest land proposed to be used for non-forest purpose forms part of a nature reserve, national park, wild life sanctuary, biosphere reserve or forms part of the habitat of any endangered or threatened species of flora and fauna or of an area lying in severely eroded catchment;*
- *(b) Whether the use of any forest land is for agricultural purpose or for the rehabilitation of persons displaced from their residences by reasons of any river valley or hydro-electric project;*
- *(c) Whether the State Government or the other authority has certified that it has considered all other alternatives and that no other alternatives in the circumstances are feasible and that the required area is the minimum needed for the purpose; and*
- *(d) Whether the State Government or the other authority undertakes to provide at its cost for acquisition of land or an equivalent area and afforestation thereof;*

(3) While tendering the advice, the committee may also suggest any conditions or restrictions of the use of any forest land for any non-forest purpose which, in its opinion, would minimise adverse environmental impact.

6. Action of the Central Government on the advice of the Committee.—*The Central Government shall, after considering the advice of the committee tendered under rule 5 and after such further enquiry as it may consider necessary, grant approval to the proposal with or without conditions or reject the same.*

---

[1] Subs. by G.S.R. 563 (E), dated 21st May, 1992.

[1][Form

Form for seeking prior approval under Sec. 2 of the proposals by the State Governments and other authorities

(*See* rule 4)

1. Project details :

- (*i*) Short narrative of the proposal and project/scheme for which the forest land is required.
- (*ii*) Map showing the required forest area, boundary of adjoining forest and item-wise break-up of the required forest area for different purposes (to be authenticated by an officer not below the rank of Deputy Conservator of Forests)
- (*iii*) Total cost of the project
- (*iv*) Justification for locating the project in the forest area giving alternatives examined and reasons for their rejection
- (*v*) Financial and social benefits
- (*vi*) Total population benefited
- (*vii*) Employment generated

2. Location of the project/scheme :

- (*i*) State/Union Territory
- (*ii*) District
- (*iii*) Forest Division, Forest Block, compartment, etc

3. Item-wise break-up of the total land required for the project/scheme along with its existing land

4. Details of forest land involved :

- (*i*) Legal statutes of the forest (namely, reserve, projected/unclassed, etc.)
- (*ii*) Details of flora and fauna existing in the area.
- (*iii*) Density of vegetation.
- (*iv*) Species-wise and diameter class-wise abstract or trees.
- (*v*) Vulnerability of the forest area to erosion, whether it forms a part of seriously eroded area or not.
- (*vi*) Whether it forms a part of national park, wild-life sanctuary, nature reserve, biosphere reserve, etc; and if so, details of the area involved. (Specific comments of the Chief Wildlife Warden to be annexed).
- (*vii*) Item-wise break-up of the forest land required for the project/scheme for different purposes.
- (*viii*) Rare/endangered species of flora and fauna found in the area.
- (*ix*) Whether it is a habitat for migrating fauna or forms a breeding ground for them.
- (*x*) Any other significance of the area relevant to the proposal.

5. Details of displacement of people due to the project :

- (*i*) Total number of families involved in displacement.
- (*ii*) Number of Schedule Castes/Scheduled Tribes families involved in displacement.
- (*iii*) Detailed rehabilitation plan.

---

[1] Subs. by G.S.R. 563 (E), dated 21st May, 1992.

6. Details of compensatory afforestation scheme :

(*i*) Details of non-forest area/degraded forest area identified for compensatory afforestation, its distance from adjoining forests number of patches, size of each patch.

(*ii*) Map showing non-forest/degraded forest area identified for compensatory afforestation and adjoining forest boundaries.

(*iii*) Detailed compensatory afforestation scheme including species to be planted, implementing agency, time schedule, cost structure, etc.

(*iv*) Total financial outlays from compensatory afforestation scheme.

(*v*) Certificates from competent authority regarding suitability of area identified for compensatory afforestation and from management point of view (to be signed by an officer not below the rank of Deputy Conservator of Forests).

(*vi*) Certificate from the Chief Secretary regarding non-availability of the non-forest land for compensatory afforestation (if applicable).

7. Details regarding Transmission Lines (only for Transmission line proposals) :

(*i*) Total length of the Transmission Line.

(*ii*) Length passing through forest area.

(*iii*) Right of way.

(*iv*) Number of towers to be crected.

(*v*) Number of towers to be crected in forest-area.

(*vi*) Height of transmission towers.

8. Details of Irrigation/Hydel Projects (only for Irrigation/Hydel Projects) :

(*i*) Total catchment area.

(*ii*) total command area.

(*iii*) Full Reservoir Level.

(*iv*) High Flood Level.

(*v*) Minimum Drawal Level.

(*vi*) Break-up of area falling in catchment area of the project (Forest land, cultivated land, pasture land, human cultivation and others).

(*vii*) Area of Submergence of at High Flood Level.

(*viii*) Area of Submergence at Full Reservoir Level.

(*ix*) Area of Submergence at 2 metres below full Reservoir Level.

(*x*) Area of submergence at 4 metres below Full Reservoir Level (For medium and major projects only).

(*xi*) Area of submergence at Minimum Drawal Level.

(*xii*) Details catchment area treatment plan.

(*xiii*) Total financial outlays and details regarding availability of funds for Catchment area Treatment Plan.

9. Details regarding Road/Railway Lines (only for Roads/Railway lines proposals).

(*i*) Length and width of the strip... ....required and forest area required.

(*ii*) Total Length of the road.

(*iii*) Length of the road already constructed.

(*iv*) Length of the road passing through the forest.

10. Details regarding Mining proposals (only for mining proposals) :

(*i*) Total mining lease area and forest required

(*ii*) Period of mining lease proposed.

(*iii*) Estimated reserve of each mineral/ore in the forest area and in the non-forest area.

(*iv*) Annual estimated production of mineral/ore

(*v*) Nature of mining operations (opencast/underground).

(*vi*) Phased reclamation plan.

(*vii*) Gradient of the area where mining would be undertaken.

(*viii*) Copy of the Lease Deed (to be attached only for renewal purposes)

(*ix*) Number of labourers to be employed.

(*x*) Area of forest land required for—

(*a*) Mining,
(*b*) Storing mineral/ore
(*c*) Dumping of overburden
(*d*) Storing tolls and machinery
(*e*) Construction of building, power stations, workshops, etc
(*f*) Township/housing colony
(*g*) Construction of road-ropeway/railway lines
(*h*) Full land use plan of forest area required

(*xi*) Reasons why any of the activities referred to in (*a*) to (*h*) above under the project for which forest land has been asked for cannot be undertaken/located outside forest area.

(*xii*) The extent of damage likely to be caused and the number of trees affected on account of mining and related activities.

(*xiii*) Distance of the mining area from perennial water-courses, national and State highway, national parks, sanctuaries and biosphere reserves.

(*xiv*) Procedure for stocking of the topsoil for re-use.

(*xv*) Extent of subsidence expected underground mining operations and its impact on water, forest and other vegetation.

11. Cost benefit analysis.

12. Whether clearance from environmental angel is required (Yes/No).

If, years, whether, requisite details for the same have been furnished (Yes/No)

13. Whether any work in violation of the Act has been carried out (Yes/No)

If yes,

(*i*) Details of the same including date of commencement.

(*ii*) Officers responsible for violation of the Act.

(*iii*) Action taken/being taken against erring officers.

(*iv*) Whether work in violation of the Act is still in progress.

14. Any other information.

15. Details of certificates/Documents enclosed.

16. Detailed opinion of the Chief Conservator of Forests/Head of the Forest Department concerned covering the following aspects, namely :

(*i*) Out-turn of timber, fuelwood and other forest produce from the forest land involved,

(*ii*) Whether the district is self-sufficient in timber and fuelwood,

(*iii*) the effect of the proposal on

(*a*) fuelwood supply to rural population;

(*b*) economy and livelihood of the tribals and backward communities;

(iv) Specific recommendations of the Chief Conservator of Forest/Head of the Forest Department for acceptance or otherwise of the proposal with reasons thereof.

Certified that all other alternatives for the purpose have been explored and the demand for the required area the minimum demand for forest land.

Signature of the authorised officers
of the State Government/Authority.

N.B. (1) While furnishing details of flora and fauna, the species should be deserted by their scientific names.

N.B. (2) If the space provided above is not sufficient to specify any information please attach separate details/documents.]

PART III-19

THE WILD LIFE (PROTECTION) ACT, 1972

(ACT NO. 53 OF 1972)

[9th September, 1972]

An Act to provide for the protection of [1][wild animals, birds and plants] and for matters connected therewith or ancillary or incidental thereto.

[2][* * * *]

BE it enacted by Parliament in the Twenty-third year of Republic of India as follows :

CHAPTER I

PRELIMINARY

***1. Short title, extent and commencement.**—(1) This Act may be called the Wild Life (Protection) Act, 1972.*

[3][(2) It extends to the whole of India, except the State of Jammu and Kashmir.]

(3) It shall come into force[4] in a State of Union territory to which it

---

[1] Subs. by Act 44 of 1991, Sec. 2 (w.e.f. 2nd October, 1991).

[2] Preamble omitted by Act 44 of 1991, Sec. 3. (w.e.f. 2nd October, 1991).

[3] Subs. by Act 44 of 1991, Sec. 4 (*a*), (w.e.f. 2nd October, 1991).

[4] The Act has been made applicable in various States and Union Territories on the following dates as under :

  29. Uttar Pradesh, w.e.f. 1st February, 1973, *vide* G.S.R. 44 (E) dated 1st February, 1973.
  30. West Bengal, w.e.f. 1st May, 1973, *vide* G.S.R. 224 (E), dated 1st May, 1973.

extends,[1]*[* * *] on such date as the Central Government may, by notification, appoint, and different dates may be appointed for different provisions of this Act or for different States or Union territories.*

2. *Definitions.—In this Act, unless the context otherwise requires,—*

(1) "animal" includes amphibians, birds, mammals and reptiles and their young, and also includes, in the cases of birds and reptiles, their eggs;

(2) "animals article" means an article made from any captive animal or wild animal, other than vermin, and includes an article or object in which the whole or any part of such animal [2]*[has been used, and ivory imported into India and an article made therefrom];*

(3) [3]*[* * *];*

(4) "Board" means the Wild Life Advisory Board constituted under sub-section (1) of Sec. 6;

(5) "captive animal" means any animal, specified in Sch. I, Sch. II, Sch. III or Sch. IV, which is captured or kept or bred in captivity;

(6) [3]*[* * *];*

(7) "Chief Wild Life Warden" means the person appointed as such under Cl. (a) of sub-section (1) of Sec. 4;

[4]*[(7-A) "circus" means an establishment, whether stationary or mobile where animals are kept or used wholly or mainly for the purpose of performing tricks or manoeuvres;]*

(8) "closed area" means the area which is declared under sub-section (1) of Sec. 37 to be closed to hunting;

(9) "Collector" means the Chief Officer in charge of the revenue administration of a district;

(10) "commencement of this Act", in relation to—

- *(a) a State, means commencement of this Act in this State,*
- *(b) any provision of this Act, means the commencement of that provision in the concerned State;*

(11) "dealer" means any person who carries on the business of buying and selling any captive animal, animal article, trophy, uncured trophy, [5]*[meat or specified plant];*

(12) "Director" means the person appointed as Director of Wild Life Preservation under Cl. (a) of sub-section (1) of Sec. 3;

[4]*[(12-A) "Forest Officer" means the Forest Officer appointed under Cl. (2) of Sec. 2 of the Indian Forest Act, (16 of 1927)];*

(13) [6]*[* * *]*

---

1. Omitted by Act 44 of 1991, Sec. 4 (w.e.f. 2nd October, 1991).
2. Subs. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).
3. Omitted by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).
4. Ins. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).
5. Subs. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).
6. Omitted by Act 44 of 1991, Sec. 5 (w.e.f 2nd October,1991).

(14) "Government property" means any property referred to in Sec. 39 [1][or Sec. 17-H];

(15) "habitat" includes land, water or vegetation which is the natural home of any wild animal;

(16) "hunting" with its grammatical variations and cognate expressions, includes,—

- *(a) capturing, killing, poisoning, snaring and trapping of any wild animal and every attempt to do so,*
- *(b) driving any wild animal for any of the purposes specified in sub-clause (a),*
- *(c) injuring or destroying or taking any part of the body of any such animal or, in the case of wild birds or reptiles, damaging the eggs of such birds or reptiles, or disturbing the eggs or nests of such birds or reptiles;*

(17) "land" includes canals, creeks and other water channels, reservoirs, rivers, streams and lakes, whether artificial or natural, [2][marshes and wetlands and also includes boulders and rocks;]

(18) "licence" means a licence granted under this Act,

[1][(18-A) "live-stock" includes buffaloes, bulls, bullocks, camels, cows, donkeys, goats, horses, mules, pigs, sheep, yaks and also includes their young,]

(19) "manufacturer" means a manufacturer of animal articles;

(20) "meat" includes blood, bones, sinew, eggs, fat and flesh, whether raw or cooked, or any wild animal, other than vermin;

(21) "National Park" means an area declared, whether under Sec. 35 or Sec. 38, or deemed, under sub-section (3) of Sec. 66, to be declared, as a National Park;

(22) "notification" means a notification published in the Official Gazette;

(23) "permit" means a permit granted under this Act or any rule made thereunder;

(24) "person" includes a firm;

(25) "prescribed" means prescribed by rules made under this Act;

[3][(25-A) "recognised zoo" means a Zoo recognised under Sec. 38-H;

(25-B) "reserve forest" means the forest declared to be reserved by the State Government under Sec 20 of the Indian Forest Act, 1927 (16 of 1927);]

(26) "sanctuary" means an area declared, whether under Sec. [4][26-A] or Sec. 38, or deemed, under sub-section (3) of Sec. 66, to be declared, as wild life sanctuary;

---

1. Ins. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).
2. Subs. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).
3. Ins. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).
4. Subs. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).

[1][(27) "specified plant" means any plant specified in Sch. VI;]

(28) "special game" means any animal specified in Sch. II;

(29) "State Government", in relation to Union Territory, means the Administrator of that Union Territory appointed by the President under Art. 239 of the Constitution;

(30) "taxidermy", with its grammatical variations and cognate expressions, means the curing, preparation or preservation of trophies;

[2][(30-A "territorial waters" shall have the same meaning as in Sec. 3 of the Territorial Waters, Continental Shelf, Exclusive Economic Zone and Other Maritime Zones Act, 1976 (80 of 1976);]

(31) "trophy" means the whole or any part of any captive animal or wild animal, other than vermin, which has been kept or preserved by any means, whether artificial or natural, and includes—

(a) rugs, skins and specimens of such animal mounted in whole or in part through a process of taxidermy, and

(b) antler, horn, rhinoceros horn, hair, feather, nail, tooth, musk, eggs and nests;

(32) "uncured trophy" means the whole or any part of any captive animal or wild animal, other than vermin, which has not undergone a process of taxidermy, and includes a [3][freshly killed wild animal, ambergris, musk and other animal products;]

(33) "vehicle" means any conveyance used for movement on land, water or air and includes buffalo, bull, bullock, camel, donkey, elephant, horse and mule;

(34) "vermin" means any wild animal specified in Sch. V;

(35) "weapon" includes ammunition, bows and arrows, explosives, fire arms, hooks, knives, nets, poison, snares and traps and any instrument or apparatus capable of anaesthetizing, decoying, destroying, injuring or killing an animal;

(36) "wild animal" means any animal found wild in nature and includes any animal specified in Sch. I, Sch. II, Sch. III, Sch. IV or Sch. V, wherever found;

(37) "wild life" includes any animal, bees, butterflies, crustacea, fish and moths; and aquatic or land vegetation which forms part of any habitat;

(38) "Wild Life Warden" means the person appointed as such under Cl. (b) of sub-section (1) of Sec. 4;

[4][(39) "zoo" means an establishment, whether stationary or mobile, where captive animals are kept for exhibition to the public but does not include a circus and an establishment of a licensed dealer in captive animals.]

3. Subs. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).
4. Subs. by Act 44 of 1991, Sec. 5 (w.e.f. 2nd October, 1991).

CHAPTER II

AUTHORITIES TO BE APPOINTED OR CONSTITUTED UNDER THE ACT

3. ***Appointment of Director and other officer.***—*(1) The Central Government may, for the purposes of this Act, appoint,—*

(a) a Director of Wild Life Preservation;

(b) Assistant Director of Wild Life Preservation; and

(c) such other officers and employees as may be necessary.

(2) In the performance of his duties and exercise of his powers by or under this Act, the Director shall be subject to such general or special directions, as the Central Government may, from time to time, give.

(3) The Assistant Director of Wild Life Preservation and other officers and employees appointed under this section shall be subordinate to the Director.

4. ***Appointment of Chief Wild Life Warden and other officers.***—*(1) The State Government may, for the purposes of this Act, appoint,—*

(a) a Chief Wild Life Warden;

(b) Wild Life Wardens; [1][***]

[2]*[(bb) one Honorary Wild Life Warden in each district; and]*

(c) such other officers and employees as may be necessary.

(2) In the performance of his duties and exercise of his powers by or under this Act, the Chief Wild Life Warden shall be subject to such general or special directions, as the State Government may, from time to time, give.

(3) [3]*[The Wild Life Warden, the Honorary Wild Life Warden] and other officers and employees appointed under this section shall be subordinate to the Chief Wild Life Warden.*

5. ***Power to delegate.***—*(1) The Director may, with the previous approval of the Central Government, by order in writing, delegate all or any of his powers and duties under this Act to any officer subordinate to him subject to such conditions, if any, as may be specified in the order.*

(2) The Chief Wild Life Warden may, with the previous approval of the State Government, by order in writing, delegate all or any of his powers and duties under this Act, except those under Cl. (a) of sub-section (1) of Sec. 11, to any officer subordinate to him subject to such conditions, if any, as may be specified in the order.

(3) Subject to any general or special direction given or condition imposed by the Director or the Chief Wild Life Warden any person, authorised by the Director or the Chief Wild Life Warden to exercise any powers, may exercise those powers in the same manner and to the same effect as if they had been conferred on that person directly by this Act and not by way of delegation.

---

1. Omitted by Act 44 of 1991, Sec. 6 (w.e.f. 2nd October, 1991).
2. Ins. by Act 44 of 1991, Sec. 6 (w.e.f. 2nd October, 1991).
3. Subs. by Act 44 of 1991,Sec. 6 (w.e.f. 2nd October, 1991).

6. Constitution of Wild Life Advisory Board.—*(1) The State Government, or in case of a Union Territory, the Administrator, shall, as soon as may be after the commencement of this Act, constitute a Wild Life Advisory Board consisting of the following members, namely :*

(a) the Minister in charge of forests in the State or Union Territory, or, if there is no such Minister, the Chief Secretary to the State Government, or, as the case may be, the Chief Secretary to the Government or the Union Territory, who shall be the Chairman;

(b) two members of the State Legislature or, in the case of a Union Territory having a Legislature, two members of the Legislature of the Union Territory, as the case may be;

(c) Secretary to the State Government, or the Government of the Union Territory, in charge of forests;

[1]*[(d) the Forest Officer in charge of the State Forest Department, by whatever designation called, ex officio;]*

(e) an officer to be nominated by the Director;

(f) Chief Wild Life Warden, ex officio;

[1]*[(g) officers of the State Government not exceeding five;*

(h) such other persons, not exceeding ten, who, in the opinion of the State Government, are interested in the protection of wild life, including the representative of tribals not exceeding three.]

[2]*[(1-A) The State Government may appoint a Vice-Chairman of the Board from amongst the members referred to in Cls. (b) and (h) of sub-section (1)];*

(2) The State Government shall appoint [1]*[the Forest Officer in charge of the State Forest Department;] or Chief Wild Life Warden as the secretary of the Board.*

(3) The term of office of the members of the Board referred to in Cl. (g) of sub-section (1) and the manner of filling vacancies among them shall be such as may be prescribed.

(4) The members shall be entitled to receive such allowances in respect of expenses incurred in the performance of their duties as the State Government may prescribe.

7. Procedure to be followed by the Board.—*(1) The Board shall meet at least twice a year at such places the State Government may direct.*

(2) The Board shall regulate its own procedure (including the quorum).

(3) No act or proceeding of the Board shall be invalid merely by reason of the existence of any vacancy therein or any defect in the constitution thereof or any irregularity in the procedure of the Board affecting the merits of the case.

8. Duties of Wild Life Advisory Board.—*It shall be the duty of the Wild Life Advisory Board to advise the State Government,—*

(a) in the selection of areas to be declared as sanctuaries, National Parks, [3]*[* * *] and closed areas and the administration thereof;*

---

[1] Subs. by Act 44 of 1991, Sec. 7 (w.e.f. 2nd October, 1991).

[2] Ins. by Act 44 of 1991, Sec. 7 (w.e.f. 2nd October, 1991).

[3] Omitted by Act 44 of 1991, Sec. 8 (w.e.f 2nd October, 1991).

[1][(b) *in formulation of the policy for protection and conservation of the wild life and specified plants;]*

(c) *in any matter relating to any Schedule;*

[2][(cc) *in relation to the measures to be taken for harmonising the needs of the tribals and other dwellers of the forest with the protection and conservation of wild life; and]*

(d) *which may be referred to it by the State Government.*

CHAPTER III

HUNTING OF WILD ANIMALS

[3][9. ***Prohibition of hunting.***—*No person shall hunt any wild animal specified in Schs. I, II, III and IV except as provided under Sec. 11 and Sec 12.]*

10. [4][* * *]

11. ***Hunting of wild animals to be permitted in certain cases.***— *(1) Notwithstanding anything contained in any other law for the time being in force and subject to the provisions of Chapter IV,—*

(a) *the Chief Wild Life Warden may, if he is satisfied that any wild animal specified in Sch. I has become dangerous to human life or is so disabled or diseased as to be beyond recovery, by order in writing and stating the reasons therefor, permit any person to hunt such animal or cause such animal to be hunted;*

(b) *the Chief Wild Life Warden or the authorised officer may, if he is satisfied that any wild animal specified in Sch II, Sch, III, or Sch IV, has become dangerous to human life or to property (including standing crops on any land) or is so disabled or diseased as to be beyond recovery, by order in writing and stating the reasons therefor, permit any person to hunt such animal or cause such animal to be hunted.*

(2) The killing or wounding in good faith of any wild animal in defence of oneself or of any other person shall not be an offence:

Provided that nothing in this sub-section shall exonerate any person who, when such defence becomes necessary, was committing any act in contravention of any provision of this Act or any rule or order made thereunder.

(3) Any wild animal killed or wounded in defence of any person shall be Government property.

Comment

The Magistrate his jurisdiction to deal with the question relating to the release of the vehicle involved in the commission of the offence.— Admittedly, the appellant was charged with the commission of alleged offence under Wild Life (Protection) Act, 1972. Admittedly also, Sec. 59 (*A*) as introduced in the Indian Forest Act, 1927 by the West Bengal Amendment Act, 1988 did not have any applicability with the facts of the present case because of two reasons :

---

1. Subs. by Act 44 of 1991, Sec. 8 (w.e.f. 2nd October, 1991).
2. Ins. by Act 44 of 1991, Sec. 8 (w.e.f. 2nd October, 1991).
3. Subs. by Act 44 of 1941, Sec. 9 (w.e.f. 2nd October, 1991).
4. Omitted by Act 44 of 1991, Sec. 10 (w.e.f. 2nd October, 1991).

First, this section deals with the commission of a forest offence. Forest offence has been defined in Sec. 2 (3) of the Indian Forest Act to mean an offence punishable under that Act or the Rules made thereunder. There is no doubt that the appellant was not charged with the commission of the forest offence because the allegation against him comes under the Wild Life (Protection) Act, 1972.

Secondly, and more importantly, Secs. 59 (*A*), 59 (*B*) and 59 (*C*) as introduced in the Indian Forest Act, 1927 by the West Bengal Amendment Act, 1988 deal with the confiscation of the property including the vehicle. In the present case the vehicle was not at all confiscated. It was only seized in terms of Sec. 50 (C) of the Wild Life (Protection) Act, 1972.

His Lordship held that the Magistrate had the jurisdiction to deal with the question relating to the release of the vehicle allegedly involved in the commission of the offence.[1]

12. Grant of permit for special purpose.—*Notwithstanding anything contained elsewhere in this Act, it shall be lawful for the Chief Wild Life Warden, to grant, [2][* * *] a permit, by an order in writing stating the reasons therefor, to any person, on payment of such fee as may be prescribed, which shall entitle the holder of such permit to hunt, subject to such conditions as may be specified therein, any wild animal, specified in such permit, for the purpose of,—*

(a) education;

[3][(b) scientific research;

(bb) scientific management;

Explanation.—For the purposes of Cl. (bb), the expression "scientific management" means—

(i) translocation of any wild animals to an alternative suitable habitat; or

(ii) population management of wild life, without killing or poisoning or destroying any wild animals;] or

[4][(c) collection of specimens—(i) for recognised zoos subject to the permission under Sec. 38-I; or

(ii) for museums and similar institutions;

(d) derivation, collection or preparation of snake-venom for the manufacture of life-saving drugs :]

[5][Provided that no such permit shall be granted—

(a) in respect of any wild animal specified in Sch. I, except with the previous permission of the Central Government, and

(b) in respect of any other wild animal, except with the previous permission of the State Government.]

[2][CHAPTER III-A

PROTECTION OF SPECIFIED PLANTS

17-A. ***Prohibition of picking, uprooting, etc. of specified plants.****—Save as otherwise provided in this Chapter, no person shall,—*

(a) wilfully pick, uproot, damage, destroy, acquire or collect any specified plant from any forest land and any area specified, by notification, by the Central Government;

(b) possess, sell, offer for sale, or transfer by way of gift or otherwise, or transport any specified plant, whether alive or dead, or part or derivative thereof :

Provided that nothing in this section shall prevent a member of a Scheduled Tribe, subject to the provisions of Chapter IV, from picking, collecting or possessing in the district he resides any specified plant or part or derivative thereof for his bona fide personal use.

17-B. ***Grant of permit for special purposes.****—The Chief Wild Life Warden may with the pervious permission of the State Government, grant to any person a permit to pick, uproot, acquire or collect from a forest land or the area specified under Sec. 17-A or transport, subject to such conditions as may be specified therein, any specified plant for the purpose of—*

(a) education;

(b) scientific research;

(c) collection, preservation and display in a herbarium of any scientific institution; or

(d) propagation by a person or an institution approved by the Central Government in this regard.

17-C. ***Cultivation of specified plants without licence prohibited.****—(1) No person shall cultivate a specified plant except under, and in accordance with a licence granted by the Chief Wild Life Warden or any other officer authorised by the State Government in this behalf :*

Provided that nothing in this section shall prevent a person, who, immediately before the commencement of the Wild Life (Protection) Amendment Act, 1991, was cultivating a specified plant, from carrying on such cultivation for a period of six months from such commencement, or where he has made an application within that period for the grant of a licence to him, until, the licence is granted to him, or he is informed in writing that a licence be granted to him.

(2) Every licence granted under this section shall specify the area in which and the conditions, if any, subject to which the licensee shall cultivate a specified plant.

17-D. ***Dealing in specified plants without licence prohibited.****—(1) No person shall, except under and in accordance with a licence granted by the Chief Wild Life Warden or any other officer authorized by the State Government in this behalf, commence or carry on business or occupation as a dealer in a specified plant or part or derivative thereof :*

---

[1] Omitted by Act 44 of 1991, Sec. 12 (w.e.f. 2nd October, 1991).

[2] Ins. by Act 44 of 1991, Sec. 13 (w.e.f. 2nd October, 1991).

Provided that nothing in this section shall prevent a person, who, immediately before the commencement of the Wild Life (Protection) Amendment, Act, 1991, was carrying on such business or occupation, from carrying on such business or occupation for a period of sixty days from such commencement, or where he has made an application within that period for the grant of licence to him, until the licence is granted to him or he is informed in writing that a licence cannot be granted to him.

(2) Every licence granted under this section shall specify the premises in which and the conditions, if any, subject to which the licensee shall carry on his business.

17-E. Declaration of stock.—*(1) Every person cultivating, or dealing in, a specified plant or part or derivative thereof shall, within thirty days from the date of commencement of the Wild Life (Protection) Amendment Act, 1991, declare to the Chief Wild Life Warden or any other officer authorised by the State government in this behalf, his stocks of such plants and part or derivative thereof, as the case may be, on the date of such commencement.*

(2) The provisions of sub-section (3) to (8) (both inclusive) of Secs. 44, 45, 46 and 47 shall, as far as may be, apply in relation to an application and a licence referred to in Secs. 17-C and 17-D as they apply in relation to the licence or business in animals or animal articles.

17-F. Possession, etc., of plants by licence.—*No licensee under this Chapter shall,—*

(a) keep in his control, custody or possession—

(i) any specified plant, or part or derivative thereof in respect of which a declaration under the provisions of Sec. 17-E has to be made, but has not been made;

(ii) any specified plant, or part or derivative thereof which has not been lawfully acquired under the provisions of this Act or any rule, or order made thereunder;

(b) (i) pick, uproot, collect or acquire any specified plant, or

(ii) acquire, receive, keep in his control, custody or possession, or sell, offer for sale or transport, any specified plant or part or derivative thereof,

except in accordance with the conditions subject to which the licence has been granted and such rules as may be made under this Act.

17-G. Purchase, etc., of specified plants.—*No person shall purchase, receive or acquire any specified plant or derivative thereof otherwise than from a licensed dealer :*

Provided that nothing in this section shall apply to any person referred to in Sec. 17-B.

17-H. Plants to be Government property.—*(1) Every specified plant or part or derivative thereof, in respect of which any offence against this Act or any rule or order made thereunder has been committed, shall be the property of the State Government, and, where such plant or part or derivative thereof has been collected or* *acquired from a sanctuary or National Park declared by the Central Government, such plant or part or derivative thereof shall be the property of the Central Government.*

(2) The provisions of sub-sections (2) and (3) of Sec. 39 shall, as far as may be, apply in relation to the specified plant or part or derivative thereof or they apply in relation to wild animals and articles referred to in sub-section (1) of that section.]

CHAPTER IV

SANCTUARIES, NATIONAL PARKS, [1][* * *] AND CLOSED AREAS

Sanctuaries

18. *Declaration of sanctuary.*—[2]*[(1) The State Government may, by notification, declare its intention to constitute any area other than an area comprised within any reserve forest or the territorial waters as a sanctuary if it considers that such area is of adequate ecological, faunal, floral, geomorphological, natural or zoological significance, for the purpose of protecting, propagating or developing wild life or its environment.]*

(2) The notification referred to in sub-section (1) shall specify, as nearly as possible, the situation and limits of such area.

Explanation.—For the purposes of this section, it shall be sufficient to describe the area by roads, rivers, ridges or other well-known or readily intelligible boundaries.

Comment

Sanctuary-Declaration of.—On examination of the scheme of the Act, it appears that the statute does not envisage lodging of any objection by any person in the declaration of sanctuary. There is no scope for the Court to go into the justification of any declaration of any area to be included in the sanctuary, provided it satisfies the test of Sec. 18 (1) of the Act. Section 18 of the Act empowers the State Government to declare any area to be a sanctuary, if it is considered that such area is of adequate ecological, faunal, floral, geomorphological, natural or zoological significance for the purpose of protecting, propagating or developing wild life or its environment. Once these tests are satisfied, the grievance of a person having right over any such property included in sanctuary in limited to the determination of his rights as envisaged in Sec. 19 read with Sec. 21 (*b*) followed by Secs. 24 and 25 of the said Act. Section 19 vests in the Collector the power of enquiry and determination of the existence, nature and extent of the right of a person. Such right is to be decided on the lodging of a claim under Sec. 21 (*b*) of the Act. Section. 21 requires a proclamation to be published through notification : (*a*) Specifying the limits of the sanctuary; and (*b*) lodging of claim in prescribed forms within two months. The claim meant in Sec. 21 (*b*) is to be understood from the extent of claim mentioned therein. The legislative intent can be gathered from the expression used, which is clear and unambiguous and does not leave any scope for any other kind of interpretation. The claim is confined in "specifying the nature and extent of the right .... and the amount and particulars of compensation"...................... This expression does not permit of any other claim or objection within scope thereof.

---

1. The words "Game Reserves" omitted by Act 44 of 1991, Sec. 14 (w.e.f. 2nd October, 1991).
2. Subs. by Act 44 of 1991, Sec. 15 (w.e.f. 2nd October, 1991).

In case, the claim of the petitioner is decided earlier in that event, a copy of the said order may be served on the petitioner. In case it is not decided, it may be decided in term of Secs. 22 and 32 of the said Act, within a period of two months from the date a certified copy of this order is produced before the concerned respondent. Thereafter, the concerned respondent shall proceed in terms of Sec. 24 or Sec. 25 of the said Act, as he may deem fit.[1]

19. ***Collector to determine rights.***—*[2][When a notification has been issued under Sec. 18], the Collector shall inquire into, and determine the existence, nature and extent of the rights of any person in or over the land comprised within the limits of the sanctuary.*

20. ***Bar of accrual of rights.***—*After the issue of a notification under Sec. 18, no right shall be acquired in, on or over the land comprised with in the limits of the area specified in such notification, except by succession, testamentary or intestate.*

Comment

Lease regarding national park would be void.—In the instent case, it cannot be seriously disputed that the State Government has assigned a portion of the forest land by way of lease or otherwise thereby creating a right in the properties in question which forms a part of the "national park"-cum"reserve forest" in favour of the fifth respondent, which is a private company, without seeking prior approval of the Central Government. There is an absolute prohibition on the grant of such rights under Sec. 20 read with Sec. 35 (3) of the Wildlife (Protection) Act, 1972. As such the grant of lease in question is void and cannot be acted upon by the fifth respondent. Further the transaction is also hit by Sec. 2 of the Forest Conservation Act, for want of prior approval of the Central Government.[3]

21. ***Proclamation by Collector.***—*When a notification has been issued under Sec. 18, the Collector shall publish in the regional language in every town and village in or in the neighbourhood of the area comprised therein, a proclamation—*

- *(a) specifying, as nearly as possible, the situation and the limits of the sanctuary; and*
- *(b) requiring any person, claiming any right mentioned in Sec. 19, to prefer before the Collector, within two months from the date of such proclamation, a written claim in the prescribed form specifying the nature and extent of such right with necessary details and the amount and particulars of the compensation, if any, claimed in respect thereof.*

Comment

Proclamation to be published through notification.—Section 21 requires a proclamation to be published through notification (*a*) specifying the limits of the sanctuary and (*b*) lodging of claim in prescribed forms within two months. The claim meant in Sec. 21 (*b*) is to be understood from the extent of claim mentioned therein. The legislative intent can be gathered from the expression used which is clear and unambiguous and does not leave any scope for any other kind of interpretation. The claim is confined in "specifying the nature and extent of the right ...... and the amount and particulars of compensation" .... This expression does not permit of any other claim or objection within scope thereof.[1]

[2] Subs. by Act 44 of 1991, Sec. 16 (w.e.f. 2nd October, 1991).

[3] **Magarahole Budakattu Hakku Sthapana Samithi *v.* State of Karnataka, A.I.R. 1997 Kant. 288 at p. 294.**

22. ***Inquiry by Collector.***—*The Collector shall, after service of the prescribed notice upon the claimant, expeditiously inquire into—*

(a) the claim preferred before him under Cl. (b) of Sec. 21, and

(b) the existence of any right mentioned in Sec. 19 and not claimed under Cl. (b) of Sec. 21,

so far as the same may be ascertainable from the records of the State Government, and the evidence of any person acquainted with the same.

Comment

Collector may reject or admit the claim.—After the claim is lodged the Collector, after serving notice upon the claimant, shall enquire the claim preferred as well as those not preferred in terms of Sec. 22 with the aid of Sec. 23. After such enquiry the Collector under Sec. 24 (1) may reject or admit the claim in whole or part and then either to exclude the land from the limits of sanctuary or to proceed to acquire in exercise of the power conferred on him under Sec. 24 (2). The procedure for acquisition is prescribed in Sec. 25. It is for the Collector to decide as to which course he will adopt viz. either to exclude or to acquire. From the pleadings of this case this stage does not appear to have been reached.[2]

23. ***Powers of Collector.***—*For the purpose of such inquiry, the Collector may exercise the following powers, namely—*

(a) the power to enter in or upon any land and to survey, demarcate and make a map of the same or to authorise any other officer to do so;

(b) the same powers as are vested in a Civil Court for the trial of suits.

24. *Acquisition of rights.—(1) In the case of a claim to a right in or over any land referred to in Sec. 19, the Collector shall pass an order admitting or rejecting the same in whole or in part.*

(2) If such claim is admitted in whole or in part, the Collector may either—

(a) exclude such land from the limits of the proposed sanctuary, or

(b) proceed to acquire such land or rights, except where by an agreement between the owner of such land or holder of rights and the Government the owner or holder of such rights has agreed to surrender his rights to the Government, in or over such land, and on payment of such compensation, as is provided in the Land Acquisition Act, 1894 (1 of 1894).

[3]*[(c) allow, in consultation with the Chief Wild Life Warden, the continuance of any right of any person in, or over any land within the limits of the sanctuary.]*

[3] Ins. by Act 44 of 1991, Sec. 17 (w.e.f. 2nd October, 1991).

Comment

Management of property is not a claim which is permissible.—The claim that the petitioner, being the owner, is entitled to the management of the property is not a claim which is permissible to be claimed unless it is excluded under Sec. 24 (2) (*b*). Our above interpretation finds supports from Sec. 27 which imposes restriction on entry to sanctuary to every person other than (*a*) public servant (*b*) a person permitted by the Chief Wild Life Warden or the Officer authorised tc reside inside the sancturary (*c*) a person having right over immovable properties inside the sanctuary. The right exempted from restriction of Sec. 27 can arise only when either such property though situated within the sanctuary but is not included in the declaration or by reason of its exclusion after declaration in terms of Sec. 24 (2) (*a*). Therefore, the claim of management is dependent in this case on the decision of the Collector while exercising power under Sec. 24.[1]

*25. **Acquisition proceedings.**—(1) For the purpose of acquiring such land, or rights in or over such land,—*

(a) the Collector shall be deemed to be a Collector, proceeding under the Land Acquisition Act, 1894 (1 of 1894);

(b) the claimant shall be deemed to be a person interested and appearing before him in pursuance of a notice given under Sec. 9 of that Act;

(c) the provisions of the sections, preceding Sec. 9 of that Act, shall be deemed to have been complied with;

(d) where the claimant does not accept the award made in his favour in the matter of compensation, he shall be deemed, within the meaning of Sec. 18 of that Act, to be a person interested who has not accepted the award, and shall be entitled to proceed to claim relief against the award under the provisions of Part III of that Act;

(e) the Collector, with the consent of the claimant, or the Court, with the consent of both the parties, may award compensation in land or money or partly in land and partly in money; and

(f) in the case of the stoppage of a public way or a common pasture, the Collector may, with the previous sanction of the State Government, provide for a alternative public way or common pasture, as far as may be practicable or convenient.

(2) The acquisition under this Act of any land or interest therein shall be deemed to be acquisition for a public purpose.

*26. **Delegation of Collector's powers.**—The State Government may, by general or special order, direct that the powers exercisable or the functions to be performed by the Collector under Secs. 19 to 25 (both inclusive) may be exercised and performed by such other officer as may be specified in the order.*

[2][*26-A. **Declaration of area as sanctuary.**—(1) When,—*

(a) a notification has been issued under Sec. 18 and the period for preferring claims has elapsed, and all claims, if any, made in relation to any land in an area intended to be declared as sanctuary, have been disposed of by the State Government; or

[2] Ins. by Act 44 of 1991, Sec. 18 (w.e.f. 2nd October, 1991).

(b) any area comprised within any reserve forest or any part of the territorial waters, which is considered by the State Government to be of adequate ecological, faunal, floral, geomorphological, natural or zoological significance for the purpose of protecting, propagating or developing wild life or its environment, is to be included in a sanctuary, the State Government shall issue a notification specifying the limits of that area which shall be comprised within the sanctuary and declare that the said area shall be a sanctuary on and from such date as may be specified in the notification :

Provided that where any part of the territorial waters is to be so included, prior concurrence of the Central Government shall be obtained by the State Government :

Provided further that the limits of the area of the territorial waters to be included in the sanctuary shall be determined in consultation with the Chief Naval Hydrographer of the Central Government and after taking adequate measures to protect the occupational interests of the local fishermen.

(2) Notwithstanding anything contained in sub-section (1), the right of innocent passage of any vessel or boat through the territorial water shall not be affected by the notification issued under sub-section (1).

(3) No alteration of the boundaries of sanctuary shall be made except on a resolution passed by the Legislature of the State.]

Comment

Declaring definite boundaries of sanctuary within specified time.— Collector directed to proceed with further action in persuance of the Notification issued under Sec. 18 and proclamation under Sec. 21 of the Act and pass final notification under Sec. 26-A declaring the Sancuary with the definite boundaries within period of 6 months from the date of reciept of copy of this order.[1]

*27. **Restriction on entry in sanctuary.**—(1) No person other than,—*

(a) a public servant on duty;

(b) a person who has been permitted by the Chief Wild Life Warden or the authorised officer to reside within the limits of the sanctuary;

(c) a person who has any right over immovable property within the limits of the sanctuary;

(d) a person passing through the sanctuary along a public highway; and

(e) the dependents of the person referred to in Cl. (a), Cl (b) or Cl (c), shall enter or reside in the sanctuary, except under and in accordance with the conditions of a permit granted under Sec. 28.

(2) Every person shall, so long as he resides in the sanctuary, be bound—

(a) to prevent the commission, in the sanctuary, of an offence against this Act;

(b) where there is reason to believe that any such offence against this Act has been committed, in such sanctuary, to help in discovering and arresting the offender;

(c) *to report the death of any wild animal and to safeguard its remains until the Chief Wild Life Warden or the authorised officer takes charge thereof;*

(d) *to extinguish any fire in such sanctuary of which he has knowledge or information and to prevent from spreading, by any lawful means in his power, any fire within the vicinity of such sanctuary of which he has knowledge or information; and*

(e) *to assist any forest officer, Chief Wild Life Warden, Wild Life Warden or police officer demanding his aid for preventing the commission of any offence against this Act or in the investigation of any such offence.*

[1][(3) *No person shall, with intent to cause damage to any boundary-mark of a sanctuary or to cause wrongful gain as defined in the Indian Penal Code (45 of 1860), alter, destroy, move or deface such boundary-mark.*

(4) *No person shall tease or molest any wild animal or litter the grounds of sanctuary.]*

28. ***Grant of permit.***—*(1) The Chief Wild Life Warden may, on application, grant to any person a permit to enter or reside in a sanctuary for all or any of the following purposes, namely :*

(a) *investigation or study of wild life and purposes ancillary or incidental thereto;*

(b) *photography;*

(c) *scientific research;*

(d) *tourism;*

(e) *transaction of lawful business with any person residing in the sanctuary.*

(2) *A permit to enter or reside in a sanctuary shall be issued subject to such conditions and on payment of such fee as may be prescribed.*

[2][29. ***Destruction, etc., in a sanctuary prohibited without a permit.***—*No person shall destroy, exploit or remove any wild life from a sanctuary or destroy or damage the habitat of any wild animal or deprive any wild animal of its habitat within such sanctuary except under and in accordance with a permit granted by the Chief Wild Life Warden and no such permit shall be granted unless the State Government, being satisfied that such destruction, exploitation or removal of wild life from the sanctuary is necessary for the improvement and better management of wild life therein, authorises the issued of such permit.*

Explanation.—For the purposes of this section, grazing or movement of live-stock permitted under Cl. (d) of Sec. 33 shall not be deemed to be an act prohibited under this section.]

Comment

For grant of permission for laying of pipeline in marine National Park /Sanctury by Chief Wild Life Warden.—Courts opinion when the conditions which the Central Government has put while granting clearance under the Environment Act on September 15, 1995 as well as the conditions in the letter of July 31, 1997 are read together, then it would be quite clear that the Central Government had taken necessary precaution to see that there is protection and betterment of wildlife and ecology and the respondent No. 2 has also granted permission in question to respondent No. 4 with conditions which would show that the order in question is passed bearing in mind the provisions of the said Act.[1]

[1] Ins. by Act 44 of 1991, Sec. 19 (w.e.f. 2nd October, 1991).

[2] Subs. by Act 44 of 1991, Sec. 20 (w.e.f. 2nd October, 1991).

30. ***Causing fire prohibited.***—*No person shall set fire to a sanctuary, or kindle any fire, or leave any fire burning, in a sanctuary, in such manner as to endanger such sanctuary.*

31. ***Prohibition of entry into sanctuary with weapon.***—*No person shall enter a sanctuary with any weapon except with the previous permission in writing of the Chief Wild Life Warden or the authorised officer.*

32. ***Ban on use of injurious substances.***—*No person shall use, in a sanctuary, chemicals, explosives or any other substances which may cause injury to, or endanger, any wild life in such sanctuary.*

33. ***Control of sanctuaries.***—*The Chief Wild Life Warden shall be the authority who shall control, manage and maintain all sanctuaries and for that purpose, within the limits of any sanctuary,—*

(a) *may construct such roads, bridges, buildings, fences or barrier gates, and carry out such othr works as he may consider necessary for the purposes of such sanctuary;*

(b) *shall take such steps as will ensure the security of wild animals in the sanctuary and the preservation of the sanctuary and wild animals therein;*

(c) *may take such measures, in the interests of wild life, as he may consider necessary for the improvement of any habitat;*

(d) *may regulate, control or prohibit, in keeping with the interests of wild life, as he may consider necessary for the improvement of* [2]*[live stock];*

(e) [3]*[* * *]*

[4]*[33-A.* ***Immunisation of live-stock.***—*(1) The Chief Wild Life Warden shall take such measures in such manner, as may be prescribed, for immunisation against communicable diseases of the live-stock kept in or within five kilometres of a sanctuary.*

(2) No person shall take, or cause to be taken or grazed, any live-stock in a sanctuary without getting it immunised.]

Comment

Directions to establish veterinary centres.—In the instant case Court have perused the affidavits that have been filed by the various State Governments/Union Territories Administration. As regards compliance with the requirements of Sec. 33-A regarding the immunisation of live-stock the Court finds that no concrete steps have been taken in most of the States/ Union territories. What is required is that the immediate vicinity of each National Park/Sanctuary there should be veterinary centre of the Animal Husbandry Department which should undertake the immunisation of livestock that are being taken into the National Park/Sanctuary for the purpose of grazing etc. The States/Union Territories are, therefore, directed to take concrete steps for the establishment of such centres the immediate vicinity of the National Park/Sanctuary within their territory within a period of two months so that the requirement of immunisation in accordance with the requrements of Sec. 33-A can be fulfilled.[1]

SYNOPSIS

1. An area constituted as a National Park—Purpose of ... 934
2. Additional directions for proper implementation of the licence conditions ... 934
3. No final notification—Government allowed villagers to enter Sanctuary or National Park ... 935
4. Biological and ecological ecology ... 936

1. An area constituted as a National Park—Purpose of.—A conjoined reading of Section 20 and 35 (3) of the Act spells out a restriction on acquisition of any right in, on or over the land comprised within the limits of the area of a National Part except by succession, testamentary or intestate. Therefore, it seems obvious that on and after the date of declaration by the State Government of its intention to declare an area as a National Park under Sec. 35 (1), no one can acquire any right in, on or over the land comprised therein, either by way of a transfer within the meaning of Transfer of Property Act, 1882 or by easement or licensee as understood under the Easements Act, 1882.[3]

2. Additional directions for proper implementation of the licence conditions.—While every attempt must be made to preserve the fragile ecology of the forest area, and protect the Tiger Reserve, the right of the tribals formerly living in the area to keep body and soul together must also receive proper consideration. Undoubtedly, every effort should be made to ensure that the tribals, when resettled, are in a position to earn their livelihood. In the present case, it would have been far more desirable, had the tribals been provided with other suitable fishing areas outside the National Park or had been given land for cultivation. Totaladoh dam where fishing is permitted is in the heart of the National Park area. There are other parts of the National Park. We are not in a position to say whether these outlying parts of the reservoir are accessible or whether they are suitable for fishing, in the absence of any material being placed before us by the State of Madhya Pradesh or by the petitioner. Some attempts, however seem to have been made by the State of Madhya Pradesh to contain the damage by imposing conditions on these fishing permits.

---

[1] Subs. by Act 44 of 1991, Sec. 23 (c) (w.e.f. 2nd October, 1991).

[2] Subs. by Act 44 of 1991, Sec. 23 (*d*) (w.e.f. 2nd October, 1991).

[3] **Nagarahole Budakattu Hakku Sthapana Samithi, Virajpet Coorg *v.* State of Karnataka, 1997 (3) Kant. L.J. 279 at p. 289.**

We, therefore, find it necessary to clear some doubt and give some additional directions for properly implementing the licence conditions. We direct that :

(1) Only the persons named in Annexure RXVI to the affidavit of respondent No. 2 shall be given individual permits for fishing in Totaladoh reservoir. Each permit holder will have a photo identity card with his photograph on it. This will be a personal right given to the identity card holder and the permit granted to him shall not be transferable. The permit will also bear the photograph of the permit holder.

(2) The permit holder will be entitled to enter the National Park area only at Thuepani and shall be entitled to travel through the National Park only on the Highway joining Thuepani to Totaladoh. He will not have any right to enter or travel in the National Park area except along the said highway in order to have access to the Totaladoh reservoir.

(3) The Wildlife Warden and/or any other authority nominated by the Madhya Pradesh Government shall demarcate the area of the reservoir over which these permit holders are allowed to fish.

(4) It shall be made clear that the permit holders shall be entitled to have any access to the islands in the reservoir.

(5) The State of Madhya Pradesh shall maintain check posts along the route of these fishermen to ensure that the fishermen do not transgress into any other part of the National Park.

(6) A daily record of the entry and exit of each permit holder and the quantity of fish carried by him out of the National Park shall be maintained.

(7) The fishermen will be prohibited from lighting fires for cooking of for any other purpose along the banks of the reservoir nor shall they throw any litter along the banks of the reservoir or in the water.

(8) The Madhya Pradesh State Government shall sanction an adequate number of personnel as also vehicles and boats for the purpose of monitoring the activities of these 305 permit holders. A monitoring squad shall be posted not merely at the entrance to the National Forest area, but also along the route or in other areas of the National Forest as may be required to ensure that there is not poaching or other undesirable activity by the permit holders.[1]

3. **No final notification—Government allowed villagers to enter Sanctuary and National Park.**—On a plain reading of these provisions, it is, therefore, obvious that the procedure in regard to acquisition of rights in and over the land to be included in a Sanctuary or National Park has to be followed before a final notification under Sec. 26-A or Sec. 35(1) is issued by the State Government. In the instant case, it is not the contention of the petitioner that the procedure for the acquisition of rights in or over the land of those living in the vicinity of the areas proposed to be declared as Sanctuaries and National Parks under Secs. 26-A and 35 of the Act has been undertaken. It was for this reason that the order of 28-3-1995 in terms stated that since no final notification was issued under the said provisions, the State Government was not in a position to bar the entry of villagers living in and around the Sanctuaries and the National Parks so long as their rights were not acquired and final notifications under the aforesaid provisions were issued. It is,

---

[1] **Animal and Environment Legal Defence Fund v. Union of India, A.I.R. 1997 S.C. 1071 at pp. 1073, 1074 : (1997) 3 S.C.C. 549 at pp. 553, 555 : J.T. 1997 (3) S.C. 298.**

therefore not possible to conclude that the State Government had violated any provision of law in issuing the notification dated 28-3-1995 in question.[1]

4. Biological and ecological ecology.—The perusal of the Wild Life Protection Act shows that the Government has been enabled to declare any area as a national park for the purpose of conserving the biological and geological ecology. At the same time, Court is unable to find any particular section or rule which provides prior consultation with the Advisory Board for selecting an area for declaration as a national park, even though Sec. 8 of the Act provides that one of the duties of the Wild Life Advisory Board is to advise the Government on that aspect. In any case, the notification in question is only a preliminary notification and the Government is bound to hear the objections before making a final notification. The learned Advocate-General suggests that necessary expert advice could be taken by the Government before making final notification. As at present advised it would be proper to consider this as a park which is not yet notified as national park but the power of the Government to regulate the entry for the protection cannot be gainsaid.[2]

36. [3][* * *]

Closed Area

*37. **Declaration of closed area.**—(1) The State Government may, by notification, declare any area closed to hunting for such period as may be specified in the notification.*

(2) No hunting of any wild animal shall be permitted in a closed area during the period specified in the notification referred to in sub-section (1).

Sanctuaries or National Parks declared by Central Government

*38. **Power of Central Government to declare areas as sanctuaries or National Parks.**—(1) Where the State Government leases or otherwise transfers any area under its control, not being an area within a sanctuary, to the Central Government, the Central Government may, if it is satisfied that the conditions specified in Sec. 18 are fulfilled in relation to the area so transferred to it, declare such area, by notification, to be a sanctuary and the provisions of [4][Secs. 18 to 35] (both inclusive), 54 and 55 shall apply in relation to such sanctuary as they apply in relation to a sanctuary declared by the State Government.*

(2) The Central Government may, if it is satisfied that the conditions specified in Sec. 35 are fulfilled in relation to any area referred to in sub-section (1), whether or not such area has been declared, to be a sanctuary by the Central Government or the State Government, declare such area, by notification to be a National Park and the provisions of Secs. 35, 54 and 55 shall apply in relation to a National Park declared by the State Government.

(3) In relation to a sanctuary or National Park declared by the Central Government, the powers and duties of the Chief Wild Life Warden under the section referred to in sub-sections (1) and (2), shall be exercised and discharged by the

[1][CHAPTER IV-A

CENTRAL ZOO AUTHORITY AND RECOGNITION OF ZOOS

38-A. Constitution of Central Zoo Authority.—*(1) The Central Government shall constitute a body to be known as the Central Zoo Authority (hereinafter in this Chapter referred to as the Authority), to exercise the powers conferred on, and to perform the functions assigned to it under this Act.*

(2) The Authority shall consist of—

(a) Chairperson;

(b) such number of members not exceeding ten; and

(c) Member-Secretary;

to be appointed by the Central Government.

38-B. Term of office and conditions of service of Chairperson and members, etc.—*(1) The Chairperson and every member shall hold office for such period, not exceeding three years, as may be specified by the Central Government in this behalf.*

(2) The Chairperson or a member may, by writing under his hand addressed to the Central Government, resign from the office of Chairperson or, as the case may be, of the member;

(3) The Central Government shall remove a person from the office of Chairperson or member referred to in sub-section (2) if that person,—

(a) becomes an undischarged insolvent;

(b) gets convicted and sentenced to imprisonment for an offence which, in the opinion of the Central Government, involves moral turpitude;

(c) becomes of unsound mind and stands so declared by a competent Court;

(d) refuses to act or becomes incapable of acting;

(e) is, without obtaining leave of absence from the authority, absent from three consecutive meetings of the Authority; or

(f) in the opinion of the Central Government has so abused the position of Chairperson or member as to render that person's continuance in office detrimental to the public interest :

Provided that no person shall be removed under this clause unless that person has been given a reasonable opportunity of being heard in the matter.

(4) A vacancy caused under sub-section (2) or otherwise shall be filled by fresh appointment.

---

[1] Ins. by Act 44 of 1991, Sec. 26, (w.e.f. 4th February,1992).

(5) The salaries and allowances and other conditions of appointment of Chairperson, members and Member-Secretary of the Authority shall be such as may be prescribed.

(6) The Authority shall, with the previous sanctions of the Central Government, employ such officers and other employees as it deems necessary to carry out the purposes of the Authority.

(7) The terms and conditions of service of the officers and other employees of the Authority shall be such as may be prescribed.

(8) No act or proceeding of the Authority shall be questioned or shall be invalid on the ground merely of the existence of any vacancies or defect in the constitution of the Authority.

***38-C. Functions of the Authority.**—The Authority shall perform the following functions, namely :*

(a) specify the minimum standards for housing, upkeep and veterinary care of the animals kept in a zoo;

(b) evaluate and assess the functioning of zoos with respect to the standards or the norms as may be prescribed;

(c) recognise or de-recognize zoos;

(d) identity endangered species of wild animals for purposes of captive breeding and assigning responsibility in this regard to a zoo;

(e) co-ordinate the acquisition, exchange and loaning of animals for breeding purposes;

(f) ensure maintenance of stud-books of endangered species of wild animal bred in captivity;

(g) identify priorities and themes with regard to display of captive animals in a zoo;

(h) co-ordinate training of zoo personnel in India and outside India;

(i) co-ordinate research in captive breeding and educational programmes for the purposes of zoos;

(j) provide technical and other assistance to zoos for their proper management for the purposes of zoos;

(k) perform such other functions as may be necessary to carry out the purposes of this Act with regard to zoos.

***38-D. Procedure to be regulated by the Authority.**—(1) The Authority shall meet as and when necessary and shall meet at such time and place as the Chairperson may think fit.*

(2) The Authority shall regulate its own procedure.

(3) All orders and decisions of the Authority shall be authenticated by the Member-Secretary or any other officer of the Authority duly authorised by the Member-Secretary in this behalf.

38-E. Grants and loans to Authority and constitution of Fund.—(1) *The Central Government may, after due appropriation made by Parliament by law in this behalf, make to the Authority grants and loans of such sums of money as that Government may consider necessary.*

(2) There shall be constituted a Fund to be called the Central Zoo Authority Fund and there shall be credited thereto any grants and loans made to the Authority by the Central Government, all fees and charges received by the Authority under this Act and all sums received by the Authority from such other sources as may be decided upon by the Central Government.

(3) The Fund referred to in sub-section (2) shall be applied for meeting salary, allowances and other remuneration of the members, officers and other employees of the Authority and the expenses of the Authority in the discharge of its functions under this Chapter and expenses on objects and for purposes authorised by this Act.

(4) The Authority shall maintain proper accounts and other relevant records and prepare an annual statement of accounts in such form as may be prescribed by the Central Government in consultation with the Comptroller and Auditor-General of India.

(5) The accounts of the Authority shall be audited by the Comptroller and Auditor-General at such intervals as may be specified by him and any expenditure incurred in connection with such audit shall be payable by the Authority to the Comptroller and Auditor-General.

(6) The Comptroller and Auditor-General and any person appointed by him in connection with the audit of the accounts of the Authority under this Act shall have the same rights and privileges and the authority in connection with such audit as the Comptroller and Auditor-General generally has in connection with the audit of the Government accounts and, in particular, shall have the right to demand the production of books, accounts, connected vouchers and other documents and papers and to inspect any of the offices of the Authority.

(7) The accounts of the Authority, as certified by the Comptroller and Auditor-General or any other person appointed by him in this behalf, together with the audit report therein, shall be forwarded annually to the Central Government by the Authority.

38-F. Annual Report.—*The Authority shall prepare in such form and at such time, for each financial year, as may be prescribed its annual report, giving a full account of the activities during the previous financial year and forward a copy thereof to the Central Government.*

38-G. Annual report and audit report to be laid before Parliament.—*The Central Government shall cause the annual report together with a memorandum of action taken on the recommendations contained therein, in so far as they relate to Central Government, and the reasons for the non-acceptance, if any, of any of such recommendations and the audit report to be laid as soon as may be after the reports are received, before each House of Parliament.*

38-H. Recognition of zoos.—*(1) No zoo shall be operated without being recognised by the Authority :*

Provided that a zoo being operated immediately before the date of commencement of the Wild Life (Protection) Amendment Act, 1991 may continue to operate without being recognised for a period of [1]*[eighteen months from the date of such commencement] and if the application seeking recognition is made within that period, the zoo may continue to be operated until the said application is finally decided or withdrawn and in case of refusal for a further period of six months from the date of such refusal.*

(2) Every application for recognition of a zoo shall be made to the Authority in such form and on payment of such fees as may be prescribed.

(3) Every recognition shall specify the conditions, if any, subject to which the applicant shall operate the zoo.

(4) No recognition to a zoo shall be granted unless the Authority, having due regard to the interests or protection and conservation of wild life, and such standards, norms and other matters as may be prescribed, is satisfied that recognition should be granted.

(5) No application for recognition of zoo shall be rejected unless the applicant had been given a reasonable opportunity of being heard.

(6) The Authority may, for reasons to be recorded by it, suspend or cancel any recognition granted under sub-section (4) :

Provided that no such suspension or cancellation shall be made except after giving the person operating the zoo a reasonable opportunity of being heard.

(7) An appeal from an order refusing to recognise a zoo under sub-section (5) or an order suspending or cancelling a recognition under sub-section (6) shall lie to the Central Government.

(8) An appeal under sub-section (7) shall be preferred within thirty days from the date of communication, to the applicant, of the order appealed against :

Provided that the Central Government may admit any appeal preferred after the expiry of the period aforesaid if it is satisfied that the appellant had sufficient cause for not preferring the appeal in time.

***38-I. Acquisition of animals by a zoo.**—Subject to the other provisions of this Act, no zoo shall acquire or transfer any wild animal specified in Schs. I and II except with the previous permission of the Authority.*

***38-J. Prohibition of teasing etc., in a zoo.**—No person shall tease, molest, injure or feed any animal or cause disturbance to the animals by noise or otherwise, or litter the grounds in a zoo.]*

CHAPTER V

TRADE OR COMMERCE IN WILD ANIMALS, ANIMAL ARTICLES AND TROPHIES

***39. Wild animals, etc., to be Government property.**—(1) Every—*

(a) wild animal, other than vermin, which is hunted under Sec. 11 or

---

[1] Subs. by Act. 26 of 1993, Sec. 2 (w.e.f. 4th August, 1993).

sub-section (1) of Sec. 29 or sub-section (6) of Sec. 35 or kept or [1]*[bred in captivity or hunted] in contravention or any provision of this Act or any rule or order made thereunder are found dead, or killed by* [2]*[***] mistake; and*

(b) *animal article, trophy or uncured trophy or meat derived from any wild animal referred to in Cl. (a) in respect of which any offence against this Act or any rule or order made thereunder has been committed;*

[3]*[(c) ivory imported into India and an article made from such ivory in respect of which any offence against this Act or any rule or order made thereunder had been committed;*

(d) *vehicle, vessel, weapon, trap or tool that has been used for committing an offence and has been seized under the provisions of this Act,]*

shall be the property of the State Government, and, where such animal is hunted in a sanctuary or National Park declared by the Central Government, such animal or any animal article, trophy, uncured trophy or meat [1]*[derived from such animal, or any vehicle, vessel, weapon, trap or tool used in such hunting] shall be property of the Central Government.*

(2) Any person who obtains, by any means, the possession of Government property, shall, within forty-eight hours from obtaining such possession to the nearest police station or the authorised officer and shall, if so required, hand over such property to the officer-in-charge of such police station or such authorised officer, as the case may be

(3) No person shall, without the previous permission in writing of the Chief Wild Life Warden or the authorised officer—

(a) *acquire or keep in his possession, custody or control, or*

(b) *transfer to any person, whether by way of gift, sale or otherwise, or*

(c) *destroy or damage, such Government property.*

Comment

Ecological imbalance—Endangering human life.—Directive principles are fundamental in the governance of the country and they can be effective if they are to prevail over fundamental right in order to sub-serve the common good. While most cherished freedoms and rights have been guaranteed, the Government has been laid under a solemn duty, to give effect to the directive principles.

It was in fulfilment of this duty that the Principal Act and the Amendment Act, 44 of 1991, have been enacted to conserve wild life. The destruction or depletion of the other form of life would create ecological imbalances endangering human life. No one can be given the privilege to endanger human life as that would violate Art. 21 of the Constitution. Basically, it is extremely essential for the survival of man to co-exist with nature and to preserve and protect wild life.

As already seen, the directive principles of State policy are based upon moral principles and consideration. The protection of wild life has seeds in the history of time, and in the history of moral and ethical principles evolved by every society through various ages. A society which does not have ethical and moral values and fails to live in harmony with nature, whithers and perishes. The sooner this truth is realised the better it would be for the welfare of the people. It has come to use through centuries to show compassion towards animals and birds, as all are considered to have come from the same source. Lord Krishna in Bhagaved Geeta declared that 'SARVE YONISU AHAM BIJA PRADAHPITAH' which means that I am the father of all. The followers of the Geeta are steeped in the belief that even the leaves of the trees, the petals and the flowers have life and God pervades in them. This belief is generated, nurtured and sustained by declarations of the Lord in the various Shlokas particularly in the following :

Chapter VI Test 33

'Yo Mas Pas Yati Sarvatra Sarvam ca mayi pas' yatı Tasyaham no Prasan' yami sa ca me no pranasyati.

Meaning

He who sees me present in all beings, and all being existing within me, never loses sight of me, and I never lose sight of hım. (Translatıon as culled out from 'Bhagavad-Gita' published by Gita Press, Gorakhpur).

Chapter X Test 8

Aham Sarvasya Prabhavomattah sarvam pravartate ıti matva bhajante mam budha bhava-samanvitah'.

Meanıng

I am source of all creation and everything in the world moves because of me; knowing this the wise, full of devotion constantly worship me. (Translation as culled out from 'The Bhagaved Gita' published by Gita Press, Gorakhpur). In various 'Ahadis' the killing of animals for pleasure is deprecated. Equally the mutilation of animals is decried.

Apart from the beliefs which are personal to a person or society or people or section of people. It is now scientifically established that animals, trees, flora, fauna, insects, birds and human beings are linked with each other for their survival. Each specie is indispensable for the preservation of ecology, which is necessary for our existence. Even a lowly earth worm in the soil has also a function to perform to help us survive. It makes the soil fertile which gives us our food and nourishment. The trees were venerated in the past and are still being venerated by some as being sacred. This is not without reason. The trees take carbon dioxide from the at atmosphere and replace it by life giving oxygen. Man forgetting the grand design of nature in which every living organism or being has to do its bit, has assumed the role of plunderer and destroyer of ecology for his greed. Man has been killing animals for the satisfaction of his uncontrolled thurst for money or hunting animals for pleasure and sport.[1]

40. Declarations.—*(1) Every person having at the commencement of this Ac*

the control, custody or possession of any captive animal specified in Sch. I or Part II of Sch. II, or any uncured trophy from such animal or salted or dried skins of such animals or the musk of a musk deer or the horn of a rhinoceros, shall, within thirty days from the commencement of this Act, declare to the Chief Wild Life Warden or the authorised officer the number and description of the animal, or article of the foregoing description under his control, custody or possession and the place where such animal or article is kept.

(2) No person shall, after the commencement of this Act, acquire, receive, keep in his control, custody or possession, sell, offer for sale or otherwise transfer or transport any animal specified in Sch. I or Part II of Sch. II or any uncured trophy or meat derived from such animal, or the salted or dried skins of such animal or the musk of a musk deer or the horn of a rhinoceros, except with the previous permission in writing of the Chief Wild Life Warden or the authorised officer.

[1]*[(3) Nothing in sub-section (1) or sub-section (2) shall apply to a recognised zoo subject to the provisions of Sec. 38-I or to a public museum.]*

(4) The State Government may, by notification, require any person to declare to the Chief Wild Life Warden or the authorised officer any animal article or trophy (other than a musk deer or horn of a rhinoceros) or salted or dried skins derived from an animal specified in Sch. I or Part II of Sch. II in his control, custody or possession in such form, in such manner, and within such time as may be prescribed.

41. *Inquiry and preparation of inventories.*—*(1) On receipt of a declaration made under Sec. 40, the Chief Wild Life Warden or the authorised officer may, after such notice, in such manner and at such time, as may be prescribed,—*

- *(a) enter upon the premises of a person referred to in Sec. 40;*
- *(b) make inquiries and prepare inventories of animal articles, trophies, uncured trophies, salted and dried skins and captive animals specified in Sch. I and Part II of Sch. II and found thereon; and*
- *(c) affix upon the animals, animal articles, trophies, uncured trophies identification marks in such manner as may be prescribed.*

(2) No person shall obliterate or counterfeit any identification mark referred to in this Chapter.

42. *Certificate of ownership.*—*The Chief Wild Life Warden may, for the purposes of Sec. 40, issue a certificate of ownership in such form, as may be prescribed, to any person who, in his opinion, is in lawful possession of any wild animal or any animal article, trophy, uncured trophy and may, where possible, make in the prescribed manner, such animal article, trophy or uncured trophy for purposes of identification.*

43. *Regulation of transfer of animal, etc.*—*(1) Subject to the provisions of sub-section (2), (3) and (4), a person (other than a dealer) who does not possess a certificate of ownership shall not—*

---

[1] Subs. by Act 44 of 1991, Sec. 28 (w.e.f. 2nd October, 1991).

(a) sell or offer for sale or transfer whether by way of sale, gift or otherwise, any wild animal specified in Sch. I or Part II of Sch. II or any captive animal belonging to that category or any animal article, trophy, uncured trophy or meat derived therefrom;

(b) make animal articles containing part or whole of such animal;

(c) put under a process of taxidermy an uncured trophy of such animal, except with the previous permission in writing of the Chief Wild Life Warden or the authorised officer.

(2) Where a person transfers or transports from the State in which he resides to another State or acquires by transfer from outside the State any such animal, animal article, trophy or uncured trophy as referred to in sub-section (1) in respect of which he has a certificate of ownership, he shall, within thirty days of the transfer or transport, report the transfer or transport to the Chief Wild Life Warden or the authorised officer within whose jurisdiction the transfer or transport is effected.

(3) No person who does not possess a certificate of ownership shall transfer or transport from one State to another State or acquire by transfer from outside the State any such animal, animal article, trophy or uncured trophy as is referred to in sub-section (1) except with the previous permission in writing of the Chief Wild Life Warden or the authorised officer within whose jurisdiction the transfer is to be effected.

(4) Before granting any permission under sub-section (1) or sub-section (3), the Chief Wild Life Warden or the authorised officer shall satisfy himself that the animal or article referred to therein has been lawfully acquired.

(5) While permitting the transfer or transport of animal, animal article, trophy or uncured trophy, as is referred to in sub-section (1), the Chief Wild Life Warden or the authorised officer—

(a) shall issue a certificate of ownership after such inquiry as he may deem fit;

(b) shall, where the certificate of ownership existed in the name of the previous owner, issue a fresh certificate of ownership in the name of the person to whom the transfer has been effected;

(c) may affix an identification mark on any such animal, animal article, trophy or uncured trophy.

(6) Nothing in this section shall apply—

[1]*[(a) to tail feather of peacock and the animal articles or trophies made therefrom;]*

[1]*[(b) to any transaction entered into by a recognised zoo subject to the provisions of Sec. 38-I or by a public museum with any other recognised zoo or public museum.]*

44. Dealings in trophy and animal articles without licence prohibited.—*(1)* [2]*[Subject to the provisions of Chapter V-A, no person shall, except under, and in accordance with, a licence granted under sub-section (4),—]*

(a) commence or carry on the business as—

---

[1] Subs. by Act 44 of 1991, Sec. 29 (w.e.f. 2nd October, 1991).

[2] Subs. by Act 28 of 1986, Sec. 2, for the words "except under, and in accordance with, a licence granted under sub-section (4), no person shall" (w.e.f. 20th November, 1986).

(i) a manufacturer of, or dealer in, any animal article; or

(i-a) [1][* * *]

(ii) a taxidermist; or

(iii) a dealer in trophy or uncured trophy; or

(iv) a dealer in captive animal; or

(v) a dealer in meat; or

(b) cook or serve meat in any eating-house;

[2]*[(c) derive, collect or prepare, or deal in, snake venom:]*

Provided that nothing in this sub-section shall prevent a person, who, immediately before the commencement of this Act was carrying on the business or occupation specified in this sub-section, from carrying on such business or occupation for a period of thirty days from such commencement, or where he has made an application within that period for the grant of a licence to him, until the licence is granted to him or he is informed in writing that a licence cannot be granted to him :

[3]*[Provided further that nothing in this sub-section shall apply to the dealers in tail feathers of peacock and articles made therefrom and the manufacturers of such articles.]*

Explanation.—For the purposes of this section, "eating-house" includes a hotel, restaurant or any other place where any eatable is served on payment, whether or not such payment is separately made for such eatable or is included in the amount charged in board and lodging.

(2) Every manufacturer of, or dealer in animal article, or every dealer in captive animals, trophies or uncured trophies, or every taxidermist shall, within fifteen days from the commencement of this Act, declare to the Chief Wild Life Warden his stocks of animals articles, captive animals, trophies and uncured trophies, as the case may be, as on the date of such declaration and the Chief Wild Life Warden or the authorised officer may place an identification mark on every animal article, captive animal, trophy or uncured trophy, as the case may be.

(3) Every person referred to in sub-section (1) who intends to obtain licence, shall, [4]*[* * *] make an application to the Chief Wild Life Warden or the authorised officer for the grant of a licence.*

(4) (a) Every application referred to in sub-section (3) shall be made in such form and on payment of such fee as may be prescribed, to the Chief Wild Life Warden or the authorised officer.

[5]*[(b) No licence referred to in sub-section (1) shall be granted unless the Chief Wild Life Warden or the authorised officer having regard to the antecedents and previous experience of the applicant, the implication which the grant of such licence would have on the status of wild life and to such other matters as may be prescribed in this behalf and after making such inquiry in respect of those matters as he may think fit, is satisfied that the licence should be granted.]*

---

1. Omitted by Act 44 of 1991, Sec. 30 (w.e.f. 2nd October, 1991).
2. Ins. by Act 44 of 1991, Sec. 30 (w.e.f. 2nd October, 1991).
3. Subs. by Act 44 of 1991, Sec. 30 (w.e.f. 2nd October, 1991).
4. Omitted by Act 23 of 1982, Sec. 3, (w.e.f. 21st May, 1982) for the words "within fifteen days from the commencement of this Act".
5. Subs. by Act 23 of 1982, Sec. 3. (w.e.f. 21st May, 1982).

(5) Every licence granted under this section shall specify the premises in which and the conditions, if any, subject to which the licensee shall carry on his business.

(6) Every licence granted under this section shall—

(a) be valid for one year from the date of its grant;

(b) not be transferable; and

(c) be renewable for a period not exceeding one year at a time.

(7) No application for the renewal of a licence shall be rejected unless the holder of such licence has been given a reasonable opportunity of presenting this case and unless the Chief Wild Life Warden or the authorised officer is satisfied that—

(i) the application for such renewal has been made after the expiry of the period specified thereof; or

(ii) any statement made by the applicant at the time of the grant or renewal of the licence was incorrect or false in material particulars; or

(iii) the applicant has contravened any term or condition of the licence or any provision of this act or any rule made thereunder; or

(iv) the applicant does not fulfil the prescribed conditions.

(8) Every order granting or rejecting an application for the grant or renewal of a licence shall be made in writing.

(9) Nothing in foregoing sub-sections shall apply in relation to vermin.

Comment

Accused found in possession of trophies-Conviction justified.—From the facts, it can be seen that the contravention is that of provisions of Sec. 44 and 49 of the Act. The evidence of PW-1 establishes that the appellant was found in possession of trophies. Section 44 prohibits any dealing in such trophies without a licence and Sec. 49 of the Act lays down that no person shall purchase, receive or acquire any captive animal, wild animal other than vermin or any animal article, trophy, uncured trophy, or meat derived therefrom otherwise than from a dealer or from a person authorised to sell or otherwise transfer the same under this Act.[1]

*45. **Suspension of cancellation of licence.**—Subject to any general or special order of the State Government, the Chief Wild Life Warden or the authorised officer may, for reasons to be recorded by him in writing, suspend or cancel any licence granted or renewed under Sec. 44 :*

Provided that no such suspension or cancellation shall be made except after giving the holder of the licence a reasonable opportunity of being heard.

*46. **Appeal.**—(1) An appeal from an order refusing to grant or renew a licence under Sec. 44 or an order suspending or cancelling a licence under Sec. 45 shall lie—*

(a) if the order is made by the authorised officer, to the Chief Wild Life Warden; or

(b) if the order is made by Chief Wild Life Warden, to the State Government.

(2) In the case of an order passed in appeal by the Chief Wild Life Warden under Cl. (a) of sub-section (1), a second appeal shall lie to the State Government.

---

[1] Pyarelal *v.* The State (Delhi Admn.), A.I.R. 1995 S.C. 1159 at p. 1159.

(3) Subject as aforesaid, every order passed in appeal under this section shall be final.

(4) An appeal under this section shall be preferred within thirty days from the date of the communication, to the applicant, or the order appealed against :

Provided that the appellate authority may admit any appeal preferred after the expiry of the period aforesaid if it is satisfied that the appellant had sufficient cause for not preferring the appeal in time.

47. Maintenance of records.*—A licensee under this Chapter shall—*

(a) keep records, and submit such returns of his dealings, as may be prescribed,—

  (i) to the Director or any other officer authorised by him in this behalf, and

  (ii) to the Chief Wild Life Warden or the authorised officer; and

(b) make such records available on demand for inspection by such officers.

48. Purchase of animal, etc. by licensee.*—No licensee under this Chapter shall—*

(a) keep in his control, custody or possession,—

  (i) any animal, animal article, trophy or uncured trophy in respect of which a declaration under the provisions of sub-section (2) of Sec. 44 has to be made but has not been made;

  (ii) any animal or animal article, trophy, uncured trophy or meat which has not been lawfully acquired under the provisions of this Act or any rule or order made thereunder;

(b) (i) capture any wild animal, or

  (ii) acquire, receive, keep in his control, custody or possession, or sell, offer for sale or transport, any captive animal specified in Sch. I or Part II of Sch. II or any animal article, trophy, uncured trophy or meat derived therefrom or serve such meat, or put under a process; or taxidermy or make animal article containing part or whole of such animal,

except in accordance with such rules as may be made under this Act :

Provided that where the acquisition or, possession, control or custody of such animal or animal article, trophy or uncured trophy entails the transfer or transport from one State to another, no such transfer or transport shall be effected except with the previous permission in writing of the Director or any other officer authorised by him in this behalf :

Provided further that no such permission under the foregoing proviso shall be granted unless the Director or the officer authorised by him is satisfied that the animal or article aforesaid has been lawfully acquired.

[1]*[****48-A. Restriction on transportation of wild life.****—No person shall accept any wild animal (other than vermin), or any animal article, or any specified plant or part or derivative thereof, for transportation except after exercising due care to ascertain that permission from the Chief Wild Life Warden or any other officer authorised by the State Government in this behalf has been obtained for such transportation.]*

---

[1] Ins. by Act 44 of 1991, Sec. 31 (w.e.f. 2nd October, 1991).

49. Purchase of captive animal, etc. by a person other than a licensee.—No person shall purchase, receive or acquire any captive animal, wild animal other than vermin, or any animal article, trophy, uncured trophy or meat derived therefrom otherwise than from a dealer or from a person authorised to sell or otherwise transfer the same under this Act :

[1][Provided that nothing in this section shall apply to a recognised zoo subject to the provisions of Sec. 38-I or to a public museum.]

[2][CHAPTER V-A

PROHIBITION OF TRADE OR COMMERCE IN TROPHIES, ANIMAL ARTICLES, ETC., DERIVED FROM CERTAIN ANIMALS

49-A. Definitions.—In this Chapter,—

- *(a) "scheduled animal" means an animal specified for the time being in Sch. I or Part II of Sch. II;*
- *(b) "scheduled animal article" means an article made from any scheduled animal and includes an article or object in which the whole or any part of such animal [3][has been used but does not include tail feather of peacock, an article or trophy made therefrom and snake venom or its derivative;]*
- *(c) "specified date" means—*
  - *(i) in relation to a scheduled animal on the commencement of the Wild Life (Protection) Amendment Act, 1986, the date of expiry of two months from such commencement; [4][***]*
  - *(ii) in relation to any animal added or transferred to Sch. I or Part II of Sch. II at any time after such commencement, the date of expiry of two months from such addition or transfer,*
  - *[5][(iii) in relation to ivory imported into India or an article made from such ivory, the date of expiry of six months from the commencement of the Wild Life (Protection) Amendment Act, 1991.]*

Comment

Ban on sale of ivory.—The State has taken the stand that the sale of ivory by the dealers would encourage poaching & killing of elephants as the stocks which the petitioners hold presently will be replenshied by further killings of elephants as ivory fetches a very good price in the market. Delhi High Court does not find any fault with the stand taken by the respondents. Therefore, the ban imposed by the impugned legislation especially Sec. 49 B (1) (a) (ia) r/w Sec. 49 A (c) (iii) and Sec. 49 C (7) thereof is not violative of Art. 19 (1) (g) of the Constitution.[6]

49-B. Prohibition of dealings in trophies, animal articles, etc. derived from scheduled animals.—*(1) Subject to the other provisions of this section, on and after the specified date, no person shall,—*

- *(a) commence or carry on the business as—*
  - *(i) a manufacturer of, or dealer in, scheduled animal articles; or*
  - *[7][(i-a) a dealer in ivory imported into India or articles made therefrom or a manufacturer of such articles; or]*

---

1. Subs. by Act 44 of 1991 Sec. 32 (w.e.f. 2nd October, 1991).
2. Ins. by Act 28 of 1986, Sec. 3 (w.e.f. 25th November, 1986).
3. Subs. by Act 44 of 1991, Sec. 33 (w.e.f. 2nd October, 1991).
4. Omitted by Act 44 of 1991, Sec. 33 (w.e.f. 2nd October, 1991).
5. Ins. by Act 44 of 1991, Sec. 33, (w.e.f. 2nd October, 1991).
6. **Ivory Traders & Manufacturers Association *v.* Union of India, A.I.R. 1997 Delhi 267 at p. 288.**
7. Ins. by Act 44 of 1991, Sec. 34, (w.e.f. 2nd October, 1991).

(ii) *a taxidermist with respect to any scheduled animals or any parts of such animals; or*

(iii) *a dealer in trophy or uncured trophy derived from any scheduled animal; or*

(iv) *a dealer in any captive animals being scheduled animal; or*

(v) *a dealer in meat derived from any scheduled animal; or*

(b) *cook or save meat derived from any scheduled animal in any eating-house.*

Explanation.—For the purposes of this sub-section, "eating-house" has the same meaning as in the Explanation below sub-section (1) of Sec. 44.

(2) Subject to the other provisions of this section, no licence granted or renewed under Sec. 44 before the specified date shall entitled the holder thereof or any other person to commence or carry on the business referred to in Cl. (a) of sub-section (1) of this section or the occupation referred to in Cl. (b) of that sub-section after such date.

(3) Notwithstanding anything contained in sub-section (1) or sub-section (2), where the Central Government is satisfied that it is necessary or expedient so to do in the public interest, it may, by general or special order published in the official Gazette, exempt, for purposes of export, any corporation owned or controlled by the Central Government (including a Government Company within the meaning of Sec. 617 of the Companies Act, 1956 (1 of 1956), or any society registered under the Societies Registration Act, 1860 (21 of 1860), or any other law for the time being in force, wholly or substantially financed by the Central Government), from the provisions of sub-section (1) and (2).

(4) Notwithstanding anything contained in sub-section (1) or sub-section (2), but subject to any rules which may be made in this behalf, a person holding a licence under Sec. 44 to carry on the business as a taxidermist may put under a process of taxidermy any scheduled animal or any part thereof,—

(a) *for or on behalf of the Government or any corporation or society exempted under sub-section (3), or*

(b) *with the previous authorisation in writing of the Chief Wild Life Warden, for and on behalf of any person for educational or scientific purposes.*

Comments

Each and every animal plays a vital role in maintaining the ecological balance.—The protection of Wild Life is included in the directive principles of the State policy under the 42nd Constitutional Amendment Act, 1976 under Cl. G of Art. 51-A of the Constitution. It is the fundamental duty of every citizen to protect and improve the natural environment including various lakes, rivers and Wild Life and to have compassion for living creatures. The contention of the petitioners that protection and preservation of Wild Life was not in public interest was therefore devoid of all merit. Wild Life forms part of our cultural heritage in the same manner as other archaeological monuments panimal plays a role in maintaining the ecological balance and, therefore, the contention that certain animals have no role to play or are detrimental to human life is completely misconceived. Taking the case of even jackals, which are referred to by the petitioners as animals of no utility, these are natural scavengers who feed on off all and dead animals, thereby keeping the environment clean. Snakes which have been described by some petitioners as harmful and dangerous to human life feed on rats. The mortality rate in the country due to snake bites is less than 0.0005% which is very low compared to the death and fatalities caused by other diseases and animal bites. Snakes are the natural killers of rats which cause loss of nearly 33 million tonnes of stored cereals, apart from dreaded diseases such as plague. Rusel Wipers and Rat snakes are known to have facination of rats for food. The above would show that even the most maligned animals which appear apparently to be of no utility, have a role to play in retaining ecological balance. Besides, it is only when human beings tread their natural habitat that animals react. The Wild Life (Protection) Act has provisions to deal with and eliminate those animals which become harmful to human lives or properties. Thus, the argument that certain wild animals are harmful to life and serve no useful purpose is misconceived. It is to be recognized that Wild Life is an asset an heritage to be preserved for future generations.[1]

The possession of ivory or articles made therefrom an offence not voilature of Art. 19 (1) (*a*) of the Constitution.—Undoubtedly the business which the petitioners in the instant case are pursuing is attended with danger to the community. Its evil effect is manifested by the depletion of the elephant population. The possession of an article made from ivory has been declared as a article made from ivory has been declared as a crime. There is no fundamental right to carry on business in crime. The Legislature has stepped in to eliminate the killing of elephant. If the legislation in order to rectify the malady has made the possession of ivory or articles made therefrom an offence, it cannot be said that the legislation violates Art. 19 (*1*) (*g*) of the Constitution to carry on trade and business. Such a pernicious activity cannot be taken to be as business or trade in the sense in which it is used in Art. 19 (1) (*g*) of the Constitution.[2]

49-C. Declaration by dealers.—(1) Every person carrying on the business or occupation referred to in sub-section (1) of Sec. 49-B shall, within thirty days from the specified date, declare to the Chief Wild Life Warden or the authorised officer,—

(a) his stocks, if any, as at the end of the specified date of—

(i) scheduled animal articles;

(ii) scheduled animals and parts thereof;

(iii) trophies and uncured trophies derived from scheduled animals;

(iv) captive animals, being scheduled animals;

[3]*[(v) ivory imported into India or articles made therefrom.]*

(b) the place or places at which the stocks mentioned in the declaration are kept; and

(c) the description of such items, if any, of the stocks mentioned in the declaration which he desires to retain with himself for his bona fide personal use.

(2) On receipt of a declaration under sub-section (1), the Chief Wild Life Warden or the authorised officer may take all or any of the measures specified in Sec. 41 and for this purpose, the provisions of Sec. 41 shall, so far as may be, apply.

(3) Where, in a declaration made under sub-section (1), the person making the

[2] **Ivory Traders & Manufacturers Association *v.* Union of India (FB) A.I.R. 1997 Delhi 267 at p. 292.**

[3] Ins. by Act 44 of 1991, Sec. 35 (w.e.f. 2nd October, 1991).

declaration expresses his desire to retain with himself any of the items of the stocks specified in the declaration for his bona fide personal use, the Chief Wild Life Warden with the prior approval of the Director, may, if he is satisfied that the person is in lawful possession of such items, issue certificates of ownership in favour of such person with respect to all, or as the case may be, such of the items as in the opinion of the Chief Wild Life Warden, are required of the bona fide personal use of such person and affix upon such items identification marks in such manner as may be prescribed :

Provided that no such item shall be kept in any commercial premises.

(4) No person shall obliterate or counterfeit any identification mark referred to in sub-section (3).

(5) An appeal shall lie against any refusal to grant certificate of ownership under sub-section (3) and the provisions of sub-sections (2), (3) and (4) of Sec. 46 shall, so far as may be, appeals under this sub-section.

(6) Where a person who has been issued a certificate of ownership under sub-section (3) in respect of any item,—

(a) transfers such item to any person, whether by way of gift, sale or otherwise, or

(b) transfers or transports from the State in which he resides to another State any such item,

he shall, within thirty days of such transfer or transport, report the transfer or transport to the Chief Wild Life Warden or the authorised officer within whose jurisdiction the transfer or transport is effected.

(7) No person, other than a person who has been issued a certificate of ownership under sub-section (3) shall on and after the specified date, keep under his control, sell or offer for sale or transfer to any person [1][any scheduled animal, a scheduled animal article or ivory imported into India or any article made therefrom.]

Comment

Compensation-payment of.—Having regard to the decisions it is not necessary for the State to pay compensation to the petitioners for extinguishment of title of the petitioners in imported ivory or article made therefrom. Since the State is not under any obligation to buy the stocks of the petitioners in acceptance of the one time sale proposition propounded by the petitioners, Division Bench of Delhi High Court cannot direct the State to either buy the same or pay compensation for it.[2]

CHAPTER VI

PREVENTION AND DETECTION OF OFFENCES

50. *Power of entry, search, arrest and detention.*—*(1) Notwithstanding anything contained in any other law for the time being in force, the Director or any other officer authorised by him in this behalf or the Chief Wild Life Warden or the authorised officer or any forest officer or any police officer not below the rank of a sub-inspector, may, if he has reasonable grounds for believing that any person has committed an offence against this Act,—*

(a) require any such person to produce for inspection any captive animal, wild animal, animal article, meat, [3][trophy, uncured trophy or any specified plant or part or derivative thereof] in his control, custody or possession, or any licence, permit or other document granted to him or required to be kept by him under the provisions of this Act;

---

[1] Subs. by Act 44 of 1991, Sec. 35 (w.e.f. 2nd October, 1991).

[2] **Ivory Traders & Manufacturers Association *v.* Union of India, A.I.R. 1997 Delhi 267 at pp. 297, 298.**

[3] Subs. by Act 44 of 1991, Sec. 36 (w.e.f. 2nd October, 1991).

(b) stop any vehicle or vessel in order to conduct search or inquiry or enter upon and search any premises, land, vehicle, or vessel, in the occupation of such person, and open and search any baggage or other things in his possession;

[1][*(c) seize any captive animal, wild animal, animal article, meat, trophy or uncured trophy, or any specified plant or part or derivative thereof in respect of which an offence against this Act appears to have been committed, in the possession of any person together with any trap, tool, vehicle, vessel or weapon used for committing any such offence and, unless he is satisfied that such person will appear and answer any charge which may be preferred against him, arrest him without warrant, and detain him :*

Provided that where a fisherman, residing within ten kilometres of a sanctuary or National Park, inadvertently enters on a boat, not used for commercial fishing, in the territorial water in the sanctuary or National Park, a fishing tackle or net on such boat shall not be seized.]

(2) [2][* * *]

(3) It shall be lawful for any of the officers referred to in sub-section (1) to stop and detain any person, whom he sees doing any act for which a licence or permit is required under the provisions of this Act, for the purposes of requiring such person to produce the licence or permit and if such person fails to produce the licence or permit, as the case may be, he may be arrested without warrant, unless he furnishes his name and address, and otherwise satisfies the officer arresting him that he will duly answer any summons or other proceedings which may be taken against him.

[3][*(3-A) Any officer of a rank not inferior to that of an Assistant Director of Wild Life Preservation or Wild Life Warden, who, or whose subordinate, has seized any captive animal or wild animal under Cl. (c) of sub-section (1) may give the same for custody on the execution by any person of a bond for the production of such animal if and when so required, before the Magistrate having jurisdiction to try the offence on account of which the seizure has been made.*]

(4) Any person detained, or things seized under the foregoing power, shall forthwith be taken before a Magistrate to be dealt with according to law.

(5) Any person who, without reasonable cause, fails to produce any thing, which he is required to produce under this section, shall be guilty of an offence against this Act.

(6) (a) Where any meat, [4][*uncured trophy, specified plant or part or derivative thereof*] *is seized under the provisions of this section, the Assistant Director of Wild Life Preservation or any other officer of a gazetted rank authorised by him in this behalf or the Chief Wild Life Warden or the authorised officer may arrange for the sale of the same and deal with the proceeds of such sale in such manner as may be prescribed.*

(b) Where it is proved that the [4][*meat, uncured trophy, specified plant or part or derivative thereof*] *seized under the provisions of this section is not Government property, the proceeds of the sale shall be returned to the owner.*

(7) Whenever any person is approached by any of the officers referred to in sub-section (1) for assistance in the prevention or detection of an offence against this Act, or in apprehending persons charged with the violation of this Act, or for seizure in accordance with Cl. (c) of sub-section (1), it shall be the duty of such person or persons to render such assistance.

---

1. Subs. by Act 44 of 1991, Sec. 36 (w.e.f. 2nd October, 1991).
2. Omitted by Act 44 of 1991, Sec. 36, (w.e.f. 2nd October, 1991).
3. Ins. by Act 44 of 1991, Sec. 36, (w.e.f. 2nd October, 1991).
4. Subs. by Act 44 of 1991, Sec. 36 (w.e.f. 2nd October, 1991).

[1]*[(8) Notwithstanding anything contained in any other law for the time being in force, any officer not below the rank of an Assistant Director of Wild Life Preservation or Wild Life Warden shall have the powers, for purposes of making investigation into any offence against any provision of this Act,—*

(a) to issue a search-warrant;

(b) to enforce attendance of witnesses;

(c) to compel the discovery and production of documents and material objects; and

(d) to receive and record evidence.

(9) Any evidence recorded under Cl. (d) of sub-section (8) shall be admissible in any subsequent trial before a Magistrate provided that it has been taken in the presence of the accused person.]

51. Penalties.—*(1) Any person who* [2]*{contravenes any provision of this Act* [3]*[(except Chapter V-A and Sec. 38-J)]} or any rule or order made thereunder or who commits a breach of any of the conditions of any licence or permit granted under this Act, shall be guilty of an offence against this Act, and shall, on conviction, be punished with imprisonment for a term which may extend to* [3]*[three years], or with fine which may extend to* [3]*[twenty-five thousand rupees] or with both .*

Provided that where the offence committed is in relation to any animal specified in Sch. I or Part II of Sch. II or meat of any such animal or animal article, trophy or uncured trophy derived from such animal or where the offence [3]*[relates to hunting in or altering the boundaries of] a sanctuary or a National Park, such offence shall be punishable with imprisonment for a term which shall not be less than* [3]*[one year] but may extend to six years and also with fine which shall not be less than* [3]*[five thousand rupees];*

[3]*[Provided further that in the case of a second or subsequent offence of the nature mentioned in this sub-section, the term of imprisonment may extend to six years and shall not be less than two years and the amount of fine shall not be less than ten thousand rupees.]*

[4]*[(1-A) Any person who contravenes any provisions of Chapter V-A, shall be punishable with imprisonment for a term which shall not be less than one year but which may extend to seven years and also which fine which shall not be less than five thousand rupees.]*

[5]*[(1-B) Any person who contravenes the provisions of Sec. 38-J shall be punishable with imprisonment for a term which may extend to six months, or with fine which may extend to two thousand rupees, or with both :*

Provided that in the case of a second or subsequent offence the term of imprisonment may extend to one year or the fine may extend to five thousand rupees.]

---

[1] Ins. by Act 44 of 1991, Sec. 36 (w.e.f. 2nd October, 1991).

[2] Subs. by Act 28 of 1986, Sec. 4, for certain words (w.e.f. 25th November, 1986).

[3] Subs. by Act 44 of 1991, Sec. 37 (w.e.f. 2nd October, 1991).

[4] Ins. by Act 28 of 1986, Sec. 4 (w.e.f. 25th November, 1986).

[5] Ins. by Act 44 of 1991, Sec. 37 (w.e.f. 2nd October, 1991).

(2) When any person is convicted of an offence against this Act, the Court trying the offence may order that any captive animal, wild animal, animal article, trophy [1][uncured trophy, meat, ivory imported into India or an article made from such ivory, any specified plant, or part or derivative thereof] in respect of which the offence has been committed and any trap, tool, vehicle, vessel or weapon, used in the commission of the said offence be forfeited to the State Government and that any licence or permit, held by such person under the provisions of this Act, be cancelled.

(3) Such cancellation of licence or permit or such forfeiture shall be in addition to any other punishment that may be awarded for such offence.

(4) Where any person is convicted of an offence against this Act; the Court may direct that the licence, if any, granted to such person under the Arms Act, 1959 (54 of 1959), for possession of any arm with which an offence against this Act has been committed, shall be cancelled and that such person shall not be eligible for a licence under the Arms Act, 1959, for a period of five years from the date of conviction.

[2][(5) Nothing contained in Sec. 360 of the Code of Criminal Procedure, 1973 (2 of 1974), or in the Probation of Offenders Act, 1958 (20 of 1958), shall apply to a person convicted of an offence with respect to hunting in a sanctuary or a National Park or of an offence against any provision of Chapter V-A unless such person is under eighteen years of age.]

*52. **Attempts and abetment.**—Whoever attempts to contravene, or abets the contravention of, any of the provisions of this Act or of any rule or order made thereunder shall be deemed to have contravened that provision or rule or order, as the case may be.*

*53. **Punishment for wrongful seizure.**—If any person, exercising powers under this Act, vexatiously and unnecessarily seizes the property of any other person on the pretence of seizing it for the reasons mentioned in Sec. 50, he shall, on conviction, be punishable with imprisonment for a term which may extend to six months, or with fine which may extend to five hundred rupees, or with both.*

*54. **Power to compound offences.**—(1) The [3][Central Government may, by notification, empower the Director or Wild Life Preservation or any other officer and the State Government] or any officer of a rank not inferior to that of a Deputy Conservator of Forests,—*

(a) to accept, from any person against whom a reasonable suspicion exists that he has committed an offence against this Act, payment of a sum of money by way of composition of the offence which such person is suspected to have committed; and

(b) when any property has been seized is liable to be forfeited, to release the same on payment of the value thereof as estimated by such officer.

(2) On payment of such sum of money or such value, or both, as the case may be, to such officer, the suspected person, if in custody, shall be discharged, and the property, other than Government property, if any, seized, shall be released and no further proceedings in respect of the offence shall be taken against such person.

---

[1] Subs. by Act 44 of 1991, Sec. 37 (w.e.f. 2nd October, 1991).

[2] Ins. by Act 44 of 1991, Sec. 37 (w.e.f. 2nd October, 1991).

[3] Subs. by Act 44 of 1991, Sec. 38 (w.e.f. 2nd October, 1991).

(3) The officer compounding any offence may order the cancellation of any licence or permit granted under this Act to the offender, or if not empowered to do so, may approach an officer so empowered, for the cancellation of such licence or permit.

(4) The sum of money accepted or agreed to be accepted as composition under Cl. (b) of sub-section (1) shall, in no case, exceed the sum of two thousand rupees :

Provided that no offence, for which a minimum period of imprisonment has been prescribed in sub-section (1) of Sec. 51, shall be compounded.

[1][**55. Cognizance of offences.**—*No Court shall take cognizance of any offence against this Act on the complaint of any person other than—*

- *(a) the Director of Wild Life Preservation or any other officer authorised in this behalf by the Central Government; or*
- *(b) the Chief Wild Life Warden, or any other officer authorised in this behalf by the State Government; or*
- *(c) any person who has given notice of not less than sixty days, in the manner prescribed, of the alleged offence and of his intention to make a complaint, to the Central Government or the State Government or the officer authorised as aforesaid.]*

56. Operation of other laws not barred.—*Nothing in this Act shall be deemed to prevent any person from being prosecuted under any other law for the time being in force, for any act or omission which constitutes an offence against this Act or from being liable under such other law to any higher punishment or penalty than that provided by this Act :*

Provided that no person shall be punished twice for the same offence.

57. Presumption to be made in certain cases.—*Where, in any prosecution for one offence against this Act, it is established that a person is in possession, custody or control of any captive animal, animal article, meat, [2][trophy, uncured trophy, specified plant, or part or derivative thereof] it shall be presumed, until the contrary is proved, the burden of proving which shall lie on the accused, that such person is in unlawful possession, custody or control of such captive animal, animal article, meat, [2][trophy, uncured trophy, specified plant or part or derivative thereof].*

58. Offences by companies.—*(1) Where an offence against this Act has been committed by a company, every person who, at the time the offence was committed, was in charge of, and was responsible to, the company for the conduct of the business of the company as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this sub-section shall render any such person liable to any punishment, if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence against this Act has been committed by a company and it is proved that the offence

---

[1] Subs. by Act 44 of 1991, Sec. 39 (w.e.f. 2nd October, 1991).

[2] Subs. by Act 44 of 1991, Sec. 40 (w.e.f. 2nd October, 1991).

has been committed with the consent or connivance or, is attributable to any neglect on the part of, any director, manager, secretary or other officer of the company, such director, manager, secretary or other officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

Explanation.—For the purposes of this section,—

(a) "company" means any body corporate and includes a firm or other association of individuals; and

(b) "director", in relation to a firm, means a partner in the firm.

CHAPTER VII

MISCELLANEOUS

59. Officer to be public servants.—*Every officer referred to in [1][Chapter II and the Chairperson, member, member-secretary, and other officers and employees referred to in Chapter IV-A] and every other officer exercising any of the powers conferred by this Act shall be deemed to be a public servant within the meaning of Sec. 21 of the Indian Penal Code (45 of 1860).*

60. Protection of action taken in good faith.—*(1) No suit, prosecution or other legal proceeding shall lie against any officer or other employee of the Central Government or the State Government for anything which is in good faith done or intended to be done under this Act.*

(2) No suit or other legal proceeding shall lie against the Central Government or the State Government or any of its officers or other employees, for any damage caused or likely to be caused by anything which is in good faith done or intended to be done under this Act.

[2]*[(3) No suit or other legal proceeding shall lie against the Authority referred to in Chapter IV-A and its Chairperson, member, member-secretary, officers and other employees for anything which is in good faith done or intended to be done under this Act.]*

[3]*[**60-A. Reward to persons.**—(1) When a Court imposes a sentence of fine or a sentence of which fine forms a part, the Court may, when passing judgment, order that the reward be paid to a person who renders assistance in the detection of the offence or the apprehension of the offenders out of the proceeds of fine not exceeding twenty per cent. of such fine.*

(2) When a case is compounded under Sec. 54, the officer compounding may order reward to be paid to a person who renders assistance in the detection of the offence or the apprehension of the offenders out of the sum of money accepted by way of composition not exceeding twenty per cent. of such money.]

61. Power to alter entries in schedules.—*(1) The Central Government may, if it is of opinion that it is expedient so to do, by notification [4][add or delete any entry to or from any Schedule] or transfer any entry from one part of a Schedule to another part of the same Schedule or from one Schedule to another.*

[5]*[(2) * * *]*

(3) On the issue of a notification under sub-section (1) [5][* *] the relevant Schedule shall be deemed to be altered accordingly, provided that every such alteration*

[1] Subs. by Act 44 of 1991, Sec. 41 (w.e.f. 2nd October, 1991).

[2] Ins. by Act 44 of 1991, Sec. 42 (w.e.f. 2nd October, 1991).

[3] Ins. by Act 44 of 1991, Sec. 43 (w.e.f. 2nd October, 1991).

[4] Subs. by Act 44 of 1991, Sec. 44 (w.e.f. 2nd October, 1991).

[5] Omitted by Act 44 of 1991, Sec. 44 (w.e.f. 2nd October, 1991).

shall be without prejudice to anything done or omitted to be done before such alteration.

[1][(4) * * *]

Comment

Protection and preservation of every animal is necessary for ecological balance.—The protection of Wild Life is included in the directive principles of the State Policy under the 42nd Constitutional Amendment Act, 1976 under Cl. (g) of Art. 51A of the Constitution. It is the fundamental duty of every citizen to protect and improve the natural environment including various lakes, rivers and Wild Life and to have compassion for living creatures. The contention of the petitioners that protection and preservation of Wild Life was not in public interest was therefore devoid of all merit. Wild Life forms part of our cultural heritage in the same manner as other archaeological monuments, painting, literature etc. Each and every animal plays a role in maintaining the ecological balance and, therefore, the contention that certain animals have no role to play or are detrimental to human life is completely misconceived.[2]

62. Declaration of certain wild animals to be vermin.—[3]*[The Central Government] may, by notification, declare any wild animal other than those specified in Sch. I and Part II of Sch. II to be vermin for any area and for such period as may be specified therein and so long as such notification is in force, such wild animal shall be deemed to have been included in Sch. V.*

63. Power of Central Government to make rules.—[4]*[(1) The Central Government may, by notification, make rules for all or any of the following matters, namely :*

- *(a) conditions and other matters subject to which a licensee may keep any specified plant in his custody or possession under Sec. 17-F;*
- *(b) the salaries, allowances and other conditions of appointment of Chairperson, members and member-secretary under sub-section (5) of Sec. 38-B;*
- *(c) the terms and conditions of service of the officers and other employees of the Central Zoo Authority shall be prepared under sub-section (7) of Sec. 38-B;*
- *(d) the form in which the annual statement of accounts of the Central Zoo Authority shall be prepared under sub-section (4) of Sec. 38-E;*
- *(e) the form in which and the time at which the annual report of the Central Zoo Authority shall be prepared under Sec. 38-F;*
- *(f) the form in which and the fee required to be paid with the application for recognition of a zoo under sub-section (2) of Sec. 38-H;*
- *(g) the standards, norms and other matters to be considered for granting recognition under sub-section (4) of Sec. 38-H;*
- *(h) the form in which declaration shall be made under sub-section (2) of Sec. 44;*
- *(i) the matters to be prescribed under Cl. (b) of sub-section (4) of Sec. 44;*

---

[1] Omitted by Act 44 of 1991, Sec. 44 (w.e.f. 2nd October, 1991).

[2] **G.R. Simon *v.* Union of India (FB), A.I.R. 1997 Delhi 301 at pp. 303, 304.**

[3] Subs. by Act 44 of 1991, Sec. 45 (w.e.f. 2nd October, 1991).

[4] Subs. by Act 44 of 1991, Sec. 46 (w.e.f. 2nd October, 1991).

(j) the terms and conditions which shall govern transaction referred to in Cl. (b) of Sec. 48;

(k) the manner in which notice may be given by a person under Cl. (c) of Sec. 55;

(l) the matters specified in sub-section (2) of Sec. 64 in so far as they relate to sanctuaries and National Parks declared by the Central Government.]

(2) Every rule made under this section shall be laid, as soon as may be after it is made, before each House of Parliament, while it is in session, for a total period of thirty days which may be comprised in one session or in two or more successive sessions, and if before the expiry of the session immediately following the session or the successive sessions aforesaid, both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, the rule shall thereafter have effect only in such modified form or be of no effect, as the case may be; so however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule.

64. Power of State Government to make rules.—*(1) The State Government may, by notification, make rules for carrying out the provisions of this Act in respect of matters which do not fall within the purview of Sec. 63.*

(2) In particular and without prejudice to the generality of the foregoing power; such rules may provide for all or any of the following matters, namely :

(a) the term of office of the members of the Board referred to in Cl. (g) of sub-section (1) of Sec. 6 and the manner of filling vacancies among them;

(b) allowances referred to in sub-section (4) of Sec. (6);

(c) the forms to be used for any application, certificate, claim, declaration, licence, permit, registration, return or other document, made, granted or submitted under the provisions of this Act and the fees, if any, therefor;

(d) the conditions subject to which may licence or permit may be granted under this Act:

(e) the particulars, of the record of wild animal (captured or killed) to be kept and submitted by the licensee;

[1]*[(ee) the manner in which measures for immunisation of livestock shoal be taken.;]*

(f) regulation of the possession, transfer and the sale of captive animals, meat, animal articles, trophies and uncured trophies;

(g) regulation of taxidermy;

(h) any other matter which has to be, or may be, prescribed under this Act.

65. Rights of Scheduled Tribes to be protected.—*Nothing in this Act shall affect the hunting rights conferred on the Scheduled Tribes of the Nicobar Islands in the Union territory of Andaman and Nicobar Islands by notification of the Andaman and Nicobar Administration No. 40/97/F. No. G-635, Vol. III, dated the 28th April, 1967, published at pages 1 to 5 of the Extraordinary issue of the Andaman and Nicobar Gazette, dated the 28th April, 1967.*

66. Repeal and savings.—*(1) As from the commencement of this Act, every other Act relating to any matter contained in this Act and in force in a State shall, to*

---

1. Ins. by Act 44 of 1991, Sec. 47 (w.e.f. 2nd October 1991)

the extent to which that Act or any provision contained therein corresponds, or is repugnant, to this Act or any provision contained in this Act, stand repealed :

Provided that such repeal shall not,—

- *(i) affect the previous operation of the Act so repealed, or anything duly done or suffered thereunder;*
- *(ii) affect any right, privilege, obligation or liability acquired, accrued or incurred under the Act so repealed;*
- *(iii) affect any penalty, forfeiture or punishment incurred in respect of any offence committed against the Act so repealed; or*
- *(iv) affect any investigation, legal proceeding or remedy in respect of any such right, privilege, obligation, liability, penalty, forfeiture, or punishment as aforesaid;*

and any such investigation legal proceeding or remedy may be instituted, continued or enforced, and any such penalty, forfeiture and punishment may be imposed, as if the aforesaid Act had not been repealed.

(2) Notwithstanding such repeal,—

- *(a) anything done or any action taken under the Act so repealed (including any notification, order, certificate, notice or receipt issued, application made, or permit granted) which is not inconsistent with the provisions of this Act be deemed to have been done or taken under the corresponding provisions of this Act as if this Act were in force at the time such thing was done or action was taken, and shall continue to be in force, unless and until superseded by anything done or any action taken under this Act;*
- *(b) every licence granted under any Act so repealed and in force immediately before the commencement of this Act shall be deemed to have been granted under the corresponding provisions of this Act and shall, subject to the provisions of this Act, continue to be in force for the unexpired portion of the period for which such licence had been granted.*

(3) For the removal of doubts, it is hereby declared that any sanctuary or National Park declared by a State Government under any Act repealed under sub-section (1) shall be deemed to be a sanctuary or National Park, as the case may be, declared by the State Government under this Act and where any right in or over any land in any such National Park which had not been extinguished under the said Act, at or before the commencement of this Act, the extinguishment of such rights shall be made in accordance with the provisions of this Act.

[1]*[(4) For the removal of doubts, it is hereby further declared that where any proceeding under any provision of Secs. 19 to 25 (both inclusive) is pending on the date of commencement of the Wild Life (Protection) Amendment Act, 1991, any reserve forest or a part of territorial waters comprised within a sanctuary declared under Sec. 18 to be a sanctuary before the date of such commencement shall be deemed to be a sanctuary declared under Sec. 26-A.]*

PART IV

Crustacea and Insects

[1][1.] Butterflies and Moths

Family Amathusidae.	***Common English Name***
Discophora deo deo.	Duffer, banded
Discophora sondaica muscina.	Duffer, common.
Faunis faunula faunuloides.	Pallied fauna.
Family Danaidae	
Danaus gautama gautamoides.	Tigers.
Euploea cramiri nicevillei.	Crow, spotted black.
Euploca midamus roopstorfii.	Crow, blue-spotted.
Family Lycaenidae.	
Allotinus drumila.	Darkie, crenuatic/great.
Allotinus fabius panormis.	Angled darkie.
Amblopala avidiena.	Hairstreak, Chinese.
Amblypodia ace arata.	Leaf Blue.
Amblypodia alea constanceae.	Rosy Oakblue
Amblypodia amon ariel.	Malayan Bush blue.
Amblypodia arvina ardea.	Purple brown tailless oakblue.
Amblypodia asopia.	Plain tailless oakblue.
Amblypodia opalima.	Opal oakblue.

---

1. *Vide* S.O. 859 (E), dated 24th November 1986, published in the *Gazette of India, Extraordinary*, Part-II, Sec. 3 (*i*) dated 24th November 1986.
2. *Vide* Notification dated 29th August, 1977, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 3rd September, 1977.
3. *Vide* Notification dated 9th September, 1980 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 2nd October, 1980.

	Common English Name
Amblypodia zeta.	Andaman tailless oakblue.
Biduanda melisa cyana.	Blue posy
Collphyrs leechii.	Hairstreak' Ferruginous
Castalius rosimon alarbus.	Parrot, common
Charana cepheis.	Mandar in blue, cachar
Chlieria othona	Tit, orchid
Deudoryx epijarbas amatius.	Cornelian, scarce
Everes moorei	Cupid, Moore'
Gerydus biggsii.	Bigg's Brownie
Gerydus sumethus diopeithes	Great Brownie
Heliophorus hybrida	Sapphires
Horaga albimacula.	Onyxes.
Jamides ferrari	Caeruleans
Liphyra brassolis	Butterfly, Moth
Listeria dudgenni	Lister's hairstreak
Logania watsoniana subfasciata.	Mottle, watsen's
Lycaenopsis binghami.	Hedge Blue
Lycaenopsis haraldus ananga.	Hedge Blue, Felder's
Lycaenopsis puspa prominens.	Common hedge blue
Lycanopsis quadriplaga dohertyi	Naga hedge blue
Nacaduba noreia hampsoni.	Lineblue, white-tipped
Polymatus orbitulus leela	Greenish moutain blue.
Pratapa icetas mishmia	Royal, Dark blue.
Simiskina phalena harterti	Brilliant, Broadlanded
Sinthusa virgo	Spark, Pale.
Spindasis elwesi	Silverline, Elwes's
Spindasis rukmini.	Silverline, Khaki
Strymon mackwoodi	Hairstreak, Mackwood's
Tajuria ister.	Royal, uncertain
Tajuria liculentus nela.	Royal, Chinese.
Tajuria yajna yajna	Royal, Chestnut and Black
Thecla ataxus zulla	Wonderful hairstreak
Thecla bieti mendera.	Indian Purple hairstreak
Thecla letha.	Watsoon's hairstreak.
Thecla paona.	Paona hairstreak.
Thecla pavo.	Peacock hairstreak
Virachola smilis	Guava Blues
Family Nymphalidae.	
Apatura ulupi ulupi.	Emperor, Tawny.
Argynnis hegemone.	Silve-washed fritillary
Calinage buddha.	Freak.
Charaxes dunfordi nicholi.	Rajah, chestnut.
Cirrochroa fasciata.	Yeomen.
Diagora nicevillei.	Siren, Scarce.
Dilipa morgiana.	Emperor, Golden.
Doleschallia bisaltide andamana.	Autumn Leat.
Eriboea moorei sandakanus.	Malayan Nawab.
Eriboea schreiberi.	Blue Nawab.
Eulaceura manipurensis.	Emperor, Tytler's
Euthalia durga splendens.	Barons/Counts/Duchesses.

	Common English Name
Euthalia iva.	Duke, Grand.
Euthaslia khama curvifascia.	Duke, Naga
Euthalia telchinia.	Baron, Blue
Helcyra hemina.	Emperor, White
Hypolimnas missipus	Eggfly, Danaid
Limenitis austenia purpurascens.	Commodore, Grey
Limenitis zulema	Admirals.
Melitaea shandura.	Fritillaries/Silverstripes.
Neptis antilope	Sailer, veriegatd
Neptis aspasia.	Sailer, Great hockystick
Neptis columella kankena.	Sailer, Short-banded
Neptis cydippe kirbariensis.	Sailer, Chinese yellow
Neptis ebusa ebusa.	Sailer, Lascar.
Neptis Jumbah binghami	Sailer, chestnut-streaked.
Neptis manasa.	Sailer, Pale Hockystick
Neptis nycteus.	Sailer, Hockystick
Neptis poona	Lascar' Tyter's.
Neptis sankara nar	Sailer, board-banded
Panthoporia jina jina	Bhutan sergeant.
Panthporia rata moorei.	Malay Staff sergeant.
Prothoc franckii regalis	Begum, Blue
Sasakia funebris.	Empress.
Sephisa chandra	Courtier, Eastern
Symbrenthia silana.	Jester Scarce
Vinessa antiopa yedunula	Admirrables
Family Papilionidae	
Chilasa clytea clytea f commixtus.	Common mime
Papilio elephenor.	Spangle, yellow-crested
Papilio liomedon.	Swallowtal, Malabar Banded
Parnssius aeco geminifer	Appllo
Parnassius delphius	Banded apollo
Parnassius hanhyngtoni	Hannyngton's apollo
Parnassius imperator augustus	Imperio apollo.
Parnassius stoliczanus.	Ladak Banded apollo
Polydorus coonsambilanga	Common clubtail.
Polydorus crassipes	Black windmill.
Polydorus hector.	Crimson rose.
Polydorus nevilli.	Nevills windmill.
Polydorus plutonius pembertoni.	Chinese windmill.
Polydorus polla.	Deniceyllie's windmill.
Family Pleridae.	
Aporia harrietae harrietae.	Black viens.
Balhia butleri sikkima.	White butterfly.
Colias colias thrasibulus.	Clouded yellows.
Colias dubi.	Dwarf-clouded yellow.
Delias samaca.	Jaxebel, Pale.
Pieris krueperi devta.	Butterfly cabbage/White-II.
Family Satyriidae.	
Coelitis mothis adamsoni.	Catseye, Scarce.

	Common English Name
Cyllogenes jantae.	Evening Brow, Scarce.
Elymnias peali	Palmfly, Peal's
Elymnias penanga chilensis.	Palmfly, Painted.
Erebia annada annada.	Argus, Ringed.
Erebia narasingha narasingha.	Argus, Mottled.
Letho distans.	Forester, scarce Red.
Letho dura gammiei.	Lilacfork, Scarce
Letho europa tamuna.	Bamboo tree brown
Letho gamina gafuri.	Tytler's Treed brown.
Letho gulunihal gulunihal.	Forester, Dull.
Letho margarite.	Tree brown, Bhutan.
Letho ocellata lyncus.	Mystic, Dismal
Letho remadeva.	Silverstripe Single.
Letho satyabati.	Forester, Pallid.
Mycalesis orseis nautilus.	Bushbrown, Purple.
Pararge menava maeroides.	Wall Dark
Ypthima dohertyi presimilis.	Five right Great.
Bigruslatro.	Coconut or Robber Carb.
Epiaplebialaidlawi.	Dragon Fly.]

[1][1-A. Coconut or Robber crab (*Bigruslatro*).]
[1][2-B. Dragon fly (*Epioplebia laidlawi*).]

SCHEDULE II

* * *

S.O. 216, dated 19th July, 1994.[1]—Whereas the Government of Bihar is satisfied that the areas within Darbhanga district, as mentioned in the columns, 3, 4, 5, and 7 of the Schedule appended herewith, are utmost important from ecological, faunal, floral, geomorphological and natural angle and it is necessary to protect, propagate and develop wild life of those areas and their environment.

Therefore, in exercise of the powers conferred under sub-section (I) and (II) of Sec 37. of the Wild Life (Protection) Act, 1972 (as amended upto 1991), the Governor of Bihar declares the areas, specified in the aforesaid Schedule as 'Closed Area' for a period of five years from the date of issue of this Notification. During the period trapping, killing and hunting of residential and migratory birds shall be strictly prohibited.

---

[1] Published in *Bihar Gazette, Extraordinary*, dated 19th July, 1995.

2. In order to achieve, the aforesaid objective, it is also intended to declare those areas of Darbhanga district as mentioned in the Schedule appended herewith, as Sanctuary under Sec. 18 (*i*) of the Wild Life (Protection) Act, 1972 (as amended upto 1991).

This Closed Sanctuary area shall be called as the Kusheshwarsthan Bird Sanctuary.

3. This notification would come into force from the date of publication in the State Gazette.

PART III-23

THE WILD LIFE (PROTECTION) LICENSING (ADDITIONAL MATTERS FOR CONSIDERATION) RULES, 1983

G.S.R. 328 (E), dated 13th April, 1983.[1]—In exercise of powers conferred by Cl. (*a*) of sub-section (1) of Sec. 63, read with Cl. (*b*) of sub-section (4) of Sec. 44 of the Wild Life (Protection) Act, 1972 (53 of 1972), the Central Government hereby makes the following rules, namely :—

1. Short title, extent and commencement *.—(1) These rules may be called the Wild Life (Protection) Licensing (Additional Matters for Consideration) Rules, 1983.*

(2) They shall extend to the whole of India except the State of Jammu and Kashmir.

(3) They shall come into force on the date of their publication in the Official Gazette.

2. ***Definition.****—In these rules, unless the context otherwise requires, "Act" means the Wild Life (Protection) Act, 1972 (53 of 1972).*

3. ***Additional matters for consideration for grant of licence under Sec. 44 of the Act.****—For the purposes of granting a licence referred to in sub-section (1) of Sec. 44 of the Act, the Chief Wild Life Warden or the authorised officer as the case may be, shall in addition to the matters specified in Cl. (b) of sub-section (4) of that section, have regard to the following other matters, namely,—*

- *(i) capacity of the applicant to handle the business concerned with reference to facilities, equipment and suitability of the premises for such business;*
- *(ii) source and the manner in which the supplies for the business concerned would be obtained;*
- *(iii) number of licences for the relevant business already in existence in the area concerned;*
- *(iv) implications which the grant of such licence would have on the hunting or trade of wild animals concerned:*

Provided that no such licence shall be granted if the said implications relate to any wild animal specified in Sch. I or Part II of Sch. II to the Act except with the previous consultation of the Central Government.

PART III-24

THE WILD LIFE (TRANSACTIONS AND TAXIDERMY) RULES, 1973

G.S.R. 198 (E), dated 9th April, 1973.[1]—In exercise of powers conferred by Cl. (*b*) of sub-section (1) of Sec. 63 of the Wild Life (Protection) Act, 1972 (53 of 1972), the Central Government hereby makes the following rules, namely :—

1. *Short title and commencement* .—*(1) These rules may be called the Wild Life (Transactions and Taxidermy) Rules, 1973.*

(2) They extend to the whole of the State[2] *of Bihar, Gujarat, Haryana, Himachal Pradesh, Madhya Pradesh and Uttar Pradesh.*

(3) They shall come into force on the 9th April, 1973.

2. *Definition.*—*In these rules, unless the context otherwise requires,—*

(a) "Act" means the Wild Life (Protection) Act, 1972 (53 of 1972);

(b) "form" means a form appended to these rules;

(c) "licensee" means a licensee under Chapter V of the Act;

(d) "officer" means the Chief Wild Life Warden or any other officer which the State Government may, for the purposes of these rules, by notification in the Official Gazette, appoint;

(e) "specified animal" means any animal which is specified in Sch. I, or Part II of Sch. II, to the Act and which is—

(i) captured or kept or bred in captivity, or

(ii) found wild in nature.

3. *Acquiring, receiving or keeping specified animal, etc., in control, custody, or possession or put under process of taxidermy or make articles, etc.*—*(1) No licensee shall—*

(i) acquire, receive, keep in his control, custody or possession any specified animal or any animal articles, trophy, uncured trophy or meat derived therefrom, or

(ii) put under a process of taxidermy or make animal article containing part or whole of such animal, except with the previous permission of the officer.

(2) Every application for such permission shall be made in Form I.

(3) On receipt of an application made under sub-rule (2), the officer, may after making such inquiry as he may think fit and within a period of 15 days from the date of receipt of the application, either grant or refuse to grant the permission :

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 9th April, 1973.

[2] The same rule is extended to the State of Maharashtra, *vide* G.S.R. 298 (E), published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 1st June, 1973 and to the State of Kerala *vide* G.S.R. 293 (E), dated, 1st June, 1973, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 1st June, 1973.

Provided that no such permission shall be granted unless the officer is satisfied that the specified animal or animal article, trophy, uncured trophy or meat, referred to in sub-rule (1) has been lawfully acquired.

(4) Where the officer refuses to grant the permission, he shall record the reasons for so doing and a copy of the reasons so recorded shall be communicated to the licensee applying for the permission.

(5) Every permission granted under sub-rule (3) shall be in Form II.

4. Submission of report of stocks.—*(1) Every licensee to whom permission has been granted under sub-rule (3) of rule 3 shall submit, to the officer who had granted the said permission, report regarding the stocks of specified animal or animal article, trophy, uncured trophy or meat, referred to in sub-rule (1) of rule 3, in Form III within a period of* [1]*[thirty-days] of the acquisition, receipt or keeping of the same in his control, custody or possession.*

(2) The officer, after receiving such report may arrange to affix identification marks on such stocks.

5. Sale of specified animal, etc.—*(1) No licensed dealer shall sell or offer for sale any specified animal or any animal article, trophy or uncured trophy derived therefrom, except to a person authorised to purchase by a permission granted by the officer and where the sale is effected the purchaser shall surrender the permission to the licensed dealer.*

(2) Every application for permission to purchase shall be made in Form IV.

(3) On receipt of an application made under sub-rule (2), the officer may, after making such inquiry as he may think fit and within a period of ten days from the date of receipt of the application, either grant or refuse to grant the permission.

(4) Where the officer refuses to grant the permission, he shall record the reasons for so doing and a copy of the reasons so recorded shall be communicated to the person applying for the permission.

(5) Every permission granted under sub-rule (3) shall be in Form V.

(6) Every permission granted under sub-rule (3) shall be valid up to a period of one month from the date of issue of the same.

(7) Every licensed dealer, at the time of each sale, issue a voucher in relation to the specified animal or animal article, trophy or uncured trophy, referred to in sub-rule (1), to the person authorised to purchase.

(8) Each voucher shall contain the following particulars, namely :

(a) date of issue of voucher;

(b) the amount of price realised or to be realised;

(c) name and address of the licensed dealer issuing voucher;

(d) name and address of the person to whom the voucher is issued;

(e) permission number of the person authorised to purchase;

(f) description of the specified animal/animal article/trophy/uncured trophy derived therefrom and number;

---

[1] Subs. by G.S.R. 712 (E), dated 16th December, 1983, for the words "seven days".

(g) whether such specified animal/animal article/trophy/uncured trophy was/were required to be declared under Sec. 44 of the Wild Life (Protection) Act, 1972 (53 of 1972), and if so, whether it/they has/have been declared;

(h) signature of the licensed dealer issuing voucher;

(i) signature of the person to whom the voucher is issued

6. Taxidermy or making animal article.—*(1) Every licensed taxidermist or licensed manufacturer shall, at the time of returning the trophy or animal article, issue a voucher to the owner of the said trophy or animal article.*

(2) Each voucher shall contain the following particulars, namely :

(a) date of issue of voucher;

(b) charges realised or to be realised;

(c) name and address of the licensed taxidermist/manufacturer issuing the voucher;

(d) name and address of the persons to whom the voucher is issued;

(e) description of the uncured trophy/trophy/animal article, and number;

(f) whether uncured trophy/trophy/animal article was required to be declared under Sec. 44 of the Wild Life (Protection) Act, 1972 (53 of 1972), and if so, whether it/they has/have been declared;

(g) signature of the licensed taxidermist/manufacturer issuing the voucher

7. Maintenance of vouchers.—*(1) The voucher referred to in rule 5 or rule 6 shall be in triplicate and serially numbered.*

(2) The duplicate and the triplicate copy of the voucher shall be retained by the licensed dealer, licensed taxidermist or licensed manufacturer and the original copy of the voucher shall be given to the person referred to in sub-rule (7) of rule 5 or sub-rule (1) of rule 6.

(3) Every book containing blank voucher shall be presented to the officer for affixing his initials or stamps on such book before it is brought into use.

(4) (a) Every licensed dealer, licensed taxidermist or licensed manufacturer shall send in monthly batches not later than the seventh day of every month, the duplicate copies of vouchers retained by him, to the officer.

(b) Every permission surrendered to a licensed dealer at the time of sale shall also be enclosed along with the duplicate copies aforesaid.

8. Transport of specified animal, etc.—*(1) No licensee shall transport from one place to another within the State any specified animal, animal article, trophy or uncured trophy derived therefrom, except with the previous permission of the officer.*

(2) Every application for such permission shall be made in Form VI.

(3) On receipt of an application made under sub-rule (2), the officer may, after making such inquiry as he may think fit and within a period of seven days from the date of receipt of the application, either grant or refuse or grant the permissions :

Provided that no such permission shall be granted unless the officer is satisfied that the specified animal or animal article, trophy or uncured trophy referred to in sub-rule (1), has been lawfully acquired.

(4) Where the officer refuses to grant the permission, he shall record the reasons for so doing and a copy of the reasons so recorded shall be communicated to the licensee applying for the permission.

(5) Every permission granted under sub-rule (3) shall be in Form VII.

9. Appeal.—*(1) Any licensee or a person aggrieved by an order made by the Chief Wild Life Warden or any other officer granting the permission under sub-rule (3) of rule 3, sub-rule (3) of rule 5 or sub-rule (3) of rule 8, may prefer an appeal,—*

- *(i) if the order is made by an officer other than the Chief Wild Life Warden to the Chief Wild Life Warden, or*
- *(ii) if the order is made by the Chief Wild Life Warden, to the State Government.*

(2) In the case of an order passed in appeal by the Chief Wild Life Warden under Cl. (i) of sub-rule (1), a second appeal shall lie to the State Government.

(3) No appeal shall be entertained unless it is preferred within fifteen days from the date of the communication to the applicant of the order appealed against :

Provided that the appellate authority may admit any appeal after the expiry of the period aforesaid if it is satisfied that the appellant had sufficient cause for not preparing the appeal in time.

PART III-25

THE WILD LIFE (STOCK DECLARATION) CENTRAL RULES, 1973

G.S.R. 29 (E).[1] —In exercise of powers conferred by Cl. (*a*) of sub-section (1) of Sec. 63 of the Wild Life (Protection) Act, 1972 (53 of 1972), the Central Government hereby makes the following rules, namely :—

1. ***Short title and commencement.***—*(1) These rules may be called the Wild Life (Stock Declaration) Rules, 1973.*

(2) They shall come into force in the State of Madhya Pradesh on the 25th January, 1973, and in other States[2] *and Union territories*[3] *on such date as the Central Government may, by notification appoint and different dates may be appointed for different States and Union territories.*

2. ***Declaration by manufacturer of, dealer or taxidermist in animal article etc.***—*Every manufacturer of, or dealer in animal article or every dealer in captive animals, trophies or uncured trophies or every taxidermist shall, within fifteen days from the commencement of the Wild Life (Protection) Act, 1972, declare his stocks of animal articles, captive animals, trophies and uncured trophies, as the case may be, as on the date of such declaration to the Chief Wild Life Warden in the form given below.*

Form

[*See* sub-section (2) of Sec. 44]

Form of Declaration

To

The Chief Wild Life Warden,

State or Union territory of_____________

1. Full name and address of the manufacturer/dealer/taxidermist making the declaration.

2. Actual stock held on the declaration in animal articles :

   (*i*) Description including name of animal from which derived.
   (*ii*) Number
   (*iii*) Dimension or weight.

---

1 Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 25th January, 1973.

2. The same rule has been extended to following States :

(*i*) Bihar, *vide* G.S.R. 41 (E), published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 1st February, 1973.

(*ii*) Haryana, *vide* G.S.R. 64 (E), published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 12th March, 1973.

(*iii*) Himachal Pradesh, *vide* G.S.R. 191 (E), published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 2nd April, 1973.

(*iv*) Maharashtra, *vide* G.S.R. 297 (E), published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 1st June, 1973.

(*v*) Tamil Nadu, *vide* G.S.R. 2 (E), published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 1st January, 1974.

3. The same rule extended to the Union territory of Pondicherry, *vide* G.S.R. 63 (E), published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 1st March, 1975.

(*iv*) Premises where kept.

3. Actual stock held on the date of declaration in captive animals :

   (*i*) Species and sex.
   (*ii*) Number.
   (*iii*) Adult or Juvenile.
   (*iv*) Premises where kept.

4. Actual stock held on the date of declaration in trophies :

   (*i*) Description including specie of animal.
   (*ii*) Number.
   (*iii*) Dimension or weight.
   (*iv*) Premises where kept.

5. Actual stock held on the date of declaration in uncured trophies,

   (*i*) Description including specie of animal .
   (*ii*) Number.
   (*iii*) Dimension or weight.
   (*iv*) Premises where kept.

6. Remarks, if any.

I do hereby declare that the information given above is true to the best of my knowledge and belief.

PART III-26

THE RECOGNITION OF ZOO RULES, 1992

G.S.R. 711 (E), dated 4th August, 1992.[1]—In exercise of the powers conferred by Cls. (*f*) and (*g*) of sub-section (1) of Sec. 63 of the Wild Life (Protection) Act, 1972 (53 of 1972), the Central Government here makes the following rules, namely :

1. Short title and commencement.—*(1) These rules may be called the Recognition of Zoo Rules, 1992.*

(2) They shall come into force on the date of their publication in the Official Gazette.

2. Definitions.—*In these rules, unless the context otherwise requires,—*

(a) "Act" means the Wild Life (Protection) Act, 1972 (52 of 1972);

(b) "Enclosure" means any accommodation provided for zoo animals;

(c) "Enclosure barrier" means a physical barrier to contain an animal within an enclosure;

(d) "Endangered species" means species included in Sch. I of the Act;

(e) "Form" means a form set forth in Appendix A to these rules;

(f) "Performing purposes" means any effort to force the animal to carry out unnatural act including performance of circus tricks;

(g) "Stand-of barrier" means a physical barrier set back from the outer edge of an enclosure barrier;

(h) "Zoo operator" means the person who has ultimate control over the affairs of the Zoo provided that—

(i) in the case of a firm or other association of individuals, any one of the individual partners or members thereof shall be deemed to be the Zoo operator;

(ii) in the case of a company, any director, manager, secretary or other officer, who is in charge of and responsible to the company for the affairs of the zoo shall be deemed to be the Zoo operator :

(iii) in the case of a zoo owned or controlled by the Central Government or any State Government, or any local authority, the person or persons appointed to manage the affairs of the zoo by the Central Government, the State Government or the local authority, as the case may be, shall be deemed to be the Zoo operator.

3. Application for recognition.—*An application under Sec. 38-H of the Act for recognition of a zoo shall be made to the Central Zoo Authority in Form A.*

4. Fees for application.—*(a) There shall be paid in respect of every application under rule 3, fee of Rupees five hundred.*

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 4th August, 1992.

(b) The amount of the fee shall be paid through Demand Draft/Postal Order (s) in favour of the Central Zoo Authority, New Delhi.

5. *Document to be filed along with the application and particulars it should contain.*—*Every application shall be accompanied by the prescribed fee and shall contain clear particulars as to the matters specified in Form A.*

6. *Power to make inquiries and call for information.*—*Before granting recognition to a zoo under Sec. 38-H of the Act, the Central Authority may make such inquires and require such further information to be furnished, as it deems necessary, relating to the information furnished by the zoo in its application in Form A.*

7. *Form of recognition.*—*The recognition granted to a zoo shall be subject to the following conditions, namely :*

- *(a) that the recognition unless granted on a permanent basis, shall be for such period not less than one year as may be specified in the recognition;*
- *(b) that the zoo shall comply with such standards and norms as are or may be prescribed or imposed under the provisions of the Act and these rules from time to time.*

8. *Renewal of recognition.*—*(a) Three months before the expiry of the period of recognition, a recognised zoo desirous of renewal of such recognition may make an application to the Central Zoo Authority in Form A.*

(b) The provisions of rule 3, rule 4, rule 5, rule 6 and rule 7 shall apply in relation to renewal of recognition as they apply in relation to grant of recognition except that, the fee payable in respect of an application for renewal of recognition shall be rupees two hundred.

9. *Classification of Zoos.*—*For the purposes of deciding standards and norms for recognition of zoos, and monitoring and evaluating their performance, the zoos, on the basis of the area, number of animals and their variety exhibited, and the number of visitors, shall be clssified into four categories as specified below :—*

Category of Zoo	Large	Medium	Small	Mini
Area of the zoo in hectares	More than 75 hectare	50—75 hectare	20—50 hectare	Less than 20 hectare
Number of animal exhibited	More than 750	500—750	200—499	200
Animal variety exhibited	More than 75 numbers	50—75 numbers	20—49 numbers	20 numbers
Number of endangered species exhibited	More than 15	10—15	5—9	Less than 5
Annual Attendance of visitor per year	More than 7.5 lakhs	5—7.5 lakhs	2—5 lakhs	Less than 2.00 lakhs

10. *Standards and norms subject to which recognition under Sec. 38-H of the Act shall be granted.*—*The Central Zoo Authority shall grant recognition with due regard to the interests of protection and conservation of wild life, and such standards, norms and other matters as are specified below :—*

GENERAL

(1) The primary objective of operating any zoo shall be the conservation of wildlife and no zoo shall take up any activity that is inconsistent with this objective.

(2) No zoo shall acquire any animal in violation of the Act or rules made thereunder.

(3) No zoo shall allow any animal to be subjected to the cruelties as defined under the Prevention of Cruelty to Animals Act, 1960 (59 of 1960) or permit any activity that exposes the animals to unnecessary pain, stress or provocation, including use of animals for performing purposes.

(4) No zoo shall use any animal, other than the elephants in plains and yak in hilly areas for riding purposes or draughting any vehicle.

(5) No zoo shall keep any animal chained or teethered unless doing so is essential for its own well being.

(6) No zoo shall exhibit any animal that is seriously sick, injured or infirm

(7) Each zoo shall be closed to visitors at least once a week.

(8) Each zoo shall be encompassed by a perimeter wall with at least two metres height from the ground level. The existing zoos in the nature of safaries and deer parks will continue to have chain link fence of appropriate design and dimensions.

(9) The zoo operators shall provide a clean and healthy environment in the zoo by planting trees, creating green belts and providing lawns and flower bed etc.

(10) The built-up in any zoo shall not exceed twenty-five per cent of the total area of the zoo. The built-up area includes administrative buildings, stores, hospitals, restaurants, kiosks and visitor rest sheds, etc., animals houses and pucca roads.

(11) No zoo shall have the residential complexes for the staff within the main campus of the zoo. Such complex, if any, shall be separated from the main campus of the zoo by a boundary wall with a minimum height of two metres from the ground level.

ADMINISTRATIVE AND STAFFING PATTERN

(12) Every zoo shall have one full-time office in-charge of the zoo. The said officer shall be delegated adequate administrative and financing powers as may be necessary for proper upkeep and care of zoo animals.

(13) Every large and medium zoo shall have at least one full-time curator having the sole responsibility of looking after the upkeep of animals and maintenance of animals enclosures.

(14) Each large zoo shall have at least two full-time veterinarians and medium and small zoo small have at least on full-time veterinarian. The mini zoo may atleast have arrangement with any outside veterinarian for visiting the zoo every day to look after the animals.

ANIMAL ENCLOSURES—DESIGN, DIMENSIONS AND OTHER ESSENTIAL FEATURES

(15) All animal enclosures in a zoo shall be so designed as to fully ensure the safety of animals, caretakers and the visitors. Stand of barriers and adequate warning signs shall be proved for keeping the visitors at a safe distance from the animals.

(16) All animal enclosures in a zoo shall be so designed as to meet the full biological requirements of the animals housed therein. The enclosures shall be, such size as to ensure that the animals get space for their free movement and exercise and the animals within herds and groups are not unduly dominated by individuals. The zoo operators shall take adequate safeguards to avoid the animals being unnaturally provoked for the benefit of viewing by public and excessive stress being caused by visibility of the animals in the adjoining enclosures.

(17) The zoo operators shall endeavour to simulate the conditions of the natural habitat of the animal in the enclosures as closely as possible. Planting of appropriate species of trees for providing shade and constructing shelters which would merge in the overall environment of the enclosures, shall also be provided. Wherever it is technically feasible, only moats shall be provided as enclosure barriers.

(18) The enclosures housing the endangered mammalian species, mentioned in Appendix I to these rules, shall have feeding and retiring cubicles/cell of minimum dimensions given in the said appendix. Each cubicle/cell shall have resting, feeding, drinking water and exercising facilities, according to the biological needs of the species. Separate accommodation shall be provided for pregnant animals. Proper ventilation and arrangements for removal of excreta and residual water be provided in each cell/cubicle/enclosure.

(19) Proper arrangements of drainage of excess of water and arrangements for removal of excreta and residual water from each cell/cubicle/enclosure shall be made.

(20) Designing of any new enclosure for endangered species shall be finalized in consultation with the Central Zoo Authority.

HYGIENE, FEEDING AND UPKEEP

(21) Every zoo shall ensure timely supply of wholesome and unadulterated food in sufficient quantity to each animal according to the requirement of the individual animals, so that no animal remains undernourished.

(22) Every zoo shall provide for a proper waste disposal system for treating both the solid and liquid wastes generated in the zoos.

(23) All left over food items, animal excreta and rubbish shall be removed from each enclosure regularly and disposed of in a manner congenial to the general cleanliness of the zoo.

(24) The zoo operators shall make available round the clock supply of potable water for drinking purpose in each cell/enclosure/cubicle.

(25) Periodic application for disinfectants in each enclosure shall be made according to the directions of the authorized veterinary officer of the zoo.

ANIMAL CARE, HEALTH AND TREATMENT

(26) The animals shall be handled only by the staff having experience and training handling the individual animals. Ever care shall be taken to avoid discomfort, behavioral stress or physical harm to any animal.

(27) The condition and health of all animals in the zoo shall be checked every day by the person-in-charge of their care. If any animal is found sick, injured or unduly stressed the matter shall be reported to the veterinary officer for providing treatment expeditiously.

(28) Routine examination including parasite checks shall be carried out regularly and preventive medicines including vaccination be administered at such intervals as may be decided by the authorised veterinary officer.

(29) The zoo operators shall arrange for medical check-ups of the staff responsible for upkeep of animals at least once in every six months to ensure that they do not have infections of such diseases that can infect the zoo animals.

(30) Each zoo shall maintain animal history sheets and treatment card in respect of each animal of endangered species, identified by the Central Zoo Authority.

VETERINARY FACILITIES

(31) Every large and medium zoo shall have full -fledged veterinary facilities including a properly equipped veterinary hospital, basic diagnostic facilities and comprehensive range of drugs. Each veterinary hospital shall have isolation and quarantine wards for newly arriving animals and sick animals. These wards should be so located as to minimise the chances of infections spreading to other animals of the zoo.

(32) Each veterinary hospital shall have facilities for restraining and handing sick animals including tranquilizing equipments and service projector. The hospital shall also have a reference library on animal health care and upkeep.

(33) The small and minizoos, where full-fledged veterinary hospital is not available, shall have at least a treatment room in the premises of the zoo where routine examination of animals can be undertaken and immediate treatment can be provided.

(34) Every zoo shall have post-mortem room. Any animal that dies in a zoo shall be subjected to a detailed post-mortem and the findings recorded and maintained for a period of at least six years.

(35) Each zoo shall have a graveyard where the carcasses of dead animals can be buried without affecting the hygiene and the cleanliness of the zoo. The large and medium zoos shall have an inscinerator for disposal of the carcasses and other refuse material.

BREEDING OF ANIMALS

(36) Every zoo shall formulate a programme for captive breeding of only such animals as are approved by the Central Zoo Authority for the zoo. They shall abide by the guidelines and directives of the Central Zoo Authority in this regard.

(37) Every zoo shall keep the animal in viable, social groups. No animal will be kept without a mate for a period exceeding one year unless there is a legitimate reason for doing so or the animal has already passed its prime and is of no use for breeding purposes. In the event of a zoo failing to find a mate for any single animal within this period, the animal shall be shifted to some other place according to the direction of the Central Zoo Authority.

(38) No zoo shall be allowed to acquire a single animal of any variety except when doing so is essential either for finding a mate for the single animal housed in the said zoo or for exchange of blood in a captive breeding group.

(39) Every zoo shall take up regular exchange programmes of animals so as to prevent the traits or ill effects of in breeding. To achieve this object each zoo shall maintain a stud book in respect of every endangered species.

(40) To safeguard against uncontrolled growth in the population of prolifically breeding animals, every zoo shall implement appropriate population control measures like separation of sexes, sterilization, vasectomy and implanting of pallets, etc.

(41) No zoo shall permit hybridization either between different species of animals or different races of the same species of animals.

MAINTENANCE OF RECORDS AND SUBMISSION OF INVENTORY TO THE CENTRAL ZOO AUTHORITY

(42) Every zoo shall keep a record of the birth, acquisitions, sales, disposals and deaths of all animals. The inventory of the animals housed in each zoo as on 31st March of every year shall be submitted to the Central Zoo Authority by 30th April of the same year.

(43) Every zoo shall also submit a brief summary of the death of animals in the zoo for every financial year, alongwith the reasons of death identified on the basis of post-mortem reports and other diagnostic tests, by 30th April of the following year.

(44) Every zoo shall publish an annual report of the activities of the zoo in respect of each financial year. The copy of the said annual report shall be made available to the Central Zoo Authority, within two months, after the end of the financial year. The report shall also be made available to the general public at a reasonable cost.

EDUCATION AND RESEARCH

(45) Every enclosure in a zoo shall bear a sign board displaying the scientific information regarding the animals exhibited in it.

(46) Every zoo shall publish leaflets, brochures and guide books and make the same available to the visitors either free of cost or at a reasonable price.

(47) Every large and medium zoo shall make arrangements for recording, in writing, the detailed observations about the biological behaviour, population dynamics and veterinary care of the animals exhibited as per directions of the Central Zoo Authority so that a detailed data base could be developed. The data base shall be exchanged with other zoos as well as the Central Zoo Authority.

VISITOR FACILITIES

(48) The zoo operators shall provide adequate civic facilities like toilets, visitor sheds, and drinking water points at convenient places in the zoo for visitors.

(49) First-aid equipments including anti-venom shall be readily available in the premises of the zoo.

(50) Arrangements shall be made to provide access to the zoo for disabled visitors including those in the wheel chair.

DEVELOPMENT AND PLANNING

(51) Each zoo shall prepare a long-term master plan for its development. The zoo shall also prepare a management plan, giving details of the proposal and activities of development for next six years. The copies of the said plans shall be sent to the Central Zoo Authority.

APPENDIX A

Application for Getting Recognition from the Central Zoo Authority under Sec. 38-H sub-section (2)

Form A

To
The Member-Secretary,
Central Zoo Authority of India,
New Delhi.

We want to get recognition under Sec. 38-H of the Wild Life (Protection) Act, 1972 in respect of ____________, Bank Draft/Postal Order for Rs. 500 drawn in favour of Central Zoo Authority is also enclosed. The required information in respect of __________ is an under :

1. Name of the Zoo :
2. Location of the Zoo and Area :
3. Date of establishment :
4. Name of controlling authority/Operator :
5. Total number of visitors to the zoo during the last three years : (Year-wise)
6 Total number of days on which zoo is open to visitors during a calendar year :
7. Number of animals exhibited by the zoo :

Number of species exhibited	Stock position on the close of preceding year	Stock position during the current financial year				Stock as on the on the date of application
		Disposal	Birth	Acquisition	Deaths	
Mammals						
Birds						
Reptiles						
Amphibians						
Fishes and other Invertebrates						

8. Total number of enclosures :
    (*i*) Open air moated enclosures :
    (*ii*) Closed cages/aviaries.
9. List of endangered species bred during last 3 years :
10. Veterinary facilities :
    (*a*) Whole-time veterinarian is available or not :
    (*b*) Facilities available in the Veterinary Hospital :
        (*a*) Operation theatre Surgical room.
        (*b*) X-ray facility.
        (*c*) Squeeze cages.
        (*d*) Indoor patient ward.
        (*e*) Quarantine ward.
        (*f*) Dispensary.
        (*g*) Nursery for hand-rearing animal babies.
        (*h*) Pathological laboratory.
        (*i*) Tranquillising equipments/drugs.
11. Whether the following facilities exist in the Zoo :
    (*i*) Kitchen
    (*ii*) Food store
    (*iii*) Deep Freeze
    (*iv*) Potable water facility
    (*v*) Food distribution Van/Rickshaw etc.
12. Sanitary care and disease control :
    Whether—
    (*i*) Pollution-free water to animals for drinking is available ?
    (*ii*) Proper drainage system exists in enclosures ?
    (*iii*) Regular disposal of refuse material is done ?
    (*iv*) Programmes for control of pests and predators exists ?
    (*v*) Preventive measures like deworming and vaccination are being provided ?
13. Amenities to visitors :
    Whether—
    (*a*) Public facilities like toilets, bathrooms exist ?
    (*b*) Sufficient number of drinking water taps available ?
    (*c*) Visitor's sheds at reasonable distances are available ?
    (*d*) Visitor information centre and nature interpretation centre exist ?
    (*e*) Zoo education facilities have been provided ?
    (*f*) Public telephone booths are available ?
    (*g*) Kiosks and Restaurants are available at the zoo ?
14. Safety measures for visitors :
    Whether—
    (*a*) Effective Stand-off barriers have been provided around enclosures ?
    (*b*) Adequate number of warning sign boards exist ?
    (*c*) First-Aid measures are available ?
15. Budget of the Zoo for last 3 years

Revenue	Grants	Total expenditure

16. Annual Report, Guide books, Brochure, any other publication (copies enclosed)
17. Master plan of the Zoo (copy enclosed)

APPENDIX-I

Minimum Prescribed Size for Feeding/Retiring Cubicle/Enclosures for Important Mammalian Species of Captive Animals

Name of the Species	Size of cubicle/enclosure length x breadth x height in meters
1	2
Family—Felidae :	
Tiger and lions	2.75 x 1.80 x 3.00
Panther	2.00 x 1.50 x 2.00
Clouded Leopard and Snow Leopard	2.00 x 1.50 x 2.00
Small cats	1.80 x 1.50 x 1.50
Family—Elephantidae	
Elephant	8.0 x 6.0 x 5.5
Family—Rhinocerotidae	
One-horned Indian Rhinoceroes	5.0 x 3.0 x 2.5
Family—Cervidae	
Brow antered deer	3.0 x 2.0 x 2.5
Hangul	3.0 x 2.0 x 2.5
Swamp deer	3.0 x 2.0 x 2.5
Musk deer	2.5 x 1.5 x 2.0
Mouse deer	1.5 x 1.0 x 1.5
Family—Bovidae	
Nilgiri Tahr	2.5 x 1.5 x 2.0
Chinkara	2.5 x 1.5 x 2.0
Four-horned antilope	2.5 x 1.5 x 2.0
Wild Buffalo	3.0 x 1.5 x 2.0
Indian Biason	3.0 x 2.0 x 2.5
Yak	4.0 x 2.0 x 2.5
Bharat, goral, wild sheep and Markhor	2.5 x 1.5 x 2.0
Family—Equidae	
Wild Ass	4.0 x 2.0 x 2.5
Family—Ursidae	
All types of Indian bears	2.0 x 1.8 x 2.0
Family—Canidae	
Jackal, Wolf and Wild dog	2.0 x 1.5 x 1.5
Family—Vivirridae	
Palmcivet	2.0 x 1.0 x 1.0
Large Indian Civet and Binturong	2.0 x 1.5 x 1.0
Family—Mustellidae	
Otters all types	2.5 x 1.5 x 1.0
Ratel/Hogibadger	2.5 x 1.5 x 1.0
Martems	2.0 x 1.5 x 1.0
Family—Pracyonidae	
Red Panda	3.0 x 1.5 x 1.0
Family—Lorisidae	
Slow loris and slender loris	1.0 x 1.0 x 1.5
Family—Cercopithecidae	
Monkeys and langurs	2.0 x 1.0 x 1.5

PART III-27

NATIONAL ZOO POLICY, 1998[1]

NOTIFICATION

1. Preamble.—1.1 The growing awareness for nature and wildlife conservation has made zoos a popular institution. Estimates indicate that 10% of the world's population visit zoos every year. There are about 350 animal collections in India, which are visited by more than 50 million people annually.

1.2 While there is a history of scientific interest, conservation and welfare of captive wild animals in the country, many zoos have evolved from menageries and private collections, and most zoos until the last two decades were set up mainly for entertainment and recreation. As wildlife resources were abundant in the past, scientific a knowledge about the behavioural and biological requirements of animals did not receive adequate attention, with the result that scientific management of wild animals in captivity has evolved slowly

1.3 The need for making conservation as one of the main objectives of management of zoos was realised by Government of India soon after Independence and the Indian Board for Wildlife made important recommendations in this regard. The Government set up an Expert Committee on Management of Zoos in November 1972 and its recommendations were accepted in June 1973. The recommendations are relevant even now for improving the management of zoos. The National Wildlife Action Plan of 1983 again emphasised the role of *ex situ* conservation in national conservation efforts. However, because of varied ownership patterns and divergent nature of animal collections not much was achieved.

1.4 Today when wildlife habitats are under severe pressure and a large number of species of wild fauna have become endangered, the zoos have not only to sustain their own populations but also augment the depleting populations of endangered species in the wild This new role has been acknowledged by the global conservation community and Article 9 of the Convention on Biological Diversity.

1.5 As zoos are visited by a large number of visitors, zoos are a potent tool for educating people about the close linkage between protection of natural areas and maintaining the life-supporting processes of nature. Well-planned and appropriately designed zoos can sensitize visitors to the dangers of a hostile or indifferent attitude towards nature

1.6 In India, many well designed zoos were set up in some of the States but for the most part, zoos have not been able to meet the challenges imposed by the changing scenario and still continue with the legacy of past i.e., displaying animals under conditions which are neither congenial to the animals nor educative and rewarding to the visitors.

1.7 The amendment of the Wildlife (Protection) Act, in 1991, provided for the enforcement of mandatory standards and norms for management of zoos through the Central Zoo Authority. However, it is realised that the objectives of the Act can be achieved only through co-operation and participation of various government agencies, non-governmental organisations and people at large

1.8 The National Zoo Policy aims at giving proper direction and thrust to the management of zoos by mustering co-operation and participation of all concerned

2. Objectives.—2.1 The main objective of the zoos shall be to complement and strengthen the national efforts in conservation of the rich biodiversity of the country, particularly the wild fauna. This objective can be achieved through the following protocol :—

2.1.1 Supporting the conservation of endangered species by giving species, which have no chance of survival in wild, a last chance of survival through coordinated breeding under *ex situ* conditions and raise stocks for rehabilitating them in wild as and when it is appropriate and desirable.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 29th October, 1998 (*vide* Notification No. S.O. 936 (E), dated 28th October, 1998.

2.1.2 To inspire amongst zoo visitors empathy for wild animals, an understanding and awareness about the need for conservation of natural resources and for maintaining the ecological balance.

2.1.3 Providing opportunities for scientific studies useful for conservation in general and creation of database for sharing between the agencies involved in *in situ* and *ex situ* conservation

2.1.4 Besides the aforesaid objectives, the zoos shall continue to function as rescue centres for orphaned wild animals, subject to the availability of appropriate housing and upkeep infrastructure. Where appropriate housing and upkeep is not available, State Governments and the Central Government would ascertain setting up rescue facilities in off—the—display areas of the zoo, subject to the availability of land.

3. Strategy for achieving the objectives.—

3.1 General Policy about zoos.—

3.1.1 Since zoos require a significant amount of resources in the form of land, water, energy and money, no new zoo shall be set up unless a sustained supply of resources including finance and technical support are guaranteed.

3.1.2 Zoos shall prepare a long-term masterplan for development to ensure optimum utilisation of the land, water, energy and finance

3.1.3 Every zoo shall maintain a healthy, hygienic and natural environment in the zoo, so that the visitors get an adequate opportunity to experience a natural environment.

3.1.4 Zoos shall give priority to endangered species in their collection and breeding plans. The order of preference for selection of species shall be (in descending order) locality, region, country and other areas.

3.1.5 Zoos shall regulate the number of animals of various species in their collection in such a way that each animal serves the objectives of the zoo. For achieving this objective, a detailed management plan of every species in the zoo shall be prepared.

3.1.6 Every zoo shall endeavour to avoid keeping single animals or non-viable sex ratios of any species. They shall co-operate in pooling such animals into genetically, demographically and socially viable groups at zoos identified for the purpose.

3.1.7 Zoos shall avoid keeping surplus animals of prolifically breeding species and, if required, appropriate population control measures shall be adopted.

3.2 Acquisition of Animals.—

3.2.1 Except for obtaining founder animals for approved breeding programme and infusion of new blood into inbred groups, no zoo shall collect animals from the wild.

3.2.2 Zoos shall not enter into any transaction involving violation of the law and provisions of international conventions on wildlife conservation.

3.2.3 Zoos shall not enter into any transaction in respect of their surplus animals with any commercial establishment. Even the animal products should not be utilised for commercial purposes. The trophies of the animals could, however, be used for educational or scientific purposes.

3.3 Animal Housing.—

3.3.1 Every animal in a zoo shall be provided housing, upkeep and health care that can ensure a quality of life and longevity to enable the zoo population sustain itself through procreation.

3.3.2 The enclosure for all the species displayed or kept in a zoo shall be of such size that all animals get adequate space for free movement and exercise and no animal is unduly dominated or harassed by any other animal.

3.3.3 Each animal enclosure in a zoo shall have appropriate shelters, perches, withdrawal areas, wallow-pools, drinking water points and such other facilities which can provide the animals a chance to display the wide range of their natural behaviour as well as protect them from extremes of climate.

3.4 Upkeep of Animal Collections.—

3.4.1 Zoos shall provide diet to each species which is similar to its feed in nature. Where for unavoidable reasons any ingredients have to be substituted, due care will be taken to ensure that the substitute fulfils the nutritional requirement of the species.

3.4.2 For the well-being of the animals, round-the-clock supply of potable drinking-water shall be made available to all animals kept in the zoo.

3 4.3 With the objective of avoiding human imprinting and domestication of animals, zoos shall prevent physical handling of animals by the staff to the extent possible.

3.4.4 Zoos shall not allow any animal to be provoked or tortured for the purpose of extracting any performance or tricks for the benefit of the visitors or for any other reason.

3.5 Health Care.—

3.5.1 Zoos shall ensure availability of the highest standards of veterinary care to all the animals in ther collection.

3.5.2 Adequate measures shall be taken by every zoo for implementing wildlife health and quarantine rules and regulations. Appropriate vaccination programmes shall also be taken up for safeguarding against infectious diseases. Timely action to isolate infected animals from the zoo populatiuon shall also be taken to avoid further spread of disease.

3.6 Research and Training.—

3.6.1 The zoos shall encourage research on the biology, behaviour, nutrition and veterinary aspects of animals in their collection. They shall also endeavour for creation of expertise on zoo architecture and landscape designing, co-operation of recognised institutions already working in relevant fields in this regard shall be taken.

3.6.2 Zoos shall endeavour for transfer of technical skills available in the filed for zoo personnel. The Central Government, Central Zoo Authority and State Government shall provide due support to zoos in these efforts. Assistance of Wildlife Institute of India (WII), Indian Veterinary Research Institute (IVRI) and other institutions within India and abroad, having appropriate expertise shall be taken in this regard.

3.6.3 Zoos shall also endeavour for dissemination of information on scientific aspects of management through publication of periodicals, journals, news-letters and special bulletins. Help of non-governmental organisations (NGOs) and government institutions shall also be availed in such efforts. The Central Zoo Authority shall provide technical and financial support to the Indian Zoo Directors Association (IZDA) and other institutions in this regard.

3.7 Breeding Programme for Species.—

3 7.1 Before taking up breeding programme of any species, zoos shall clearly identify the objectives for which the breeding programme is being taken up. The targeted numbers for the programme would be decided keeping in view the identified objectives.

3 7.2 All zoos shall cooperate in successful implementation of identified breeding programmes by way of loaning, pooling or exchanging animals for the programme and help creation of socially, genetically and demographically viable groups even at the cost of reducing the number of animals or number of species displayed in individual zoos.

3.7.3 Breeding programme shall be taken up by zoos after collection of adequate data like biology, behaviour and other demographic factors affecting the programme, including the minimum number of founder animals and the quantum of housing facilities available.

3.7.4 Programmes for breeding of zoo animals for re-introduction in the wild shall be taken up after getting approval of the State Government, the Central Zoo Authority and the Central Government, as the case may be.

3.7.5 Zoos shall give priority in their breeding programmes to endangered species representing the zoo-geographic zones in which they are located.

3.7.6 For carrying out breeding programmes in a scientific and planned manner the zoo shall mark every individual animal involved in the programme in an appropriate manner and maintain appropriate records.

3.7.7 Zoos shall take utmost precaution to prevent inbreeding. They shall avoid artificial selection of traits and make no explicit or implicit attempts to interbreed various genera, species and sub-species

3 7.8 Special effort shall be made to avoid human imprinting of the stocks raised for reintroduction purposes by providing off-exhibit breeding facilities.

3.8 *Education and Outreach Activity.*—

3.8.1 Each zoos should have a well-drawn-up plan for educating the visitors as well as others in the community. Zoos shall keep a close liaison with other *ex situ* facilities in this regard

3 8 2 The central theme of the zoo education programme being the linkage between the survival of various species and protection of their natural habitat enclosures which allow the animals to display natural behaviour are crucial to zoo education. Zoos shall, therefore, display animals in such enclosures only where the animals do not suffer physiological and psychological restraint.

3 8 3 Attractive and effective signage methods and interactive displays to explain activities of various species to visitors, published education material and audio-visual devices are proven methods for driving home the conservation message A formal education programme should also be pursued for strengthening the education message

3 8.4 Besides signage, the zoos shall also use guided tours, talks by knowledgeable persons and audio-visual shows for effectively communication the message of conservation to the visitors

3 8 5 The help of universities, colleges and non-governmental organisations shall be taken to educate the students about the benefits of supporting nature conservation programmes.

3.9 *Extension Activities.*—

3 9 1 To provide the urban population with a window to nature and to serve as green lungs for the polluting environment, zoos shall extend their exprrtise and help to State Governments and local authorities to create nature parks extending over extensive areas near big cities.

3.10 *Amenities to Visitors.*—

3.10.1 Zoos shall provide basic civic amentities to the visitors like toilets, drinking-water points, shelters and first-aid facilities Ramps shall also be provided for the benefit of visitors in wheelchairs for approach to animal enclosures and other civic amenities.

3 10.2 Zoos shall not provide any infrastructure for recreation/entertainment of visitors that is inconsistent with the stated objective of zoos.

PART III-28

THE PUBLIC LIABILITY INSURANCE ACT, 1991

[ACT NO. 6 OF 1991][1]

[22nd January, 1991]

An Act to provide for public liability insurance for the purpose of providing immediate relief to the persons affected by accident occurring while handling any hazardous substance and for matters connected therewith or incidental thereto.

BE it enacted by Parliament in the forty-first Year of the Republic of India as follows :—

1. ***Short title and commencement.***—*(1) This Act may be called the Public Liability Insurance Act, 1991.*

(2) It shall come into force on such date[2] as the Central Government may, by notification, appoint.

2. ***Definitions.***—*In this Act, unless the context otherwise requires.—*

[3]*[(a) "accident" means an accident involving a fortuitous, sudden or unintentional occurrence while handling any hazardous substance resulting in continuous, intermittent or repeated exposure to death, of or injury to, any person or damage to any property but does not include an accident by reason only of war or radioactivity;]*

(b) "Collector" means the Collector having jurisdiction over the area in which the accident occurs;

(c) "handling", in relation to any hazardous substance, means the manufacture, processing, treatment, package, storage, transportation by vehicle, use, collection, destruction, conversion, offering for sale, transfer or the like of such hazardous substance;

(d) "hazardous substance" means any substance or preparation which is defined as hazardous substance under the Environment (Protection) Act, 1986, 29 of 1986), and exceeding such quantity as may be specified, by notification, by the Central Government;

(e) "insurance" means insurance against liability under sub-section (1) of Sec. 3;

(f) "notification" means notification published in the Official Gazette;

[4]*[(g) "owner" means a person who owns, or has control over handling any hazardous substance at the time of accident and includes,—*

(i) in the case of firm, any of its partners;

---

[1] Received the assent of the President on the 22nd January, 1991 and published in the *Gazette of India, Extraordinary* Pt. II, Sec. 1, dated 22nd January, 1991.

[2] It came into force w.e.f. 1st day of April, 1991 *vide* G.S.R. 253, dated 27th March, 1991 published in the *Gazette of India*, Pt. II, Sec. 1, dated 13th April, 1991.

[3] Subs. by Act 11 of 1992, Sec. 2 (w.e.f. 31st January, 1992).

[4] Subs. by Act 11 of 1992, Sec. 2 (w.e.f. 31st January, 1992).

(ii) in the case of an association, any of its members; and

(iii) in the case of a company, any of its directors, managers, secretaries or other officers who is directly in charge of, and is responsible to the company for the conduct of the business of the company;]

(h) "prescribed' means prescribed by rules made under this Act;

[1][*(ha) "Relief Fund" means the Environmental Relief Fund established under Sec. 7A]*

(i) "rules" means rules made under this Act;

(ii) "vehicle" means any mode of surface transport other than railways.

3. Liability to give relief in certain cases on principle of no fault.—*(1) Where death or injury to any person (other than a workman) or damage to any property has resulted from an accident, the owner shall be liable to give such relief as is specified in Schedule for such death, injury or damage.*

(2) In any claim for relief under sub-section (1) (hereinafter referred to in this Act as claim for relief), the claimant shall not be required to plead and establish that the death, injury or damage in respect of which the claim has been made was due to any wrongful act, neglect or default of any person.

Explanation.—For the purpose of this section,—

(i) "workman" has the meaning assigned to it in the Workmen's Compensation Act, 1923 (8 of 1923);

(ii) "injury" includes permanent total or permanent partial disability or sickness resulting out of an accident.

4. Liability of owner to take out insurance policies.—*(1) Every owner shall take out, before he starts handling any hazardous substance, one or more insurance policies providing for contracts of insurance whereby he is insured against liability to give relief under sub-section (1) of Sec. 3 :*

Provided that any owner handling any hazardous substance immediately before the commencement of this Act shall take out such insurance policy or policies as soon as may be and in any case within a period of one year from such commencement.

(2) Every owner shall get the insurance policy, referred to in sub-section (1), renewed from time to time before the expiry of the period of validity thereof so that the insurance policies may remain in force throughout the period during which such handling is continued.

[2][*(2A) No insurance policy taken out by an owner shall be for a amount less than the amount of the paid-up capital of the undertaking handling any hazardous substance and owned or controlled by that owner and more than the amount, not exceeding fifty crore rupees, as may be prescribed.*

Explanation.—"Paid-up capital" in this sub-section means, in the case of an owner not being a company, the market value of all assets and stocks of the undertaking on the date of contracts of insurance.

---

1. Subs by Act 11 of 1992, Sec. 3 (w.e.f. 31st January, 1992).
2. Ins. by Act 11 of 1992, Sec. 3 (w.e.f. 31st January, 1992).

(2B) The liability of the insurer under one insurance policy shall not exceed the amount specified in the terms of the contract of insurance in that insurance policy.

(2C) Every owner shall also, together with the amount of premium, pay to the insurer, for being credited to the Relief Fund established under Sec. 7A, such further amount, not exceeding the amount of premium, as may be prescribed.

(2D)The insurer shall remit the further amount received from the owner under sub-section (2C) to the Relief Fund in such manner and within such period as may be prescribed and where the insurer fails to so remit the further amount, such amount shall be recoverable from insurer as arrears of land revenue or of public demand.]

(3) The Central Government may, by notification, exempt from the operation of sub-section (1) any owner, namely :—

(a) the Central Government;

(b) any State Government,

(c) any corporation owned or controlled by the Central Government or a State Government; or

(d) any local authority :

Provided that no such order shall be made in relation to such owner unless a fund has been established and is maintained by that owner in accordance with the rules made in this behalf for meeting any liability under sub-section (1) of Sec. 3.

5. Verification and publication of accident by Collector.*—Whenever it comes to the notice of the Collector that an accident has occurred at any place within his jurisdiction, he shall verify the occurence of such accident and cause publicity to be given in such manner as he deems fit for inviting applications under sub-section (1) of Sec. 6.*

6. Application for claim for relief.*—(1) An application for claim for relief may be made—*

(a) by the person who has sustained the injury;

(b) by the owner of the property to which the damage has been caused;

(c) where death has resulted from the accident, by all or any of the legal representatives of the deceased; or

(d) by any agent duly authorised by such person or owner of such property or all or any of the legal representatives of the deceased, as the case may be :

Provided that where all the legal representatives of the deceased have not joined in any such application for relief, the application shall be made on behalf of or for the benefit of all the legal representatives of the deceased and the legal representatives who have not so joined shall be impleaded as respondents to the application.

(2) Every application under sub-section (1) shall be made to the Collector shall be in such form, contain such particulars and shall be accompanied by such documents as may be prescribed.

(3) No application for relief shall be entertained unless it is made within five years of the occurrence of the accident.

7. ***Award of relief.***—*(1) On receipt of an application under sub-section (1) of Sec. 6, the Collector shall after giving notice of the application to the owner and after giving the parties an opportunity of being heard, hold an inquiry into the claim or, each of the claims, and may make an award determining the amount of relief which appears to him to be just and specifying the person or persons to whom such amount of relief shall be paid.*

(2) The Collector shall arrange to deliver copies of the award to the parties concerned expeditiously and in any case within a period of fifteen days from the date of the award.

[1]*[(3) When an award is made under this section,—*

- *(a) the insurer, who is required to pay any amount in terms of such award and to the extent specified in sub-section (2B) of Sec. 4, shall, within a period of thirty days of the date of announcement of the award, deposit that amount in such manner as the Collector may direct;*
- *(b) the Collector shall arrange to pay from the Relief Fund, in terms of such award and in accordance with the scheme made under Sec. 7A, to the person or persons referred to in sub-section (1) such amount in such manner as may be specified in that scheme;*
- *(c) the owner shall, within such period, deposit such amount in such manner as the Collector may direct.]*

(4) In holding any inquiry under sub-section (1), the Collector may, subject to any rules made in this behalf, follow such summary procedure as he thinks fit.

(5) The Collector shall have all the powers of Civil Court for the purpose of taking evidence on oath and of enforcing the attendance of witnesses and of compelling the discovery and production of documents and material objects and for such other purposes as may be prescribed; and the Collector shall be deemed to be Civil Court for all the purposes of Sec. 195 and Chapter XXVI of the Code of Criminal Procedure, 1973 (2 of 1974).

(6) Where the insurer or the owner against whom the award is made under sub-section (1) fails to deposit the amount of such award within the period specified under sub-section (3), such amount shall be recoverable from the owner, or as the case may be, the insurer as arrears of land revenue or of public demand.

(7) A claim for relief in respect of death of, or injury to, any person or damage to any property shall be disposed of as expeditiously as possible and every endeavour shall be made to dispose of such claim within three months of the receipt of the application for relief under sub-section (1) of Sec. 6.

---

[1] Subs. by Act 11 of 1992, Sec. 4 (w.e.f. 31st January, 1992).

[1][(8) *Where an owner is likely to remove or dispose of his property with a view to evading payment by him of the amount of award, the Collector may, in accordance with the provisions contained in rules 1 to 4 of Order XXXIX of the First Schedule to the Code of Civil Procedure, 1908 , (5 of 1908), grant a temporary injuction to restrain such act.]*

[2][**7-A. Establishment of Environmental Relief Fund.**—*(1) The Central Government may, by notification in the Official Gazette, establish a fund to be known as the Environment Relief Fund.*

(2) The Relief Fund shall be utilised for paying, in accordance with the provision of this Act and the scheme, relief under the award made by the Collector under Sec. 7.

(3) The Central Government may, by notification in the Official Gazette, make a scheme specifying the authority in which the relief fund shall vest, the manner in which the Fund shall be administered the form and the manner in which money shall be drawn from the Relief Fund and for all other matters connected with or incidental to the administration of the Relief Fund and the payment of relief therefrom.]

8. Provisions as to other right to claim compensation for death, etc.—*(1) The right to claim relief under sub-section (1) of Sec. 3 in respect of death of, or injury to, any person or damage to any property shall be in addition to any other right to claim compensation in respect thereof under any other law for time being in force.*

(2) Notwithstanding anything contained in sub-section (1), where in respect of death of, or injury to, any person or damage to any property, the owner, liable to give claim for relief, is also liable to pay compensation under any other law, the amount of such compensation shall be reduced by the amount of relief paid under this Act.

9. Power to call for information.—*Any person authorised by the Central Government may, for the purposes of ascertaining whether any requirements of this Act or of any rule or of any direction given under this Act have been complied with, require any owner to submit to that person such information as that person may reasonably think necessary.*

10. Power of entry and inspection.—*Any person, authorised by the Central Government in this behalf, shall have a right to enter, at all reasonable times with such assistance as he considers necessary, any place, premises or vehicle, where hazardous substance is handled for the purpose of determining whether any provisions of this Act or of any rule or of any direction given under this Act is being or has been complied with and such owner is bound to render all assistance to such person.*

11. Power of search and seizure.—*(1) If a person, authorised by Central Government in this behalf, has reason to believe that handling of any hazardous substance is taking place in any place, premises or vehicle, in contravention of sub-section (1) of Sec. 4, he may enter into and search such place, premises or vehicle for such handling of hazardous substance.*

---

1. Subs. by Act 11 of 1992, Sec. 4 (w.e.f. 31st January, 1992).
2. Ins. by Act 11 of 1992, Sec. 5 (w.e.f. 31st January, 1992).

(2) Where, as a result of any search under sub-section (1) any handling of hazardous substance has been found in relation to which contravention of sub-section (1) of Sec. 4 has taken place, he may seize such hazardous substance and other things which, in his opinion, will be useful for, or relevant to, any proceeding under this Act :

Provided that where it is not practicable to seize any such substance or thing he may serve on the owner any order that the owner shall not remove, part with, or otherwise deal with, the hazardous substance and such other things except with the previous permission of that person.

(3) He may, if he has reason to believe that it is expedient so to do to prevent an accident dispose of the hazardous substance seized under sub-section (2) immediately in such manner as he may deem fit.

(4) All expenses incurred by him in the disposal of hazardous substances under sub-section (3) shall be recoverable from the owner as arrears of land revenue or of public demand.

12. Power to give directions.—*Notwithstanding anything contained in any other law but subject to the provisions of this Act, the Central Government may, in exercise of its powers and performance of it functions under this Act, issue such directions in writing as it may deem fit for the purposes of this Act to any owner or any person, officer, authority or agency and such owner, person, officer, authority or agency shall be bound to comply with such directions.*

Explanation.—For the removal of doubts, it is hereby declared that the power to issue directions under this section includes the power to direct—

- *(a) prohibition or regulation of the handling of any hazardous substance; or*
- *(b) stoppage or regulation of the supply of electricity, water or any other service.*

13. Power to make application to courts for restraining owner from handling hazardous substances.—*(1) If the Central Government or any person authorised by that Government in this behalf has reason to believe that any owner has been handling any hazardous substance in contravention of any of the provisions of this Act, that Government or, as the case may be, that person may make an application to a Court, not inferior to that of a Metropolitan Magistrate or a Judicial Magistrate first class for restraining such owner from such handling.*

(2) On receipt of the application under sub-section (1), the Court may make such order as it deems fit.

(3) Where under sub-section (2) the Court makes an order restraining any owner from handling hazardous substance, it may, in that order—

- *(a) direct such owner to desist from such handling;*
- *(b) authorise the Central Government or, as the case may be, the person referred to in sub-section (1), if the direction under Cl. (a) is not complied with by the owner to whom such direction is issued, to implement the direction in such manner as may be specified by the Court.*

(4) All expenses incurred by the Central Government, or as the case may be, the person in implementing the directions of Court under Cl. (b) of sub-section (3), shall be recoverable from the owner as arrears of land revenue or of public demand.

14. Penalty for contravention of sub-section (1) or sub-section (2) of Sec. 4 or failure to comply with directions under Sec. 12.—*(1) Whoever contravenes any of the provisions of [1][sub-section (1), sub-section (2), sub-section (2A) or sub-section (2-C)] of Sec. 4 or fails to comply with any directions issued under Sec. 12, he shall be punishable with imprisonment for a term which shall not be less than one year and six months but which may extend to six years, or with fine which shall not be less than one lakh rupees, or with both.*

(2) Whoever, having already been convicted of an offence under sub-section (1), is convicted for the second offence or any offence subsequent to the second offence, he shall be punishable with imprisonment for a term which shall not be less than two years but which may extend to seven years and with fine which shall not be less than one lakh rupees.

(3) Nothing contained in Sec. 360 of the Code of Criminal Procedure, 1973 (2 of 1974), or in the Probation of Offenders Act, 1958 (20 of 1958), shall apply to a person convicted of an offence under this Act unless such person is under eighteen years of age.

15. Penalty for failure to comply with direction under Sec. 9 or order under Sec. 11 or obstructing any person in discharge of his functions under Sec. 10 or 11.—*If any owner fails to comply with direction issued under Sec. 9 or fails to comply with order issued under sub-section (2) of Sec. 11, or obstructs any person in discharge of his functions under Sec. 10 or sub-section (1) or sub-section (3) of Sec. 11, he shall be punishable with imprisonment which may extend to three months, or with fine which may extend to ten thousand rupees, or with both.*

16. Offences by companies.—*(1) Where any offence under this Act has been committed by a company, every person who, at the time the offence was committed, was directly in charge of, and was responsible to, the company for the conduct of the business of the company, as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly:*

Provided that nothing contained in this sub-section shall render any such person liable to any punishment provided in this Act, if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence under this Act has been committed by a company and it is proved that the offence has been committed with the consent or connivance of, or is attributable to any neglect on the part of, any director, manager, secretary or other officer of the company, such director, manager, secretary or other officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

---

[1] Subs. by Act 11 of 1992, Sec. 6 (w.e.f. 31st January, 1992).

Explanation—For the purposes of this section,—

(a) "company" means any body corporate and includes a firm or other association of individual;

(b) "director", in relation to a firm, means a partner in the firm.

***17. Offences by Government Departments.**—Where an offence under this Act has been committed by any Department of Government, the Head of the Department shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this section shall render such Head of the Department liable to any punishment if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

***18. Cognizance of offences.**—No court shall take cognizance of any offence under this Act except on a complaint made by—*

(a) the Central Government or any authority or officer authorised in this behalf by that Government; or

(b) any person who has given notice of not less than sixty days in the manner prescribed, of the alleged offence and of his intention to make a complaint, to the Central Government or the authority or officer authorised as aforesaid.

***19. Power to delegate.**—The Central Government may, by notification delegate, subject to such conditions and limitations as may be specified in the notification, such of its powers and functions under this Act (except the power under Sec. 23) as it may deem necessary or expedient to any person (including any officer, authority or other agency).*

***20. Protection of action taken in good faith.**—No suit, prosecution or other legal proceeding shall lie against the Government or the person, officer, authority or other agency in respect of anything which is done or intended to be done in good faith in pursuance of this Act or the rules made or orders or directions issued thereunder.*

***21. Advisory Committee.**—(1) The Central Government may, from time to time, constitute, an Advisory Committee on the matters relating to the insurance policy under this Act.*

(2) The Advisory Committee shall consist of—

(a) three officers representing the Central Government;

(b) two person representing the insurers;

(c) two persons representing the owners; and

(d) two persons from amongst the experts of insurance or hazardous substances, to be appointed by the Central Government.

(3) The Chairman of the Advisory Committee shall be one of the members representing the Central Government, nominated in this behalf by that Government.

22. ***Effect of other laws.****—The provisions of this Act and any rules made thereunder shall have effect notwithstanding anything inconsistent therewith contained in any other law.*

23. ***Power to make rules.****—(1) The Central Government may, by notification, make rules for carrying out the purposes of this Act.*

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely :—

[1][*(a)* *the maximum amount for which an insurance policy may be taken out by an owner under sub-section (2 A) of Sec. 4;*

(aa) *the amount required to be paid by every owner for being credited to the Relief Fund under sub-section (2C) of Sec. 4;*

(ab) *the manner in which and the period within the amount received from the owner is required to be remitted by the insurer under sub-section (2D) of Sec. 4];*

[2][*(ac)*] *establishment and maintenance of fund under sub-section (3) of Sec. 4;*

(b) *the form of application and the particulars to be given therein and the documents to accompany such application under sub-section (2) of Sec. 6;*

(c) *the procedure for holding an inquiry under sub-section (4) of Sec. 7;*

(d) *the purposes for which the Collector shall have powers of a Civil Court under sub-section (5) of Sec. 7;*

(e) *the manner in which notice of the offence and of the intention to make a complaint to the Central Government shall be given under Cl. (b) of Sec. 18;*

(f) *any other matter which is required to be, or may be, prescribed.*

(3) Every [3]*[rule or scheme] made under this Act shall be laid, as soon as may be after it is made, before each House of Parliament, while it is in session for a total period of thirty days which may be comprised in one session or in two or more successive sessions, and if, before the expiry of the session immediately following the session or the successive sessions aforesaid, both Houses agree in making any modification in the* [3]*[rule or scheme] or both Houses agree that the* [3]*[rule or scheme] should not be made, the* [3] *[rule or scheme] shall thereafter have effect only in such modified from or be of no effect, as the case may be; so, however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that* [3]*[rule or scheme.]*

---

[1] Ins. by Act 11 of 1992, Sec. 7 (w.e.f. 31st January, 1992).
[2] Relettered by Act 11 of 1992, Sec. 7 (w.e.f. 31st January, 1992).
[3] Subs. by Act 11 of 1992, Sec. 7 (w.e.f. 31st January, 1992).

THE SCHEDULE

[*See* Sec. 3 (1)]

(*i*) Reimbursement of medical expenses incurred up to a maximum of Rs. 12,500 in each case.

(*ii*) For fatal accidents the relief will be Rs 25,000 per person in addition to reimbursement of medical expenses, if any, incurred on the victim up to a maximum of Rs. 12,500.

(*iii*) For permanent total or permanent partial disability or other injury or sickness, the relief will be (*a*) reimbursement of medical expenses incurred, if any, up to a maximum of Rs. 12,500 in each case and (*b*) cash relief on the basis of percentage of disablement as certified by an authorised physician. The relief for total permanent disability will be Rs. 25,000.

(*iv*) For loss of wages due to temporary partial disability which reduces the earning capacity of the victim, there will be a fixed monthly relief not exceeding Rs. 1,000 per month up to a maximum of 3 months : provided the victim has been hospitalised for a period of exceeding 3 days and is above 16 years of age.

(*v*) Up to Rs 6,000 depending on the actual damage, for any damage to private property

NOTIFICATION

G.S.R. 253 dated 27th March, 1991.[1]—In exercise of the powers conferred by sub-section (2) of Sec. 1 of the Public Liability Insurance Act, 1991 (6 of 1991), the Central Government hereby appoints the 1st day of April, 1991 as the date on which the said Act shall come into force

PART III-29

THE PUBLIC LIABILITY INSURANCE RULES, 1991

S.O. 330 (E), dated 1st May, 1991[1].—In exercise of the powers conferred by Sec. 23 of the Public Liability Insurance Act, 1991, the Central Government hereby makes the following rules, namely :—

1. ***Short title and commencement.****—(1) These rules may be called the Public Liability Insurance Rules, 1991.*

(2) These rules shall come into force on the date of their publication in the Official Gazette.

2. ***Definitions.****—In this rules, unless the context otherwise requires.—*

- *(a) "Act" means the Public Liability Insurance Act, 1991 (6 of 1991);*
- *(b) "Advisory Committee" means the committee constituted by the Central Government in accordance with Sec. 21 of the Act called the Public Liability Insurance Advisory Committee (PLIAC);*
- *(c) "Authorised physician" means any person registered under any Central Act or State Act providing for the maintenance of a register of medical practitioners or in any area where no such last mentioned Act is in force, any person declared by State Government by notification in the Official Gazette to be a qualified medical practitioner,*
- *(d)* [2]*["Fund" means the Public Liability Insurance Fund established] and maintained by an owner in accordance with provision to sub-section (3) of Sec. 4 of the Act;*
- *(e) Words and expressions used in these rules but not defined and defined in the Act shall have the meanings respectively assigned to them in these Acts.*

3. ***Application for relief.****—An application for claim for relief shall be made to the Collector in Form I.*

4. ***Documents that may be required.****—The claim application shall be made to the Collector in Form I accompanied by such of the following documents as may be applicable.*

- *(i) Certificate of an authorised physician regarding disability or injury or illness caused by the accident;*
- *(ii) Death Certificate and/or post mortem report in the case of a fatal accident;*
- *(iii) Certificate of the employer regarding loss of wages due to temporary or partial disability, with proof of hospitalisation for a period exceeding three days and certificate about the date of birth or age of victim;*
- *(iv) Medical bills and receipts;*

[2] Subs. by G.S.R. 391 (E), dated 23rd April, 1993, published in the *Gazette of India*, Pt II. Sec. 3 (*i*), dated 29th April, 1993.

(v) Certificate of cost of repairs or replacement of private property damaged by the accident;

(vi) Any other documents which may have relevance to the claim.

5. Powers of Collector.—*(i) The Collector may follow such summary procedure for conducting an inquiry on an application for relief under the Act, as he thinks fit.*

(ii) The Collector shall have all the powers of a Civil Court for the following purposes namely :—

(a) summoning and enforcing the attendance of any person and examining him on oath;

(b) requiring the discovery and production of documents;

(c) receiving evidence on affidavits;

(d) subject to the provisions of Secs. 123 and 124 of the Indian Evidence Act, 1872, requisitioning any public record or document or copy of such record or document from any office;

(e) issuing commissions for the examining of witness or documents;

(f) dismissing an application for default or proceeding ex-parte;

(g) setting aside any order of dismissal of any application for default or any order passed by it ex-parte;

(h) inherent powers of a civil court as saved under Sec. 151 of the Code of Civil Procedure, 1908.

6. Establishment and Administration of Fund.—[1][*(1) An owner seeking exemption under sub-section (3) of Sec. 4 of the Act, shall with the prior approval of the Central Government create and maintain a Fund for an amount of Rs. 5 crores or for an amount equal to the paid up capital of the undertaking handling hazardous substances, whichever is less, in the State Bank of India or any of its subsidiaries or any nationalised Bank, and which will be available readily for meeting the liability of that owner under the Act.*]

(2) The fund to be created shall be utilised for the purpose of meeting the liability arising out of any claim awarded against the owner who has created the fund and to discharge the amount awarded by the Collector.

(3) The fund shall be operated by an Administrator to be nominated by the owner. The owner shall notify the nomination of the Administrator to the Central Government.

7. Miscellaneous.—*(1) The Collector shall maintain a register of the application for relief or claim petitions, and a register of awards and payment made thereunder.*

(2) These registers shall be kept open to public inspection from 11.00 AM to 1 PM and 2 PM to 5 PM on every working day.

(3) On a request from a concerned person, the Collector shall supply a copy of or extract from any particulars entered in the registers mentioned above to be true copy or extract thereof.

---

[1] Subs. by G.S.R. 391 (E) dated 23rd April, 1993 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (i), dated 29th April, 1993.

(4) A copy of or extract from the register(s) of the Collector as certified under the hand of the Collector or any officer authorised to act in this behalf shall in all legal proceedings, be admissible as evidence as of equal validity with the original.

[1]*[8.* ***Directions.***—*(1) Any direction issued under Sec. 12 shall be in writing.*

(2) The direction shall specify the nature of action to be taken and the time within which it shall be complied with by any owner, person, officer, authority or agency to whom such direction is given.

(3) The owner, person, officer authority or agency to whom any direction is sought to be issued, shall be served with a copy of the proposed direction and shall be given an opportunity of not less than fifteen days from the date of service of the notice to file, with an officer designated in this behalf, the objections, if any, to the issue of the proposed direction.

(4) The Government shall within a period of forty five days from the date of receipt of the objections, or from the date upto which an opportunity is given to the owner, person, officer, authority or agency to file objections, whichever is earlier after considering the objections, if any, received from the owner, person, officer, authority or agency sought to be directed and for reasons to be recorded in writing, confirm, modify or decide not to issue the proposed direction.

(5) In a case where the Government is of the opinion that in view of the likelihood of a grave injury to the public it is not expedient to provide an opportunity to file objections against the proposed direction, it may, for reasons to be recorded in writing, issue directions without providing such an opportunity.

(6) Every notice or direction required to be issued under this rule shall be deemed to be duly served.

- *(a) where the person to be served is a company, if the document is addressed in name of the company, at its registered office or at its principal office or place of business, and is either,*
  - *(i) sent by registered post; or*
  - *(ii) delivered or affixed at some conspicuous part of the premises at its registered office or at the principal office or place of business.*
- *(b) where the person to be served is an owner serving in Government, if the document is addressed to the person and a copy thereof is endorsed to his Head of the Department and also to the Secretary to the Government, as the case may be, incharge of the Department in which, for the time being, the business relating to the Department, in which the officer is employed, is transacted and is either,—*
  - *(i) sent by registered post; or*
  - *(ii) is given or tendered to him;*
- *(c) in any other case, if the document is addressed to the person to be served, and—*
  - *(i) is given or tendered to him; or*

---

[1] Ins. by G.S.R. 596 (E), dated 20th September, 1991, published in the *Gazette of India, Extraordinary,* Pt. II, Sec. 3 (*ii*), dated 26th September, 1991.

(ii) if such person cannot be found, is affixed on some conspicuous part of his last known place of residence or business, or is given or tendered to some adult member of his family or is affixed on some conspicuous part of the land or building, if any, to which it relates, or

(iii) is sent by registered post to that person.

Explanation.—For the purpose of this rule;—

(a) "company" means any body corporate and includes a firm or other association of individuals;

(b) "a servant" is not a member of the family.

9. *Manner of giving notice.*—*The manner of giving notice under Cl. (b) of Sec. 18 shall be as follows :—*

(a) The notice shall be in writing in Form II.

(b) The person giving notice may send a copy of the same to—

(i) if the alleged offence has taken place in a Union Territory—

(a) the Central Board or the Committee/person or body of persons delegated the powers of the Central Board under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974) and Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981); and

(b) Ministry of Environment and Forests (represented by the Secretary to the Government of India);

(ii) if the alleged offence has taken place in the State—

(a) the State Board for the Prevention and Control of Water Pollution constituted under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974); and

(b) the Government of the State (represented by the Secretary to the State Government incharge of Environment); and

(c) the Ministry of Environment and Forests (represented by the Secretary to the Government of India);

(iii) if the alleged offence has taken place in a District, the District Collector.

(a) The notice shall be sent by registered post acknowledgment due; and

(b) The period of sixty days mentioned in Cl. (b) of Sec. 18 of the Act, (6 of 1991) shall be reckoned from the date it is first received by one of the authorities mentioned above.]

[1]**[10. *Extent of liability.***—*(1) Subject to the provision of sub-section (2A) of Sec. 4 of the Act, the maximum aggregate liability of the insurer to pay relief under an award to the several claimants arising out of an accident shall not exceed rupees five crores and in case of more than one accident during the currency of the policy or one year, whichever is less, shall not exceed rupees fifteen crores in the aggregate.*

---

[1] Ins. by G.S.R. 87 (E) dated 6th February, 1992 published in the *Gazette of India, Extraordinary,* Pt. II,Sec. 3 (i), dated 6th February, 1992.

(2) In awarding relief under the Act, the Collector shall ensure that the insurer's maximum liability under the Insurance Policy does not exceed the limits stipulated in sub-rule (1).

(3) Any award for relief which exceeds the amount payable under the Insurance Policy shall be met from the Relief Fund and in case the award exceeds the total of the amount of insurance and the Relief Fund, the amount which falls short of such sum payable shall be met by the owner.

[1]*[(4) Notwithstanding anything contained in sub-rule (3), where an owner is exempted under sub-section (3) of Sec. 4 of the Act, he shall be liable to discharge all the claims arising out of an accident.]*

11. Contribution of owner to the Environmental Relief Fund.—[2]*[An owner unless exempted under sub-section (3) of Sec. 4 the Act shall contribute] to the Environmental Relief Fund a sum equal to the premium payable to the insurer.*

(2) Every contribution to the Environmental Relief Fund under sub-rule (1) shall be payable to the insurer, together with the amount of premium.

(3) The contribution receiving by the insurer shall be remitted as per the scheme under Sec. 7A of the Act.]

Form I

Form of Application for Compensation

Shri/Shrimati/Kumari*______________________________ Son of/ daughter of/Widow* of Shri _________________________ who died/had sustained injuries in an accident on ____________________________ at ____________________ particulars in respect of accident and other information are given below :—

1. Name and Father's name of person injured/dead (husband's name in case of married woman or widow) ·
2. Address of the person injured/dead :
3. Age ____________________ Date of Birth ____________________
4. Sex of the person injured/dead :
5. Place, date and time of accident :
6. Occupation of the person injured/dead :
7. Nature of injuries sustained :
8. Name and Address of Police Station in whose jurisdiction accident took place or was registered :
9. Name and Address of the Medical Officer/Practitioner who attended on the injured/dead :
10. Name and address of the Claimant/Claimants :
11. Relationship with the deceased :

---

[1] Ins. by G.S.R. 391 (E), dated 23rd April, 1993 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 29th April, 1993.

[2] Subs. by *ibid.*

12 Any other information that may be considered necessary or helpful in the disposal of the claim :

I hereby swear and affirm that all the facts noted above are true to the best of my knowledge and belief

Signature of the Claimant

NOTIFICATIONS

S.O. 779 (E), dated 15th November, 1991.[1]—In exercise of the powers conferred by Sec. 19 of the Public Liability Insurance Act, 1991 (6 of 1991), the Central Government hereby delegates the powers vested in it under Sec. 12 of the said Act to the respective State Governments, to exercise the same within their respective jurisdiction subject to the condition that the Central Government may revoke such delegation of powers in respect of all or any one or more of the State Government or may itself invoke the provisions of above section of the Act, if in the opinion of the Central Government such a course of action is necessary in public interest.

* * *

S.O. 780 (E), dated 15th November, 1991.[2]—In exercise of the powers conferred by Sec. 19 of the Public Liability Insurance Act, 1991 (6 of 1991), the Central Government hereby delegates the powers vested in it under Secs. 9, 10 and 11 to the State Governments, to exercise the same within their respective jurisdiction and to the Central Pollution Control Board in the whole of India, subject to the condition that the Central Government may revoke such delegation of powers in respect of all or any one or more of the State Governments or the Central Pollution Control Board, or may itself invoke the provisions of above section of the Act, if in the opinion of the Central Government such a course of action is necessary in public interest.

* * *

S.O. 227 (E), dated 24th March, 1992.[3]—In exercise of the powers conferred by Cl. (*d*) of Sec. 2 of the Public Liability Insurance Act, 1991 (6 of 1991), the Central Government hereby specifies the quantities shown in column 3 of the Table below for which or exceeding which every owner handling the hazardous substance mentioned in the corresponding entry in column 2 thereof shall take out insurance policy as per the provisions of the said Act

TABLE

1	2	3
	(Prevention & Control of Pollution) Act, 1974 (6 of 1974) or a State Board for the Prevention & Control of Air Pollution constituted under Sec. 5 of the Air (Prevention & Control of Pollution) Act, 1981 (14 of 1981)	
3	The Chairman or the Member-Secretary of the Pollution Control Committee of the Union Territories who have been delegated powers under Cl. (4) of Sec. 4 of the Water (Prevention & Control of Pollution) Act, 1974, and Sec 6 of the Air (Prevention & Control of Pollution) Act, 1981 by Central Pollution Control Board.	Whole of the Union Territories or area as laid down by the Central Board
6.	District Collector	Whole of Revenue District
7.	Regional Officers of the Central Pollution Control Board who have been delegated powers under Sec. 20, 21 and 23 of the Water (Prevention & Control of Pollution) Act, 1974 (6 of 1974) and Sec 24 of the Air (Prevention & Control of Pollution) Act, 1981 (14 of 1981)	Area as laid down by the Central Board
8.	Regional Officers of the State Polution Control Board who have been delegated powers under Sec. 20, 21 and 23 of the Water (Prevention & Control of Pollution) Act, 1974	Area as laid down by the State Board
9.	Regional Officers of the State Pollution Control Board who have been delegated powers under Sec 24 of the Air (Prevention & Control of Pollution) Act, 1981	Area as laid down by the State Board
10.	Any Regional/Zonal Officers or a Director Incharge of a Regional/Zonal Office of the Ministry of Environment & Forests.	Zonal/Regional Area as laid down by the Ministry of Environment & Forests
11.	Joint Director (Legal) in the Department of Environment, Forests and Wildlife, Ministry of Environment & Forests, Government of India	Whole of India.

PART III-30

RECYCLED PLASTICS MANUFACTURE AND USAGE RULES, 1999

S.O. 705 (E), dated 2nd September, 1999[1].—In exercise of the powers conferred by Cl. (*viii*) of sub-section (2) of Sec. 3 read with Sec. 25 of the Environment (Protection) Act, 1986, the Central Government hereby notifies the rules for the manufacture and use of recycled plastics, carry bags and containers.

*1. **Short title and commencement.**—(a) These rules may be called the Recycled Plastics Manufacture and Usage Rules, 1999.*

(b) They shall come into force on the date of their publication in the Official Gazette.

*2. **Definitions.**—In this rules, unless the context otherwise requires,—*

- *(a) "Act" means means the Environment (Protection) Act, 1986;*
- *(b) "Foodstuffs" means ready-to-eat food and food products, fast food, processed and cooked food in liquid, powder, solid or semi-solid form;*
- *(c) "Vendor" means person who sells foodstuffs as defined above packaged and stored in plastic carry bags and containers.*

*3. **Prescribed Autority.**—(a) The prescribed authority for enforcement of the provisions of these rules related to manufacture and recycling shall be the State Pollution Control Boards in respect of States and the Pollution Control Committees in respect of Union Territories;*

(b) The prescribed authority for enforcement of the provisions of these rules related to the use, collection, segregation, transportation and disposal shall be the District Collector/Deputy Commissioner of the concerned district where no such Authority has been constituted by the State Government/Union Territory administration under any law regarding non-biodegradable garbage.

*4. **Prohibition of usage of carry bags or containers made of recycled plastics.**—No vendor shall use carry bags or containers made of recycled plastics for storing, carrying, dispensing, or packaging of foodstuffs.*

*5. **Conditions of manufacture of carry bags and containers made of plastics.**—Subject to the provisions of Rule 4, any person may manufacture carry bags or containers made of plastics if the following conditions are satisfied, namely :—*

- *(a) Carry bags and containers made of virgin plastic shall be in natural shade or white;*
- *(b) Carry bags and containers made of recycled plastic and used for purposes other than storing and packaging foodstuffs shall be manufactured using pigments and colourants as per IS : 9833 : 1981 entitled "List of*

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 2nd September, 1999 (w.e.f. 2nd September, 1999).

pigments and colourants for use in plastics in contact with foodstuffs, pharmaceuticals and drinking water".

*6. **Recycling.**—Recycling of plastics shall be undertaken strictly in accordance with the Bureau of Indian Standards specification : IS : 14534 : 1998 entitled "The Guidelines for Recycling of Plastics".*

*7. **Marking/codification.**—Manufacturers of recycled plastic carry bags having printing facilities shall code/mark carry bags and containers as per Bureau of Indian Standard Specification : IS: 14534 : 1998 entitled "The Guidelines for Recycling of Plastics" and the end product made out of recycled plastics shall be marked as "recycled" along with the indication of the percentage of use of recycled material. Other manufacturers, who do not have printing facilities, shall comply with the condition within one year of publication of these rules. Manufacturers shall print on each packet of carry bags as to whether these are made of "recycled material" or of "virgin plastic".*

*8. **Thickness of carry bags.**—The minimum thickness of carry bags made of virgin plastics or recycled plastics shall not be less than 20 microns.*

*9. **Self regulation by certain persons.**—Without prejudice to the provisions contained in Rule 3, the Plastics Industry Association, through their member units, shall undertake self regulatory measures.*

PART IV

A BRIEF RESUME OF ANALOGOUS STATUTORY PROVISIONS ON ENVIRONMENTAL POLLUTION LAWS

Introduction.—The problem of environmental pollution precedes the history of mankind. Even before the birth of mankind the environmental pollution existed, however, negligible its form may have been. Nature possesses an inherent quality of curing pollution by itself. After the birth of mankind, the environmental pollution started growing. The learned of the yore took precautions to fight pollution by burning incenses, by performing Homums and Yagnas. The Hindus believed that the cowdung possessed curatives of pollution.

Creation of acute problem of environmental pollution.

Slowly and steadily mankind grew in number and now the world is facing the problem of population explosion which has assumed dangerous proportions of enormous magnitude. The growth of population gave rise to increase in wants and demands of mankind. Manual processes proved insufficient to cope with these demands and wants. Resort had to be taken to mechanical processes to increase production and thus industries came in existence, and in the present day context, industrialization in the developed countries is very high. The developing countries are also competing in the race of industrialization with the developed countries. Industries naturally had to be established near urban areas so that the facilities required may be easily obtained and thus urban areas provided sources of employment. This resulted into a rush of the rural population in urban areas. This triple process of population explosion, heavy industrialization and growing urbanization has succeeded in creating acute problems of environmental pollution including water pollution, air pollution and even noise pollution. A separate chapter has been devoted to the analogous statutes brought on the statute book to face the evergrowing menace of pollution. Nations, both in the developed areas in the developing areas have been from time to time, passing legislation to meet the problem of pollution. But these statutes failed to keep pace with the expanding needs of prevention and control of pollution and it was felt that specific and stringent laws must be separately made in this regard.

Orissa and Maharashtra River Pollution Prevention Acts.

In India, the lead in the matter was taken by the State of Orissa which enacted in 1953 the Orissa River Pollution Prevention Act. Maharashtra one of the most industrialized and thickly populated States followed suit and it came out in 1969 with a much more comprehensive statute, Maharashtra Prevention of Water Pollution Act, 1969. While the Orissa Act was confined to only rivers whereas the Maharashtra Act extended to rivers, water courses, whether flowing or for the time being dry, inland water, both natural and artificial, subterranean streams, the course of which is known and/or defined and to see to such extent and tidal waters to such point as the State Government may specify in this behalf. By that time, the Central Government was already seized of the matter. The Central Government had set up an Expert Committee in 1962 to draft an enactment for the prevention and control of water pollution. The Committee submitted its report which was circulated to State Governments. The Central Council of Local Self Governments was also consulted in 1963. The Council recommended that a Central Law may be enacted by the Parliament in regard to the problems of water pollution. A draft Bill was prepared in 1965. The draft was put up for consideration before a joint Session of the Central Council of Local Self Governments and the Fifth Conference of the State Ministers Town and Country Planning. There was, however, a hurdle in the way.

Shore Nuisance (Bombay and Colaba) Act, 1853.

The oldest Act on the statute book regarding control of water pollution in India is the Shore Nuisance (Bombay and Colaba) Act, 1853 (XI of 1853). Section 1 of the Act runs thus :

> "1. *Power to give notice to remove nuisance, mode of giving notice, contents, form.*—It shall be lawful for the Collector of Land-Revenue at Bombay to give notice requiring the removal of any nuisance, obstruction or encroachment anywhere below high water mark (high water mark is that part of the sea-shore to which the waters ordinarily reach when the tide is highest) in the said harbour of Bombay or upon or about the shores of the said islands, such notice shall be given by affixing the same in some conspicuous place on or near to the encroachment, obstruction or nuisance complained of, and by publication thereof in the Official Gazette, and shall state that unless the nuisance, obstruction or encroachment be removed or abated within one month, the same will be removed or abated by the said Collector; such notice may be in the Form No. 1, in the Schedule to this Act annexed, or to the like effect".

Section 2 provides for the procedure upon petition by persons denying rights to remove nuisance. Section 3 places the onus of proof on the petitioner. Section 4 lays down that period of one months as limitation for making any such petition. Section 5 runs thus :

> "5 *When Collector may cause removal of nuisance—Form of warrant—Indemnity.*—If no such petition shall be presented within the said period of one month, or if the same be presented and determined against the right of the petitioner, or be dismissed for want of prosecution, it shall be lawful for the Collector to cause such abatement or removal as aforesaid by any person or persons to be authorized by warrant under his hand, and such warrant may be in the Form No. 2 in the Schedule to this Act annexed, or to the like effect; and the said Collector, and any person acting under his warrant, shall not be answerable for any damage unavoidably occasioned in the removal of any such nuisance, obstruction or encroachment".

Oriental Gas Company Act, 1887

The next oldest Act is the Oriental Gas Company Act, 1887. Oriental Gas Company was registered in England and subsequently incorporated in India also. The Company erected gas work on land granted for the purpose by the Government in the vicinity of Calcutta. The Company was engaged in the preparation of apparatus and materials for lighting Calcutta. The Company was given certain powers and facilities but certain obligations were also imposed.

Section 16 of the said Act says as under :

> "16. *Daily penalty during escape of gas after notice.*—Whenever, any gas shall escape from any pipe, laid down or set up by or belonging to the said Company, they shall, immediately after receiving notice thereof in writing, prevent such gas from escaping; and in case the said Company shall not, within twenty-four hours next after service of such

notice, effectually prevent the gas from escaping, and wholly remove the cause of complaint, they shall for every such offence forfeit the sum of fifty rupees for each day during which the gas shall be suffered to escape, after the expiration of twenty-four hours from the service of such notice".

Section 17 of the Act lays down thus :

> "17. *Penalty if water be fouled by gas.*—Whenever any water shall be fouled by the gas of the said Company, they shall forfeit to the person whose water shall be so fouled for every such offence a sum not exceeding one hundred rupees, for each day during which the offence shall continue, after the expiration of twenty-four hours from the service of notice of such offence".

Damodar Valley Corporation Act, 1948.

Section 16 of the Damodar Valley Corporation Act (XIV of 1948) empowers the Corporation to make regulations, with the previous sanction of the Central Government, by notification in Gazette of India making provisions for ...... (*d*) preventing the pollution of water under its control ...... and the Corporation have framed regulations in this regard prohibiting pollution of water under its control. The regulations, however, allow pollution of water with the permission of the Corporation. But a duty has been cast upon the Corporation to ensure that all reasonably practicable steps have been taken to prevent the effluents from being poisonous, noxious or polluting. Infringement of the regulations entails fine upto Rs. 1,000/- and in case of continuing offence, a fine of Rs. 100/- per day, after the conviction for the first breach. The vires of this regulation has been questioned by some jurists on the basis of excessive delegation.

Rivers Board Act, 1956 and pollution of waters of the Inter-State rivers.

The Rivers Boards Act (XLI of 1956) provides for establishment of River Boards under Sec. 13 of the Act. one of the functions performed by the Board is to advise the Government in regard to prevention of pollution of waters of the Inter-State rivers.

Sarais Act, 1867

The Sarais Act of 1867 (XXII of 1867) ordains a keeper of a *sarai* or an inn shall be bound to fit thoroughly cleanse ...... drains of the *sarai* water is obtained for the persons or animals using it and the wells, tanks and other sources from which to the satisfaction of the District Magistrate or his nominee. Its non-compliance is punishable with fine of Rs. 20/-.

Section 70 of the Northern India Canal and Drainage Act, 1873, says Whoever, without proper authority and voluntarily does any of the act following that is to say ...... (3) interfere with or alters the flow of water in any river or stream so as to endanger, damage or render less useful any canal or drainage work...... shall be liable for conviction before a Magistrate to a fine not exceeding Rs. 50/- or to imprisonment not exceeding one month or with both.

Section 8 of the Obstruction in Fairways Act (XVI of 1881) runs thus :

Fairways Act, 1881.

> "8. *Power to make rules to regulate and prohibit the placing of obstructions in fairways.*—The Central Government may, from time to time, by notification in the Official Gazette, make rules to regulate or prohibit, in any fairway leading to a port in the territories which immediately before the 1st

November, 1956, were comprised in Part A States and Part C States the placing of fishing-states, the casting or throwing of ballast, rubbish, or any other thing likely to give rise to a bank or shoal, or the doing of any other act which will, in its opinion, cause, or be likely to cause, obstruction or danger to navigation".

Indian Ports Act, 1908.

Section 6 of the Indian Ports Act (XV of 1908) empowers the Government to make such rules consistent with the Act for any of the following purposes, namely :

> "...... *(ee) for* regulating the manner in which oil or water mixed with oil shall be discharged in any such port or for disposal of the same".

Section 21 of the same Act lays down that :

> "(1) No ballast or rubbish and no other thing likely to form a bank or shoal or to be detrimental to navigation, shall, without lawful excuse, be cast or thrown into any such port or into or upon any place on shore from which the same is liable to be washed into any such port, either by ordinary or high tides, or by storms or land-floods and no oil or water mixed with oil shall be discharged in or into any such port, to which any rules made under Cl. (*ee*) of sub-section (1) of Sec. 6 apply, otherwise than in accordance with such rules.
>
> (2) Any person who by himself or another so casts or throws any ballast or rubbish or any such other thing (or so discharges any oil or water mixed with oil), and the master of any vessel from which the same is so cast, (thrown or discharged) shall be punishable with fine which may extend to five hundred rupees, and shall pay any reasonable expenses which may be incurred in removing the same.
>
> (3) If, after receiving notice from the Conservator of the Port to desist from so casting or throwing any ballast or rubbish or such other thing (or from so discharging any oil or water mixed with oil), any master continues so to cast (throw or discharge the same), he shall also be liable to simple imprisonment for a term which may extend to two months.
>
> (4) Nothing in this section applies to any case in which the ballast or rubbish or such other thing is cast or thrown into, (or the oil or water mixed with oil is discharged in or into), any such port with the consent in writing of the Conservator or within any limits within which such act may be authorized by the Government".

Indian Steam Vessels Act, 1917.

Section 54 (*b*) of the Indian Steam Vessels Act (Act 1 of 1917) empowers the State Government to make rules requiring......the supply, free of charge a sufficient quantity of fresh water for use of such passenger.

CHAPTER I
THE ATOMIC ENERGY ACT, 1962
(ACT NO. 33 of 1962)

SYNOPSIS

1. Introduction .. 1035
2 Sec 2 . 1035
3. Sec. 3 . 1035
4. Sec. 5 ... 1036
5. Sec. 16 ... 1037
6. Sec. 17 ... 1037
7 Sec 23 . 1038
8 Sec. 24 .. 1038
9 Sec 25 .. 1039
10. Sec. 26 .. 1039
11. Sec. 30 .. 1039

1. Introduction.—An Act to provide for the development, control and use of atomic energy for the welfare of the people of India and for other peaceful purposes and for matters connected therewith.

2. Sec. 2. Definitions and interpretation.—(1) In this Act, unless the context otherwise requires,—

(*f*) "prescribed equipment" means any property which the Central Government may, by notification, prescribe, being a property which in its opinion is specially designed or adapted or which is used or intended to be used for the production or utilisation of any prescribed substance, or for the production or utilisation of atomic energy, radioactive substances, or radiation, but does not include mining, milling, laboratory and other equipment not so specially designed or adapted and not incorporated in equipment or intended to be used for any of the purposes aforesaid;

(*g*) "prescribed substance" means any substance including any mineral which the Central Government may, by notification, prescribe, being a substance which in its opinion is or may be used for the production or use of atomic energy or research into matters connected therewith and includes uranium, plutonium, thorium, beryllium, deuterium or any of their respective derivatives or compounds or any other materials containing any of the aforesaid substances.

(*h*) "radiation" means gamma rays, X-rays, and rays consisting of alpha particles, beta particles, neutrons, protons and other nuclear and sub-atomic particles; but not sound or radio waves, or visible, infra-red or ultra-voilet light;

(*i*) "radioactive substance" or "radioactive material" means any substance or material which spontaneously emits radiation in excess of the levels prescribed by notification by the Central Government.

* * * *

3. Sec. 3 General powers of the Central Government.—Subject to the provisions of this Act, the Central Government shall have power—

(*e*) to provide for control over radioactive substances or radiation generating plant in order to :—

(*i*) prevent radiation hazards;

(*ii*) secure public safety and safety of persons handling radioactive substances or radiation generating plant; and

(*iii*) ensure safe disposal of radioactive wastes;

* * *

4. **Sec. 5. Control overmining or concentration of substances containing uranium.**—(1) If the Central Government is satisfied that any person is mining or is about to mine any substance from which, in the opinion of the Central Government uranium can be or may reasonably be expected to be, isolated or extracted, or is engaged or is about to be engaged in treating or concentrating by any physical, chemical or metallurgical process any substance from which, in the opinion of the Central Government, uranium can be or may reasonably be expected to be, isolated or extracted, the Central Government may be notice in writing given to that person either—

(*a*) require him in conducting the mining operations or in treating or concentrating the substance aforesaid to comply with such terms and conditions and adopt such processes as the Central Government may in the notice, or from time to time thereafter, think fit to specify, or

(*b*) totally prohibit him from conducting the mining operations or treating or concentrating the substance aforesaid.

(2) Where any terms and conditions are imposed on any person conducting any mining operations or treating or concentrating any substance under Cl. (*a*) of sub-section (1), the Central Government may, having regard to the nature of the terms and conditions, decide as to whether or not to pay any compensation to that person and the decision of the Central Government shall be final :

Provided that where the Central Government decides not to pay any compensation, it shall record in writing a brief statement giving the reasons for such decision.

(3) Where the Central Government decides to pay any compensation under sub-section (2), the amount thereof shall be determined in accordance with Sec. 21 but in calculating the compensation payable, no account shall be taken of the value of any uranium contained in the substance referred to in sub-section (1).

(4) Where any mining operation or any process of treatment or concentration of any substance is prohibited under Cl. (*b*) of sub-section (1), the Central Government shall pay compensation to the person conducting the mining operations or using the process of treatment or concentration and the amount of such compensation shall be determined in accordance with Sec. 21 but in calculating the compensation payable, no account shall be taken of the value of any uranium contained in the substance.

Clause 5.— "This clause, *inter alia*, empowers the Central Government to impose certain terms and conditions on persons engaged in mining substances from which uranium can be isolated or extracted".—S.O.R.—Gaz. of Ind., 13-8-1962, Pt. II, Sec. 2, Ext., p. 633.

* * *

5. Sec. 16. Control over radioactive substances.—The Central Government may prohibit the manufacture, possession, use, transfer by sale or otherwise, export and import and in any emergency, transport and disposal, of any radioactive substances without its written consent.

Clause 16.—"This clause for the same reason, prohibits the manufacture, possession, use, transfer by sale or otherwise export, import, etc., of radioactive substances without the written consent of the Central Government".—S.O.R.—Gaz. of Ind., 13.8.1962, Pt. II, S. 2, Ext., p. 633.

6. Sec. 17. Special provisions as to safety.—(1) The Central Government may, as regards any class or description of premises or places, being premises, or places, in which radioactive substances are manufactured, produced, mined, treated, stored or used or any radiation generating plant, equipment or appliance is ued, make such provision by rules as appear to the Central Government to be necessary—

(*a*) to prevent injury being caused to the health of persons employed at such premises or places or other persons either by radiations, or by the ingestion of any radioactive substance;

(*b*) to secure that any radioactive waste products resulting from such manufacture, production, mining, treatment, storage, or use as aforesaid are disposed of safely;

(*c*) to prescribe qualifications of the persons for employment at such premises or places and the regulation of their hours of employment minimum leave and periodical medical examination :

and the rules may, in particular and without prejudice to the generality of this sub-section provide for imposing requirements as to the erection or structural alterations of buildings or the carrying out of works.

(2) The Central Government may, as respects the transport of any radioactive substance or any prescribed substance specified by an order issued under this Act as being dangerous to health, make such rules as appear to be necessary to prevent injury being caused by such transport to the health of persons engaged therein and other persons.

(3) Rules made under this section may provide for imposing requirements, prohibitions and restrictions on employers, employed persons and other persons.

(4) Any persons authorised by the Central Government under this section, may, on producing, if so required, a duly authenticated document showing his authority, enter at all reasonable hours any premises, or any vehicle, vessel or aircraft for the purpose of ascertaining whether there has been committed, or is being committed, in or in connection with the premises, vehicle, vessels or aircraft, any contravention of the rules made under this section.

(5) In the event of any contravention of the rules made under this section, the Central Government shall have the right to take such measures as it may deem necessary to prevent further injury to persons or damage to property arising from radiation or contamination by radioactive substances, including, without prejudice to the generality of the foregoing provisions, and to the right to take further action for the enforcement of penalties under Sec. 24, the sealing of premises, vehicle, vessel, or aircraft, and the seizure of radioactive substances and contaminated equipment.

Clause 17.—"This clause enables the Central Government to make rules to ensure that safety measures are taken in handing radioactive substances wherever they are manufactured, produced, mined, treated, stored, transported or used". —S.O.R.—Gaz. of Ind., 13.8.1962, Pt. II, Sec. 2, Ext., p. 633.

* * *

7. **Sec. 23. Administration of Factories Act, 1948.**—Notwithstanding anything contained in the Factories Act, 1948, the authority to administer the said Act and to do all things for the enforcement of its provisions, including the appointment of inspecting staff and the making of rules thereunder, shall vest in the Central Government in relation to any factory owned by the Central Government (or any authority of corporation established by it or a Government company) and engaged in carrying out the purposes of this Act.

(*a*) for Atomic Energy (Factories) Rules, 1984—*See* G.S.R. 782 of 1984-Gaz. of Ind, 21.7.1984, Pt. II, S. 3 (*i*), p. 1886.

(*b*) Inserted by the Atomic Energy (Amendment) Act (29 of 1987), S. 5 (8.9.1987).

Clause 23.—"This clause vests in the Central Government the authority to administer the provisions of the Factories Act, 1948, and to enforce its provisions in the factories, workshops or other places of work owned by the Central Government and engaged in carrying out the purposes of the Act.

This provisions is essential as radiation hazards require elaborate precautions whih the Department of Atomic Energy is in the best position to prescribe and enforce".—S.O.R. Gaz. of Ind, 13.8.1962, Pt. II, Sec. 2, Ext., p. 634.

* * *

8. **Sec. 24. Offences and penalties.**—(1) Whoever—

(*a*) contravenes any order made under Sec. 14 or any condition subject to which a licence is granted under that section; or

(*b*) contravenes any rule made under Sec. 17 or any requirement, prohibition or restriction imposed under any such rule; or

(*c*) obstructs any person authorised by the Central Government under Sub-sec. (4) of Sec. 17 in the exercise of powers under that sub-section; or

(*d*) . contravenes sub-section (2) of Sec. 18; shall be punishable with imprisonment for a term which may extend to five years, or with fine, or with both,

(2) Whoever :—

(*a*) fails to comply with any notice served on him under Sec. 7 or with any terms and conditions that may be imposed on him under that section; or

(*b*) fails to comply with any notice served on him under Sec. 5 or knowingly makes any untrue statement in any return or statement made in pursuance of any such notice; or

(*c*) obstructs any person or authority in the exercise of powers under Secs. 8 or 9; or

(*d*) contravenes any other provision of this Act or any order made thereunder;

shall be punishable with imprisonment for a term which may extend to one year, or with fine, or with both.

Clause 24.—"This Clause 24 prescribes a penalty of imprisonment upto five years or fine without limit or both for grave offences under the Act, and a penalty of imprisonment up to one year of fine without limit or both for less serious offences".—S.O.R.—Gaz. of Ind., 13.8.1962, Pt. II, S. 2, Ext., p. 634.

* * *

9. Sec. 25. Offences by companies.—(1) Where an offence under this Act has been committed by a company, every person who at the time the offence was committed was in charge of and was responsible to, the company for the conduct of the business of the company as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :—

Provided that nothing contained in this sub-section shall render any such person liable to any punishment, if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1) where any offence under this Act has been committed by a company and it is proved that the offence has been committed with the consent or connivance of, or is attributable to, any neglect on the part of, any director, manager, secretary or other officer shall be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

Explanation.—For the purposes of this section :—

(*a*) "company" means and body corporate and includes a firm and other association of individuals; and

(*b*) "director" in relation to a firm, means a partner in the firm.

* * *

10. Sec. 26. Cognizance of offences.—(1) All offences under this Act shall be cognizable under the Code of Criminal Procedure, 1898, but no action shall be taken in respect of any person for any offence under this Act except on the basis of a written complaint made :—

(*a*) in respect of contravention of Secs. 8, 14 or 17 or any rule or order made thereunder, by the person authorised to exercise powers of entry and inspection,

(*b*) in respect of any other contravention, by a person duly authorised to make such complaints by the Central Government.

(2) Proceedings in respect of contravention of Sec. 18 shall not be instituted except with the consent of the Attorney General of India.

Clause 26.—"This Clause makes offences under the Act cognizable under the Code of Criminal Procedure, 1898".—S.O.R.—Gaz. of India dated 13.8.1962, Pt II, S. 2, Ext., p. 635.

* * *

11. Sec. 30. Power to make rules.—(2) In particular, and without prejudice to the generality of the foregoing powers, such rules may provide for—

(*a*) regulating the producting, import, export, transfer, possession ownership, sale, use or dispoosal of the prescribed substances and any other articles that in the opinion of the Central Government may be used for, or any result as a consequence of, the production, use or application of atomic energy;

(*b*) regulating the manufacture, custody, transport, transfer sale, export, import, use or disposal of any radioactive substance;

(*c*) regulating the transport of such prescribed substances as are declared dangerous to health under sub-section (2) of Sec. 17;

CHAPTER II

COAST GUARD ACT, 1978

(Act No 30 of 1978)

The need for setting up of Coast Guard organisation not only for the purpose of ensuring safety or navigation in our waters, protection of our off-shore installations and fishing interests, organising salvage and pollution control measures and other allied purposes. Chapter III deals in duties and functions of the Coast Guard, wherein Sec. 14 (2) (c) exclusively provides as under—"taking such measures as are necessary to preserve and protect the marittime environment and to prevent and control marine pollution".

Subclause (*f*) provides as under:—

"such other matters, including measures for the safety of life, and property at sea and collection of scientific data, as may be presenbed".

CHAPTER III

CODE OF CIVIL PROCEDURE, 1908

(ACT NO. 5 of 1908)

SYNOPSIS

1. Introduction . 1041
2. Sec. 9 ... 1041

9 Order 39, Rl 2-A . 1043
10 Order 39, Rl 3 . 1043
11 Order 39, Rl 3-A . . 1044
12 Order 39, Rl 4 . 1044
13 Order 39, Rl. 5 . 1044

1. Introduction.—The Code of Civil Procedure is enacted to consolidate and amend laws relating to procedure of courts of the Civil Judicature, Civil Procedure Code generally contains procedural law but at the same time contains Specific Provisions in the nature of substantive laws to secure the natural resources viz., air, water, environment, vegetation, humanbeing and property of state and public at large. The aggrieved may approach the prescribed court under the provisions of the Civil Procedure Code to seek relief against polluter where the competent Court may grant temporary or permanent injunction against the polluter as the case may be.

* * *

2. Sec. 9.—Civil Procedure Code, 1908 empowers the Courts to try all Civil suits unless barred, of the Civil nature excepting suits of which their cognizence is either expressly or impliedly barred.

Explanation I.—A suit in which the right to property or to an office is contested is a suit of a civil nature, not withstanding that such right may depend entirely or the decision of questions as to religious rites or ceremonies.

Explanation II.—For the purposes of this section, it is immaterial whether or not any fees are attached to the office referred to in Explanation I or whether or not such office is attached to a particular place.

* * *

The competent court may grant temporary injunction against polluter against in any of the undermentioned circumstances. Injunction is an order of a court restraining the commission, repetition or continuation of a wrongful act of the defendant. This remedy is awarded to the plaintiff at the discreation of the court.

Comment

3. In temporary injunctions. —Provisions are given under Sections 94, 95 and order 39 of the Code of Civil Procedure, 1908. This injunction is generally granted before the case has been heard on merits and is of provisional nature and continues till the case is heard on its merits or till subsequent order is passed by the Court concerned. The purpose of this type of injunction is to maintain the state of cause of action at the given time until the trial is completed on its merits. Temporary injunction may be granted at any stage of the suit on an interlocutory application. A temporary injunction is only granted where the Court is satisfied by the application of the plaintiff or in other words plaintiff established that there is *prime facie* case. Apart from the above stated provisions, Courts have also inherent power to issue temporary injunction in circumstances not covered under the said order if the Court intertaining the suit is satisfied that the interests of justice so requires.

* * *

4. **Sec. 94. Supplemental proceedings.**—In order to prevent the ends of justice from being defeated the Court may, if it is so prescribed.—

(*a*) issue a warrant to arrest the defendant and bring him before the Court to show cause why he should not give security for his appearance, and if he fails to comply with any order for security commit him to the civil prison;

(*b*) direct the defendant to furnish security to produce any property belonging to him and to place the same at the disposal of the Court or order the attachment of any property;

(*c*) grant a temporary injunction and in case of disobedience commit the person guilty thereof to the civil prison and order that his property be attached and sold;

(*d*) appoint a receiver of any property and enforce the performance of his duties by attaching and selling his property;

(*e*) make such other interlocutory orders as may appear to the Court to be just and convenient".

* * *

5. **Sec. 95. Compensation for obtaining arrest, attachment of injunction on insufficient grounds.**—(1) Where, in any suit in which an arrest or attachment has been effected or temporary injunction granted under the last preceding section.—

(*a*) it appears to the Court that such arrest, attachment or injunction was applied for on insufficient grounds, or

(*b*) the suit of the plaintiff fails and it appears to the Court that there was no reasonable or probable ground for instituting the same,

the defendant may apply to the Court, and the Court may, upon such application, award against the plaintiff by its order such amount, not exceeding one thousand rupees, as it deems a reasonable compensation to the defendant for the [1](expense or injury (including injury to repuatation) caused to him) :

Provided that a Court shall not award, under this section an amount exceeding the limits of its pecuniary jurisdiction.

(2) An order determining any such application shall bar any suit for compensation in respect of such arrest, attachment or injunction".

* * *

6. **Provisions of Order XXXIX (Rules 1 to 5) deals in temporary injunctions and interlocutory orders in temporary injunctions.**

* * *

---

[1] Subs. by Act 104 of 1976., Sec. 32 (w.e.f. 1.2.1977).

7. Rule 1. Cases in which temporary injunction may be granted.— Where in any suit it is proved by affidavit or otherwise—

(*a*) that any property in dispute in a suit in danger of being wasted, damaged or alienated by any party to the suit, or wrongfully sold in execution of a decree, or

(*b*) that the defendant threatens, or intends, to remove or dispose of his property with a view to (defrauding) his creditiors,

(*c*) that the defendant threatens to dispossess the plaintiff or otherwise cause injury to the plaintiff in relation to any property in dispoute in the suit".

Comment

The Court may by order grant a temporary injunction to restrain such act, or make such other order for the purposer of staying and preventing the wasting, damaging, alienation, sale, removal or disposition of the property (or dispossession of the plaintiff, or otherwise causing injury to the plaintiff in relation to any property in dispute in the suit) as the Court thinks fit, until the disposal of the suit or until further order.

8. Rule 2. Injunction to restrain repetition or continuance of breach.— (1) In any suit for restraining the defendant from committing a breach of contract or other injury of any kind, whether compensation is claimed in the suit or not, the plaintiff may, at any time after the commencement of the suit, and either before or after judgment, apply to the Court for a temporary injunction to restrain the defendant from committing the breach of contract or injury complained of, or any breach of contract or injury of a like kind arising out of the same contract or relating to the same property or right.

(2) The Court may be order grant such injunction, on such terms as to the duration of the injunction, keeping and account, giving security, or otherwise as the Court thinks fit.

* * *

9. Rule 2-A. Consequence of disobedience or breach of injunction.—(1) In the case of disobedience of any injunction granted or other order made under Rule 1 or Rule 2 or breach of any of the terms on which the injunction was granted or the order made, of the Court granting the injunction or making the order or any Court to which the suit or proceeding is transferred, may order the property of the person guilty of such disobedience or breach to be attached, and may also order such person to be detained in the civil prison for a term not exceeding three months, unless in the meantime the Court directs his release.

(2) No attachment made under this rule shall remain in force for more than one year, at the end of which time, if the disobedience or breach continues, the property attached may be sold and out of the proceeds, the Court may award such compensation as it thinks fit to the injured party and shall pay the balance, if any, to the party entitled thereto.

* * *

10. Rule 3. Before granting injunction, Court to direct notice to opposite party.— The Court shall in all cases, except where it appears that the object of granting the injunction would be defeated by the delay, before granting an injunction, direct notice of the application for the same to be given to the opposite party :

Provided that, where it is proposed to grant an injunction without giving notice of the application to the opposite party, the Court shall record the reasons for its opinion that the object of granting the injunction would be defeated by delay, and require the applicant :—

(*a*) to deliver to the opposite party, or to send to him by registered post, immediately after the order granting the injunction has been made, a copy of the application for injunction together with—

(*i*) a copy of the affidavit filed in support of the application;

(*ii*) a copy of the plaint, and

(*iii*) copies of documents on which the applicant relies, and

(*b*) to file, on the day on which such injunction is granted or on the day immediately following that day, an affidavit, stating that the copies aforesaid have been so delivered or sent

* * *

11. Rule 3-A. Court to dispose of application for injunction within thirty days.—Where an injunction has been granted without giving notice to the opposite party, the Court shall make an endevour to finally dispose of the application within thirty day from the date on which the injunction was granted; and where it is unable so to do, it shall record it reasons for such inability.

* * *

12. Rule 4. Order for injunction may be discharged, varied or set aside.—Any order for an injunction may be discharged, or varied, or set aside by the Court, on application made thereto by any party dissatisfied with such order :

Provided that if in an application for temporary injunction or in any affidavit supporting such application, a party has knowingly made a false or misleading statement in relation to a material particular and the injunction was granted without giving notice to the opposite party, the Court shall vacate the injunction unless, for reasons to be recorded, it considers that it is not necessary so to do in the interest of justice;

Provided further that where an order for injunction has been passed after giving to a party an opportunity of being heard, the order shall not be discharged, varied or set aside on the application of that party except where such discharge, variation or setting aside has been necessitated by a change in the circumstances, or unless the court is satisfied that the order has caused undue hardship to that party.

* * *

13. Rule 5. Injunction to corporation binding on its officers.—An injunction directed to a corporation is binding not only on the corporation itself, but also on all members and officers of the corporation whose personal action it seeks to restrain.

* * *

CHAPTER IV

THE CONSTITUTION OF INDIA

18. The"precautionary principle" and the "Polluter pays" principle—Acceptance of . 1058
19 State have sufficient authority to enact law 1058

1. Introduction.—A Constitution to be living must be growing. If the impediments to the growth of the Constitution are not removed, the Constitution will suffer a virtual atrophy. The question of amending the Constitution for removing the difficulties which have arisen in achieving the objective of socio-economic revolution which would end poverty and ignorance and disease and unequality of opportunity, has been engaging the active attention of Government and the public for some years now.

The democratic institutions provided in the Constitution are basically sound and the path for progress does not lie in denigrating any of these institutions. However, there could be no denial that these institutions have been subjected to considerable stresses and strains and that vested interests have been trying to promote their selfish ends of the great detriment of public good.

Keeping the above view in mind Parliament in the Twenty-seventh year of the Republic of India passed the Constitution (Forty-second Amendment) Act, 1976.

Amendment in the preamble of the Constitution—Importance.

By the Constitution (42nd Amendment) Act, 1976, which received the assent of the President on 16th December, 1976, and was published in the *Gazette of India* on the same date in Part II, Sec. 1, certain important amendments were made in the Constitution. Initially, in the preamble of the Constitution for the words "Sovereign Democratic Republic" the words "Sovereign Socialist Secular Democratic Republic", were substituted. The importance of this amendment can easily be visualized. Though India has always been following the ideal of socialistic pattern of society, yet it was for the first time that the ideal was given a constitutional recognition by the 42nd Constitutional Amendment Act, 1976. The problem of environmental pollution is a social problem affecting, as it does, the society at large. The transformation from the *laissez faire* societies to the socialistic pattern of the societies imposes a number of new obligations on the State and the State is saddled with heavy responsibility of eradication of social hazards and social evils and ensurance of social justice to every citizen of the country and it cannot be gain-said that the solution of the problems regarding environmental pollution is one of the most important social problems that a nation is called upon to face. The developed countries of the world have had to meet his challenge for some time past and necessary legislations were passed by them to prevent and control the problem from time to time. In developing countries, however, the problem has not yet assumed that enormity but if care is not taken immediately, they may be confronted with the problem in the same manner in which it exists in developed countries. In this connection an anecdote alluded to Solomon may suitably be retold. Somebody asked Solomon where he learnt all his wisdom from. Solomon replied, in the company of fools. Surprised by the answer, the interrogator asked how is that. Pert came the reply from Solomon, by scrupulously avoiding doing that the fools did. The developing nations must take a lesson from the enormity of the problem of environmental pollution that the developed countries are struggling to face and can easily nip the trouble in bud before it grows into a terrifying giant. India was a participant country at the Stockholm Conference and consequently was under an obligation to give effect to the recommendations made by the Stockholm Conference

Constitutional effort for protection and improvement from pollution

Part IV of the Constitution deals with the directive principles of State policies. Article 47 says that the State shall regard the raising of the level of nutrition and the standard of living of its people and the improvements of public health as among its primary duties......This article provides for the improvement of the public health as one of the primary duties of the State and it could very well include by implication of the protection and improvement of the environment, for the control and prevention of environmental pollution necessarily and primarily comes within the concept of the improvements of the public health but the Parliament in its wisdom decided to add Art. 48-A by the 42nd Amendment Act.

2. **"Article (1) (*g*). Right to freedom to practise any profession, or to carry on any occupation, trade or business.**

Comments

In the instant case Delhi High Court held that :—

"No citizen has a fundamental right to trade in ivory or ivory articles, whether indigenous or imported;

assuming trade in ivory to be a fundamental right granted under Art. 19 (1) (*g*), the prohibition imposed thereon by he impugned Act is in public interest and in consonance with the moral claims embodied in Art. 48-A of the Constitution; and

the ban on trade in imported ivory and articles made therefrom is not violative of Art. 14 of the Constitution and does not suffer from any of the maladies, namely, unreasonableness, unfairness and arbitrariness".[1]

---

[1] **Ivory Traders & Manufacturers Association *v.* Union of India, A.I.R. 1997 Delhi 267 at p. 295.**

Restriction for cutting trees not held unreasonable.—So long, a rule or regulation is regulatory, it will not offend against the freedom guaranteed by Art. 301. The same test, which are applicable to determine reasonableness under Art. 19 (6) are also applicable to determine reasonableness under Art. 304 (*b*). An imposition of restriction requiring a person to obtain a permission from the proper authority for cutting trees cannot be held to be unreasonable. Consequently the Court is not satisfied that the Rules framed by the State Government in exercise of power conferred by Secs. 41 and 42 of the Rajasthan Forest Act, in any way, are in contravention of the provisions of the Constitution of India.[1]

* * *

3. Article "48-A. Protection and improvements of environment and safeguarding of forests and wild life.—The State shall endeavour to protect and improve the environment and to safeguard the forests and the wild life of the country".

It is useful to note here that Art. 48-A mentioned above casts a obligatory duty on the State to endeavour to protect and improve the environment and to safeguard the forests and wild life of the country.

Comments

Onus of proof.—The 'Onus of Proof' is on an industry to show that its operation with the aid of coke/coal is environmentally benign. It is, rather, proved beyond doubt that the emissions generated by the use of coke/coal by the industries in T.T.Z. are the main polluters of the ambient air.[2]

Environmental protection.—The Central Government shall constitute an authority under Sec. 3 (3) of the Environment (Protection) Act, 1986 and shall confer on the said authority all the powers necessary to the ecologically fragile coastal areas, sea shore, (water front and other coastal areas and especially to deal with the situation created by the shrimp culture industry in the coastal States, Union Territories.[3]

Forest and wild life play an important role in prevention of environmental pollution.

To make it effective this the Constitution (42nd Amendment Act, 1976) has amended the Seventh Schedule of the Constitution by inserting entry "17-A Forests" and entry "17-B Protection of wild animals and birds" in the concurrent List III. Forests and wild animals and birds play a very important role in the prevention and control of environmental pollution and population control and family planning have their own importance in that regard or, it can be safely said without any fear of contradiction that the man is the greatest polluter of environment. Population explosion is playing a very vital role in polluting the environment. Some authors have gone to the extent of asserting that in fact the history of pollution begins with the history of mankind. The Constitution (Forty-Second Amendment) Act, 1976, has added "Part IV-A" in the Constitution relating to fundamental duties of every citizen of India. The said "Part IV-A" reads thus :

* * *

Part IV-A, Fundamental Duties

4. "51-A. Fundamental duties.—It shall be the duty of every citizen of India—

(*a*) to abide by the Constitution and respect its ideals and institutions, the National Flag and the National Anthem;

---

[1] Aramachine & Lakri Vikreta Singh v. State of Rajasthan, A.I.R. 1992 Raj. 7 at p. 11.

[2] M.C. Mehta *v.* Union of India, A.I.R. 1997 S.C. 734 at p. 762.

[3] S. Jaganneth *v.* Union of India, A.I.R. 1997 S.C. 811 at pp. 848, 849.

(*b*) to cherish and follow the noble ideals which inspired out national struggle for freedom ;

(*c*) to uphold and protect the sovereignty, unity and integrity of India;

(*d*) to defend the country and render national service when called upon to do so ;

(*e*) to promote harmony and the spirit of common brotherhood amongst all the people of India transcending religious, linguistic and regional or sectional diversities, to renounce practices derogatory to the dignity of women;

(*f*) to value and preserve the rich heritage of our composite culture;

(*g*) to protect and improve the natural environmental including forest, lakes, rivers and wild life and to have compassion for living creatures ;

(*h*) to develop the scientific temper, humanism and the spirit of inquiry and reform;

(*i*) to safeguard public property and to adjure violence;

(*j*) to strive towards excellence in all sphere of individual and collective activity so that the nation constantly rises to higher levels of endeavour and achievements".

Comments

Thus, Art. 51-A of the Constitution specifically deals with fundamental duties of every citizen of India to abide by the Constitution and respect its ideals and institutions. It also provides that it shall be the duty of every citizen to protect and improve the natural environment including forest, lakes, rivers and wild life and to have compassion for living creatures. Article 32 of the Constitution empowers the Supreme Court to issue directions or orders or writs, including writs in the nature of *habeas corpus, mandamus,* prohibition, *quo warranto* and *certiorari,* whichever may be appropriate for the enforcement of any of the fundamental rights and duties guaranteed by the Constitution. The Supreme Court has started entertaining public interest litigation.

The Supreme Court in a recent case *M.C. Mehta* v. *Union of India,*[1] relating to public interest litigation has observed thus :

> "Having regard to the grave consequences of the pollution of water and air and the need for protecting and improving the natural environment which is considered to be one of the fundamental duties under the Constitution [*vide* Cl. (*g*) of Art. 51-A of the Constitution] we are of the view that it is the duty of the Central Government to direct all the educational institutions throughout India to teach at least for one hour in a week lessons relating to the protection and the improvement of the natural environment including forests, lakes, rivers and wild life in the first ten classes. The Central Government shall get text books written for the said purpose and distribute them to the educational institutions free of cost. Children should be taught about the need for maintaining cleanliness commencing with the cleanliness of the house both inside and outside, and of the streets in which they live. Clean surroundings lead to healthy body and healthy mind. Training of teachers who teach this subject by the introduction of short-term courses for such training shall also be considered. This should be done throughout India."

The problem of environmental pollution assumed a world-wide recognition round the year 1970 and legislation on this problem were passed

---

[1] A.I.R. 1988 S.C. 1115 at p. 1127.

Constitutional recognition to environmental pollution problem

by the developed as well as the developing nations throughout the world but the credit of giving constitutional recognition to the problem goes to India. India was the first country in the world to give the control and prevention of environmental pollution as a constitutional obligation by inserting Art. 48-A in the Constitution.

Part IV of the Constitution contains a number of directive principles and some of them have not been pursued in right earnest even after a lapse of more than 30 years of the Constitution coming into force. Adding a few more directive principles will be meaningless and will remain a mere window-dressing if steps are not taken by legislative measures to implement the directive principles. It is a matter of genuine gratification that India came out with the Water (Prevention and Control of Pollution) Act in 1974 followed by the Air (Prevention and Control of Pollution) Act of 1981, and the Environmental (Protection) Act, 1986.

* * *

Wild life forms part of our cultural heritage.—The protection of Wild Life is included in the directive principles of the State policy under the 42nd Constitutional Amendment Act, 1976 under Cl. C of Art. 51-A of th Constitution. It is the fundamental duty of every citizen to protect and improve the natural environment including various lakes, rivers and Wild Life and to have compassion for living creatures. The contention of the petitioners that protection and preservation of Wild Life was not in public interest was therefore devoid of all merit. Wild Life forms part of our cultural heritage in the same manner as other archaeological monuments painting, literature etc.[1]

* * *

5. Entry 17 of List II.—Water is a subject in the State List of the Constitution. In 7th Schedule of the Constitution reads as follows :

> "Water that is to say water supply, irrigation and canals, drainage and enabankments, water storage and water power, subject to the provisions of Entry 56 of List I".

* * *

6. **Entry 6 of List II** in the Seventh Schedule reads as follows :

"Public health and sanitation, hospitals and dispensaries".

* * *

7. **Entry 56 of List I** reads as follows :

> "Regulation and development of inter-State rivers and river valleys to the extent to which such regulation and development under the control of the Union is declared by Parliament by law to be expedient in the public interest".

Competence to legislate on water pollution.

Water pollution as such does not find mention in any of the Lists. Thus it is clear that any legislation in regard to control of pollution of water must draw its authority from the aforementioned two Entries in List II, for, the competence to legislate must be determined by the pith and substances of the legislation itself.

* * *

Article 246 of the Constitution of India deals with subject-matter of law made by Parliament and by the Legislative of States. Parliament and State Legislature of any State have exclusive power to make laws with respect of any state have exclusive power to make laws with respect of any of the matters enumerated in List I (Union List) and List II (State List) in the Seventh Schedule. Parliament and State Legislature of any State have power to make laws with respect to any of the matters enumerated in List III (Concurrent List). Environmental Legislative Powers are available under all the three lists are given below :

---

[1] **G.R. Simon *v.* Union of India, A.I.R. 1997 Delhi 301 at p. 303.**

List I—Union List

Entry 52 — Industries.

Entry 53 — The control of which by the Union is declared by the Parliament by law to be expedient in the public interest.

— Regulation and Development of Oil Fields and Mineral Resources.

Entry 54 — Regulation of Mines and Mineral Development.

Entry 55 — Regulation and Development of Inter-State Rivers and River Valleys.

Entry 57 — Fishing and Fisheries beyond territorial waters

List II—State List

Entry 6 — Public Health and Sanitation.

Entry 14 — Agriculture, Protection against pests and prevention of plant diseases.

Entry 18 — Land, that is to say, right in and over land.

Entry 21 — Fisheries.

Entry 23 — Mines and Minerals, Subject to provisions of List I.

Entry 29 — Industries, subject to provisions of List I.

Entry 25 — Gas and Gas works.

List III—Concurrent List

Entry 17-A — Forest.

Entry 17-B — Protection of Wild Animals and Birds.

Entry 20 — Economic and Social Planning.

Entries 16-A, 17-B and 20 of the Concurrent list, included in VIIth Schedule by Constitution (42nd Amendment) Act, 1976.

* * *

8. **Article 245.**—The general powers conferred on the Parliament is given by Art. 245 of the Constitution of India which is as under :

> "245 (1) *Extent of laws made by Parliament and by Legislatures of States.*—(1) Subject to the provisions of this Constitution; Parliament may make laws for the whole or any part of the territory of India, and the Legislature of a State may make laws for the whole or any part of the State.
>
> (2) No law made by Parliament shall be deemed to be invalid on the ground that it would have extra-territorial operation".

* * *

9. Article 246.—Next is the classification of field of legislation of legislative bodies as envisaged by Art. 246 of the Constitution of India which is as follows :

> "246. *Subject-matter of laws made by Parliament and by the Legislatures of States.*—(1) Notwithstanding anything in Cls. (2) and (3) Parliament has exclusive power to make laws with respect to any of the matters enumerated in List I in the Seventh Schedule (in this Constitution referred to as the 'Union list').
>
> (2) Notwithstanding anything in Cl. (3), Parliament, and, subject to Cl. (1) the Legislature of any State [1][* * *] also, have power to make laws with respect to any of the matters enumerated in List III in the Seventh schedule (in this Constitution referred to as the 'concurrent List').
>
> (3) Subject to Cls. (1) and (2), the Legislature of any State [1][* * *] has exclusive power to make laws for such State or any part thereof with respect to any of the matters enumerated in List II in the Seventh Schedule (in this Constitution referred to as the 'State List').
>
> (4) Parliament has power to make laws with respect any matter for any part of the territory of India not included [2][in a State] notwithstanding that such matter is a matter enumerated in the State List".

* * *

10. Article 249 of the Constitution reads thus :

> "249. *Power of Parliament to legislate with respect to a matter in the State List in the national interest.*—(1) Notwithstanding anything in the foregoing provisions of this Chapter, if the Council of States has declared by resolution supported by not less than two-thirds of the members present and voting that it is necessary or expedient in the national interest that Parliament should make laws with respect to any matter enumerated in the State List specified in the resolution, it shall be lawful for Parliament to make laws for the whole or any part of the territory of India with respect to that matter while the resolution remains in force.
>
> (2) A resolution passed under Cl. (1) shall remain in force for such period not exceeding one year as may be specified therein :
>
> Provided that, if and so often as a resolution approving the continuance in force of any such resolution is passed in the manner provided in Cl. (1), such resolution shall continue in force for a further period of one year from the date on which under this clause it would otherwise have ceased to be in force.
>
> (3) A law made by Parliament which Parliament would not but for the passing of a resolution under Cl. (1) have been competent to make shall, to the extent of the incompetency, cease to have effect on the expiration of a period of six months after the resolution has ceased to be in force, except as respects things done or omitted to be done before the expiration of the said period".

* * *

---

[1] The words and letters "specified in Part A or Part B of the First Schedule" omitted by the Constitution (Seventh Amendment) Act, 1956.

[2] Subs. by *ibid.*, for the words "in Part A or Part B of the First Schedule".

11. Article 252 of the Constitution reads thus :

> "252. *Power of Parliament to legislate for two or more States by consent and adoption of such legislation by any other State.*—(1) If it appears to the Legislatures of two or more States to be desirable that any of the matters with respect to which Parliament has no power to make laws for the States except as provided in Arts. 249 and 250 should be regulated in such States by Parliament by law, and if resolutions to that effect are passed by all the Houses of the Legislatures of those States, it shall be lawful for Parliament to pass an Act for regulating that matter accordingly, and any Act so passed shall apply to such States and to any other State by which it is adopted afterwards by resolution passed in that behalf by the House, or, where there are two Houses, by each of the Houses of the Legislature of that State.
>
> (2) Any Act so passed by Parliament may be amended or repealed by an Act of Parliament passed or adopted in like manner but shall not, as respects any State to which it applies, be amended or repealed by an Act of the Legislature of that State".

Comments

12. Effect of passing of resolution in accordance with Art. 252 (1) of the Constitution of India.—In the Indian Constitution as it was in the Government of India Act the power of legislation is distributed between the Union and the States and the subjects on which the respective Legislatures can legislate are enumerated in the three lists and in the Articles of the Constitution, provision is made as to what is to happen if there is a conflict between the Statutes passed by Parliament and the Legislatures of the States. The peculiar nature of the Indian Constitution in regard to the enumeration of powers in the entries in the Lists was emphasised by Gwyer, C.J., *In re Central Provinces and Berar Sales of Motor Spirit and Lubricants Taxation Act, 1938, in the matter of* ,[1] and by Sulaiman, J., at pp. 73 and 74 (of F C.R.) : at p. 21 (of A.I.R.), Gwyer, C.J. said :

> "But there are few subjects on which the decision of other courts require to be treated with greater caution that than of federal and provincial powers, for in the last analysis the decision must depend upon the words of the Constitution which the Court is interpreting; and since no two Constitutions are in identical terms it is extremely unsafe to assume that a decision one of them can be applied without quantification to another. This may be so even where the words or expressions used are the same in both cases; for a word of a phrase may take a colour from its context and bear different senses accordingly".

At page 74 (of F.C.R.) : at p. 21 (of A.I.R.), Sulaiman, J., observed :

> "The heads have been separately specified in great detail; and a special head `taxes on the sale of goods' has been assigned to the Provinces, which did not at all find a separate and distinct place in the State or Provincial List of any of the Dominions. This peculiarity is a unique feature of the Indian Constitution, having an important bearing on the present case, as textes on sales have been adopted as a post-war measure in most contries".

The result of the passing of a resolution under Art. 252 (1) is that any matter with respect to which Parliament has no power to enact laws becomes a matter for the regulation of which Parliament becomes empowered to pass any Act, and such Act, if passed by the Parliament, becomes, applicable to the States passing the resolution or adopting that Act. Sub-clause (2) of the Article provides that any such Act may be amended or repealed by an Act of Parliament in the like manner, *i.e.*, in the manner provided in Cl. (1) and it cannot be amended or repealed by the Legislature of the State or States passing the resolution.[1]

---

[1] 1939 F.C.R. 18 at p. 38 : A.I.R. 1939 F.C. at p. 5.

13. Pollution free atmosphere—Right of a Citizen.—The right to live conferred by Art. 21 of the Constitution includes the right of enjoyment of pollution free atmosphere and of late the Apex court has shown so much concern with pollution that from "pedestrian" case *Ratlam Municipality* v. *Vardhichand*,[2] to the latest decision in *M.C. Mehta* v. *Union of India*,[3] it has been passing orders even for closure of the industries causing pollution and directing for taking over steps necessary to take care of pollution.[4]

14. Protection and improvement of environment—Object of Article 48-A—Described.—The final facet of unreasonableness relates to the "social cost" of which "environmental cost" is the main component. Their Lordships do agree with the counsel on this aspect of the matter almost whole-hog. Their Lordships have no reservation to say that the revenue yielding aspect of the policy almost blinded the vision of the policy-makers in not taking note of the great harm to the ecology to be caused by massive adoption of extensive and intensive prawn culture. "Prawn-dollar" like "pretro-dollar" became so much dear that everything else was forgotten. This should not have happened. Revenue cannot be earned by sacrificing larger interest of the society. A balance has to be struck between gain to exchequer and loss to society. From what has been noted above by Court. Their Lordships are satisfied that non-fishermen had to engage and did engage themselves in fishing in and around Chilka. Whether this was a legal act has not much of importance, because if a thing gets rooted and cannot be got uprooted without causing damage to the structure of the society, it would be good for all concerned to accept it and then to tailor the solutions and remedies accordingly. Their Lordships are, therefore, of the view that granting of right to the non-fishermen as contained in the policy was a desirable stand, as it takes care of the livelihood of the non-fishermen, which is also important as in the taking care of the livelihood of the fishermen. Prevention of law and order situation and maintenance of peace and tranquillity in and around Chilka too demanded conferment of some legal right on the non-fishermen to fish in the lake. The mere fact that the non-fishermen do not belong to a caste which has not accepted fishing as a profession cannot be a ground in the changed circumstances to treat them as outsiders for the purpose of conferring some right to fish in Chilka. Their Lordships would think that the fishermen should also accept the reality and adopt the principle of "Live and let live". The prunning by way of some chopping off which Their Lordships would direct is to prohibit intensive and some of the co-related methods of prawn culture in Chilka, because of the great damage it has caused and is likely to cause to the eco-system. Their Lordships are aware that intensive method of culturing leads to higher yield, almost double the yield by the other method of culture; but then, earning of revenue alone cannot be the aim of the

1. R.M.D.C. (Mysore) Private Ltd. *v.* State of Mysore, A.I.R. 1962 S.C. 594 at pp. 597, 599 : (1962) 3 S.C.R. 230.
2. A.I.R. 1980 S.C. 1622.
3. (1992) 3 S.C.C. 256 : A.I.R. 1992 S.C. 382.
4. Kholamuhana Primary Fishermen Co-operative Society *v.* State of Orissa, A.I.R. 1994 Ori. 191 at p. 207.

Government at as it has to protect and improve the environment as enjoined by Art. 48-A of the Constitution, not to speak of enforcing the other environmental laws. The short-fall in revenue, which would be of a few crores going by the figures given in the report of the Committee, would be more than made up by the benefits derived from free and unpolluted Chilka. The more important result would be that the *mafia raj* would get controlled, because *mafias* have appeared along with "prawn-dollars", to use the terminology given by the Committee. If "prawn-rupees" would be there, *mafias* may not be there; and even if they will be there despite this, the Government owes an obligation to see that they are dealt firmly and are not allowed to take away the cream Their Lordships do hope that the Government would not be found wanting in taking stern measures against the *mafias*. Their Lordships have made this observation, because the report of the Committee says that "important politicians or their relations" and "bureaucrats of standing" are involved in sheltering the *mafias*.[1]

15. Right to environment is part of the right to life.—In the instant case their Lordships are fully aware of the fact hat directing the first respondent to decommission the ammonia tank would certainly involve very far-reaching and serious economic issues as well as issues relating to loss of employment to large number of persons. Certainly, these issues involve vital and serious consequences. But their Lordships have to balance these issues with the real and intelligible potential possibility of a catastrophic accident to the ammonia tank resulting in extermination of all living beings in Willingdon Island, City of Cochin and nearby places. Their Lordships have found that the catastrophic failure of the tank is not a remote possibility, but a credible and contingent possibility to be reasonably anticipated on the facts unfolded in the case. Their Lordships feel that they have to discharge their obligation informed of the fact that the human population of Cochin City and Willingdon Island should not be compelled to remain under the dark shadow of a genocide. Life on earth can never be peaceful if it is shrouded in perpetual anxiety and fear of extermination on account of an avoidable human activity It is the plain and clear negation of the most basic human right and gross violation of the fundamental right guaranteed under Art. 21 of the Constitution of India. It has to be remembered that the Supreme Court has repeatedly said that the right to life inherits the quality of life. In *M.C. Mehta* v *Union of India*,[2] the Supreme Court highlighted the imperative of human safety in running hazardous industries using highly advanced technology. Deprivation of life under Art. 21 of the Constitution of India comprehends certainly deprivations other than total deprivation. The guarantee to life is certainly more than immunity for annihilation of life. Right to environment is part of the right to life. A part from the rights under Art 21 of the Constitution of India and its refined articulations in Art. 51 (*g*), their Lordships have to remember that in 1984, United Nations adopted a resolution, reading : "All human beings have the fundamental right to an environment adequate for their health and well being". A State of perpetual anxiety and fear of extermination of life is not an environment adequate for the health and well being of human race. The continuation of the operation of the ammonia storage tank by the first respondent is a plain and clear violation of the fundamental right guaranteed under Art. 21 of the Constitution of India and so their Lordships are obliged to stop it. On an anxious consideration of the rival claims and competing concerns, their Lordships order the first respondent to decommission and

empty the ammonia storage tank at Willingdon Island should not be used for string liquid ammonia after decommissioning the tank. The first respondent is directed to pay Rs, 5,000/- (Rupees Five Thousand only) to the petitioner as costs of this litigation.[1]

Legislative powers of Parliament.

16. Scope of Art. 252 of the Constitution.—In order to appreciate the content, scope and meaning of the provisions of Art. 252, it is necessary to refer to the scheme of the Constitution. It appears in Part XI headed "Relations between the Union and the States" and occurs in Chapter I relating to "Legislative Relations", i.e., dealing with the distribution of legislative powers between the Union and the States. It would appear that our Constitution, though, broadly federal in structure, is modelled on the British Parliamentary System, with unitary features. This, even apart from emergencies, the Parliament may assume legislative power (though temporality) over any subject under Act, 249, by a two- thirds vote that such legislation is necessary in "the national interest". While a Proclamation of Emergency under Art. 352 is in operation the Parliament is also competent under Art. 250 to legislate with respect to any such matter in the State list Article 251 makes it clear that the legislative power or the State Legislatures to make any law which they have power under the Constitution to make is restricted by the provisions of Arts. 249 and 250; but if any law made by the Legislature of a State is repugnant to any provision of a law enacted by the Parliament, the law made by Parliament shall prevail and the law made by the State Legislature to the extent of repugnancy shall not be valid so long as the law enacted by Parliament effective and operative. Reverting back to Art, 252, it will be noticed that this articles corresponds to Sec 103 of the Government of India Act, 1935. It empowers the Parliament to legislate for two or more States on any of the matters with respect to which it has no power to make laws except as provided in Arts. 249 and 250. The effect of the passing of a resolution under Cl. (1) of Art. 252 is that Parliament, which has no power to legislate with respect to the matter which is the subject of the resolution, becomes entitled to legislate with respect to it. On the other hand, the State Legislature ceases to have a power to make a law relating to that matter. While Art. 263 provides for the creation of an inter-State Council for effecting administrative coordination between the States in matters of common interest, Art. 252 provides the Legislative means to attain that object. After the enactment of a law by the Parliament under this Article, it is open to any of the other States to adopt the Act for such State by merely passing a Resolution to that effect in its Legislature, but the operation of the Act in such State cannot be from a date earlier than the date of the resolution passed in the Legislature adopting the Act. The question as to whether or not here is surrender by the State Legislature of its power to legislate, and if so, to what extent, must depend on the language of the resolution passed under Art. 252 (1).[1] Clause (2) specifically lays down that after Parliament makes an Act in pursuance of the resolution, such Act cannot be amended or repealed by the State Legislature even though the matter to which the Act of Parliament relates was included in List II of the 7th Schedule of the Constitution. The term "Legislature" must, in the context means the House or the Houses of the Legislature, as the case may be and it does not include the Governor. The key to the interpretation of the first part of Cl. (1)

Resolution under Cl (1) of Art. 252—Effect of

---

1. Law Society of India *v.* Fertilizers and Chemicals Travancore Ltd., A.I.R. 1994 Ker. 308 at pp. 370
2. R.M.D.C. (Mysore) Private Ltd. *v.* State of Mysore, A.I.R. 1962 S.C. 594 at pp. 597, 599 : (1962) 3 S.C.R. 230..

of Art. 252 lies in the words "to that effect", and they obviously refer to "desirability" of Parliament making a law on a State subject. It is pointed out that though the Governor is the component part of the State Legislature under Art. 168, he is precluded by the terms of Art. 158. (1) from being a member of either House of Parliament or of a House of the Legislature of any State. Not being a member of the House or Houses of Legislature of a State, as the case may be the question of his participation, it is said, in the proceedings of the State Legislature in passing a resolution under Art. 252 (1) does not at all arise. One may pay attention to different provisions of the Constitution, and in particular to proviso to Art. 368 (2) which requires a ratification by the Legislatures of not less than one-half of the States to a Bill passed by the Parliament under Art. 368(1) in exercise of its constituent powers to amend the Constitution. To concede to the Governor the power to participate in the process of authorisation for the passing of a law by the Parliament on a State subject under Art. 252 (1), as the High Court had done, or to the process of ratification of the constitutional amendment by the State Legislatures under proviso to Art. 368 (2) to a constitutional amendment by the Parliament under Art. 368 (1), would create a dangerous situation and would be destructive of our constitutional system based on the Westminster model, under which the Governor is only the constitutional head of the State. In the *State of Bihar* v. *Kameshwar Singh*,[1] in repelling the contention that the words "law" and "Legislature" were deliberately used in Art. 31 (3) as a special safeguard, which, in order to ensure that no hasty or unjust expropriatory legislation is passed by a State Legislature, requires for such legislation the assent of both the Governor and the President, Patanjali Sastri, C.J., observed :

Governor whether included in "Legislature"

> "It is true that the 'legislature' of a State includes the Governor and that a Bill passed by such Legislature cannot become a law until it receives the Governor's assent. The terms 'legislature' is not always used in the Constitution as including the Governor, though Art. 168 makes him a component part of the State Legislature. In Art. 163, for instance, the word is clearly used in the sense of the 'House of Legislatures' and excludes the Governor. There are other provisions also where the word is used in contexts which excludes the Governor. Similarly the word 'law' is sometimes loosely used in referring to a Bill. Article 31(4) for instance, speaks of a 'Bill', being reserved for the President's assent 'after it has been passed' by the 'legislature of a State' and of 'the law so assented to'. If the expression 'passed by the Legislature' were taken to mean 'passed by the Houses of the Legislature and assented to by the Governor'......then, it would case to be a 'Bill and could not longer be reserved as such. Nor is the phrase 'law so assented to' strictly accurate' as the previous portion of the clause makes it clear that what is reserved for the President's assent and what he assents to is a 'Bill' and not a law".

This decision really clinches the whole issue. Article 252 (1) is in two parts. The first part merely recites about the "desirability" of the Parliament legislating on a subject in respect of which it has no power to make laws except as provided in Arts. 249 and 350. This power to legislate is vested in the Parliament only if two or more States Legislatures think it desirable to have a law enacted by the Parliament on such matter in List II, i.e., with respect to which the Parliament has no power to make laws of the States, and all the Houses of the Legislatures of those States express such desire by passing a resolution to that effect. The legislatewe of these states should not only think it desirable and expedient, but actually pass resolution that the Parliament should regulate the matter in those States, in order to invest the Parliament with the power to legislate on such subject. The passing of such resolution by the State Legislatures of two or more States, is a condition precedent for investing the Parliament with the power to make a law on that topic or matter, and then only it shall be lawful for the Parliament to make a law for regulating that matter accordingly. The law so made or enacted by the Parliament under Art. 252 (1) will apply only to those States whose Legislatures have passed resolutions under that provision and also to those. States which have afterwards adopted the same by resolution passed by the Legislatures of States in that behalf. It would appear that the first part of the articles is only introductory the second is the operative part. The words 'to that effect' in the first part, therefore, refer to the 'desirability' for affecting administrative control by the Parliament over two or more States in respect of matters of common interest. Thus, the world 'Legislature' in the first part of Art. 252 (1) in the context in which it appears, cannot means the three component parts of the State Legislature contemplated by Art. 168, but only the House or Houses of Legislature, as the case may be, i.e., excluding the Governor.[1]

---

[1] 1952 S.C.R. 899 : A.I.R. 1952 S.C. 252.

Applicability of the law made under Art. 252 (1).

> "There is a clear distinction between 'an Act of legislature' 'a legislative act' and 'a resolution of the House".

Therefore the Governor nowhere comes in the picture at all in these matters.

Article 252 empowers the parliament to legislate for two or more States on any of the matters with respect of which the Parliament has no power to make law except as provided under Arts. 249 and 250. This power to legislate is vested in the Parliament on such matters in List II i.e., with respect to which the Parliament has no power to make law for the State. The passing of the resolutions by the State Legislatures is a condition precedent for vesting the Parliament with such power.[2]

17. The precautionary principle and the polluter pays principle are part of the environmental law.—The precautionary principle and the polluter pays principle are part of the environmental law of the country. Based on the reports of various technical authorities mentioned in this judgment. Supreme Court has already reached the finding that the emissions generated by the coke/coal consuming industries are air-pollutants and have damaging effect on the Taj and the people living in the TTZ. The atmospheric pollution in TTZ has to be eliminated at any cost. Not even one per cent chance can be taken when—human life apart—the preservaion of a prestigious monument like The Taj is involved. In any case, in view of the precautionary principle as defined by Supreme Court, the environmental measures must anticipate, prevent and attack the causes of environmental degradation. The onus of proof is on an industry to show that its operation with the aid of coke/coal is environmentally benign. It is, rather proved beyond doubt that the emissions generated by the use of coke/coal by the industries in TTZ are the main polluters of the ambient air. The industries which are not in a position to obtain gas connections for any reason-shall stop functioning with the aid of coke/coal in the TTZ and may relocate themselves as per the directions given.[3]

[3] **M.C. Mehta *v.* Union of India, A.I.R. 1997 S.C. 734 at pp. 761, 762.**

18. The "precautionary principle" and the "Polluter pays" principle—Acceptance of.—The precautionary principle and the polluter pays principle have been accepted as part of the law of the land. Article 21 of the Constitution of India guarantees protection of life and personal liberty. Articles 47, 48-A and 51A(*g*) of the Constitution are as under :

> "47. Duty of the State to raise the level of nutrition and the standard of living and to improve public health—The State shall regard the raising of the level of nutrition and the standard of living of its people and the improvement of public health as among its primary duties and in particular, the State shall endeavour to bring about prohibition of the consumption except for medicinal purposes of intoxicating drinks and of drugs which are injurious to health. 48-A. Protection and improvement of environment and safeguarding of forests and wild life—The State shall endeavour to protect and improve the environment and to safeguard the forests and wild life of the country.
>
> 51A (*g*). To protect and improve the natural environment including forests, lakes, rivers and wild life, and to have compassion for living creatures"

Apart from the constitutional mandate to protect and improve the environment there are plenty of post independence legislations on the subject but more relevant enactments for our purpose are : The Water (Prevention and Control of Pollution) Act, 1974 (the Water Act). The Air (Prevention and Control of Pollution) Act, 1981 (the Air Act) and the Environment Protection Act 1986 (the Environment Act). The Water Act provides for the constitution of the Central Pollution Control Board by the Central Government and the constitution of the State Pollution Control Boards by various State Governments in the Country. The Boards function under the control of the Governments concerned. The Water Act prohibits the use of streams and wells for disposal of polluting matters. Also provides for restrictions on outlets and discharge of effluents without obtaining consent from the Board. Prosecution and penalties have been provided which include sentence of imprisonment. The Air Act provides that the Central Pollution Control Board and the State Pollution Control Boards constituted under the Water Act shall also perform the powers and functions under the Air Act. The main function of the Boards, under the Air Act, is to improve the quality of the air and to prevent, control and abate air pollution in the country. In view of the above mentioned constitutional and statutory provisions their Lordships have no hesitation in holding that the precautionary principle and the polluter pays principle are part of the environmental law of the country.[1]

19. State have sufficient authority to enact law.—The legislation which provides for extinction of the ownership of a person in imported ivory is not a law for the purpose of acquisition and requisitioning of property by the State. Its primary object is the preservation of the elephant, and not for utilisation of the property for public purpose. This being so, Art. 300 A is not attracted. At this stage Court pointed out that the State had sufficient authority to enact the impugned law in exercise of its sovereign powers as distinguished from police powers of the State.[2]

CHAPTER V

CODE OF CRIMINAL PROCEDURE, 1973

(ACT NO. 2 OF 1974)

SYNOPSIS

1 Introduction to Sec. 133 .. 1059
2 Public nuisance 1060
3. Scope ... 1061
4. Orders .. 1064
5. Jurisdiction for initiation .. 1065
6 Purpose and object of . 1065
7 Interpretation of the section .. 1066
8. Removal of nuisance .. 1066
9. State of law as regards the section ... 1066
10. Transfer of enquiry 1067
11 Enquiry .. 1067
12 Sub-section (2) . 1067

1. Introduction to Sec. 133.—Chapter X of the Code of the Criminal Procedure, 1973 (2 of 1974) deals with "maintenance of public order and tranquillity" whereas Sec. 133 to 144 of Chapter X of the Code deal with "public nuisance". The powers conferred under these sections on certain Magistrate are confined to the nuisance described in Sec. 133, Cr. P.C. These relevant sections of the Code of Criminal Procedure 1973 (2 of 1974) with their commentary are given here as under :

> "133. *Conditional order for removal of nuisance*".—(1) Whenever a District Magistrate or a Sub-divisional Magistrate or any other Executive Magistrate, specially empowered in this behalf by the State Government, on receiving the report of the police officer or other information and on taking such evidence (if any) as he thinks fit, considers,—
>
> (*a*) that any unlawful obstruction or nuisance should be removed from any public place or from any way, river or channel or which is or may be lawfully used by the public; or
>
> (*b*) that the conduct of any trade or occupation, or the keeping of any goods or merchandise, is injurious to the health or physical comfort of the community, and that in the consequence such trade or occupation should be prohibited or regulated or such goods or merchandise should be removed or the keeping thereof regulated; or
>
> (*c*) that the construction of any building, or, the disposal of any substance, as is likely to occasion conflagration, or explosion, should be prevented or stopped; or
>
> (*d*) that any building, tent or structure, or any tree is in such a condition that it is likely to fall and thereby cause injury to persons living or carrying on business in the neighbourhood or passing by, and that in consequence the removal, repair or support of such building, tent or structure, or the removal or support of such tree, is necessary; or
>
> (*e*) that any tank, well or excavation adjacent to any such way or public place should be fenced in such manner as to prevent danger arising to the public; or
>
> (*f*) that any dangerous animal should be destroyed, confined or otherwise disposed of,

such Magistrate may make a conditional order requiring the person causing such obstruction or nuisance, or carrying on such trade or occupation, or keeping any such goods or merchandise, or owning, possessing or controlling such building, tent, structure, substance, tank, well or excavation, or owning or possessing such animal or tree, within a time to be fixed in the order—

(*i*) to remove such obstruction or nuisance; or

(*ii*) to desist from carrying on, or to remove or regulate in such manner, as may be directed, such trade or occupation, or to remove such goods or merchandise, or to regulate the keeping thereof in such manner as may be directed; or

(*iii*) to prevent or stop the construction of such building or to alter the disposal of such substance; or

(*iv*) to remove, repair or support such building, tent or structure, or to remove or support such tree; or

(*v*) to fence such tanks, well or excavation; or

(*vi*) to destroy, confine or dispose of such dangerous animal in the manner provided in the said order;

or, if he objects so to do to appear before himself or some other Executive Magistrate subordinate to him at a time and a place to be fixed by the order, and show cause, in the manner herein—after provided, why the order should not be made absolute.

(2) No order duly made by a Magistrate under this section shall be called in question in any Civil Court.

Explanation.—A "public place" includes also property belonging to the State, camping grounds and grounds left unoccupied for sanitary or recreative purposes".

2. Public nuisance.—Where a well adjoining a road is dangerous to the public as well as to the existence of the road, an order can direct the construction of such works only as are necessary for the safety of the public and not of the works necessary for the safety of the road.[1]

The most important matter on which the original Code was silent was the procedure to be adopted by the Magistrate when the person on whom notice was issued under Sec. 133 (new) appeared, and denied the existence of any public right in the use of any way, river, channel or place. The Courts have held that, in such a case, it was the duty of the Magistrate before taking further proceedings to determine whether the objection is *bona fide* or made merely to prevent further action on his part.[2] He ought not to go further and decide whether the title set up does or does not exist, for that is a matter for the Civil Court.[3] If the dispute is *bona fide* (and this must be found by the Magistrate), no order under Sec. 133 could be passed or made absolute, until he public right or way had been established by proceedings, civil or criminal. That was held in a case decided under the Code of 1872,[4] but the Code of

1882 and the present Code of 1973 do not give a Criminal Court power to deal with such a matter. A person may obtain a declaratory decree that he is owner of the land as against any person, who may claim to use it as a public way.[1]

It was further held that if such a dispute were found to be *bona fide* and not a pretext to oust jurisdiction, the Magistrate should allow an opportunity for the determination of the matter in the Civil Court.[2]

If the person objecting failed to establish his right in the Civil Court, the Magistrate might proceed.[3]

Action under Sec. 133. (new) is *prima facie* sufficient to show that it is a public thorough fare or place. If no such objection was raised, and it was found that the order was reasonable and proper, the High Court would not interfere on revision.[4]

The law does not say how long the proceedings are to be stayed, but presumably the courts will continue to hold that if within a reasonable time after proceedings have been stayed the person upon whose denial the Magistrate has found that there is reasonable evidence against the existence of a public right does not take steps to establish his rights in the Civil Court, the Magistrate may proceed.[5] If the Magistrate finds that there is no reliable evidence in support of the denial he will proceed with the case and the Magistrate's finding will be final.

In Maharashtra, the rights over all public roads are vested in the Government.[6] In municipalities in Bengal, all roads are vested in and belong to the Commissioners,[7] also in the Town of Calcutta.[8] In Madras, all public streets in any municipality, belong to the Municipal Council, unless specially excluded by notification of the Governor-in-Council,[9] and elsewhere in the Presidency of Madras situate beyond the limits of the City of Madras, all public roads or streets are vested in the local boards, unless specially excluded as just mentioned,[10] and there is a similar provision in regard to the City of Madras.[11]

Power is given to the Magistrate to order local inspection and examine experts as witness.[12]

3. Scope.—A perusal of Secs. 133 and 138 of the Criminal Procedure Code discloses that it is the function of the Magistrate to conduct an enquiry and to decide as to whether there was reliable evidence or not to come to the conclusion. When learned Magistrate after full enquiry found that the correct position was that the way alleged by applicants was not a public way, it was not for learned Sessions judge to interfere.[1] When there is obstruction placed on the public path or in the public place then the proper procedure to follow is under Sec. 133 of of the Code. Section 133 is therefore of the remedial nature, whereas Sec. 147 is preventive. An order under Sec. 147 can be made when there is a dispute likely to cause breach of peace in regard to the alleged right of the user of any land or water as explained in Secs. 145 (2), Cr. P.C. Therefore, in terms of Sec. 147, an order can be passed by the Magistrate before any obstruction is placed by the opposite party. Under Sec. 133 a proceeding can be only resorted to when there is a question of removal of obstruction already there on a public place; whereas a proceeding under Sec. 147 can be drawn up when there is no obstruction placed, but there is apprehension of interference of the right of the user of any land or water.[2]

[12] Notes on Clauses.

It is important to bear in mind that for this provision to apply the obstruction or nuisance to be removed should be on the same way. The provisions of Sec. 133 are applicable only to cases where there is no doubt that the place where the alleged obstruction is caused is a public thoroughfare and that the obstruction caused is unlawful. Courts have got to be realistic.[3] In Sec. 133, Cl. (*a*) speaks of an unlawful obstruction. Clause (*b*) speaks of the conduct of the trade or occupation, injurious to physical comfort. Clause (*c*) refers to construction of any building. Clause (*d*) to any building, tent, structure or tree. Clause (*e*) to fencing of any tank, well or excavation adjacent to a public place and Cl. (*f*) to dangerous animals. In *Murlidher Bhila Patil* v. *Onkar Vyankat Patil*,[4] the words "is injurious to physical comfort" have been held to require that the injury should be *in praesenti* and not contingent or possible. In *Murlidhar Bhila Patil* v. *Onkar Vyankat Patil*,[5] the order stated that the operation of a flour mill created vibrations and that those vibrations were likely to cause danger to the people residing nearby. It was held that immediate danger was not found. What was found is only a possibility of danger The mining operations are not injurious to the physical comfort of the community. For allocating the provision, it has to be injurious to the public at large or to the residents of the community as whole and not to a few individuals residing in some hutments in a locality.

The Magistrate can form an opinion either on a police report or other information. If the jurisdiction of the Magistrate is challenged on the ground that there was no material whatsoever before him to enable him to arrive at a conclusion that any facts spoken of in Cls. (*a*) to (*f*) exist, the High Court has to examine the material, if any, which is on record.[6]

The guns of Sec. 133 go into action wherever there is public nuisance. The public power of the Magistrate under the Code is a public duty to the members of the public who are the victims of the nuisance, and so he shall exercise it when the jurisdictional facts are present here :

> "All power is a trust—that we are accountable for its exercise—that, from the people, and for the people all springs and all must exist".

Discretion becomes a duty when the beneficiary brings home the circumstances for its being exercise. If the order is defied or ignored, Sec. 188, I.P.C., comes into penal play. The Criminal Procedure Code operates against statutory bodies and others regardless of the cash in their coffers, even, as human rights under Part III of the Constitution have to be respected by the State regardless of budgetory provision. Likewise Sec. 123 of the Act has no saving clause when the municipal council is penniless. Otherwise a profligate statutory body or pachydermic governmental agency may legally defy duties under the law by urging in self-defence a self-created bankruptcy or perverted expenditure budget. That cannot be Sec. 133, Cr. P.C. is categoric, although reads discretionary judicial discretion when facts for its exercise are present, has a mandatory import. Therefore when the Sub-divisional Magistrate, Ratlam, has, before him, information and evidence, which discloses the existence of public nuisance and, on the materials placed, he considers that such unlawful obstruction or nuisance should be removed from any public place which may be lawfully used by the public, he shall act. Thus his judicial power shall, passing through the procedural barrel, fire upon the obstruction or nuisance, triggered by the jurisdictional facts. The Magistrate's responsibility under Sec. 133, Cr. P.C. is to order removal of such nuisance within a time to be fixed in the order. This is a public duty implicit in the public power to be exercised on behalf of the public and pursuant to a public proceeding. Failure to comply with the direction will be visited with a punishment contemplated by Sec. 188., I.P.C. Therefore, the Municipal Commissioner or other Executive authority bound by the order under Sec. 133, Cr. P.C. shall obey the direction because disobedience, if it causes obstruction or annoyance or injury to any persons lawfully pursuing their employment, shall be punished with simple imprisonment or fine as prescribed in the section. The offence is aggravated if the disobedience tends to cause danger to human health or safety. The imperative tone of Section 133, Cr. P.C., read with the punitive temper of Sec. 188, I.P.C. makes the prohibitory act a mandatory duty.

Although these two Codes are of ancient vintage, the new social justice orientation imparted to them by the Constitution of India makes it a remedial weapon of versatile use. Social justice is due to the people, and therefore, the people must be able to trigger off the jurisdiction vested for their benefit in any public functionary like a Magistrate under Sec. 133, Cr. P.C. Public nuisance because of pollutants being discharged by the big factories to the detriment of the poorer sections, is the challenge to the social justice component of the rule of law. Likewise, the grievious failure of the local authorities to provide the basic amenity of public conveniences drives the miserable slum-dwellers to ease in the streets, on the sly for a time, and openly thereafter, because under nature's pressure, bashfulness becomes a luxury and dignity a difficult art. A responsible municipal council constituted for the precise purpose of preserving public health and providing better finances cannot run away from its principal duty by pleading financial inability. Decency and dignity are non negotiable facets of human rights and are a first charge on local self-governing bodies. Similarly, providing drainage systems-not pompous and attractive, but in working condition and sufficient to meet the needs of the people cannot be evaded if the municipality is to justify its existence. A bare study of the statutory provisions makes this position clear. An order to abate the nuisance by taking affirmative action on a time-bound basis is justified in the circumstances. The nature of the judicial process is not purely adjudicatory nor is it functionally that of an umpire only. Affirmative action to make the remedy effective is of the essence of the right which otherwise becomes sterile. Therefore the Court, armed with the provisions of the two Codes must adventure into positive directions. Section 133, Cr. P.C., authorizes the prescription of a time limit for carrying out the order. The same provision spells out the power to give specific directives.[1]

If the Executive Magistrate, not being duly empowered by law on that behalf, makes an order under Sec. 133 (new) his proceedings shall be void.[2]

If the Magistrate has, as Chairman of the local board, already taken in the matter he is, under Sec. 556 (new Sec. 479) barred from proceeding under Sec. 133 (new).[3]

A District Magistrate, a Sub Divisional Magistrate, or a specially empowered Executive Magistrate of the first class, can order the person against whom a conditional order has been made to appear before such other Executive Magistrates who will have the conduct of all subsequent proceedings.[4]

From the terms of the second clause the nuisance would probably be held to be a public nuisance from the nature of the place in which it is committed.

4. Orders.—Forms of order under Sec. 133 (new) are given in the Second Schedule, Form No. 20. The order should be clear in its terms. Where it was indefinite it was set aside on revision.[5]

The initial and final orders must state accurately the specific obstruction caused by each person and which he is required to remove, unless it is alleged that all of them are jointly responsible for all the obstructions.[6] An order under Sec. 133, cannot, even by consent of parties, be based upon the information gathered at local inquiry.[7] A final order on grounds not covered by the conditional order is illegal.[8]

Section 133 does not relate to the possibility of future results.[9]

An order directing a person to do a certain thing within a certain time and threatening him with certain penalties on disobedience thereof is illegal.[10]

If it is ambiguous and capable of two interpretations, and disobedience thereof is made the subject of a criminal prosecution, the interpretation most favourable to the accused must be adopted.[11]

The Magistrate cannot act merely for the protection of the private property.[12] In such a case, however, if the erection of a *bund* is likely to cause a breach of the peace, he can pass an order under Sec. 144, or determine the right to use the water by proceedings taken under Sec. 147. Nor can he order a private path to be reopened which leads to public thoroughfare, as there is public right of way over such pathway.[1] Nor can a Magistrate order the removal of an obstruction to a drain into which the sewage of certain premises fell, unless it causes a nuisance in a public place.[2]

Where the house stood in its own compound and at a distance from the public road, it was held that the Magistrate was not competent to pass an order under Sec. 133 (new) for its repair.[3]

No length of time creates a prescriptive right to commit a public nuisance. So what is not in the first instance a public nuisance may become one.[4] Section 133 has been applied to the removal of the slaughter-house, found to be a nuisance dangerous to the health of the community.[5]

A cremation ground kept and used in a manner to be offensive or a source of injury, danger or annoyance to the public in general who, lives in its vicinity, it may be dealt with under Sec. 133 (new).[6]

An order may be passed under Sec. 133 (new) directing the removal of a *bund* across a river which by raising the depth of water in the river has made it inaccessible on foot and for carts. The bund had caused an unjustifiable obstruction to the public in lawful enjoyment of a right of a way.[7]

Houses occupied by prostitutes on the public road cannot be said to affect the physical comfort of the community, so as to justify an order under Sec. 133 (new) for their removal.[8]

5. Jurisdiction for initiation.—The initiation will be bad in case the Executive Magistrate himself takes part in the local enquiry and as such he should not ultimately initiate the proceedings.[9]

6. Purpose and object of.—Proceedings under Sec. 133 (new). Cr. P.C., are not intended to settle private disputes between the two members of the public. But, on the other hand, it is intended to protect the public as a whole against inconvenience. There is no provision for ordering the reconstruction of the house which is ordered to be demolished and put back the tenants in the reconstructed premises, under this section.[10]

7. Interpretation of the section.—A plain reading of Sec. 133 (new) would show that before an action can be taken on the basis of obstruction or nuisance, the obstruction or nuisance must be proved to exist on some way, river or channel which lawfully be used by the public or on some public place. If the obstruction or nuisance is on some private property and yet action under Sec. 133 (new) is taken, it would evidently mean interference with the exercise of the right of an individual to use his own property in a way and manner he wants. The Legislature never meant to interfere in the rights of the owners of the properties to enjoy the same in the manner suitable to them.

In *Sumer Singh* v. *Sanitary Inspector of Bauria*,[1] it was held that the constructions about on the road would not bring the case within the purview of the Sec. 133 of the Code.

Similarly in *Gauri Shanker* v. *Shri Krishna*,[2] the High Court considered that the obstruction of a latrine by person on his own land cannot be considered as nuisance. This authority of the Allahabad High Court was followed subsequently by the same High Court in *Shri Ram* v. *Emperor*.[3]

8. Removal of nuisance.—The scheme of proceeding under Sec. 133, Cr. P.C., contemplates that the party against whom a conditional order under Sec. 133, Cr. P.C., is passed should either comply with it by removing the nuisance or if he objects so to do he should appear and show-cause why the order should not be made absolute.[4] In the case reported in *Maria Julia Coutinho* v. *Ananta Soman Chiltare*,[5] the complainant did not lead any evidence in support of his allegations. It was held that in such circumstances, the Magistrate should have stopped the proceedings in the case rather than proceed to examine the respondent and the witness cited by her. The course adopted by the Magistrate was in clear violation of the statutory provision enacted in Sec. 244 [Sec. 254 (new)] of the Code and as such the entire proceedings stand vitiated.

This view is supported by a catena of authorities.[6]

If a trade like auctioning which has to be carried on as necessary for the well being of the community, some amount of noise has to be borne in at least that part of the town where such trade is ordinarily carried on. In making the provisions of Sec. 133 (new) of the Code of Criminal Procedure, the Legislature cannot have intended the stoppage of such trades in such part of town, merely because of the "discomfort" caused by the noise in carrying on the trade. Therefore the slight discomfort that may be caused to some people passing by the road or living in the neighbourhood cannot ordinarily be considered to be such as to justify action under Sec. 133.[7]

9. State of law as regards the section.—The conduct of the trade must be injurious in *praesenti* to the health or physical comfort of the community. There must, at any rate, be an imminent danger to the health or the physical comfort of the community in the locality in which the trade or occupation is conducted. Unless there is such imminent danger to the health or physical comfort of that community or the conduct of the trade or occupation is in fact injurious to the health or the physical comfort of that community, an order under Sec. 133 cannot be passed.[1]

[7] Ram Autar *v.* State of U.P., 1962 A.L.J. 1161 at p. 1162 : A.I.R. 1962 S.C. 1974; *see* also Jamia Milia Islamia *v.* State, (1986) 29 D.L.T. 31.

Reference may be made in this connexion to *Gokul* v. *Emperor*,[2] and *Rameshwar Prasad* v. *State of Bihar*.[3]

10. Transfer of enquiry.—The Magistrate making transfer cannot direct the parties to appear before another Magistrate for the limited purpose of enquiry under Sec. 137 (Sec. 139-A, old). If he, after making a conditional order, chooses to send the case to another magistrate, the other Magistrate gets seized of the case until he disposes it off finally either by setting aside the conditional order or by modifying it in the manner provided in the section following Sec. 133, Cr. P.C.[4]

11. Enquiry.—When a proceeding under Sec. 133 of the Code is drawn up in respect of an alleged obstruction to the public in the use of any channel the Magistrate is required to make two enquiries to determine : *firstly*, whether or not there is existence of a public right in respect of the channel, and *secondly*, whether or not there has been obstruction caused on the said channel regarding the use of it by the public.[5]

12. Sub-section (2).—The provisions of the law are stringent, because the intention is to create facilities for conditional orders, without needless delay, and thereby to ensure public safety.[6] If an order under Sec. 133 is within the jurisdiction of the Magistrate disobedience thereto is punishable under Sec. 188 of the Penal Code, but, on proof that such order is illegal by reason of its being beyond the jurisdiction of such Magistrate, a conviction and sentence for such offence is illegal, and will be set aside.[7]

But an irregularity, such as, a failure to serve the order as required by Sec. 134, will not vitiate a conviction and sentence under Sec. 188 of the Penal Code, if it is shown that the person to whom it was directed had otherwise become informed that it had been made; and that, notwithstanding this, he has wilfully disobeyed it.[8] At the same time it is not so where the Magistrate has not followed the procedure properly as provided under Sec. 133, Cr. P.C. and the preliminary order itself made by him is not in conformity with the provisions of Cl. (*ii*) of the later part of sub-section (1) of Sec. 133, Cr. P.C. The proceedings are bad in law and liable to be quashed.[9]

CHAPTER VI

THE CONSUMER PROTECTION ACT, 1986

SYNOPSIS

1 Introduction .. 1068
2 Sec 2 . 1069
3 Sec 6 . 1069
4. Sec. 27 1069
5. Drainage System—Duty of the M.C.D to repair the sewerage system .. 1070
6. Education—Sceptic Tank open—Student of U K G drowned in the tank 1070
7. Air pollution control system installed for commercial purpose—Defect in the system Whether complainant a consumer ... 1070

1. Introduction.—It is a social developing Legislation placed on the Statute Book in 1986 to protect the interest of Consumer of goods and services rendered. The purpose of this Act to seek, *inter alia* to promote and protect the rights of consumers such as—

(*a*) the right to be protected against marketing of goods which are hazardous to life and property;

(*b*) the right to be informed about the quality, quantity, potency, purity, standards and price of good to protect the consumer against unfair trade practices;

(*c*) the right to be assured, wherever possible, access to an authority of goods at competitive price;

(*d*) the right to be heard and to be assured that consumers interest will receive due considerations at appropriate forums,

(*e*) the right to seek redressal against unfair trade practices or unscrupulous exploitation of consumers; and

(*f*) right to consumer education.

These objects are sought to be promoted and protected by Consumer Protection Council to be established at the Central and State level. From the working of the Act, it was found necessary to amend the Act and it was this radically amended in 1993 to plug these loopholes and enlarge the scope of areas covered and intrust powers to the redressal agencies under the Act to confer additional powers on the redressal agencies by way of awarding costs to the parties, for ordering removal of defects or deficiency from the services, and for empowering to re-call of goods likely to endamger the safety of the public, etc. Every living thing in this world is consumer for we are consuming air, water, environment industries, etc. If polluted water, air, food products, and other basic necessities are consumed by living things that would directly or indirectly have adverse effect on ones causing serious damage to life and property. The person injured by a pollutional activity should obtain compensation for his loss. A plaintiff in a tort action may sue for damages or an injunction or both.

Damages are the remedy for the loss incurred it may broadly be classified into substantial or ordinary and vindictive or exemplary. Substantial damages are intended to compensate the plaintiff for the damage he has suffered on account of defendants wrongful act, Vindictive damages are usually awarded in excess of the material loss suffered by the plaintiff with a view to prevent similar behaviour in future on the part of defandant. The main objective of the damages so awarded is not to compensate the plaintiff but to punish the wrongdoer for his outrageous conduct which is visible by his wrongful activity.

* * *

2. **Sec. 2. Definition.**—The important definitions are as follows :—

(*v*) goods which will be hazardous to life and safety when used, are being offered for sale to the public in contravention of the provisions of any law for the time being in force requiring traders to display information in regard to the contents, manner and effect of use of such goods with a view to obtaining any relief provided by or under this Act;

(*f*) "defect" means any fault, imperfection or shortcoming in the quality, quantity, potency, purity or standard which is required to be maintained by or under any law for the time being in force or (under any contract, express or implied, or) as is claimed by the trader in any manner whatsoever in relation to any goods;

(*g*) "deficiency" means any fault, imperfection, shortcoming or inadequacy in the quality, nature and manner of performance which is required to be maintained by or under any law for the time being in force or has been undertaken to be performed by a person in pursuance of a contract or otherwise in relation to any service".

* * *

3. **Sec. 6. Objects of the Central Council.**— The objects of the Central Council shall be to promote and protect the rights of the consumers, such as,—

(*a*) the right to be protected against marketing of goods and services which are hazardous to life and property;

(*b*) the right to be informed about the quality, quantity, potency, purity, standard and price of goods for services, as the case may be so as to protect the consumer against unfair trade practices;

(*c*) the right to be assured, wherever possible, access to a variety of goods and services at competitive prices;

(*d*) the right to be heard and to be assured that consumers' interests will receive due consideration at appropriate forums;

(*e*) the right to seek redressal against unfair trade practices or restrictive trade practices or unscrupulus exploitation of consumers;

(*f*) the right to consumer education.

* * *

4. **Sec. 27. "Penalties.**—Where a trader or a person against whom a complaint is made or the complainant fails or omits to comply with any order made by the District Forum, the State Commission or the National

Commission, as the case may be, such trader of person or the complainant shall be punishable with imprisonment for a term which shall not be less than one month but which may extend to three years, or with fine which shall not be less than two thousand rupees but which may extend to ten thousand rupees, or with both;

Provided that the District Forum, the State Commission or the National Commission, as the case may be, if it is satisfied that circumstances of the case so require, impose a sentence of imprisonment of fine, or both for a term lesser than the minimum term and the amount lesser than the minimum amount specified in this section".

Comments

5. Drainage System—Duty of the M.C.D. to repair the sewerage system.—It is a duty of the M.C.D. to see that the drainage system is not choked and the filthy water does not overflow and inundate the road and adjacent areas. It is, therefore, necessary that the sewerage system should be repaired and the water standing on the road and adjacent areas should be drained out immediately by the O.P.[1]

6. Education—Sceptic Tank open—Student of U.K.G. drowned in the tank.—The complainant has admitted his daughter in the Opposite Party-school on payment of necessary fees. He has, therefore, hired or availed of the service of the Opposite Party in the matter of education for consideration and is, therefore, a consumer under Sec. 2 (1) (*d*) (*ii*) of the Consumer Protection Act. It is due to the negligence of the Opposite Party in keeping the sceptic tank open, this unfortunate occurrence has occurred resulting in the death of the three and a half years old child. The Complainant is entitled to claim compensation for loss of expectation of life. Taking into consideration the inflationary trend that is prevailing to day, a sum of Rs. 10,000/- will be sufficient compensation.[2]

7. Air Pollution Control System Installed for commercial purpose.—Defect in the system—Whether complainant a consumer.—The contract between the parties was one for sale of goods for a commercial purpose, and hence the complainant could not invoke the jurisdiction of the State Commission under the provisions of the Consumer Protection Act inasmuch the Act. This contention was upheld by the State Commission by its impugned order dated 9th May, 1991 wherein detailed reasons have been stated in support of its conclusion that the contract between the parties was in substance and essence one for supply and installation of machinery for a commercial purpose and hence the complainant is not a "consumer" entitled to invoke the remedies provided under the Act. The State Commission was prefectly right in upholding the preliminary objections raised by the respondent that the complainant is not a "consumer" and hence the complaint filed by it could not be maintained under the Consumer Protection Act.[3]

CHAPTER VII

INDIAN EASEMENTS ACT, 1882

(ACT NO. 5 OF 1982)

SYNOPSIS

1 Relevant codified provisions of Indian Easements Act—Sec 2 Savings 1071
2 Right of riparian owner to accustomed flow of water 1071
3 Sec 7 1072
4 Easementary right of irrigation . 1073
5 Acquisition of easement over surface water . 1073
6 Sec 17 1074
7 No right of easement in respect of collected and impounded surface water ... 1074
8 Right to change a channel . 1075
9 Easement to draw water from a well ... 1076
10 Right to discharge water by means of water course ... 1076
11 Use of *nala* water for irrigation . 1076
12 Injunction to restrain disturbance of easement . . 1076
13 Sec 35 1076
14 Analysis of Secs 28, 33 and 35 . 1077
15 Temporary mandatory injunction in relation to flow of water in the street . . 1081
16. Injunction to restrain interference with the use of water of tank 1082
17 Injunction to restrain blocking of the drain 1082
18 Injunction to restrain interference with easement to water . 1082
19 Injunction to restrain discharge of roof water 1082
20 Injunction for restoration of normal supply of water ... 1082
21. Injunction to restrain flow of dirty water through private land ... 1082
22 Distinction between easementary right and natural right .. 1082
23 Cause of action in case of apprehended infringement of natural right 1083
24. Grant of injunction in case of pollution of water ... 1083

1. Relevant codified provisions of Indian Easements Act—Sec. 2 : "**Savings.**—Nothing herein contained shall be deemed to affect any law not hereby expressly repealed; or to derogate from—

> (*a*) any right of the Government to regulate the collection, retention and distribution of the water of rivers and streams flowing in natural channels, and of natural lakes and ponds, or of the water flowing, collected, retained or distributed in or by any channels or other work constructed at the public expense for irrigations".

* * *

2. Right of riparian owners to accustomed flow of water.—Every owner of land adjacent to water running in a defined natural courses—whether higher riparian owner or lower riparian owner has a right arising *jure naturae* to the accustomed flow of water both as to quantity and quality. His right to the ordinary or primary use of water flowing past his land extends to domestic purposes including purposes of his cattle. This he can exercise without regard to diminution of supply to lower owners. His right to extraordinary or secondary user can, however, be exercised only within limits.

It may be incidentally mentioned that this natural right of a riparian owner is recognised in illustration "J" to Sec. 7 of the Easements Act. Various principles could be collected from the leading cases on the subject. The following propositions are in accord with those principles :

Section 7 Easement being ristrictitions on the free use of property declaring that all easements are in derogation of one or other of certain rights incidental to the ownership of immoveable property. The exchusive right to injoy and dispose of immovable property and its products, and the right of the owner of such property to the enjoyment of the natural advantages arising from its situations, such as unpolluted air, quiet, the vertical passage of right and air, the natural support of land by the soil of another unpolluted water, draining the uninterrupted flow of water naturally flowing in defined channels, the discharge of surface water of lower adjoining land and the use of the water of a stream for drinking household purposes, watering cattle and for irrigation and manufactures.

3. **Sec. "7. Easements restrictive of certain rights.**—Easements are restrictions of one or other of the following rights, namely :

(*a*) *Exclusive right to enjoy.*—The exclusive right of every owner of immoveable property (subject to any law for the time being in force) to enjoy and dispose of the same and all products thereof and accession thereto.

(*b*) *Rights to advantages arising from situation.*—The right of every owner of immoveable property (subject to any law for time being in force) to enjoy without distubance by another the natural advantages arising from its situation.

Illustrations of the rights above referred to :

(*a*) The exclusive right of every owner of land in a town to build on such land, subject to any municipal law for the time being in force

(*b*) The right of every owner of land that the air passing thereto shall not unreasonably polluted by other person.

(*c*) The right of every owner of a house that his physical comfort shall not be interfered with materially and unreasonably by noise or vibration caused by any other person.

(*d*) The right of every owner of land to so much light and air as pass vertically thereto.

(*e*) The right of every owner of land, that such land, in its natural condition, shall have the support naturally rendered by the subjecent and adjacent soil of another person.

(*f*) The right of every owner of land that, within his own limits, the water which naturally passes or percolates by, over or through his land shall not, before so passing or percolating, be unreasonably polluted by other persons".

(1) A riparian owner, in the exercise of his right to use the water of the stream for extraordinary purpose such as agriculture, can impound and divert water to irrigate his land adjacent to the stream.

(2) The right is not an absolute or exclusive right. He cannot abstract water *ad ibitum* for his right is conditioned by the similar right of other riparian owners who have co-extensive rights to the water of the stream. It is

User of stream to be only reasonable user.

limited but only by rights of persons in similar position having lands abutting both sides of the stream. The crucial condition is that the user of the stream by him must be low a reasonable use and not capricious or such as would inflict sensible injury on others similarly situated.

(3) This standard of reasonableness applied to the volume of water that he can divert to the purpose for which he can utilise it as also to the mode or method that he may adopt for impounding and channelling such water.

(4) There is no rule exclusive or inclusive which defines the mode or specific methods or manner of diverting that water for that must depend on a variety of factors including for instance geographical and natural features of the lands of the riparian owners upstream and downstream, the terrain and the magnitude of the stream.

(5) A normal and usual mode or method of diverting water adopted in many parts of the country and more so in rocky or hilly terrains is that of putting in the stream *kaccha* or *pukka randharas* (dams). In case of such terrains and principally in higher reaches of small river or rivulet this is the most practicable and economical method and it is too late in the day now to throw doubt on the reasonableness of this ancient system. It is incidental to the right itself. But the *randharas* must be such that they permit the flow of the water down-stream and without diverting the natural course of the stream.

(6) The riparian rights of lower owners is to have the water of the stream transmitted to them continuously and in a manner which does not materially affect their enjoyment of the right. An upper riparian owner who puts up a *bandhara* must, therefore, take care to see that the stream continues to flow without interruption and without any substantial diminution in volume.[1]

4. **Easementary right of irrigation.**—Where a person acquires by easement a right to irrigate a particular field from the water supplied through a channel from a tank he cannot make of the easement for the irrigation of fields other than the one for the beneficial enjoyment of which the easement had been acquired. Section 23 of the Easements Act and the illustration added to it make it clear that it has no application to such a case. It lays down the limitation of an easement right from the stand point of the dominant owner by allowing his latitude to change the mode and place of the exercise of easement provided he does not hereby impose any additional burden on the servient heritage. It does not give him the latitude to make use of the easement for any purpose and concerned with the enjoyment of the dominant heritage.[2]

5. **Acquisition of easement over surface water.**—From a plain reading of Sec. 17 (*c*) of the Easements Act, it would appear that easement rights can only be acquired over surface water if it is flowing in a stream, or if the surface water is collected in a stream. The expression used is "collected and not collecting". Thus, easement rights can only be acquired over water which is already collected in a pool or a tank, and no rights are acquired over the collecting of the same.[3]

No easement right can be acquired over percolating water unless it runs in a defined stream [Sec. 17 (*d*) of the Easements Act.].[4]

[4] Manturabai, Mst. *v* Ithal Chiman, A.I.R. 1954 Nag. 103 at p. 104.

6. Sec. 17. Provision of Sec. 17 runs as under :

Sec. 17. "Rights which cannot be acquired by prescription.—Easements acquired under Sec. 15 or said to be acquired by prescription, and are called prescriptive rights. None of the following rights can be so acquired :

- (*a*) a right which would tend to the total destruction of the subject of the right of the property on which, if the acquisition were made, liability would be imposed;
- (*b*) a right to the free passage of light or air to an open space of ground;
- (*c*) a right to surface-water not flowing in a stream and not permanently collected in a pool, tank or otherwise;
- (*d*) a right to underground water not passing in a defined channel"

* * *

7. No right of easement in respect of collected and impounded surface water.— Section 17(*c*) of the Easements Act, 1882, expressly says that no easement right can be acquired to surface water not flowing in a stream and not permanently collected in a pool, tank or otherwise. Illustration G to Sec. 7 (*b*) also speaks of the right of every owner of land to collect and dispose, within his own limits, of all water under land which does not pass in a defined channel and all water on its surface which does not pass in a defined channel. Two principles thus emerge· *fistly*, that an owner of land is entitled to collect and impound all surface water passing over his land, and *secondly*, that no prescriptive right can be acquired in respect of such water by the servient owner. In other words, unless the water flows through a defined channel no right can be acquired either by lost grant or prescription to the use of such water.

Right to collect or discharge water

Every land owner has a natural right to collect and retain upon his own land the surface water passing over his land and put it to such use as he may desire He has a right to discharge the surplus water upon his neighbour's land lying at a lower level. But there is no reciprocal right by the servient owner to compel the dominant owner to discharge a particular volume of water. In *Sarban, Mst.* v. *Phudo Sahu*,[1] the plaintiffs claimed a prescriptive right to irrigate their lands from the surface water flowing from the defendants' field which had been bounded up. It was held that the owner of the servient tenement cannot compel the owner of the dominant tenement to use the water in a particular way or to compel him not to interfere with the surface water accumulating on land, even if its exercise should be for the benefit of the servient owner.

The above principle has been recognised in *Abdul Baqi* v. *Sheo Prasash Singh*,[2] *Henry Hill and Company* v. *Sheoraj*,[3] *and Mahabir Sahu* v. *Ram Saran Sahu*.[4] The chief characteristic of surface water is that its identity and existence as a water body cannot be definitely ascertained and it cannot be said to belong to any particular person. No claim can, therefore be made to such right either as a natural right or as on easement by prescription. The right to the ownership of the water is an incident to the ownership of the land. In *Rawstron* v. *Taylor*,[5] Parke, B., gave the reasons why no right could be obtained over surface water. He observed :

---

[1] A.I.R. 1923 Pat. 65.

[2] A.I.R. 1928 Pat. 279.

[3] A.I.R. 1922 Pat. 9.

[4] A I R 1918 Pat. 493

[5] (1855) 11 Ex. 369.

> "This is the case of common surface water rising out of springly or boggy ground, and, flowing in no definite channel, although contributing to the supply of the plaintiff's mill. This water having no defined course, and its supply being merely casual the defendant is entitled to get rid of it in any way he pleases".

Martin, B., emphasised the right of every land owner to enjoy his land as he chooses, and said :

> "The proprietor of the soil has *prima facie* the right to drain his land. He is at liberty to get rid of the surface water in any manner that may appear most convenient to him, and I think no one has a right to interfere with him, and that the object he may have in so doing is quite immaterial.
>
> The defendant could not insist upon the defendant maintaining his fields as a mere water table".

Surface water and channel water

The judgment of Lord Hatherley. L.C., in *Grand Junction Canal Company* v. *Shugar*,[1] is illuminating on the point. Referring to a previous case, it observed that the distinction between surface water and channel water was firmly established. Surface water was that,—

> "which comes no one knows exactly whence and flows no one knows exactly, how either underground or on the surface, unconfined in any channel, either as rainfall or from springs of the earth may vary from day to day, or spring up from beneath the surface in a direction which no one knows—this species of water is different from water confined in a regular channel".

The true test, therefore, of the existence of the common right to such water is to see whether the flow of water on one person's land is identified with that on his neighbour's by being traceable to it along a distinct and defined course. If the waters on the two lands do not possess this unity of character they are in the same category as fish or birds, etc., and are only incident to, and form part of the produce of their respective soil. No proprietor can make a claim to the water in such a condition before it arrives within his own borders. So long as the water rises naturally and squanders itself over the surface it has no public character and before it arrives at any defined natural channel, it belongs solely to the owner of the land which it covers and he may deal with it exactly as he thinks fit while he is making a reasonable use of his own land.[2] Where the lands of the defendants stand upon a higher ground than those of the plaintiff's nature itself may be said to constitute the servitude on the inferior tenement, by which it is obliged to receive the water that falls on the superior tenement. This is a natural right inherent in the property.[3]

8. Right to change a channel.—Where the same person is proprietor of the ground on both sides of a non-navigable stream he can change a channel as he pleases; provided he restores the water to the old channel before it leaves his ground and provided that it flows out of his ground into the lands below as it was *wont* to do, neither increased nor diminished in quantity, quality or direction.[4]

---

[1] (1871) 6 Ch. 483.

[2] *See* V. Adinarayana *v.* Ramudu, A.I.R. 1913 Mad. 507.

[3] Dharindhar Sahu *v.* Bhagirathi Sahu, A.I.R. 1956 Orissa 89 at p. 91.

[4] Orr Ewing *v.* Colquhoun, (1877) 2A.C. 839; *see* Khandeshwar Champati *v.* Gokulananda Jena, A.I.R. 1965 Orissa 91 at p. 99.

9. Easement to draw water from a well.—The mere fact one person draws water from a well situate on another person's land does not create an easement. Under Indian social conditions a person owning a well is deemed to be under a moral or pious obligation to allow the poor or less fortunate inhabitants of the locality to draw water from his well. In almost every street in India the rich man's well is used by his poor neighbours for drawing water. The law of easement was not intended to disturb this excellent social custom by giving the drawer of water from another persons well right of easement, the presumption in view of social conditions should be that the right in all such cases is permissive and does not create an easement. The law of easement must be interpreted in the light of Indian social conditions. When the well has fallen into decay and the plaintiff entitled to draw water from the well, has slept over his rights for three years the relief of mandatory injunctions cannot be granted.[1]

10. Right to discharge water by means of water course.—The right to discharge water over the land of others or to receive the discharge of water from the lands of others by means of water courses artificially created, is not a natural right of property, but may be the subject-matter of contract between the parties or be established like any other easement either by express grant or by prescription which presumes a grant. No doubt, it is distinct from water flowing in a natural channel, which arises as incidental to the ownership of land, and as such *prima facie* entitles each successive riparian owner to the unimpeded flow of water in its natural course to its reasonable enjoyment as it passes through his land as a natural incident to his ownership of it. The right to water flowing to a man's land through an artificial water course must rest on some grant or arrangement, either proved or presumed from or with the owners of the lands from which the water is artificially brought, or on some other legal origin.[2]

11. Use of *nala* water for irrigation.—In this case, admittedly the plaintiffs were the proprietors of the whole village and, in that capacity, they owned not only their *sir* and *khudkast* land but also the *nala* and the channel though which the *nala* water was taken. Therefore, there could be no right either by prescription or by lost grant in regard to the use of the *nala* water for irrigation in the manner alleged. If the plaintiffs irrigated their lands in the manner alleged they did so till 1930-31, that was merely an exercise of their ordinary right of property. This position continued till the Madhya Pradesh Irrigation Act, 1931, was enacted and brought into force on 15th March, 1932.[3]

12. Injunction to restrain disturbance of easement.—Sections 34 and 35 of the Indian Easements Act lay down the circumstances under which a suit for compensation for disturbance of easement may lie. Section 35 enacts when injunction may be granted to restrain such disturbance. For the purpose of ready reference provisions of the said section are reproduced in preceding paragraphs.

13. Sec. "35. Injunctions to restrain disturbance.—Subject to provisions of the Specific Relief Act, 1877 (Sections 36 to 42) of the Specific Relief Act, 1963, Secs. 52 to 57 (both inclusive) an injunction may be granted to restrain the disturbance of an easement—

(*a*) if the easement is actually disturbed when compensation for such disturbance might be recovered under this chapter;

(*b*) if the disturbance is only threatened or intended when the act is threatened or intended must necessarily, if performed, disturb the easement".

[1] Chheddu Singh *v.* Kewal, A.I.R. 1963 All. 122 at p. 123.

[2] Tharur Punchayat *v.* Kunchayi, A.I.R. 1978 Ker. 50 at p. 53.

[3] Durga Singh (Diwan) *v.* State of Madhya Pradesh, (1971) Jab. L.J. 777 at p. 779.

14. Analysis of Secs. 28, 33 and 35.—On the analysis of Secs. 28, 33 and 35 of the Easements Act it is clear that the plaintiff must establish a substantial injury or deprivation of his right sufficient to render the use and occupation of his house inconvenient or uncomfortable according to the ordinary requirements of manking. It is not enough to allege and prove that there has been reduction in the quantum of air and light in the physical sense by the acts complained of by the plaintiff. The plaintiff must further prove that the curtailment of right has been so substantial as to render a comfortable living or use of the residence of course judged by ordinary notions, impossible.

Scope of the sections.

A temporary injunctions in merely provisional in its nature and does not conclude a right. The effect and object of it is merely to preserve the Property in dispute in status quo until the hearing of further order.

* * *

Clause (*a*) of Sec. 35, Easements Act, refers to a mandatory injunction and Cl. (*b*) to a perpetual injunction. The section is unfortunately worded. In Cl. (*a*) a mandatory injunction is allowed when compensation for disturbance might be recovered under Sec. 33. The word "when" must be construed to mean "when and where" because it would be useless to prescribe that an injunction could be granted when damages can be claimed under Sec. 33, if damages under Sec. 33 could not be claimed The effect of the clause is, therefore, only to allow an injunction where substantial damages is to be proved. This conclusion also follows from Sec. 54, Specific Relief Act, 1877, which only allows an injunction when pecuniary compensation would not afford adequate relief It follows that an injunction is only an alternative within the discretion of the Court and is not an independent from of relief.[1]

This view was adopted by Bench of the Madras High Court in *Esa Abbat Sait* v. *Jacob Haroon Sait*.[2] It was there pointed out that although the Indian Legislature in Sec. 28 (*c*) had adopted a view as to the extent of a prescribed right to the passage of light and air to an opening which was not in accordance with the view taken by the House of Lords in *Colls* v. *Home and Colonial Stores Ltd.*,[3] yet the Act had cut down the effect of the wider definition of the prescriptive right by only allowing any remedy where the disturbance caused substantial injury. In other words, it held that the Easements Act had given a right without a co-extensive remedy. This appears to be in conflict with the general principle *ubi jusibi remedium* . It is obviously desirable that no right should exceed the limits of the remedy to enforce it. This criticism, however, of the Easement Act cannot affect the interpretation to be put on that Act. It is for the Legislature to avoid disagreement between the extent of a right and the extent of the remedy, but it is for the Courts to confine themselves to the remedy allowed the statute.

Prescriptive right—Effect of

The remedy by an injunction may be sought either when the right of easement has already been actually disturbed a disturbance thereof is only threatened or intended. In the former case the disturbance cause must be such as would entitle the plaintiff to claim compensation under Sec. 33 or Sec. 34. in the latter case, which is also technically known as *quila time actio*, the act threatened or intended, must be such, that if performed it would necessarily disturb the easement, presumably causing substantial damage to the planatiff.[1]

---

[1] Suraj Narayan *v.* Kalyan Das, A.I.R. 1929 All. 430 at pp. 431-32.

[2] I.L.R. (1910) 33 Mad. 327 : M.L.J. 291 : 4 I.C. 425 : (1910) M.W.N. 246.

[3] (1904) A.C. 179 : 73 L.J. Ch. 484.

There is nothing in Sec. 35 of the Easements Act which excludes the application of Sec. 33 to this section. On the other hand Cl. (*b*) of Sec. 28 gives the right to the plaintiff to file a suit for injunction only if the easement is disturbed. The explanations to Sec. 33, clearly define the nature and extent of the right of easement and provide that the easement can be disturbed only if the value of the dominant heritage is materially diminished or if the damage is substantial so as to materially affect the physical comfort and health of the dominant owner. Section 35 cannot be read in isolation and must be read in conjunction with Sec. 33 because both these provisions deal with the same subject, namely, the question of great of injunction where there is a disturbance of easement.[2]

This view is fortified by a decision of the Punjab High Court in *Devinder Kumar* v. *Chatro Devi*,[3] where Khanna, J, (as he then was) pointed out that Sec. 28 of the Act has to be read alongwith the provisions of Secs. 33 and 35 and a person complaining of the disturbance of his right of easement must, in order to succeed, prove that the disturbance as owner resulted in substantial damage. This aspect of the case was fully considered by their Lordships of the Privy Council in *P.C.E. Paul* v *W. Robson*,[4] where they approved the law laid down by Lord Davey in *Colls* v. *Home and Colonial Stores Ltd.*[5] The observations of Lord Davey which were approved by the Privy Council are as follows :

> "The owner '......... of the dominant tenement is entitled to the uninterrupted access through his ancient windows of a quantity of light, the measure of which is what is required for the ordinary purposes of inhabitancy or business of the tenement according to the ordinary notions of mankind...' The single question in these cases is still what it was in the days of Lords Hardwicke and Lord Eldon, whether the obstruction complained of is a nuisance?"

Easement of light—Measure of.

Their Lordships in that case noticed the divergence of authorities on the question of nature and extent of light and air and appear to have settled the controversy once and for all because the observations made by Lord Davey received full support in a later case in *Jolly* v. *King*.[6] Their Lordships of the Privy Council held that "the owner of the dominant tenement does not possess an indefeasible right to light and air, but an uninterrupted access through his ancient windows of any quantity of light, the measure of which is necessary for the ordinary purpose of inhabitancy or business". Their Lordships further pointed out that the main question in such cases was to find out whether the obstruction complained of amounted to a nuisance.

This view has been taken by a large number of decisions to cite a few namely: *Bansidhar* v. *Matru Mal*,[7] *Verappa Mallappa Hadli* v. *Nagappa Fukriappa Hadli*,[8] *Sohan Singh* v. *Jagat Singh*,[9] *Suraj Narain* v. *Kalyan Das*,[10] and *Dakhan Bai, Mst.* v. *Anandi Bai*.[11]

11. A.I.R. 1959 Raj. 144.

It is pertinent to note that in *Bhushanam* v. *Upapathi,*[1] Pandurang Row, J., held as follows :

> "A case of this kind is governed by Sec. 35, Easements Act, according to which, subject to the provisions of Secs. 52 to 57, Specific Relief Act, an injunction may be granted to restrain the disturbance of an easement where the disturbance is only threatened or intended (as in the present case) when the act threatened or intend must necessarily, if performed, "disturb" the easement. Though the word used in this section namely, disturb may not *prima facie* appear to connote a tort or civil wrong, it is clear from the ruling in *Framji Shapurji* v. *Framji Edalji,*[2] that the word 'disturb' found in this section must mean an illegal obstruction or, in other words, an obstruction in respect of which a suit would lie...
>
> Damages and injunction are two remedies alternative in character given in respect of the same wrong, namely, an infraction of the legal right by way of easement and such an infraction takes place only when the deprivation is such as to amount to nuisance".

Extent and limitation of right of easement

Section 28 which confers the right of easement has to be read with Sec. 33 of the Act which indicates the extent and the limitation under which the right of easement is enjoyed. Indeed if Sec. 28 is completely divorced from the scope of Secs. 33 and 35 then the two sections would run contradictiory to each other and this will be against the rule of harmonious interpretation of statutes. Section 28 merely indicates in what measure a right of easement of light or air can be acquired but how that right is to be actually enforced when disturbed is laid down in Secs. 33 and 35 of the Act. Thus if disturbance to an easement can be prevented provided certain conditions are satisfied, then it can be safely presumed that Sec. 28 impliedly places such limitations while conferring the right of easement on the dominant owner. An injunction can be granted by the Court where the plaintiff claims that his right of easement is disturbed, only when the plaintiff is able to show that there has been a sufficient diminution of his right to receive light and air and that such diminution has caused sufficient damage or amounts to actionable nuisance so as to materialy affect the physical comfort and health of the plaintiff. There may be evidence to show that the plaintiff has other sources of light available to the plaintiff must be proved to have ripened into prescriptive right so as to deprive the plaintiff of the right which he receives through the ventilators.[3]

Damage—When not substantial.

Since Sec. 28 of the Easement Act has not to be taken in isolation but has to be read along with the provisions of Secs. 33 and 35 of the Easements Act, it is obvious that a person complaining of the disturbances of his right of easement has in order to succeed in the suit, to show not only that there has been a disturbance of an easement or of any right necessary thereto but has also to prove that the disturbance has actually resulted in substantial damage to him. It is further clear from *Expl. II* to Sec. 33 of the Act that no damage would be substantial in the case of right to the free passage of light through the opening of a house, unless—

[1] A.I.R. 1935 Mad. 870.

[2] I.L.R. (1908) 30 Bom. 319.

[3] Kasturi Lal *v.* Krishna Chand, A.I.R. 1971 J. & K. 27 at pp. 29, 30.

(1) it is likely to injure the plaintiff by affecting the evidence of the easement by materially diminishing the value of the dominant heritage, or

(2) it interfered with the physical comfort of the plaintiff, or

(3) prevents him from carrying on his accustomed business in the dominant heritage as beneficially as he had done previous to the institution of the suit.

Explanation III to Sec. 33 shows that in the case of right to the free passage of air though the opening of a house the damage would be substantial if it interferes materially with the physical comfort of the plaintiff, even though it is not injurious to his health.[1]

It is not enough to allege and prove that there has been a reduction in the quantum of air and light in the physical sense by the acts complained of by the plaintiffs. The plaintiff must further prove that the curtailment of light has been so substantial as to render a comfortable living or use of the residence, of course, judged by ordinary notions, impossible

There is no manner of doubt that both the Courts below have issued the injunction as a matter of course without calling their attention to this vital aspect of the case. They have issued the injunction on a mere finding that the plaintiff-respondent have been receiving light and air through the ventilators for a certain length of time. This was clearly insufficient to entitle the plaintiff-respondent to a decree for injunction, in view of the provisions of Secs 33 and 35 of the Easement Act.[2]

Injunction for flow of air and light—Proof to justify

The plaintiff filed a suit for permanent injunction restraining the defendant from causing obstruction to the flow and access of air and light. *Held* that in order to justify the issuance of injunction, the plaintiff has to prove in the case of passage of light that the diminution of light by the proposed building is likely to interfere materially with the physical comfort to the plaintiff and in the case of air he should prove that the obstruction caused materially effects the physical comfort of the plaintiff. It is not enough if it is averred that by the said obstruction, passage and access of air and light are diminished.[3]

It may be mentioned in passing that Secs. 15, 28, 33 and 35 of the Easements Act should be read together in the matter of prescriptive right with regard to the flow of the light and air. Mere diminution of air and light would not give the plaintiff a cause of action to sue for injunction. It should be substantial interference with the normal enjoyment of light and air so as to disturb the usual mode of life of the inhabitants of the building. In other words, it should amount to an actionable nuisance.[4] Such a case is not even made out in the plaint.[5]

[5] D Ramanatha Gupta *v.* S. Razack, A.I.R. 1982 Kant. 314 at p. 318.

Even if the defendants made construction in violation of the Municipal Rules, the plaintiff has to establish the material injury by such violation, irrespective of the question whether he has perfected his prescriptive right to light and air and if he establishes material injury, then he will be entitled to perpetual injunction as proved for.[1]

Where the plaintiffs have established their legal rights of easement and the facts of its disturbance, they are entitled of course to an injunction to prevent the recurrence of the disturbances.[2]

15. Temporary mandatory injunction in relation to flow of water in the street.—When the water in the street has been flowing in the direction of its natural flow for the last forty years and the defendant obstructed the flow by raising obstruction in the illegal manner and there is not other outlet for the water, a temporary mandatory injunction can be granted. The flow of water should be allowed as an easement of necessity. On the merits of the appeal, one may state that the learned Lower Appellate Court has observed that it had been admitted by Surta defendant himself that the level of his courtyard was lower than that of the street. From this admission, the learned Court readily inferred that the natural flow of water was from the courtyard of Surta. In paras. 4 and 6 of the written statement of the defendant appellants it has clearly been admitted that water in the street has been flowing in the direction of its natural flow for the last forty years. It is often said that the men may lie but the circumstances do not. In the face of this important circumstantial evidence it must be held that water used to flow through the courtyard of the defendant appellants and they have obstructed the flow by raising obstructions in an illegal manner. Two local Commissioners were appointed in this case. They are advocates practising at Ambala and both of them have unanimously reported that stagnant water was standing in the street and mosquitoes were breeding. This implies that because of the obstruction raised by the defendant-appellants the plaintiff-respondents have also in evidence that there is no other outlet of water. The learned Lower Appellate Court was right in observing that flow of water through the courtyard of defendant-appellants should be allowed as an easement of necessity. The learned counsel for the appellants submitted that there cannot be any easement in respect of an act of nuisance. In support of his submission, he placed reliance upon *Bankey* v. *Kishan Lal*.[3] In that case, it was held that throwing night soil oil on other's land in a wrongful act called nuisance, and no one can acquire a prescriptive right to commit nuisance of another's land. The other case relied upon by him was *Bheru Lal* v. *Mohan Singh*.[4] In that case, the use of the lane as a public latrine for a long time was held not to give a right of easement. The authorities relied upon by Mr. Jagga are clearly distinguishable. The acts on the basis of which right of easement was sought to be claimed in these two cases were acts which could be regarded as *mala in se.*, that is, acts which were inherently wrongful. The same cannot be said in case of a party trying to divert the rain water from his own house to a public street or to the adjoining land which is lying at a lower level.[5]

[4] A.I.R. 1966 Raj. 123.

[5] Mehar Singh *v.* Inder Singh, (1975) Cur. L.J. 25 at p. 28 (P. & H.).

16. Injunction to restrain interference with the use of water of tank.—Where the plaintiff have a clear right to use water of tank under the declaration made by the Court, the Court will grant a perpetual injunction, restraining the owner from interfering with that right by filling up to tank on the ground that the tank was overgrown with weeds and was full of insects especially when the plaintiff offered to bear the expenses of having that tank cleaned of the weeds.[1]

17. Injunction to restrain blocking of the drain.—Where the rain water from the roof of the plaintiff has been flowing through a certain direction for 40 consecutive years the plaintiff has a right to an injunction restraining others from blocking the drain. But in granting relief there is no reason to place any restrictions upon the other side.[2]

18. Injunction to restrain interference with easement to water.—Where the interference with the right of easement to water results in substantial damage injunction would be appropriate remedy.[3]

19. Injunction to restrain discharge of roof water.—The mere fact that the plaintiff allowed the defendant to discharge his rood water on the vacant site for some years is not a ground for refusing him the relief of injunction against that person restraining him from discharging water on the roof of the house constructed by the plaintiff on that vacant site unless the defendant has acquired an easement to discharge the water.[4]

20. Injunction for restoration of normal supply of water.—Since 1888, the plaintiff irrigated his fields with water led by him through an artificial channel which taped the Baloti Nadi, apparently a public stream. The defendants dammed the Baloti Nadi at a point higher up than the plaintiff's in take, and drew off almost the whole of the water into a channel made by them which led the fluid to their fields, and the plaintiff's prayer was for an injunction for the removal of the dam and the restoration to him of the normal supply of water. It was held that he was entitled to succeed. The facts that for over 30 years openly and without asking permission of anybody he had enjoyed the full flow of the Nadi, and in the absence of evidence that he acted by arrangement or permission, he must be held to have enjoyed arrangement or permission, he must be held to have enjoyed the easement as of right.[5]

21. Injunction to restrain flow of dirty water through private land.—It will not be in the interests of public health that dirty water from the dominant owner's house should flow through any private land when it can be discharged directly into a public drain. The Court has a discretion not to assist the dominant owner if the exercise of the right will be injurious to the public interest and an equally covenant alternative mode of enjoyment is available.[6]

22. Distinction between easementary right and natural right.—The right to light and air as pointed out by Peacock in the law relating *Easement in British India* (3rd Ed.) may be either a natural right forming one of the incidents of property or it may be an easement. The distinction between these two sets or rights, *viz.*, natural right and easementary right in this. In case of an easementary right there is no distinction in case of interference with light and air ; about the adjoining occupier being either a trespasser or an owner. In either case if the complaining person had allowed the other person to obstruct for over a period of 20 years his right to relief becomes extinguished. In *Bliss* v. *Hall*,[1] "twenty-years user" said Hart, J., "would legalise (private) nuisance". There can be no prescription to make a public nuisance.[2] On the other land, in the case of the natural right to light and air which is rested on the foot of the principles laid down in *Aldred's* case,[3] if even within the period of 20 years an owner finds himself cut off from light and air by an adjoining occupier who is a owner he is not entitled to any relief. On the other hand, if the adjoining owner is a wrong doer and is shutting light and air and causing a private nuisance interfering materially with the physical comfort of the plantiffs,[4] it is certainly open to this owner of the property suffering from that private nuisance to come forward and ask for proper relief which may be similar to the relief which would be granted in the case of easementary right, namely, injunction or damages for actual injury sustained.[5]

[6] Bhagwati Prasad *v.* Dwarika Prasad, A.I.R. 1963 All. 3 at p. 4.

23. Cause of action in case of apprehended infringement of natural right.—A plaintiff whose natural rights are in danger of being infringed or further encroached upon by a new enjoyment on the part of the defendant, capable of being converted by user for the prescriptive period into a new right in the latter, has good cause of action apart from any question as to the amount of damage which he may have suffered or be likely to suffer".[6]

24. Grant of injunction in case of pollution of water.—Once it is established that the villagers have a common right over the water in the tank for purposes of using it for their bathing and drinking purposes, any interference with that right would give them a cause of action, even though the interference is not in respect of a land belonging to the plaintiff. The action of the defendants would amount to a nuisance.

Nuisance furnishes cause of

In *Wood* v. *Wand*,[7] it was held :

> "A riparian proprietor has a right to the natural stream of water flowing through the land in its natural state, and if the water be polluted by a proprietor higher up the stream, so as to occasion damage in law, though not in fact, to the first mentioned proprietor, it gives him a good cause of action against the upper proprietor unless the latter have gained a right by long enjoyment of grant".

Of course, while in the case of riparian owners relief may be obtainable by the mere fact of the pollution even though there may not, in fact, be any sensible inconvenience or reduction of the comforts of riparian owner, in the case of persons, who merely have a right over a property not belonging to

Necessity of proving damage.

Injunction.

Fouling of others no difference.

them, damage in fact, would have to be proved. In the above case, the wrongful act of the defendant made no practical difference, that is, the pollution by the defendants did not make it less applicable to useful purposes than such water was before. But the Court held that notwithstanding that the plaintiffs have received damage in point of law, as they had a right to the natural stream flowing through the land in its natural state, as an incident to the right to the land on which water course flowed as it was a case of an injury to a right. It may be that where one is not a riparian owner, but has only a common right, actual damage may have to be proved. In *Gressely and Sons Ltd.* v. *Lightowler*,[1] it was held that the fact that the stream is fouled by others, is not a defence to a suit to restrain the fouling of the water of the river, without showing that the fouling is actually injurious to him. If the plaintiffs had proved the pollution of the Hebble opposite to their mills by the defendants they would have had good ground for an injunction, although they were not actually using the water for their business. Thus, it would be seen that the plaintiff would be entitled to an injunction even though the land in respect of which they claimed injunction is not owned by them and the only right which they have is a common right over the property belonging to others and it is no defence to the action of the plaintiffs that the people other than the defendants have already done something which has had the effect of making the water in the tank brackish.[2]

CHAPTER VIII

ESSENTIAL COMMODITIES ACT, 1955

(ACT 10 OF 1955)

SYNOPSIS

1 Introduction . 1085 2. Sec. 2 (*a*) .. 1085

1. Introduction.—Under Art. 369 of Constitution, Parliament had power during a period of 5 years from the commencement there of to make laws with respect to trade and commerce in, and the production, supply and distribution of certain essential commodities Ordinance was promulgated to take effect on the 26th day of January, 1955 which provided for the regulation of trade and commerce in the production, supply and distribution of commodities. Under Entry 42 of the Union List. Parliament has power to regulate inter State trade and commerce in all commodities i.e., wheat, raw cotton, and sugar cane. Law was made more strict by preceding amendments for confiscation by district authorities of food grains, edible oils and edible seeds. The dominant object and intention of the Act is to secure equitable distribution and availability at fair prices of essential commodities in the interest of general public and to prevent black marketiearing.

2. Sec. 2 (*a*).—As provided under Sec. 2 (*a*) the definition of essential commodities means.—

(*i*) Cattle fodder, including oil cakes and other commodities

(*ii*) Coal, including coke and other derivatives;

(*iii*) Component parts and accessories of automobiles;

(*iv*) Cotton and woollen textiles;

(*v*) drugs;

(*vi*) food stuffs, including edible oilseeds and oils.

(*vii*) iron and steel, including manufactured products of iron and steel

(*viii*) Paper, including newsprint, Paper board and straw board,

(*ix*) petroleum and petrolium products,

(*x*) raw cotton whether ginned,

(*xi*) raw jute

(xii) any other class if commodity which Central Government purposes of this Act, being a commodity with respect to which Parliament has power to make Laws by virture of Entry 33 in List III in the Seventh Schedule to the Constitution.

CHAPTER IX

THE ELEPHANTS' PRESERVATION ACT, 1879

(ACT 6 OF 1879)

1. Introduction to Sec. 3 and 7.—The slaughter of wild elephants, chiefly of males, whose tusks have reached a markatable size. The act prohibits, under penalty, the destruction of wild elephants, except in certain cases upon the waste and ferest lands of the property of Government. The act was formulated for the preservation of wild elephants, Sec. 3 of the said Act prohibits the killing and capture of wild elephants with three exceptions to retain the ecological balance of the Wild life and Forests. Sec. 7 of the above provision deals in penalty for contravening Sec. 3.

CHAPTER X

THE EMPLOYMENT OF MANUAL SCAVENGERS AND CONSTRUCTION OF DRY LATRINES (PROHIBITION) ACT, 1993

(ACT NO. 46 OF 1993)

SYNOPSIS

1. Introduction to the Act and its relation to Art. 47 of Constitution... 1087
2. Provision of Sec. 2 ... 1087
3. Provision of Sec. 3 1088
4. Provision of Sec. 10 . 1088
5. Provision of Sec 14 1089

1. Introduction to the Act and its relation to Art. 47 of Constitution.—An act to provide for the prohibition of employment of manual scavengers as well as construction or continuance of dry latrines and for the regulation of construction and maintenance of water-seal latrines and for matters connected therewith or incidental thereto.

Whereas fraternity assuring the dignity of the individual has been enshrined in the Preamble to the Constitution;

And whereas Art. 47 of the Constitution, *inter alia*, provides that the State shall regard raising the standard of living of its people and the improvement of public health as among its primary duties;

And whereas the dehumanising practice of manual scavenging of human excreta still continues in may parts of the country;

And whereas the municipal laws by themselves as a measure for conversion of dry latrines into water-seal latrines and prevention of construction of dry latrines are not stringent enough to eliminate this practice;

And whereas it is necessary to enact a uniform legislation for the whole of India for abolishing manual scavenging by declaring employment of manual scavengers for removal of human excreta an offence and thereby ban the further proliferation of dry latrines in the country;

And whereas it is desirable for eliminating the dehumanising practice of employment of manual scavengers and for protecting and improving the human environment to make it obligatory to convert dry latrines into water-seal latrines or to construct water-seal latrines in new construction;

2. Provision of Sec. 2 deals in Definitions.—

* * * *

(*c*) "dry latrine" means a latrine other than a water-seal latrine;

(*d*) "environment" includes water, air and land and the inter-relationship which exists among and between water, air and land and human beings, other living creatures, plants, micro-organism and property;

(*e*) "environmental pollutant" means any solid, liquid or gaseous substance present in such concentration as may be, or tend to be, injurious to environment;

(*f*) "environmental pollution" means the presence in the environment of any environmental pollutant,

* * *

(*i*) "latrine" means a place set apart for defecation together with the structure comprising such place, the receptacle therein for collection of human excreta and the fittings and apparatus, if any, connected therewith;

(*j*) "manual scavenger" means a person engaged in or employed for manually carrying human excreta and the expression "manual scavenging" shall be construed accordingly;

* * *

(*n*) "water-seal latrine" means a pour-flush latrine, water flush latrine or a sanitary latrine with a minimum water-seal of 20 milimetres diameter in which human excreta is pushed in or flushed by water.

Chapter II of the said Act deals in prohibition of employment of manual scavengers, etc.

3. Provision of Sec. 3. "Prohibition of employment of manual scavengers etc.—(1) Subject to sub-section (2) and the other provisions of this Act, with effect from such date and in such area as the State Government may, by notification, specify in this behalf, no person shall—

(*a*) engage in or employ for or permit to be engaged in or employed for any other person for manually carrying human excreta; or

(*b*) Construct or maintain a dry latrine.

(*c*) The State Government shall not issue a notification under sub-section (1) unless—

(*i*) it has, by notification, given not less than ninety days' notice of its intention to do so;

(*ii*) adequate facilities for the use of water-seal latrines in that area exist; and

(*iii*) it is necessary or expedient to do so for the protection and improvement of the environment of public health in that area".

* * *

4. Provision of Sec. 10. "Power of Executive Authority to prevent environmental pollution in certain cases.—(1) On receipt of information with respect to the fact or apprehension of any occurrence of contravention of the provisions of sec. 3, whether through intimation by some person or on a report of the inspector or otherwise, the Executive Authority shall, as early as practicable, besides taking any other action under this, Act, direct the owner or occupier of the premises to take such remedial measures, as may be necessary, within such reasonable time as may be specified therein and in case the owner or occupier, as the case may be, fails to comply with such directions, cause such remedial measures to be taken as are necessary to prevent or mitigate the environmental pollution at the cost of such owner or occupier of the premises.

(2) The expenses, if any, incurred by the Executive Authority with respect to the remedial measures referred to in sub-section (1) together with interest at such rate as the State Government may specify from the date when a demand for the expenses is made until it is paid, may be recovered by such authority or agency from the person concerned as arrears of land revenue or of public demand.

* * *

Chapter IV of the Said Act deals in Penalties and Procedure

5. **Provision of Sec. 14. "Penalty for contravention of the provisions of the Act and rules, orders, directions and schemes.**—Whoever fails to comply with or contravenes any of the provisions of this Act, or the rules or schemes made or orders or directions issued thereunder, shall, in respect of each such failure or contravention be punishable with imprisonment for a term which may extend to one year or with fine, which may extend to two thousand rupees, or with both, and in case the failure or contravention continues, with additional fine which may extend to one hundred rupees for every day during which such failure or contravention"

CHAPTER XI

THE EPIDEMIC DISEASES ACT, 1897

(ACT NO. 3 OF 1897)

An Act to provide for the better prevention of the spread of Dangerous Epidemic Diseases.

Section 2 of the Act deals in power of State Government to take special measures and prescribe regulations as to dangerous epidemic diseases. Sec. 2-A of the Act deals in powers of Central Government to take measures and prescribe regulations for the inspection of any ship or vessal leaving or arriving at any port in the territories of this Act with an outbreak of any dangerous epidemic disease for the ordinary provisions of the law for the time being in force are insufficient to prevent Sec. 3 of the aforesaid act deals in Penalties as under Sec. 188 of Indian Penal Code.

CHAPTER XII

FACTORIES ACT, 1948

SYNOPSIS

1. Introdution to the Act .. 1091
2 Sec. 1 1092
3. Sec. 2 ... 1092
4 Scheme of the Act ... 1094
5 Whether power station is treated as factory .. 1094
6. Manufacturing process 1094
7. Manufacturing process—Whether includes dry cleaning of clothes . 1094
8 Worker 1094
9 Factory—Meaning of .. 1095
10 Seasonal establishment . 1095
11 Working hours and hours of rest . 1095
12 What constitutes the relationship of master and servant 1096
13. Calcutta Dock Labour Board—Whether a "factory" ... 1097
14 Whether a manager of a company can be occupier .. 1097
15. Sec 7 . 1097
16 Sec 7-A ... 1098
17 Sec 7-B 1099
18 "Occupier"—Meaning of . 1100
19 "Worker"—Meaning of and test for determination of . 1100
20. Sec 12 .. 1100
21. Sec 35 ... 1100
22 Sec 36 .. 1101
23 Duty of occupier .. 1101
24. Prohibition to enter any confined space, viz., tank, pit, etc. 1101
25 Sec 36-A 1101
26. Sec. 37 . 1101
27. Sec. 38 ... 1102
28. Sec. 39 1103
29 Sec. 40 1103
30. Penalty liable to be imposed only for non-compliance of order for removal of deficiency . 1103
31. Sec 41-A 1104
32. Sec. 41-B 1105
33 Sec 41-C 1106
34. Sec. 41-D 1106
35. Sec. 41-E 1106
36. Sec 41-F . 1107
37. Sec 41-G 1107
38. Sec. 41-H . 1107
39 Sec 87 1107
40. Sec 87-A . 1108
41 Sec 88 1108
42 Occupier and manager liable to be prosecuted for contravention 1109
43. Sec. 88-A ... 1109
44 Sec. 89 1109
45. Sec. 91 . 1110
46. List of Industries involving hazardous process . 1111

1. Introduction to the Act.—The existing law relating to the regulation of labour employed in factories in India is embodied in the Factories Act, 1948 Experience of the working of the Act has revealed a number of defects Although the Act has been amended in certain respects, the general frame work remarked unchanged. The main objecdive of the Factories Act, 1948 is to ensure safety measures and to promote welfare of the workers employed in the factories. To achieve this objective Act No. 94 of 1976 was passed, duly amehded by Act No. 20 of 1987 which was due to Substantial mordernization and innovation in the industrial field. To meet the needs of changed circumstances were the chemical industries have come up deling with hazardous and toxic substances. Therefore, Act was suitably formulated to safeguard the use and handling substances to secure environment health and community life so as to minimise the adverse effects on the public and environment. The relevant provisions of Factories Act 1948 are reproduced here as under :

2. Sec. 1. Short title, extent and commencement.— (1) This Act may be called the Factories Act, 1948.

[1][(2) It extends to the whole of India. [2][****]]

(3) It shall come into force on the 1st day of April, 1949.

3. Sec. 2. Interpretation.—

* * * *

[3][(*cb*) "hazardous process" means any process or activity in relation to an industry specified in the First Schedule,[4] where, unless special care is taken, raw materials used therein or the intermediate or finished products, bye-products, wastes or effluents thereof would—

(*i*) cause material impairment to the health of the persons engaged in or connected therewith, or

(*ii*) result in the pollution of the general environment :

Provided that the State Government may, be notification in the Official Gazette, amend the First Schedule by way of addition, omission or valuation of any industry specified in the said Schedule;]

* * * *

(*i*) "transmission machinery" means any shaft, wheels, drum, pulley system of pulleys, coupling, clutch, driving belt or other appliance or device by which the motion of a prime mover is transmitted to or received by any machinery or appliance,

(*j*) "machinery" includes prime movers, transmission machinery and all other appliances whereby power is generated, transformed, transmitted or applied;

(*k*) "manufacturing process" means any process for—

(*i*) making, altering, repairing, ornamenting, finishing, packing, oiling, washing, cleaning, breaking up, demolishing, or otherwise treating or adapting any article or substance with a view to its use, sale, transport, delivery or disposal, or

[5][(*ii*) pumping oil, water, sewage or any other substance; or]

(*iii*) generating, transforming or transmitting power ; or

[6][(*iv*) composing types for printing, printing by letter press, lithography, photogravure or other similar process of book binding;] [7][or]

(*v*) constructing, re-constructing, repairing, re-fitting, finishing or breaking up ships or vessels; [8][or]

---

[1] Subs for the former sub-section by the A.L.O. 1950.

[2] Words "except the State of Jammu and Kashmir" were substituted for "except the States of Hyderabad, Jammu and Kashmir, Mysore and Travancore-Cochin" by the Part B States (Laws) Act, 1951 (3 of 1951), Sec. 3 and Sch. (1.4.1951). Those words have now been omitted by Act 51 of 1970, Sec. 2 (2) and Sch. (w.e.f 1st September, 1971).

[3] Ins. by Act 20 of 1987 , Sec. 2.

[4] *See* Schedule I at end of allied provisions of the Factories Act, 1948.

[5] Subs by Act 94 of 1976, Sec. 2 (w.e.f. 26th October, 1976).

[6] Subs by Act 25 of 1954, Sec. 2 for sub-clause (*iv*).

[7] Ins. by Act 94 of 1976, Sec 2 (w.e.f. 26th October, 1976).

[8] Ins. by Act 94 of 1976, Sec. 2 (w.e.f. 26th October, 1976).

[1][(*vi*) preserving or storing any article in cold storage;]

* * *

(*n*) "occupier" of a factory means the person who has ultimate control over the affairs of the factory [2][* * *]

[3][Provided that—

(*i*) in the case of a firm or other association of individuals, any one of the individual partners or members thereof shall be deemed to be the occupier;

(*ii*) in the case of a company, any one of the directors shall be deemed to be occupier ;

(*iii*) in the case of a factory owned or controlled by the Central Government or any State Government, or any local authority, the person or persons appointed to manage the affairs of the factory by the Central Government, the State Government or the local authority, as the case may be, shall be deemed to be occupier] ;

[4][Provided further that] in the case of a ship which is being repaired, or on which maintenance work is being carried out, in a dry dock which is available for hire—

(1) the owner of the dock shall be deemed to the occupier for the purposes of any matter provided for by or under—

(*a*) Section 6, Sec. 7 [5][Sec. 7-*a*, Sec. 7-*b*.] Sec. 11 or Sec. 12;

(*b*) Section 17, in so far as it relates to the providing and maintenance of sufficient and suitable lighting in or around the dock;

(*c*) Section 18, Sec. 19, Sec. 42, Sec. 46, Sec. 47 or Sec. 49, in relation to the workers employed on such repair or maintenance;

(2) the owner of the ship or his agent or master or other officer-in-charge of the ship or any person who contracts with such owner, agent or master or officer-in-charge to carry out the repair or maintenance work shall be deemed to be the occupier for the purposes of any matter provided for by or under Sec. 13, Sec. 14, Sec. 16 or Sec. 17 (save as otherwise provided in this proviso) or Chapter IV (except Sec. 27) or Sec. 43, Sec. 44, or Sec. 45, Chapter VI, Chapter VII, Chapter VIII or Chapter IX, Sec. 108, Sec. 109 or Sec. 110, in relation to—

(*a*) the workers employed directly by him, or by or through any agency;' and

(*b*) the machinery, plant or premises in use for the purpose of carrying out such repair or maintenance work by such owner, agent, master or other officer-in-charge or person ;]

* * * *

---

[1] Ins. by Act 94 of 1976, Sec. 2 (w.e.f. 26th October, 1976).

[2] The words "and where the said affairs are entrusted to a managing agent, such agent shall be deemed to be the occupier of the Factory" omitted by Act 20 of 1987, Sec. 2.

[3] Ins. by Act 20 of 1987, Sec. 2.

[4] Subs. by Act 94 of 1976, Sec. 2.

[5] Ins. by Act 94 of 1976, Sec. 2.

Comments

4. **Scheme of the Act.**—The scheme of the Factories Act clearly shows that the test adopted as to define a "workman" is the correct one. It would be impossible to apply many provisions of the Factories Act to the "workers" as contemplated in *State of Kerala* v. *R.E. D'Souzha.*[1]

5. **Whether power station is treated as factory.**—From the definition of "factory" it is clear that it must be premises where a manufacturing process is carried on. The fact that some of the workmen are in the power stations and the rest are either in the sub-stations or the zonal stations will not make any difference in this respect, as all of them take part in the manufacturing process. Admittedly, the power station is treated as factory and it follows that these two units, the sub-station and zonal stations also come within the definition of "factory".[2]

6. **Manufacturing process.**—In view of Sec. 2(*k*) (*iii*), both the process of transforming electrical energy from a high to a low potential and the process of transmitting the energy through supply line are manufacturing processes.[3]

7. **Manufacturing process.—Whether includes dry cleaning of clothes.**—The customer who brings clothes to the dry-cleaner's shop gets them dry-cleaned. Although there would be an element of washing or cleaning involved, but is not with a view to its sale, use, transport, etc., and without that the dry-cleaning would not come within the definition of "manufacturing process". Moreover, as held by the Allahabad High Court in *Shree Gopal Paper Mills Ltd.*, case,[4] such a wide interpretation cannot be given to the words "washing and cleaning" so as to include dry-cleaning business within the definition of "manufacturing process".[5]

8. **Worker.**—A person engaged in supervising and checking quality and weighment of waste papers and rags, used in the manufacturing process for producing paper and its various products, undoubtedly, will be working in the factory premises or its precincts in connection with the work of the subject of the manufacturing process, namely, the raw materials and engaged in a work which is connected with the subject of the manufacturing process, and such will be a paper factory worker within the meaning of Cl.(1) of Sec. 2 of the Factories Act, 1948.[6]

Under the Payment of Wages Act, it is not a "worker" as defined in the Factories Act, that is entitled to apply under the provisions of that Act, but a "person employed". He need not be a "worker" as defined in the Factories Act. [7]

In the instant case the persons working in the laundry are not exclusively employed in the laundry. They are the employees of the hospital doing all kinds of work in connection with the hospital in the various departments of the hospital, such as clinical, medical, surgical, sanitary, etc., who are by turns asked to do the work in the laundry. They are not, therefore, workers within the meaning of Sec. 2 (1) of the Factories Act and hence, the laundary in the Christian Medical College Hospital is not a factory as defined in the Act.[1]

It is to be seen that the definition of the employee in the Employees' State Insurance Act is wider than that of a worker in the Factories Act. The object of the Factories Act is to secure the health, safety, welfare, proper working hours, leave and other benefits for the workers employed in the factories. The benefit of the Employees' State Insurance Act does not extend to field workers working outside the factory. The object of the Employees' State Insurance Act is to secure sickness, maternity, disablement and medical benefits to employees of factories and establishments and dependents' benefits to their dependents. The benefit of Employees' State Insurance Act extends, *inter alia* to the employees mentioned in Sec. 2(9) (*i*) whether working inside the factory or establishment or elsewhere.[2]

9. Factory—Meaning of.—In *Dr. P.S.S. Sundar Rao* v. *Inspector of Factories, Vellore*,[3] it has been held that being part and parcel of the Christian Medical College, Hospital, the laundry cannot be separated from the main institution *viz.*, the hospital. In order to ensure a high degree of hygienic standard, the hospital is having its own laundry for washing the linen used in the hospital. The laundry is, therefore, only a subsidiary minor or incidental establishment of the hospital which is not a factory.

It is clear from the definition of factory in Cl.(*m*) of Sec. 2 that any premises which is a factory will cease to be factory, if the number of workers working therein falls short of ten, in the case of a factory where manufacturing process is being carried on with aid of power, and if such number falls below 20, in case of a factory working without the aid of power.[4]

10. Seasonal establishment.—A factory, working on seasonal basis for the purpose of manufacturing sugar from sugarcane, though a seasonal establishment, is a factory within the meaning of Sec. 2(*m*) of the Factories Act.[5]

11. Working hours and the hours of rest.—The Factories Act, 1948 (Act LXIII of 1948), contains the definition of adult, adolescent and child and young person in Sec. 2(*a*), (*b*), (*c*), (*d*) and (*e*) and in Sec. 2, Cl. (*k*), the expression "manufacturing process" is defined.

[5] Akbar Hussain *v.* Payment of Gratuity Authority, Ahmedabad, 1979 Lab. I.C. 366 at pp. 367, 369.

Section 2(*m*) contains the definition of a factory as meaning "any premises including the precincts thereof (*i*) wherein ten or more workers are working or were working on any day of the preceding twelve months, and in any part of which a manufacturing process is being carried on with the aid of power, or is ordinarily so carried on, or (*ii*) whereon twenty or more workers are working, or were working on any day, *etc.* .. .."

The production unit of cinema industry which produce the film, therefore, clearly comes within the definition of a factory as given in the Factories Act and Chapter VI of the Act which provides for the working hours and the hours of rest and for other allied matters applies to the case of a production unit of cinema industry and the provisions in the Chapter will, therefore, regulate the working hours and the hours of rest in case of persons employed in the production unit of the cinema industry [1]

12. What constitutes the relationship of master and servant.—In *Birdhichand Sharma* v. *First Civil Judge*,[2] Mr. Justice Wanchoo accepted the statement in the *Dharangadhara Chemical Works Ltd.* v. *State of Saurashtra*,[3] as well as *Chintaman Rao* v. *State of Madhya Pradesh*,[4] so far as the law is concerned and observed:

> "The *prima facie* test whether the relationship of master and servant or employer and employee existed was laid down as the existence of the right in the employer not merely to direct what work was to be done but also in control the manner in which it was to be done the nature or extent of such control varying in different industries and being by its nature incapable of being precisely defined The correct approach, therefore, to question was held to be whether having regard to the nature of the work there was due control and supervision of the employer".

Then His Lordship proceeds to explain that the question as to whether a particular worker was a worker or an independent contractor would depend upon the terms of contract entered into between him and the employer and "no general proposition could be laid down, which would apply to all cases. Thus in order to arrive at the conclusion whether a person working in a factory is an independent contractor or a worker the matter would depend upon the facts of each case." Thereafter, facts at the case were considered in paras. 5 to 8 and the decision reached that the particular persons considered in the case were workers.

In the subsequent decision, practically the same principle was accepted and applied. Mr. Justice Raghubar Dayal, who delivered the judgment on behalf of the majority, indicated in para. 7 that there were two points raised (1) whether, the worker Pandurang was not a worker within the meaning of that expression in the Factories Act, and (2) whether, even if Pandurang was a worker, he was not entitled to leave wages under Sec. 80 of the Act. So far as the statement of the law on the subject is concerned the same passage, which

1. Bengal Motion Pictures Employees' Union, Calcutta *v.* Kohinoor Pictures Private Ltd., (1965) 1 L.L.J. 387 at p. 406 · A.I.R. 1964 Cal. 519.
2. A I.R. 1961 S.C 644.
3. 1957 S.C.R. 152 : A.I.R. 1957 S.C. 264.
4. A.I.R. 1958 S.C. 388.

has already been quoted from *Chintaman Rao's* case,[1] was relied upon in para. 13 and, upon that view of the law, the question which fell to be determined was whether under the particular circumstances existing in *Shankar Balaji Waje* v. *State of Maharashtra*,[2] the worker was a worker within the meaning of Sec. 79 read with the defintion in Sec. 2 (1).[3]

13. Calcutta Dock Labour Board—Whether a "factory".—It was held by the Calcutta High Court that the Calcutta Dock Labour Board, is a body corporate constituted under Sec. 5-A of the Dock Workers (Regulation of Employment) Act, 1948.[4]

14. Whether a manager of a company can be occupier.—In interpreting the definiton given in Sec. 2 (*n*) of the Factories Act, the proviso to Sec. 100 (2) thereof can have no relevance and that is why it cannot be said that in view of sub-section (2) of Sec. 100, a manager of a company was not entitled to be occupier.[5]

* * * * *

15. Sec. 7. Notice of occupier (1).—The occupier shall, at least fifteen days before he begins to occupy or use any premises as a factory send to the Chief Inspector a written notice containing—

(*a*) the name and situation of the factory;

(*b*) the name and address of the occupier;

[6][(*bb*) the name and address of the owner of the premises of building (including the precincts thereof) referred to in Sec. 93 ;]

(*c*) the address to which communications relating to the factory may be sent ;

(*d*) the nature of the manufacturing process—

(*i*) carried on in the factory during the last twelve months in the case of factories in existence on the date of the commencement of this Act; and

(*ii*) to be carried on in the factory during the next twelve months in the case of all factories ;

[7][(*e*) the total rated horse-power installed or to be installed in the factory, which shall not include the rated horse-power of any separate stand-by plant ;]

[6] Ins. by Act 25 of 1954, Sec. 4.

[7] Subs. by Act 94 of 1976, Sec. 7.

(*f*) the name of the manager of the factory for the purposes of this Act ;

(*g*) the number of workers likely to be employed in the factory ;

(*h*) the average number of workers per day employed during the last twelve months in the case of a factory in existence on the date of the commencement of this Act ;

(*i*) such other particulars as may be prescribed.

(2) In respect of all establishments which come within the scope of the Act for the first time, the occupier shall send a written notice to the Chief Inspector containing the particulars specified in sub-section (1) within thirty days from the date of the commencement of this Act.

(3) Before a factory engaged in a manufacturing process which is ordinarily carried on for less than one hundred and eighty working days in the year resumes working, the occupier shall send a written notice to the Chief Inspector containing the particulars specified in sub-section (1) [1][at least thirty days] before the date of commencement of work.

(4) Whenever a new manager is appointed, the occupier shall send to the [2][Inspector a written notice and to the Chief Inspector a copy thereof] within seven days from the date on which such person takes over charge.

(5) During any period for which no person has been designated as manager of a factory or during which the person designated does not manage the factory, any person found acting as manager, or if no such person is found the occupier himself, shall be deemed to be the manager of the factory for the purposes of this Act".

16. **Sec.** [3][**7-A. "General duties of the occupier.**— (1) Every occupier shall ensure, so far as is reasonably practicable, the health, safety and welfare of all workers while they are at work in the factory.

(2) Without prejudice to the generality of the provisions of sub-section (1), the matters to which such duty extends, shall include—

(*a*) the provision and maintenance of plant and systems of work in the factory that are safe and without risks to health;

(*b*) the arrangements in the factory for ensuring safety and absence of risks to health in connection with the use, handling, storage and transport of articles and substances ;

(*c*) the provisions of such information, instruction, training and supervision as are necessary to ensure the health and safety of all workers at work ;

(*d*) the maintenance of all places of work in the factory in a condition that is safe and without risks to health and the provisions and maintenance of such means of access to, and egress from, such places as are safe and without such risks ;

---

[1] Subs. by Act 40 of 1949, Sec. 5 and Sch. II, for "within thirty days".

[2] Subs. by Act 25 of 1954, Sec. 4, for "Chief Inspector, a written notice.".

[3] Ins. by Act 20 of 1987, Sec. 4 (w.e.f. 1st December, 1987).

(*e*) the provision, maintenance or monitoring of such working environment in the factory for the workers that is safe, without risks to health and adequate as regards facilities and arrangements for their welfare at work.

(3) Except in such cases as may be prescribed, every occupier shall prepare, and, as often as may be appropriate, revise, a written statement of his general policy with respect to the health and safety of the workers at work and the organisation and arrangements for the time being in force for carrying out that policy, and to bring the statement and any revision thereof to the notice of all the workers in such manner as may be prescribed".

17. Sec. [1][7-B. General duties of manufacturers, etc., as regards article and substances for use in factories.—Every person who designs, manufactures, imports or supplies any article for use in any factory shall—

(*a*) ensure, so far as is reasonably practicable, that the article is so designed and constructed as to be safe and without risks to the health of the workers when properly used;

(*b*) carry out or arrange for the carrying out of such tests and examinations as may be considered necessary for the effective implementation of the provisions of Cl.(*a*) ;

(*c*) take such steps as may be necessary to ensure that adequate information will be available—

(*i*) in connection with the use of the article in any factory ;

(*ii*) about the use for which it is designed and tested ; and

(*iii*) about any conditions necessary to ensure that the article, when put to such use, will be safe, and without risks to the health of the workers:

Provided that where an article is designed or manufactured outside India, it shall be obligatory on the part of the importer to see,—

(*a*) that the article conforms to the same standards if such article is manufactured in India, or

(*b*) if the standards adopted in the country outside for the manufacture of such article is above the standards adopted in India, than the article conforms to such standards.

(2) Every person, who undertakes to design or manufacture any article for use in any factory, may carry out or arrange for the carrying out of necessary research with a view to the discovery and, so far as is reasonably practicable, the elimination or minimisation of any risks to the health or safety of the workers to which the design or article may give rise.

(3) Nothing contained in sub-sections (1) and (2) shall be construed to require a person to repeat the testing, examination or research which has been carried out otherwise than by him or at his instance in so far as it is reasonable for him to rely on the results thereof for the purposes of the said sub-sections.

(4) Any duty imposed on any person by sub-sections (1) and (2) shall extend only to things done in the course of business carried on by him and to matters within his control.

---

[1] Ins. by Act 20 of 1987, Sec. 4 (w.e.f. 1st June, 1988).

(5) Where a person designs, manufactures, imports or supplies an article on the basis of a written undertaking by the user of such article to take the steps specified in such undertaking to ensure, so far as is reasonably practicable, that the article will be safe and without risks to the health of the workers when properly used, the undertaking shall have the effect of relieving the person designing, manufacturing, importing or supplying the article from the duty imposed by Cl.(*a*) of sub-section (1) to such extent as is reasonable having regard to the terms of the undertaking.

(6) For the purpose of this section, an article is not to be regarded as properly used if it is used without regard to any information or advice relating to its use which has been made available by the person who has designed, manufactured, imported or supplied the article.

Explanation.— For the purpose of this section, "article" shall include plant and machinery.]"

Comments

18. "Occupier"—Meaning of.—"Occupier" of a factory means the person, who has ultimate control over the affairs of the factory. Undoubtedly, the expression "Occupier" is not to be equated with "owner". It must be borne in mind that the ultimate control over a factory must necessarily be with an owner unless the owner has completely transferred that control to another person. It is for the petitioners who contend that the manager of the factory has the ultimate control thereof, to lay before the Chief Inspector of Factories the necessary material for showing that the company has in some manner transferred the entire control over the factory to the manager.[1]

19. "Worker"—Meaning of and test for determination of.—Whether a particular person, under whatever designation he may be known, is worker or not under the Act depends upon the terms of the contract entered into between him and the employer.[2]

* * * *

20. Sec. 12. Disposal of wastes and effluents .—[3][(1) Effective arrangements shall be made in every factory for the treatment of wastes and effluents due to the manufacturing process carried on therein, so as to render them innocuous, and for their disposal.]

(2) The State Government may make rules prescribing the arrangements to be made under sub-section (1) or requiring that the arrangements made in accordance with sub-section (1) shall be approved by such authority as may prescibed.

* * * *

21. Sec. 35. Protection of eyes.—In respect of any such manufacturing process carri-ed on in any factory as may be prescribed, being a process which involves—

(*a*) risk of injury to the eyes from particles or fragments thrown off in the course of the process, or

(*b*) risk to the eyes by reason of exposure to excessive light, the State Government may, by rules require that effective screens or suitable goggles shall be provided for the protection of persons employed on, in the immediate vicinity of the process.

[2] Shri Chintaman Rao *v.* State of Madhya Pradesh, 1958 S.C.R. 1340 at p. 1353 : 1958 (2) Cr. L.J. 803 at p. 809.

[3] Subs. by Act 91 of 1976, Sec. 9 (w.e.f. 26th October, 1976.)

22. Sec. [1]**[36. Precautions against dangerous fumes, gases, etc.**—(1) No person shall be required or allowed to enter any chamber, tank, vat, pit, pipe line or other confined space in any factory in which any gas, fume, vapour, or dust is likely to be present to such an extent as to involve risk to persons being overcome thereby, unless it is provided with a main hole of adequate size or other effective means of egress.

(2) No person shall be required or allowed to enter any confined space as is referred to in sub-section (1), until all practicable measures have been taken to remove any gas, fume, vapour or dust, which may be present to as to bring its level within the permissible limits and to prevent any ingress of such gas, fume, vapour or dust and unless—

(*a*) a certificate in writing has been given by a competent person, based on a test carried out by himself that the space is reasonably free from dangerous gas, fume, vapour or dust ; or

(*b*) such persons is wearing suitable breathing apparatus and a belt securely attached to a rope the free end of which is held by a person outside the confined space.]

Comments

23. Duty of occupier.—It is the duty of the occupier to see that the apparatus is always available in the factory and is periodically examined and certified fit for use and sufficient number of persons are trained in its use.[2]

24. Prohibition to enter any confined space, *viz.*, tank, pit, etc.—The primary prohibition is of the persons working in the factory and the effect of this prohibition is worked out in Sec. 7 of the Act. The burden is on the prosecution to prove that the occupier or the manager had not taken all reasonable steps for preventing the entry and not on the occupier or the manager to prove that he had taken all such reasonable steps.[3]

* * * * *

25. [4]**[36-A. Precaution regarding the use of portable electric light.**—In any factory—

(*a*) no portable electric light or any other electric appliance of voltage exceeding twenty-four volts shall be permitted for use inside any chamber, tank, vat, pit, pipe, flue or other confined space [5][unless adequate safety devices are provided]; and

(*b*) if any inflammable gas, fume or dust is likely to be present in such chamber, tank, vat, pit, pipe, flue or other confined space no lamp or light other than that of flame-proof construction shall be permitted to be used therein.]

26. Sec. 37. Explosive or inflammable dust, gas, etc.—(1) Where in any factory any manufacturing process produces dust, gas, fume or vapour of such character and such extent as to be likely to explode on ignition, all practicable measures shall be taken to prevent any such explosion by—

[3] *Ibid.*, at p. 40.

[4] Ins. by Act 94 of 1976, Sec. 16 (w.e.f. 26th October, 1976).

[5] Ins. by Act 20 of 1987, Sec. 18.

(*a*) effective enclosure of the plant or machinery used in the process;

(*b*) removal or prevention of the accumulation of such dust, gas, fume or vapour;

(*c*) exclusion or effective enclosure of all possible sources of ignition.

(2) Where in any factory the plant or machinery used in a process such as is referred to in sub-section (1) is not so construed as to withstand the probable pressure which such an explosion as aforesaid would produce, all practicable measures shall be taken to restrict the spread and effects of the explosions by the provision, in the plant or machinery of chokes, baffles, vents, or other effective appliances.

(3) Where any part of the plant or machinery in a factory contains any explosive or inflammable gas or vapour under pressure greater than atmospheric pressure, that part shall not be opened except in accordance with the following provisions, namely :

(*a*) before the fastening of any joint of any pipe connected with the part of the fastening of the cover of any opening into the part is loosened and flow of the gas or vapour in the part of any such pipe shall be effectively stopped by a stop-valve or other means;

(*b*) before any such fastening as aforesaid is removed all practicable measures shall be taken to reduce the pressure of the gas or vapour in the part or pipe to an atmospheric pressure;

(*c*) where any such fastening as aforesaid has been loosened or removed effective measures shall be taken to prevent any explosive or inflammable gas or vapour from entering the part or pipe until the fastening has been secured, or, as the case may be, securely replaced :

Provided that the provisions of the sub-section shall not apply in the case of plant or machinery installed in the open air.

(4) No plant, tank or vessel which contains or has contained any explosive or inflammable substance shall be subjected in any factory to any welding, brazing, soldering or cutting operation which involves the application of heat unless adequate measures have first been taken to remove such substance and any fumes arising therefrom or to render such substance and fumes non-explosive or non-inflammable, and no such substance shall be allowed to enter such plant, tank or vessel after any such operation until the metal has cooled sufficiently to prevent any risk of igniting the substance.

(5) The State Government may by rule exempt, subject to such conditions as may be prescribed, any factory or class or description of factories from compliance with all or any of the provisions of this section.

27. Sec. [1][38. **Precautions in case of fire.**— (1) In every factory, all practicable measures shall be taken to prevent outbreak of fire and its spread, both internally and externally, and to provide and maintain—

---

[1] Subs. by Act 20 of 1987, Sec. 19. dated 1st December, 1987.

(*a*) safe means of escape for all person in the event of a fire, and

(*b*) the necessary equipment and facilities for extinguishing fire.

(2) Effective measures shall be taken to ensure that in every factory all the workers are familiar with the means of escape in case of fire and have been adequately trained in the routine to be followed in such cases.

(3) The State Government may make rules, in respect of any factory or class or description of factories, requiring the measures to be adopted to give effect to the provisions of sub-sections (1) and (2).

(4) Notwithstanding anything contained in Cl. (*a*) of sub-section (1) or sub-section (2), if the Chief Inspector, having regard to the nature of the work carried on in any factory, the construction of such factory, special risk to life or safety or any other circumstances, is of the opinion that the measures provided in the factory, whether as prescribed or not, for the purposes of Cl. (*a*) of sub-section (1) of sub-section (2), are inadequate, he may by order in writing, require that such additional measures as he may consider reasonable and necessary, be provided in the factory before such date as is specified in the order.]

28. Sec. 39. Power to require specifications of defective parts or tests of stability.— If it appears to the Inspector that any building or part of building or any part of the ways, machinery or plant in a factory is in such condition that it may be dangerous to human life or safety, he may serve on [1][the occupier or manager or both] of the factory an order in writing requiring him before a specified date—

(*a*) to furnish such drawings, specifications and other particulars as may be necessary to determine whether such building, ways, machinery or plant can be used with safety, or

(*b*) to carry out such test in such manner, as may be specified in the order, and to inform the Inspector of the result thereof.

29. Sec. 40. Safety of buildings and machinery.—(1) If it appears to the Inspector that any building or part of a building or any part of the ways, machinery or plant in a factory is in such a condition that it is dangerous to human life or safety, he may serve on [1][the occupier or manager or both] of the factory, an order in writing specifying the measure which in his opinion should be adopted and requiring them to be carried out before a specified date.

(2) If it appears to the Inspector that the use of any building or part of a building or any part of the ways, machinery or plant in a factory involves imminent danger to human life or safety, he may serve on [1][the occupier or manager or both] of the factory an order in writing prohibiting its use until it has been properly repaired or altered.

Comment

30. Penalty liable to be imposed only for non-compliance of order for removal of deficiency.— If on inspection the Inspector detects some deficiency in a factory, which he considers to be dangerous to human life or safety, he is competent to serve the occupier or manager or both of the factory, an order in writing, to remove the deficiency by a specified date. In case of non-compliance the penal provisions of Sec. 92 of the Act comes into force. If the directions contained in the Inspector's order are duly complied with the provisions of Sec. 92 cannot apply.[1]

* * * * *

[2][Chapter IV-A Provisions relating to hazardous processes

31. Sec. 41-A. Constitution of Site Appraisal Committees.— (1) The State Government may, for purposes of advising it to consider applications for grant of permission for the initial location of a factory involving a hazardous process or for the expansion of any such factory, appoint a Site Appraisal Committee consisting of—

(*a*) the Chief Inspector of the State who shall be its Chairman;

(*b*) a representative of the Central Board for the Prevention and Control of Water Pollution appointed by the Central Government under Sec. 3 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974);

(*c*) a representative of the Central Board for the Prevention and Control of Air Pollution referred to in Sec. 5 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981);

(*d*) a representative of the State Board appointed under Sec. 4 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974);

(*e*) a representative of the State Board for the Prevention and Control of Air Pollution referred in to Sec. 5 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981),

(*f*) a representative of the Department of Environment in the State;

(*g*) a representative of the Meteorological Department of the Government of India ;

(*h*) an expert in the field of occupational health ; and

(*i*) a representative of the Town Planning Department of the State Government,

and not more than five other members who, may be co-opted by the State Government who shall be—

(*i*) a scientist having specialised knowledge of the hazardous process which will be involved in the factory,

(*ii*) a representative of the local authority within whose jurisdiction the factory is to be established, and

(*iii*) not more than three other persons as deemed fit by the State Government.

(2) The Site Appraisal Committee shall examine an application for the establishment of a factory involving hazardous process and make its recommendation to the State Government within a period of ninety days of the receipt of such application in the prescribed form.

(3) Where any process relates to a factory owned or controlled by the Central Government or to a corporation or a company owned or controlled by the Central Government, the State Government shall co-opt, in the Site

[2] Ins. by Act 20 of 1987, Sec. 20 (w.e.f. 1st December,1987).

Appraisal Committee a representative nominated by the Central Government as a member of that Committee.

(4) The Site Appraisal Committee shall have power to call for any information from the person making an application for the establishment or expansion of a factory involving a hazardous process.

(5) Where the State Government has granted approval to an application for the establishment or expansion of a factory involving a hazardous process, it shall not be necessary for an applicant to obtain a further approval from the Central Board or the State Board established under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974) and the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981).

32. Sec. 41-B. Compulsory disclosure of information by the occupier.— (1) The occupier of every factory involving a hazardous process shall disclose in the manner prescribed all information regarding dangers, including health hazards and the measures to overcome such hazards arising from the exposure to or handling of the materials or substances in the manufacture, transportation, storage and other process, to the workers employed in the factory, the Chief Inspector, the local authority within whose jurisdiction the factory is situate and the general public in the vicinity.

(2) The occupier shall, at the time of registering the factory involving a hazardous process lay down a detailed policy with respect to the health and safety of the workers employed therein and intimate such policy to the Chief Inspector and the local authority and, thereafter, at such intervals as may be prescribed, inform the Chief Inspector and the local authority of any change made in the said policy.

(3) The information furnished under sub-section (1) shall include accurate information as to the quantity, specifications and other characteristics of *wastes and the manner of their disposal.*

(4) Every occupier shall, with the approval of the Chief Inspector, draw up an on-site emergency plan and detailed disaster control measures for his factory and make known to the workers employed therein and to the general public living in the vicinity of the factory the safety measures required to be taken in the event of an accident taking place.

(5) Every occupier of a factory shall,—

(*a*) if such factory engaged in a hazardous process on the commencement of the Factories (Amendment) Act, 1987, within a period of thirty days of such commencement; and

(*b*) if such factory proposes to engage in a hazardous process at any time after such commencement, within a period of thirty days before the commencement of such process,

inform the Chief Inspector of the nature and details of the process in such form and in such manner as may be prescribed.

(6) Where any occupier of a factory contravenes the provisions of sub-section (5), the licence issued under Sec. 6 to such factory shall, notwithstanding any penalty to which the occupier or factory shall be subjected to under the provision of this Act, be liable for cancellation.

(7) The occupier of a factory involving a hazardous process shall with the previous approval of the Chief Inspector, lay down measures for the

handling, usage, transportation and storage of hazardous substances inside the factory premises and the disposal of such substances outside the factory premises and publicise them in the manner prescribed among the workers and the general public living in the vicinity.

33. Sec. 41-C. Specific responsibility of the occupier in relation to hazardous processes.—Every occupier of a factory involving any hazardous process shall—

(*a*) maintain accurate and up-to-date health records or, as the case may be, medical records, of the workers in the factory who are exposed to any chemical, toxic or any other harmful substances which are manufactured, stored, handled or transported and such records shall be accessible to the workers subject to such conditions as may be prescribed ;

(*b*) appoint persons who possess qualifications and experience in handling hazardous substances and are competent to supervise such handling within the factory and to provide at the working place all the necessary facilities for protecting the workers in the manner prescribed :

Provided that where any question arises as to the qualification and experience of a person so appointed, the decision of the Chief Inspector shall be final;

(*c*) provide for medical examination of every worker—

(*a*) before such worker is assigned to a job involving the handling of, or working with a hazardous substance, and

(*b*) while continuing in such job, and after he has ceased to work in such job, at intervals not exceeding twelve months, in such manner as may be prescribed.

34. Sec. 41-D. Power of Central Government to appoint Inquiry Committee.—(1) The Central Government may, in the event of the occurrence of an extraordinary situation involving a factory engaged in a hazardous process, appoint an Inquiry Committee to inquire into the standards of health and safety observed in the factory with a view to finding out the causes of any failure, or neglect in the adoption of any measures or standards prescribed for the health and safety to the workers employed in the factory or the general public affected, or likely to be affected, due to such failure or neglect and for the prevention and recurrence of such extraordinary situations in future in such factory or elsewhere.

(2) The Committee appointed under sub-section (1) shall consist of a Chairman and two other members and the terms of reference of the Committee and the tenure of office of its members shall be such as may be determined by the Central Government according to the requirements of the situation.

(3) The recommendations of the Committee shall be advisory in nature.

35. Sec. 41-E. Emergency standards.—(1) Where the Central Government is satisfied that no standards of safety have been prescribed in respect of a hazardous process or class of hazardous processes, or where the standards so prescribed are inadequate, it may direct the Director-General of Factory Advice Service and Labour Institutes or any institution specialised in matters relating to standards of safety in hazardous process, to lay down emergency standards for enforcement of suitable standards in respect of such hazardous processes.

(2) The emergency standards laid down under sub-section (1) shall until they are incorporated in the rules made under this Act, be enforceable and have the same effect as if they had been incorporated in the rules made under this Act.

36. Sec. [1][41-F. Permissible limits of exposure of chemical and toxic substances.—(1) The maximum permissible threshold limits of exposure of chemical and toxic substances in manufacturing processes (whether hazardous or otherwise) in any factory shall be of the value indicated in the Second Schedule.]

(2) The Central Government may, at any time, for the purpose of giving effect to any scientific proof obtained from specialised institutions or experts in the field, by notification in the Official Gazette, make suitable changes in the said Schedule.

37. Sec. [2][41-G. Workers' participation in safety management.—(1) The occupier shall, in every factory where a hazardous process takes place, or where hazardous substances are used or handled, set up a Safety Committee consisting of equal number of representatives or workers and management to promote co-operation between the workers and the management in maintaining proper safety and health at work and to review periodically the measures taken in that behalf :

Provided that the State Government may, by order in writing and for reasons to be recorded, exempt the occupier of any factory or class of factories from setting up such Committee

(2) The composition of the Safety Committee, the tenure of office of its members and their rights and duties shall be such as may be prescribed.

38. Sec. 41-H. Right of workers to warn about imminent danger.—(1) Where the workers employed in any factory engaged in a hazardous process have reasonable apprehension that there is a likelihood of imminent danger to their lives or health due to any accident, they may bring the same to the notice of the occupier, agent, manager or any other person who is incharge of the factory or the process concerned directly or through their representatives in the Safety Committee and simultaneously bring the same to the notice of the Inspector.

(2) It shall be the duty of such occupier, agent, manager or the person incharge of the factory or process to take immediate remedial action if he is satisfied about the existence of such imminent danger and send a report forthwith of the action taken to the nearest inspector.

(3) If the occupier, agent, manager or the person incharge referred to in sub-section (2) is not satisfied about the instance of any imminent danger as apprehended by the workers, he shall, nevertheless refer the matter forthwith to the nearest Inspector whose decision on the question of the existence of such imminent danger shall be final.]

* * * *

39. Sec. 87. Dangerous [3][manufacturing process or operation].—Where the State Government is of opinion that any [1][manufacturing process or operation] carried on in a factory exposes any person employed in it to a serious risk of bodily injury, poisoning or disease, it may make rules applicable to any factory or class or description of factories in which [3][manufacturing process or operation] is carried on—

(*a*) specifying the [3][manufacturing process or operation] and declaring it to be dangerous ;

---

[1] Ins. by Act 20 of 1987, Sec 20 (w.e.f. 1st June, 1988).

[2] Ins. by Act 20 of 1987, Sec 20 (w.e.f. 1st December, 1987).

[3] Subs. by Act 94 of 1976, Sec. 36 (w.e.f. 26th October, 1976).

(*b*) prohibiting or restricting the employment of women, adolescents or children in the [1][manufacturing process or operation] ;

(*c*) providing for the periodical medical examination of persons employed, or seeking to be employed, in the [1][manufacturing process or operation], and prohibiting the employment of persons not certified as fit for such employment [2][and requiring the payment by the occupier of the factory of fees for such medical examination];

(*d*) providing for the protection of all persons employed in the [1][manufacturing process or operation] or in the vicinity of the places where it is carried on ;

(*e*) prohibiting, restricting or controlling the use of any specified materials or processes in connection with the [1][manufacturing process or operational];

[2][(*f*) requiring the provision of additional welfare amenities and sanitary facilities and the supply of protective equipment and clothing, and laying down the standards thereof having regard to the dangerous nature of the manufacturing process or operation ;

[3][* * * *]

40. Sec. [4]**[87-A. Power to prohibit employment on account of serious hazard.** — (1) Where it appears to the Inspector that conditions in a factory or part thereof are such that they may cause serious hazard by way of injury or death to the persons employed therein or to the general public in the vicinity, he may, by order in writing to the occupier of the factory ; state the particulars in respect of which he considers the factory or part thereof to be the cause of such serious hazard and prohibit such occupier from employing any person in the factory or any part thereof other than the minimum number of persons necessary to attend to the minimum tasks till the hazard is removed.

(2) Any order issued by the Inspector under sub-section(1) shall have effect for a period of three days until extended by the Chief Inspector by a subsequent order.

(3) Any person aggrieved by an order of the Inspector under sub-section (1), and the Chief Inspector under sub-section (2), shall have the right to appeal to the High Court.

(4) Any person whose employment has been affected by an order issued under sub-section (1), shall be entitled to wages and other benefits and it shall be the duty of the occupier to provide alternative employment to him wherever possible and in the manner prescribed.

(5) The provisions of sub-section (4) shall be without prejudice to the rights of the parties under the Industrial Disputes, Act, 1947 (14 of 1947).]

41. Sec. 88. Notice of certain accidents.— [5][(1)] Where in any factory an accident occurs which causes death, or which causes any bodily injury by reason of which the person injured is prevented from working for a period of forty-eight hours or more immediately following the accident, or which is of such nature as may be prescribed in this behalf, the manager of the factory shall send notice thereof to such authorities, and in such form and within such time, as may be prescribed.

---

[1] Subs. by Act 94 of 1976, Sec. 36 (w.e.f. 26th October, 1976).

[2] Ins. by Act 94 of 1976, Sec. 36 (w.e.f. 26th October, 1976).

[3] Clause (g) omitted by Act 20 of 1987, Sec. 25 (w.e.f. 1st December, 1987).

[4] Ins. by Act 20 of 1987, Sec. 26.

[5] Re-numbered by Act 20 of 1987, Sec. 26 (w.e.f. 26th October, 1976).

[1][(2) Where a notice given under sub-section (1) relates to an accident causing death, the authority to whom the notice is sent shall make an inquiry into the occurrence within one month of the receipt of the notice or if such authority is not the Inspector, cause the Inspector to make an inquiry within the said period.

(3) The State Government may make rules for regulating the procedure at inquiries under this section.]

Comment

42. Occupier and manager liable to be prosecuted for contravention.— For the offence of contravention of Sec. 88, both the manager and occupier are liable to be prosecuted and cognizance can be taken against them.[2]

* * *

43. Sec. [3][88-A. Notice of certain dangerous occurrences.—Where in a factory any dangerous occurrence of such nature as may be prescribed occurs, whether causing any bodily injury or disability or not, the manager of the factory shall send notice thereof to such authorities, and in such form and within such time, as may be prescribed.]

44. Sec. 89. Notice of certain diseases.— (1) Where any worker in a factory contracts any disease specified in [4][the Third Schedule,] the manager of the factory shall send notice thereof to such authorities, and in such form and within such time, as may be prescribed.

(2) If any medical practitioner attends on a person who is or has been employed in a factory, and who is, or is believed by the medical practitioner to be, suffering from any disease specified in [4][the Third Schedule,] the medical practitioner shall without delay send a report in writing to the office of the Chief Inspector stating—

(*a*) the name and full postal address of the patient ;

(*b*) the disease from which he believes the patient to the suffering; and

(*c*) the name and address of the factory in which the patient is, or was last, employed.

(3) Where the report under sub-section (2) is confirmed to the satisfaction of the Chief Inspector, by the certifying surgeon or otherwise, that the person is suffering from a disease specified in [4][the Third Schedule], he shall pay to the medical practitioner such fee as may be prescribed, and the fee so paid shall be recoverable as an arrear of land revenue from the occupier of the factory in which the person contracted the disease.

1. Ins.by Act 94 of 1976, Sec. 37, (w.e.f. 26th October, 1976).
2. Shah Sanjeev Kumar *v.* Inspector Factories and Boilers, 1987 Raj. Cr. C. 56 at p. 58.
3. Ins. by Act 94 of 1976, Sec. 38, (w.e.f. 26th October 1976).
4. Subs. by Act 20 of 1987, Secs. 27 and 28, (w.e.f. 1st December, 1987).

(4) If any medical practitioner fails to comply with the provisions of sub-section (2), he shall be punishable with fine which may extend to [1][one thousand rupees.]

[2][(5) The Central Government may, by notification in the Official Gazette, add to or alter the Third Schedule and any such addition or alteration shall have effect as if it had been made by this Act.]

* * * *

45. **Sec. 91. Power to take samples.**— (1) An Inspector may at any time during the normal working hours of a factory, after informing the occupier or manager of the factory or other person for the time being purporting to be in charge of factory take in the manner hereinafter provided a sufficient sample of any substance used or intended to be used in the factory, such use being—

(*a*) in the belief of the Inspector in contravention of any of the provisions of this Act or the rule made thereunder, or

(*b*) in the opinion of the Inspector likely to cause bodily injury to, or injury to the health of, workers in the factory.

(2) Where the Inspector takes sample under sub-section (1), he shall, in the presence of the person informed under that sub-section unless such person wilfully absents himself, divide the sample into three portions and effectively seal and suitably mark them and shall permit such person to add his own seal and mark thereto.

(3) The person informed as aforesaid shall, if the Inspector so requires, provide the appliances for dividing, sealing and making the sample taken under this section.

(4) The Inspector shall—

(*a*) forthwith give one portion of the sample of the person informed under sub-section (1) ;

(*b*) forthwith send the second portion to a Government Analyst for analysis and report thereon ;

(*c*) retain the third portion for production to the Court before which proceedings, if any, are instituted in respect of the substance.

(5) Any document purporting to be a report under the land of any Government Analyst upon any substance submitted to him for analysis and report under this section, may be used as evidence in any proceedings instituted in respect of the substance.

[1][THE FIRST SCHEDULE

[*See* Sec. 2 (*cb*)]

45. List of Industries Involving Hazardous Processes.—

1. Ferrous Metallurgical Industries.

—Integrated Iron and Steel.

—Ferro-alloys.

—Special Steels.

2. Non-ferrous Metallurgical Industries

—Primary Metallurgical Industries, namely zinc, lead, copper, manganese and aluminium.

3. Foundries (Ferrous and non-ferrous).

— Castings and forgings including cleaning or smoothering roughening by sand and shot blastings.

4. Coal, (including coke) industries.

—Coal, lignite, coke etc.

—Fuel gases, (including coal gas, producer gas, water gas).

5. Power generating industries.

6. Pulp and paper (including paper products) industries.

7. Fertiliser industries.

—Nitrogenous.

—Phosphatic.

—Mixed.

8. Cement industries.

— Portland cement (including slag cement, puzzolona cement and their products).

9. Petroleum industries

—Oil refining.

—Lubricating oils and greases.

10. Petro-chemical industries.

11. Drugs and pharmaceutical industries.

—Narcotics, drugs and pharmaceuticals.

12. Fermentation industries (distilleries and breweries).

13. Rubber (synthetic) industries.

14. Paints and pigment industries.

15. Leather tanning industries

---

[1] Ins. by Act 20 of 1987, Sec. 45 (w.e.f. 1st December 1987).

16. Electro-plating industries.
17. Chemical industries.
    - —Coke oven by-products and coaltar distillation products.
    - —Industries gases (nitrogen, oxygen, acetylene, argon, carbondioxide, hydrogen, sulphurdioxide, nitrous oxide, halogenated hydrocarbon, ozone, etc.)
    - —Industrial carbon.
    - —Alkalies and acids.
    - —Chromates and dichromates.
    - —Leads and its compounds
    - —Electro-chemicals (metallic sodium, potassium and magnesium, chlorates, perchlorates and peroxides).
    - —Electrothermal produces (artificial abrasive, calcium carbide).
    - —Nitrogenous compounds (cyanides, cyanamides, and other nitrogenous compounds).
    - —Phosphorus and its compounds.
    - —Halogens and halogenated compounds (chlorine, fluorine, bromine and iodine).
    - —Explosives (including industrial explosives and detonators and fuses).
18. Insecticides, fungicides, herbicides and other pesticides industries.
19. Synthetic resin and plastics.
20. Man-made fibre (cellulosic and non-cellulosic) industry.
21. Manufacture and repair of electrical accumulators.
22. Glass and ceramics.
23. Grinding or glazing of metals.
24. Manufacture, handling and processing of asbestos and its products.
25. Extraction of oils and fats from vegetable and animal sources.
26. Manufacture, handling and use of benzene and substance containing benzene.
27. Manufacturing processes and operations involving carbon disulphide.
28. Dyes and dyestuff including their intermediates.
29. Highly flammable liquids and gases.]

CHAPTER XIII

FISHERIES ACT, 1897

(ACT IV OF 1897)

[4th February, 1897]

SYNOPSIS

1 Sec. 4 ... 1113
2 Sec 5 ... 1113
3. Sec 6 .. 1113

1. Sec. 4. Destruction of fish by explosives in inland waters and on coasts.—(1) If any person uses any dynamite or other explosive substance in any water with intent thereby to catch or destroy any of the fish that may be therein, he shall be punishable with imprisonment for a term which may extend to two months or with fine which may extend to two hundred rupees.

(2) In sub-section (1), the word"water" includes the sea within a distance of one marine league of the sea-coast; and an offence committed under that sub-section in such sea may be tried, punished and in all respects dealt with as if it had been committed on the land abutting on such coast.

2. Sec. 5. Destruction of fish by poisoning water.— (1) If any person puts any poison, lime or noxious material into any water with intent there by to catch or destroy any fish, he shall be punishable with imprisonment for a term which may extend to two months, or with fine which may extend to two hundred rupees.

(2) The [1][State] Government may, by notification in the Official Gazette, suspend the operation of this section in any specified area, and may in like manner modify, or cancel any such notification.

3. Sec. 6. Protection of fish in selected waters by rules of State Government.—(1) The [1][State] Government may make rules for the purpose hereinafter in this section mentioned, and may by notification the Offiial Gazette apply all or any of such rules to such waters, not being private waters, as the (State) Government may specify in the said notification.

(2) The [1][State] Government may also, by like notification, apply such rules or any of them to any private water with the consent in writing of the owner thereof and of all persons having for the time being any exclusive right of fishery therein.

The provisions in this regard may be looked into Secs. 133 to 143 of the Code of Criminal Procedure, 1973.

---

[1] Subs. for the word "Provincial" by A.L.O. 1950.

CHAPTER XIV

THE GENERAL CLAUSES ACT, 1897

(ACT 10 OF 1897)

SYNOPSIS

1 Sec 8 1114
2 Sec 9 1114
3 Sec 10 .. 1114
4 Sec 20 1114
5 Sec 21 .. 1115

1. Sec. 8. Construction of references to repealed enactments.—(1) Where this Act or any (Central Act) or Regulation made after the commencement of this Act, repeals and re-enacts, with or without modification, any provision of a former enactment, then references in any other enactment or in any instrument to the provision so repealed shall, unless a different intention appears, be construed as references to the provision so re-enacted.

(2) (Where before the fifteenth day of August, 1947, any Act of Parliament of the United Kingdom repealed and re-enacted) with or without modification, any provision of a former enactment, then references in any (Cenral Act) or in any Regulation or instrument to the provision so repealed shall, unless a different intention appears, be construed as references to the provision so re-enacted.)

2. Sec. 9. Commencement and termination of time.— (1) In any (Central Act) or Regulation made after the commencement of this Act, it shall be sufficient for the purpose of including the first in a series of days or any other period of time, to use the word "from", and, for the purpose of including the last in a series or days or any other period of time, to use the word "to".

(2) This section applies also to all (Central Acts) made after the third day of January, 1868, and to all Regulations made on or after the fourteenth day of January, 1887.

3. Sec. 10. Computation of time.— (1) Where, by any (Central Act) or Regulation made after the commencement of this Act, any act or proceeding is directed or allowed to be done or taken in any Court of office on a certain day or within a prescribed period, then, if the Court or office is closed on that day or the last day of the prescribed period, the Act or proceeding shall be considered as done or taken in due time if it is done or taken on the next day afterwards on which the Court of office is open :

Provided that nothing in this section shall apply to any act or proceeding to which the Indian Limitation Act, 1887 (XV of 1887) applies :

(2) This section applies also to all (Central Acts) and Regulations made on or after the fourteenth day of January, 1887.

* * *

4. Sec. 20. Construction of notifications, etc., issued under enactments.—Where, by any (Central Act) or Regulation, a power to issue any (notification), order, scheme, rule, form, or bye-law is conferred, then expressions used in the (notification), order, scheme, rule, form, or bye-law, if it is made after the commencement of this Act, shall, unless there is anything repugnant in the subject or context, have the same respective meanings as in Act or Regulation conferring the power.

5. **Sec. 21. Power to issue, to include power to add to, amend, vary or rescind, notifications, orders, rules or bye-laws.**—Where, by any (Central Act,) or Regulation, a power to (issue notifications), orders, rules, or bye-laws is conferred, then that power includes a power, exercisable in the like manner and subject to the like sanction, and conditions (if any), to add to, amend, vary or rescind any (notifications order, rules or bye-laws so issued).

19. Sludge digestion and drying 1123
20 Tertiary treatment 1124
21 The agricultural utilization of sewage . 1124
22 Control 1125

1. Brief history.— The Provisions of Secs. 4, 17, 18, 26, 27, 29 and 30 of the Insecticides Act, 1968 has been enacted to regulate the import, manufacture, sale, transport, distribution and use of insecticides with a view to prevent risk to human life or animals and for matters connected there with. The hazards from the use of insecticides are dealt in the provisions stated above.

The environment, in the modern world, is polluted through modern agricultural activities. The extensive and excessive use of agro-chemicals such as fertilizers and pesticides, herbicides, soil conditioners, fumigants, etc., contribute to soil pollution problem effecting directly or indirectly human health and creates ecological imbalance due to accumulation of the injurious chemical constituent in the soil.

The excessive use of these pollutants not only reduces the fertility of the soil by decreasing plant nutrients, phosphates, nitrates and potassium constituents but also cause water pollution resulting in excessive aquatic plant growth, fish loss. Chemical warfare on pests has, too, back fired with beneficial pests being wiped out and resurgence of the insect and pest population consequent to their developing resistance to pesticides already in use.

Many persons died in different states as a result of food-poisoning arising from contamination of food with a poisionous organo-phosphorous insecticide 'Parathion' (Faliodal). Cases from different parts of India has been reported for which Government of India appointed Enquiry Commission under the Chairmanship of Mr. Justice J.C. Shah, to enquire into and report on Circumstances in which the foodstuffs came to be contaminated and the measures to be taken against similar occurrances in future. The recommendations of the Enquiry Commissions were accepted by the Government. The Government then appointed Inter-Ministerial Committee to suggest measures to give effect to the recommendations made by the Commission. The inter ministerial Committee suggested certain long term and short term measures. The long term measures were to formulate the enactment of legistlation to regulate the manufacture, sale, storage, transport, distribution and use of insecticides including pesticides, herebicides or fungicides in the country.

Contamination of wheat flour with "Tri-ortho-cresyl Phosphate" was cause of poisoning in 1958 in West Bengal and Assam contamination of rice stored in bags which were reportedly sprayed with 5% Benzene Heachloride causing food poisioning. Cases of poisoning due to indiscriminate use of organo-phosphorous compunds like Baytex, Diazinon, Malathion, Parathion, etc., which are used for extermination of bed bugs. Copper sulphate used in tranneries have also been noticed to be cause of food poisioning.

In the light of the experience gained in the implementation of the Act, it is proposed to enlarge the membership of the Central Insecticide Board by including persons associated with Animal Husbandry, Fisheries, Wild-Life, Ecology, Chemicals, Air pollution and Water Pollution.

* * *

2. Sec. 4. The Central Insecticides Board.—(2) The matters on which the Board may advise under sub-section (1) shall include matters relating to—

(*a*) the risk to human beings or animals involved in the use of insecticides and the safety measures necessary to prevent such risk;

(*b*) the manufacture, sale, storage transport and distribution of insecticides with view to ensure safety to human beings or animals.

(3) The board shall consist of following members namely : The Director-General of Health Services, shall be the Chairman; the Drugs Controller, India, the Plant Protection Adviser to the Government of India; the Director of Storage and Inspection Ministry of Food, Agriculture, Community Development and Co-operation (Department of Food); the Chief Adviser of Factories; the Director, National Institute of Communicable Diseases; the Director-General, Indian Council of Agricultural Research; the Director-General, Indian Council of of Medical Research; the Director, Zoological Survey of India; the Director-General, Indian Standards Institution; the Secretary, Central Committee for Food Standards; [1][the Animal Husbandry Commissioner, Department of Agriculture; the Joint Commissioner (Fisheries); the Deputy Inspector General of Forest (Wildlife); the Industrial Adviser (Chemicals), Directorate General of Technical Development; one person representing the Ministry of Petroleum and Chemicals; one Pharmacologist nominated by the Central Government; One Medical toxicologist to be nominated by the Central Government; one person in charge of the department dealing with public health in a State; two persons who shall be Directors of Agriculture in States four persons, one of whom shall be an expert in industrial health and occupational hazards; one person to represent the Council of Scientific and Industrial Research;] [2][one Ecologist nominated by the Central Government;] to Control the smoothfunctioning, control and Administration of the provisions of this Act to secure human health, protection of plants and animals to give stability and purity to the Environmental Ecology.

* * *

3. Sec. 17. Prohibition of import and manufacture of certain insecticides.—(1) No person shall, himself or by any person on his behalf, import or manufacture :

---

[1] Ins. by Act 24 of 1977, Sec. 2 (*a*) (*i*) (w.e.f. 9th August, 1977).

[2] Ins. by Act 24 of 1977, Sec. 2 (*a*) (*ii*) (w.e.f. 9th August, 1977).

(*a*) any misbranded insecticide;

(*b*) any insecticide the sale, distribution or use of which is for the time being prohibited under Sec. 27;

(*c*) any insecticide except in accordance with the conditions on which it was registered;

(*d*) any insecticide in contravention of any other provision of this Act or of any rule made thereunder :

Provided that any person who has applied for registration of a insecticide [1][under any of the provisions] to sub-section (1) of Sec. 9 may continue to import or manufacture any such insecticide and such insecticide shall not be deemed to be a misbranded insecticide within the meaning of sub-clause (*vi*) or sub-clause (*vii*) or sub-clause (*viii*) of sub-clause (*k*) of Sec. 3, until he has been informed by the Registration Committee of its decision to refuse to register the said insecticide.

(2) No person shall, himself or by any person on his behalf manufacture any insecticide except under, and in accordance with the conditions of, a licence issued for such purpose under this Act.

4. Sec. 18. Prohibition of sale, etc., of certain insecticides.—(1) No person shall, himself or by any person on his behalf, sell, stock or exhibit for sale, distribute, (transport, use, or cause to be used) by any worker—

(*a*) any insecticide which is not registered under this Act;

(*b*) any insecticide, the sale, distribution or use of which is for the time being probibited under Sec. 27.

(*c*) any insecticide, in contravention of any other provision of this Act or of any rule made thereunder.

(2) No person shall, himself or by any person on his behalf sell, stock or exhibit for sale or distribute (or use for commercial post control operations any insecticide except under, and in accordance with the conditions of, a licence issued for such purpose under this Act.

Explanation.—For the purposes of this section an insecticide in respect of which any person has applied for a certificate of registration (under any of the provisos) to sub-section (1) of Sec. 9, shall be deemed to be registered till the date on which the refusal to register such insecticide is notified in the Official Gazette.

5. Sec. 26. Notification of poisoning.— The State Government may, by notification in the Official Gazette, require any person or class of persons specified therein to report all occurrences of poisoning (through the use or handling of any insecticide) coming within his or their cognizance to such officer as may be specified in the said notification.

6. Sec. 27. Prohibition of sale, etc., of insecticidesfor reasons of public safety.—(1) If, on receiptof a report under Sec. 26 of otherwise, the Central

---

1. Subs. by Act (46 of 1972), Sec. 4 (w.e.f. 1st August, 1971).
2. Subs. by Act (46 of 1972), Sec. 5 (w.e.f. 1st August, 1977).
3. Subs. by Act (24 of 1977) Sec. 5 (*a*) 9w.e.f. 2nd August, 1977).
4. Ins. Act 24 of 1977, Sec. 5 (*b*) (w.e.f. 2nd August, 1977).

Government or the State Government is of opinion, for reasons to be recorded in writing, that the use of any insecticide specified in sub-clause (*iii*) of cause (*e*) of Sec. 3 or any specific batch thereof is likely to involve such risk to human beings or animals as to render it expedient or necessary to take immediate action, then that Government may, by notification in the Official Gazette, probhibit the sale, distribution or use of the insecticide or,batch in such area, to such area, to such extent and for such period (not exceeding sixty days) as may be specified in the notification pending investigation into the matter :

Provided that, where the investigation is not completed within the said period, the Central Government or the State Government, as the case may be, may extend it by such further period of periods not exceeding thirty days in the aggregate as it may specify in a like manner.

(2) If, as a result of its own investigation or on receipt of the report from the State Government, and after consultation with the Registration Committee, the Central Government is satisfied that the use of the said insecticide or batch is or is not likely to cause any such risk, it may pass such order (including an order refusing to register the insecticide or cancelling the certificate of registration, if any, granted in respect thereof), as it deems fit, depending on the circumstances of the case.

"**Clause 27 (original clause 28).**—The Committee feel that the power of the Government to prohibit the sale, etc., of any insecticide should be restricted, where necessary, to the prohibition of any particular batch thereof and that the Government must record in writing the reasons for such prohibition whenever it takes action.

The Committee are also of the opinion that the investigation under this clause should be completed ordinarily within a period of sixty days and if for any reason the investigation is not so completed, this period may further be extended by not more than thirty days".

* * *

7. Sec. 29. Offences and punishment.—(1) Whoever,—

* * *

(*b*) imports of manufactures any insecticide without a certificate of registration; or

(*c*) manufacutes, sells, stocks or exhibits for sale or distributes an insecticide without a licence; or

(*d*) sells or distributes an insecticide, in contravention of Sec. 27; or

(*e*) causes and insecticides, the use of which has been prohibited under Sec. 27, to be used by any worker; or

(*f*) obstructs and Insecticide Inspector in the exercise of his powers of discharge of his duties under this Act or the rules made thereunder,

shall be punishable—

(*i*) for the first offence, with imprisonment for a term which may extend to two years, or with fine which may extend to two thousand rupees, or with both;

(*ii*) for the second and a subsequent offence, with imprisonment for a term which may extend to three years, or with fine, or with both,

(2) Whoever uses an insecticide in contravention of any provision of this Act or any rule made thereunder shall be punishable with fine which may extend to five hundred rupees.

(3) Whoever contravenes any of the other provisions of this Act or any rule made thereunder or any condition of a certificate of registration of licence granted thereunder, shall be punishable—

(*i*) for the first offence, with imprisonment for a term which may extend to six months or with fine, or with both;

(*ii*) for the second and a subsequent offence, with imprisonment for a term which may extend to one year, or with fine, or with both.

(4) If any person convicted of an offence under this Act commits a like offence afterwards it shall be lawful for the court before which the second or subsequent conviction takes place to cause the offender's name and place of residence, the offence and the penalty imposed to be published in such newspapers or in such other manner as the court may direct.

* * *

8. Sec. 31. Cognizance and trial of offence.—

* * *

No court inferior to the court of [1][metropolitan magistrate or a judicial magistrate of firsh class] shall try any offence under this Act.

* * *

9. Sec. 33. Offences by Companies.—Theretore, with the help of the Insecticide Act, 1968 we can regulate not only import, manufacture, sale, transport, distribution and use of insecticides which is injurious to health and Public Safety but also regulates soil quality, agriculture, wild life and helminth. Effect of Helminth on human and its removal by treatment will be discussed at length in the preceding paragraphs.

10. Introduction.—At a conservative estimate, at least half the world's population is infected with one or more species of helminth parasite. In tropical countries, especially those with widespreads poverty and low standards of hygiene, the rates of infection are considerably greater than this. Although the alimentary canal is the most frequent and familiar site of infection, certain helminth species also invade the blood, muscles, lungs, skin, liver and nervous system. While may people can carry fairly large parasite burdens without apparent ill-effect, certain helminths may cause disfigurement, blindness, anaemia intestinal obstruction, impairment of the function of internal organs or death. Even the most harmless forms may deprive the human host of nourishment or weaken resistance to other infections.[2]

11. Adaptation to parasitism.—All parasites show a remarkable range of adaptations to their unusual way of life and a close study of these is important in understanding their means of survival and transmission and thus developing possible methods of control. These adaptations may include : organs of attachment to enable the parasite to resist mechanical removal from the host;

---

[1] Subs. by Act 24 of 1977, Sec. 7 (w.e.f. 2nd August, 1977).

[2] By M.R.N. Shephard, pp. 299-310.

elaborate mechanisms for overcoming the host's immunological and digestive systems; digestive organs in the parasite reduced or absent owing to the freely available food supply; body shape related to the site of parasitism within the host; production of vast numbers of ova to increase the chances of transmission to other hosts; and often remarkable adaptations to the behavioural or ecological characteristics of the host or vector, in order to facilitate transmission. In addition, parasites of the intestinal tract have to survive in a largely oxygen-free environment, and their use of biochemical pathways not requiring oxygen has been closely studied, particularly in relation to the development of anti-parasitic drugs.

12. Geographical distribution.—Many helminth species parasitic in man, particularly the common intestinal nematodes, have a worldwide distribution. Others are limited by the inability of the ova or larvae to survive outside the host, owing to unfavourable environmental conditions. For helminths having one or more intermediate hosts, distribution will normally be governed by the limitations placed on the distribution of those intermediate hosts, or their contact with man, by climatic, geographical, ecological or sociological factors. Cultural variations will often play a significant part in helminth distribution particularly in relation to associations between man and his domestic animals and local variations in diet. Thus, the Masai tribe of East Africa, well known for their close association with cattle, have particularly high prevalence of tapeworm inflection. While the lung-fluke *Paragonimus westemanni*, acquired by eating raw crab, is commonest in countries such as Hapan and Korea.

13. The transmission of Helminths.—In order to understand the role of sewage in the transmission of helminth infections, one must first consider the variety of means which parasites employ to ensure their survival and spread. In many cases, the faecal route is of no significance. Certain nematodes, known as filariae, have a larval stage (the microfilaria) which is comparable in size to blood cells and circulates in the capillaries. These species are transmitted by blood-sucking insects in similar manner to the malaria parasite. With other species, the parasite may release its ova or larvae to the environment by non-faecal routes; for example, the larvae of the guinea worm *Dracunculus medinensis* are released omit water through skin ulcers. In many helminth infections, human beings accidentally "break into" a cycle of transmission which is taking place in nature, but themselves play no further part in transmission; as far as the helminth is concerned, the human host is a "dead end". Thus, the cestode causing hydatid cyst, which can be fatal in man, is normally transmitted between dogs and domestic ruminants. Men become infected by the accidental ingestion of ova from dog faeces, but in order to continue the cycle, human viscera would have to be consumed by dogs, which is highly unlikely in most cultures.

We can assume that sewage treatment is only relevant as a possible means of control when helminth ova or larvae are passed in the faeces or urine of man and are then capable of infecting other human beings, either directly or after passage through one or more intermediate hosts. The principal helminth infections which come into this category can be listed thus :

Nematodes

- *Enterbius vermicularis* (pinworm)
- *Trichuris trichiura* (whipworm)
- *Ascaris lumbricoides* (roundworm)
- *Strongyloides stercoralis*
- *Ancylostoma duodenale* (hookworm)
- *Nectar americanus* (hook worm)

Trematodes

- *Schistosoma* spp.

Cestodes

- *Hymenolepis nana* (dwarf apeworm)
- *Taenia saginata* (beef tapeworm)
- *Taenia solium* (pork tapeworm)
- *Diphyliobothrium latum* (board tape worm)

It may be more convenient to classify these species not in terms of their taxonomic relationships but on the basis of their mode of transmission as in the following sub-sections.

14. The effect of sewage treatment.—All forms of sewage treatment consist of a sequence of physical, biological and sometimes chemical, processes, aimed at removing dissolved and suspended organic matter. The choice of treatment system in a particular community, and the constructional and ecological organization of the plant, will be determined by geographical and climatic conditions, the nature of the sewage to be treated, and by economic considerations. The contribution of each stage of sewage treatment to the removal or destruction of helminth ova is discussed below.

15. Sedimentation.—Provided sufficient time is allowed and turbulence is minimal, sedimentation gives a high rate of removal of helminth ova Liebmann (1964) estimated that with a specific gravity of 1.1, helminth ova will settle at a rate of 0.6 to 1.0 m/hr in static conditions, and thus for most tanks a sedimentation time of 2 hours should be sufficient. Liebmann also noted that *Taenia saginata* ova were the slowest to settle: in one experiment 68% had settled after 2 hours and 89% after 3 hours. However, with the addition of a flocculating agent, 95% of all worm eggs had settled within 2 hours. Doschl (1972) found that flocculation with aluminum sulphate at 90 to 120 g/m^3 and sedimentation for at least 60 minutes was required for the removal of *Diphyllobothrium latum* ova.

16. Biological filter.—Since the principle of this process is to encourage biological activity, one would not expect the environment to be particularly hostile to helminth ova; this is borne out by the relatively low removal rates observed. For example, Vishnevskaya (1938) reported that at Kharkov, USSR, *Ascaris humbricoides* ova, present at 60 per litre in raw sewage, were reduced to 20 per litre by sedimentation, but from there only to 13 per litre after bacteria bed treatment.

Experiments by the three groups of workers mentioned above showed that addition of helminth ova of various species to the influent of laboratory-scale bacteria beds resulted in the recovery of about 25% to 40% in the effluent within a few hours, suggesting that this form of a treatment did not give satisfactory removal rates. Bhaskaran *et al.* (1956) reported that a pilot-plant bacteria bed India gave 98% to 100% removal of Ascaris and hookworm ova, but it appeared that observations were made after secondary sedimentation and it is probable that most removal took place here rather than in the bacteria bed itself.

Being a relatively stable environment, the bacteria bed can provide an ecological niche for large organisms, both vertebrate and invertebrate, which may be significant in the transmission of helminth infections. Flies which breed in the beds, and birds which scavenge on them, have been suggested as possible carries. It has been demonstrated (Silverman and Griffiths, 1955) that helminth ova can pass through the eliminatory canal of seagulls and still retain their viability; this may be one means by which cattle pasture becomes contaminated with *Taenia saginata* ova. Free-living nematodes also occur in bacteria beds and although harmless in themselves, it has been shown (Wolf, 1971) that they can carry pathogenic bacteria and must be considered a potential hazard in the re-use of water from treated effluents.

17. **Activated sludge.**—In studies on the effect of activated sludge treatment on helminth ova, effluents have usually been sampled after both aeration and sludge separation. Quite high removal rates have been observed, probably due to physical removal during settlement rather than any adverse effect of aeration. Bhaskaran *et al.* (1956) found that at two sewage works in India, activated sludge treatment removed 93% and 98% of *Ascaris* ova, 91% and 100% of *Trichuris* ova and 81.5% and 96% of hookworm ova. Rowan (1964) reported that activated sludge treatment in Puerto Rico, including primary and secondary sedimentation, reduced the concentration of *Ascaris* ova 97% to 100% and *Schistosoma mansoni* ova by 99.7%. Jones *et al.* (1947) noted that as experimental tank proved a very favourable hatching medium for *Schistosoma japonicum* ova. Since a hatched miracidium must find a snail intermediate host within a relatively short time, this may prove helpful in preventing transmission, provided there are no snails in the outflows or nearby watercourses.

18. **Waste stabilization pond.**—In laboratory trials, Lakshminarayana and Abdulappa (1972) found that hookworm larvae were completely eliminated in less than 2 days in a facultative pond, and sludge samples did not show any viable ova; in a maturation pond, however, filariform larvae was recovered for up to 16 days. The authors considered that lack of oxygen was the principal lethal factor, although Cram (1943) found viable hookworm ova in anaerobically digesting sludge for considerable periods. In an operational works at Nagpur, India, consisting of a three-ponds series, ova *Ancylostoma duodenale, Hymenolepis nona* and *Ascarislumbrtcoides* were regularly present, and those of *Trichunis trichiura* and *Enterobius vermicularis* occasionally present, in the raw sewage. In the final effluent the only helminths present were occasional filari form lervae of *Ancylostoma duodenale.*

19. **Sludge digestion and drying.**—Helminth ova removed from sewage by the processes so far discussed have not necessarily been destroyed. They can still cause human infection depending on what form of sludge treatment is employed and for what purpose the treated sludge is used. Most treatment plants include anaerobic sludge digestion with the production of methane gas either as a separate stage or as an integral part of other processes.

Digested sludge is usually dried by exposure to the air in shallow beds. Ova of different helminth species show considerable variations in their resistance to desiccation. *Ascaris* ova are exceptionally resistant and have been shown to survive for atleast 7 years in drying sludge (Kozlova, 1965). It has been estimated that the moisture content of sludge must be reduced to 5% or less to bring about any significant destruction of *Ascaris* ova, a level that is impracticable under moist conditions (Cram, 1943; Hogg, 1950). *Trichuris* ova somewhat more sensitive than those of *Ascaris*, but still show considerable resistance. Hookworm larvae are known to be fairly susceptible to desiccation under normal transmission conditions. In sludge, hatching of hookworm ova is inhibited by the anaerobic environment, but during drying hatching takes place as aerobic conditions are re-established. Cram (1943) found that in drying sludge, hookworm larvae developed to the infective stage and remained alive for upto 62 days or until the moisture content dropped below 10% *schistoma japonicum* ova appear to survive in sludge-drying beds for not more than 3 weeks irrespective of moisture content.

20. **Tertiary treatment.**—In some sewage works, purified effluents are subjected to final cleansing measures, such as, filtering through sand or disinfection by chlorination. However, these measures are by no means universal even in the more sophisticated treatment plants, and are probably inappropriate to the simpler economies of most tropical countries. It is worth nothing, nevertheless, that sand filtration is generally considered to be one of the most effective means of removing helminth ova. Removal rates approaching 100% have been found for ova of *Ascaris* and hookworm (Cram, 1943), *Schistosoma japonicum* (Jones *et al.* 1947) and *Taenia saginata* (Newton *et al.*, 1949; Silverman and Griffiths, 1955).

21. **The agricultural utilization of sewage.**—The use of purified sewage effluents for irrigation and digested sludge as a fertilizer are both of considerable agricultural importance, especially in poorer areas of the world. However, as has been seen, most sewage treatment processes cannot guarantee the complete absence of helminth ova. It is difficult to strike a balance between the relative importance of different criteria in the well being of the community. Some may feel that the possibility of occasional nematode infections is a small price to pay for the undoubted benefits of increased soil fertility. However, a complete neglect of the dangers is likely to have serious repercussions. It is well known that the agricultural use of insufficiently treated sewage can cause helminth infections, either by the contamination of vegetables, especially those eaten raw, with helminth ova, or by the direct infections of the agricultural workers. A severe outbreak of ascariasis at Darmstadt, West Germany, attributable to vegetable contamination and aggravated by a general post-war lack of hygiene, was described by Baumhogger (1949) and Krey (1949).

Purified effluents treated by conventional methods should be largely free of helminth ova; untreated sludge or night soil are the most likely sources of infection. Various methods of disinfecting the sludge have been suggested, of which composting or digestion is the most familiar. In general the greater the temperature and the longer the digestion period, the greater the destruction of ova. If temperature around 55°C can be achieved, helminth ova are rapidly eliminated. As an alternative to digestion, chemical treatment of sludge against helminth ova using sodium nitrate (Kozai, 1960, 1962) or thiabenazole (Kutsumi and Komiya, 1965) have been found to be effective.

Romanenko (1967, 1971) investigated various methods of introducing sewage into soil by means of subsurface irrigation, deep ploughing or special injection drills thus obtaining the agricultural benefit without the danger of contaminated vegetables. Although successful, the capital cost of most of these methods would appear to be prohibitive

22. Control.—Faecal transmission does not automatically means sewage transmission. As has been seen, ova of contaminative helminths are acquired from soiled hands or clothing, or even inhaled in the air, and it is personal hygiene rather than sewage treatment that will reduce the rate of transmission. With soil-transmitted helminths, the main problem is the prevention of faecal contamination of soil in areas of human activity. While the provision of sewage treatment facilities is an important contribution, the solution must be seen in broader social terms. Hookworm (*Necator americanus*) infection is particularly characteristic of tropical countries with large plantations of sugar, coffee, bananas, etc. For workers on these estates, the incentive to use proper sanitary facilities, even if these are available, is slight since there is plenty of cover for defecation closer at hand. The sites used tend to be moist and shady, precisely the kind of environment favouring development of the larvae. Furthermore, latrines which are poorly constructed or improperly used are most likely to aggravate the spread of hookworm than control it; contamination around the base of such a latrine would give a more concentrated focus of infection. Encouraging people to wear shoes might be more effective and cheaper solution

Increasingly, it is being realised that campaigns against helminth infections based on single control method are remarkable only for their lack of success. Instead, a wide range of weapons—drugs, vector control, education sanitation—must be mobilised and employed in accordance with the epidemiological characteristics of the particular infection. This applies especially to schistosomiasis. While sewage treatment may enhance the effectiveness of other measures, by itself is both impracticable and ineffective as a means of control. Schistosome infected persons usually live in such close association with water that the complete prevention is virtually impossible.

CHAPTER XVI

THE MERCHANT SHIPPING ACT, 1958

(ACT 44 OF 1958)

SYNOPSIS

1. Introduction .. 1126
A. Civil liability for oil pollution damage
2. Sec. 352-G .. 1126

29. Sec 436 ... 1139
30. Sec 460-A .. 1139

1. Introduction.—A new Part X-B and Part XI-A has been inserted by the Merchant Shipping (Amendment) Act, 1983 (No. 12 of 1983) dealing with pollution. The same is reproduced as under .

A. [1][Part X-B Civil liability for oil pollution damage

2. Sec. 352-G. Application.—This Part applies to—

(*a*) every Indian ship wherever it is; and

(*b*) every foreign ship while it is at a port or place in India or place within the territorial waters of India or any marine areas, adjacent thereto over which India has, or may hereafter have, exclusive jurisdiction in regard to control of marine pollution under the Territorial Waters, Continental Shelf, Exclusive Economic Zone and other Maritime Zones Act, 1976 (80 of 1976), or any other law for the time being in force.

3. Sec. 352-H. Definitions.—(1) [2][**] In this Part, unless the context otherwise requires,—

(*a*) "Incident" means any occurrence, or series of occurrences having the same origin, which causes pollution damage,

(*b*) "oil" means any persistent oil such as, crude oil, fuel oil, heavy diesel oil, lubricating oil and whale oil, whether carried on board in tanker as cargo or fuel;

---

[1] Part X-B containing Secs. 352-G-352-R subs. by Act, 12 of 1983, Sec. 10 (w.e.f. 15th May, 1983).

[2] Brackets and figure (*i*) Omitted by Act 55 of 1988, Sec. 2 (w.e.f. 1st July, 1989).

(*c*) "owner" means—

- (*i*) the person registered as owner of the ship and includes the operator who for the time being is in charge of the ship and the master of the ship; or
- (*ii*) in the absence of registration, the person owning the ship; or
- (*iii*) in the case of a tanker owned by a foreign State, the person registered in that State as operator of the ship;

(*d*) "pollution damage" means loss or damage caused outside the ship by contamination resulting from escape or discharge of oil from that ship, wherever such escape or discharge occurs, and includes the costs of preventive measures and further loss or damage caused by preventive measures; so, however, that the provisions of Cl. (*a*) of sub-section (1) of Sec. 352-B shall not apply to such loss or damage;

(*e*) "preventive measures" means any reasonable measures taken by any person after the incident to prevent or minimise pollution damage.

(*f*) "tonnage" means the tonnage of a ship determined in accordance with the provisions of Sec. 352 B and where it is not determinable, it means forty per cent of the weight in tons of oil cargo the ship is capable of carrying].[1]

[2][***]

4. **Sec. 352-I. Liability of owner.**— (1) Save as otherwise provided in sub-sections (2), (3) and (4), the owner at the time of an incident, or, where the incident consists of a series of occurrences, at the time of first of such occurrences, shall be liable for any pollution damage caused by oil which has escaped or been discharged from the ship as a result of the incident.

(2) No liability for pollution damage shall attach to the owner under sub-section (1) if he proves that the pollution damage—

(*a*) resulted from an act of war, hostilities, civil war, insurrection or a natural phenomenon of an exceptional, inevitable and irresistible character; or

(*b*) was wholly caused by an act or omission done with intent to cause such damage by any other person; or

(*c*) was wholly caused by the negligence or other wrongful act of any Government or other authority responsible for the maintenance of lights or other navigational aids in exercise of its functions in that behalf.

(3) Where, with respect to any incident, the owner proves that the pollution damage resulted, either wholly or partially, from an act or omission done, with intent to cause such damage, by the person who suffered damage, or from the negligence of that person, the owner shall be exonerated wholly or, as the case may be, partially, from liability to that person.

---

[1] Ins. by Act 55 of 1988, Sec. 2 (w.e.f. 1st July, 1989).

[2] Sub-section (2) Omitted by Act 55 of 1988, Sec. 2 (w.e.f. 1st July, 1989).

(4) Where in any incident, pollution damage results from escape or discharge of oil from two or more ships, the owners of all such ships shall be jointly and severally liable for all such damage which is not reasonably separable.

(5) No claim for pollution damage shall be made against any owner otherwise than in accordance with the provisions of this section.

(6) No claim for pollution damage shall be made against any servant or agent of the owner.

5. Sec. 352-J. Limitations of liability.—(1) Save as otherwise provided in sub-section (2), the owner may limit his liability under Sec. 352-I in respect of any incident to an aggregate amount of—

[1][(*a*) one hundred and thirty-three Special Drawing Rights for each ton of the ships tonnage; or

(*b*) fourteen million Special Drawing Rights.]

whichever is lower.

(2) Where any incident causing pollution damage occurs as a result of the actual fault of the owner, he shall not be entitled to limit his liability under sub-section (1).

6. Sec. 352-K. Constitution of limitation fund.—(1) (*a*) Any owner desiring to avail of the benefit of limitation of his liability under sub-section (1) of Sec. 352-J shall make an application to the High Court for constitution of limitation fund (hereafter in this Part referred to as fund)

(*b*) Such fund may be constituted either by depositing the sum with the High Court or by furnishing bank guarantee or such other security as, in the opinion of the High Court, is satisfactory.

(2) (*a*) The insurer or any other person providing financial security to the owner may apply to the High Court for constitution of the fund under sub-section (1) and any fund so constituted shall have the same effect as if it were constituted by the owner.

(*b*) Such fund may be constituted even in cases where sub-section (2) of Sec. 325-J applies but in any such event constitution of the fund shall not prejudice the rights of any claimant against the owner for full compensation exceeding the amount deposited or secured in the fund.

[2][(3) The amount in Special Drawing Rights to be deposited or secured in the fund under sub-section (1) shall be converted in rupees on the basis of official value in rupees of the Special Drawing Rights on determined by the Reserve Bank of India on the date of constitution of the fund.]

7. Sec. 352-L. Acquisition of right for compensation by subrogation.—(1) Where the owner or any of his servants or agents or any other person providing him insurance or other financial security has, as a result of incident in question, paid any compensation to any claimant, such person shall, up to the amount so paid by him, be entitled to acquire by subrogation the rights to which the claimant so compensated would be entitled to.

(2) Where the owner or any other person providing him insurance of other financial security establishes that he may, at a later date, be compelled to pay to any person, in whole or in part, any amount by way of compensation for pollution damage caused by the incident with respect to which he would

---

1. Subs. by Act 55 of 1988, Sec. 3 (w.e.f. 1st July, 1989).
2. Subs. by Act 55 of 1988, Sec. 4 (w.e.f. 1st July, 1989).

have been entitled to acquire by subrogation the right of the claimant had the compensation been paid before the fund was distributed, the High Court may order that sufficient amount from the fund may provisionally be set aside to enable the owner or such other person to enforce his claim against the fund at a later date.

8. Sec. 352-M. Consolidation of claim and distribution of fund.—(1) The High Court shall consolidate all claims against the fund including those arising under Sec. 352-L.

(2) Any claim in respect of expenses reasonably incurred or sacrifices reasonably made by the owner voluntarily to prevent or minimise pollution damage shall rank equally with other claims against the fund.

(3) Subject to the provisions of sub-section (2) of Sec. 352-L, the High Court shall distribute the amount in the fund among all claimants in proportion to their established claims.

Comment

All claims against the fund shall be consolidated by the High Court and the High Court shall distribute the amount in the fund among all claimants according to the proportion of their claims.

9. Sec. 352-N. Compulsory insurance or other financial guarantee.—(1) The owner of every Indian ship which carries 2,000 tons or more oil in bulk as cargo shall, in respect of such ship,. maintain an insurance or other financial security for an amount equivalent to—

[1][(*a*) one hundred and thirty-three Special Drawing Rights for each ton of the ships tonnage; or

(*b*) fourteen million Special Drawing Rights,]

(2) In respect of every Indian ship which maintains insurance or other financial security under sub-section (1), there shall be issued by the Director-General a certificate in such form and giving such particulars as may be prescribed.

(3) On an application by the owner or agent of any foreign ship, the Director General may issue a certificate under sub-section (2) in respect of such foreign ship on production of satisfactory evidence relating to maintenance of insurance or other financial security in accordance with the provisions of the International Convention on Civil Liability for Oil Pollution Damage signed at Brussels on the 19th day of November, 1969 [2][as amended from time to time].

(4) For every certificate issued under sub-sections (2) and (3) there shall be charged such fee as may be prescribed.

10. Sec. 352-O. Acceptance of certificate issued outside India.— Any certificate issued by a competent authority in any country outside India to a ship registered in that country or any certificate issued by a competent authority of any country which is a contracting party to the International Convention on Civil Liability for Oil Pollution Damage signed at Brussels on the 29th day of November, 1969, [3][as amended from time to time] to any ship wherever registered, shall be accepted at any port or place in India as if it were issued under this Act.

---

1. Subs. by Act 55 of 1988, Sec. 5 (w.e.f. 1st July, 1989).
2. Ins. by Act 55 of 1988, Sec. 5 (w.e.f. 1st July, 1988).
3. Ins. by Act 55 of 1988, Sec. 6 (w.e.f. 1st July, 1989).

11. Sec. 352-P. Ban on entering or leaving an Indian port without certificate.—(1) No Indian ship, which has on board 2,000 tons of more oil in bulk as cargo shall enter or leave or attempt to enter or leave any part or place in India unless it carries on board a certificate issued under sub-section (2) of Sec. 352-N or a certificate accepted under Sec. 352-O.

(2) No ship other than an Indian ship carry 2,000 tons or more oil in bulk as cargo, wherever registered, shall enter or leave or attempt to enter or leave any port or place in India unless it carries on board a certificate issued under sub-section (3) of Sec. 352-N or a certificate accepted under Sec. 352-O.

(3) No customs officer shall grant inward entry or outward clearance to any ship to which sub-section (1), or, as the case may be, sub-section (2) applies, unless its master produces a certificate required under the respective sub-section.

12. Sec. 352-Q. Government ships.—Nothing in this Part shall apply to any ship of war or any ship for the time being used by the Government of any country for purposes other than commercial purposes.

13. Sec. 352-R. Power to make rules.—The Central Government may make rules prescribing—

(*a*) the form of certificate to be issued by the Director-General under sub-section (2) of Sec. 352-N and the particulars which it may contain;

(*b*) fees which may be charged for issue of certificates under Sec. 352-N.]

* * *

Comment

The Central Government has been authorised to make the rules regarding the form of certificate to be issued by the Director-General under sub-section (2) of Sec. 352-N. Further it has been provided that the form of certificate may contain fees which may be charged for issue of certificate.

* * *

B [1][Part XI-A, Prevention and containment of pollution of the sea by oil

14. Sec. 356-A. Commencement and application.—(1) The provisions of this Part shall come into force on such date as the Central Government may, by notification in the Official Gazette, appoint, and different dates may be appointed for different provisions of this Part.

(2) This Part shall apply to—

(*a*) tankers of one hundred and fifty tons gross or more;

(*b*) other ships of five hundred tons gross or more; and

(*c*) off-shore installations.

15. Sec. 356-B. Definitions.—In this Part, unless the context otherwise requires,—

(*a*) "cargo" includes ballast and ship's stores and fuel;

(*b*) "coast" includes any island forming part of India;

---

[1] Part XI-A containing Secs. 356-A to 356-O Subs. by Act, 12 of 1983, Sec. 11, (w.e.f. 18th May, 1983).

(*c*) "coastal waters" means any part of the territorial waters of India or any, marine areas adjacent thereto over which India has, or, may hereafter have exclusive jurisdiction in regard to control of marine pollution under the Territorial Waters, Continental Shelf, Exclusive Economic Zone and other Maritime Zones Act, 1976 (80 of 1976), or any other law for the time being in force;

(*d*) "Convention" means the International Convention for the Prevention of Pollution of the Sea by Oil, 1954, signed in London on the 12th day of May, 1954, as amended from time to time;

(*e*) "discharge", in relation to oil or oily mixture, means any discharge or escape, however caused;

(*f*) the expression "from nearest land" shall mean the baseline from which the territorial sea of the territory in question is established in accordance with the Geneva Convention on the Territorial Sea and the Contiguous Zone, 1958, except that in relation to north-eastern coast of Australia it shall mean from a line drawn from a point on the coast of Australia in latitude 11 South, longitude 142°08′ East to a point in latitude 13°35′ South, longitude 141°55′ East—

thence to a point latitude 10° 00′ South, longitude 142° 00′ East

thence to a point latitude 9° 10′ South, longitude 143° 52′ East

thence to a point latitude 9° 00′ South, longitude 144° 30′ East

thence to a point latitude 13° 00′ South, longitude 144° 00′ East

thence to a point latitude 15° 00′ South, longitude 146° 00′ East

thence to a point latitude 18° 00′ South, longitude 147° 00′ East

thence to a point latitude 21° 00′ South, longitude 153° 00′ East

thence to a point on the coast of Australia in latitude 24° 42′ South, longitude 153° 15′ East.

(*g*) "instantaneous rate of discharge oil content" means the rate of discharge of oil in litres per hour at any instant divided by the speed of the ship in knots at the same instant;

(*h*) "mile" means a nautical mile of 1,852 metres;

(*i*) "off-shore installation" means an installation, whether mobile or fixed, which is used or is intended to be used for under-water exploration or exploration or exploitation of crude oil, petroleum or other similar mineral oils, under lease, licence or any other form of contractual arrangement and includes—

(*a*) any installation which could be moved from place to place under its own motive power or otherwise; and

(*b*) a pile-line;

(*j*) "oil" means—

(*i*) crude oil;

(*ii*) fuel oil;

(*iii*) heavy diesel oil conforming to such specifications as may be provided; and

(*iv*) lubricating oil;

(*k*) "oily mixture" means a mixture with any oil content;

(*l*) "oil reception facilities" in relation to a part, means facilities for enabling vessels using the port to discharge or deposit oil residues;

(*m*) "ship" means any sea-going vessel of any type whatsoever, including a floating craft, whether self-propelled or towed by another vessel, making a sea-voyage;

(*n*) "tanker" means a ship in which greater part of the cargo space is constructed or adapted for the carriage of liquid cargoes in bulk and which is not, for the time being, carrying a cargo other than oil in that part of its cargo space.

* * *

Provisions for prevention of pollution

16. Sec. 356-C. Prohibitions as to discharge oil or oily mixture.—(1) No oil or oily mixture shall be discharged from an Indian tanker anywhere into the sea or from a foreign tanker anywhere within the coastal waters of India except where each of the following conditions is satisfied, namely :

(*a*) ·the tanker is proceeding en-route;

(*b*) the instantaneous rate of discharge does not exceed sixty litres per mile;

(*c*) the total quantity of oil discharged does not exceed 1/15,000 part of the total carrying capacity of the tanker;

(*d*) the tanker is more than 50 miles from nearest land; and

(*e*) the tanker is not within the designated area notified as such under sub-section (6) of Sec. 6 or Sec. 7 of the Territorial Waters, Continental Shelf, Exclusive Economic Zone and other Maritime Zones Act, 1976 (80 of 1976):

Provided that the provisions of this sub-section shall not apply to—

(*i*) the discharge of ballast from a cargo tank which, since the cargo was last carried therein, has been so cleaned that any effluent therefrom would, if discharged from a stationary tanker into clean calm waters on a clear day, produce no visible traces of oil on the surface of the water; or

(*ii*) the discharge of oil or oily mixture from machinery space bilges, if any such discharge is made in compliance with the provisions of sub-section (2) as if it were made from a ship other than a tanker.

(2) No oil or oily mixture shall be discharged from an Indian ship other than a tanker anywhere into the sea or from a foreign ship other than a tanker within the coastal waters of India except where each of the following conditions is satisfied, namely :

(*a*) the ship is *proceeding en-route*;

(*b*) the instantaneous rate of oil content does not exceed sixty litres per mile;

(*c*) the oil content of the discharge is less than one hundred parts per million parts of the oily mixture;

(*d*) the discharge is made as far from nearest land as practicable; and

(*e*) the ship is not within the designated areas notified as such under sub-section (6) of Sec. 7 of the Territorial Waters, Continental Shelf, Exclusive Economic Zone and other Maritime Zones Act, 1976 (80 of 1976).

(3) The discharge of oily or oil mixture into the sea from any off-shore installation is hereby prohibited.

17. Sec. 356-D. Prohibition not to apply in certain cases.—Nothing in Sec. 356-C shall apply to—

(*a*) the discharge of oil or oily mixture from a ship or an off-shore installation for the purpose of —

(*i*) safety of such ship or off-shore installation ; or

(*ii*) preventing damage to such ship or off-shore installation or cargo, if any, on board such ship or off-shore installation; or

(*iii*) saving life at sea;

(*b*) the escape of oil or oily mixture resulting from damage to or unavoidable leakage from a ship or an off-shore installation if, after occurrence of the leakage, all reasonable precautions have been taken for the purpose of preventing or minimising such escape;

(*c*) the discharge of oily mixture from the bilges of a ship during the period of twelve months following the date on which this section comes into force.

18. Sec. 356-E. Equipment in ships to prevent oil pollution.—For the purpose of preventing or reducing discharges of oil and oily mixtures into the sea, the Central Government may make rules requiring Indian ships to be fitted with such equipment and to comply with such other requirements (including requirements for preventing the escape of fuel oil or heavy diesel oil into bilges) as may be prescribed.

19. Sec. 356-F. Oil record book.—(1) Every Indian tanker and every other Indian ship which uses oil as fuel shall maintain on board the tanker or such other ship an oil record book in the prescribed form :

Provided that different forms may be prescribed for tanker and other ships.

(2) The manner in which the oil record book shall be maintained, the nature of entries to be made therein, the time and circumstances in which such entries shall be made, the custody and disposal thereof, and all other matters relating thereto shall be such as may be prescribed having regard to the provisions of the Convention.

20. Sec. 356-G. Inspection and control of ships to which the Convention applies.—(1) A surveyor or any person authorised in this behalf may, at any reasonable time, go on board a ship to which any of the provisions of this Part applies, for the purposes of—

(*a*) ensuring that the prohibitions, restrictions and obligations imposed by or under this Part are complied with;

(*b*) satisfying himself about the adequacy of the measures taken to prevent the escape of oil or oily mixture from the ship;

(*c*) ascertaining the circumstances relating to an alleged discharge of oil or oily mixture from the ship in contravention of the provisions of this Part; and

(*d*) inspecting the oil record book.

(2) The surveyor or any such person may, if necessary, make, without unduly delaying the ship, a true copy of any entry in the oil record book of the ship and may require the master of the ship to certify the copy to be a true copy and such copy shall be admissible as evidence of the facts stated therein.

21. Sec. 356-H. Information regarding contravention of the provisions of the Convention.—(1) If, on report from the surveyor or other persons authorised to inspect a vessel under Sec. 356-G, the Central Government is satisfied that any provision of the Convention has been contracted anywhere by a foreign ship, being a ship to which the provisions of the Convention apply, it shall transmit particulars of the alleged contravention to the Government of the country to which the ship belongs.

(2) On receipt of information from the Government of any country which has ratified the Convention that an Indian ship has contravened any provisions of the Convention, the Central Government may, if it is necessary so to do, request such Government to furnish further details of the alleged contravention, and if satisfied that sufficient evidence is available to establish contravention of any of the provisions of this Part or rules made thereunder, take appropriate action against the owner or master and intimate the reporting Government of the action so taken.

22. Sec. 356-I. Oil-reception facilities at ports in India.—(1) Notwithstanding anything contained in any other law for the time being in force, in respect of every port in India, the powers of the ports authority shall include the power to provide oil-reception facilities.

(2) A port authority providing oil-reception facilities or a person providing such facilities by arrangement with the port authority, may make charges for the use of the facilities at such rates and may impose such conditions in respect of the use thereof as may be approved, by notification in the Official Gazette, by the Central Government in respect of the port.

(3) Where the Central Government is satisfied there are no oil reception facilities at any port in India or that the facilities available at such port are not adequate for enabling ships calling at such port to comply with the requirements of the Convention, the Central Government may, after consultation with the port authority in charge of such port, direct, by order in writing, such authority to provide or arrange for the provision of such oil-reception facilities as may be specified in the order.

(4) The Central Government may, by notification in the Official Gazette, specify the ports in India having oil-reception facilities in accordance with the requirements of the Convention.

Explanation.—For the purpose of this section, "port authority" means,—

(*a*) in relation to any major port, the Board of Trustees in respect of that port constituted under any law for the time being in force;

(*b*) in relation to any other port, the Conservator of the Port, within the meaning of Sec. 7 of the Indian Ports Act, 1908 (15 of 1908).

Provisions for containment of accidental pollution

23. Sec. 356-J. Power to give notice to owner, etc., of polluting ship.— (1) Where the Central Government is satisfied that —

(*a*) oil is escaping or is likely to escape from a tanker, or any off-shore installation; and

(*b*) the oil so escaped or likely to escape is causing or threatens to cause pollution of any part of coasts or coastal waters of India, it may, for the purpose of minimising the pollution already caused, or, for preventing the pollution threatened to be caused, require—

(*i*) the owner, agent, master or charterer of the tanker,

(*ii*) the owner, agent, master or charterer of the ship other than a tanker,

(*iii*) the owner, agent, master, charterer or operator of a mobile off-shore installation,

(*iv*) the owner, operator, lessee or licensee off-shore installation of any other type,

or all or any of them, by notice served on him or as the case may be on them, to take such action in relation to the tanker, ship other than a tanker, mobile off-shore installation or, as the case may be, off-shore installation of any other type or its cargo or in relation to both, as may be specified in such notice.

(2) Without prejudice to the generality of sub-section (1) the notice issued under that sub-section may require the person or persons on whom such notice is served to take action relating to any or all of the following matters, namely :

(*a*) action for preventing the escape of oil from the tanker, ship other than a tanker, mobile off-shore installation or off-shore installation of any other type;

(*b*) action for removing oil from the tanker, ship other than a tanker, mobile off-shore installation or off-shore installation of any other type in such manner, if any, and to such place, if any, as may be specified in the notice;

(*c*) action for removal of the tanker, ship other than a tanker, mobile off-shore installation or off-shore installation of any other type to a place, if any, as may be specified in the notice;

(*d*) action for removal of the oil slicks on the surface of the sea in such manner, if any, as may be specified in the notice;

(*e*) action to disperse the oil slicks on the surface of the sea in such manner, if any, as may be specified in the notice.

(3) The Central Government may, by any notice issued under sub-section (1), prohibit the removal—

(*a*) of the ship other than a tanker, mobile off-shore installation or off-shore installation of any other type, from a place specified in the notice;

(*b*) from the tanker, ship other than a tanker, mobile off-shore installation of any other type, of any cargo or stores as may be specified in the notice;

except with its previous permission and upon such conditions, if any, as may be specified in the notice.

(4) Notwithstanding anything contained in sub-section (2), the Central Government may, if it is of the opinion that the pollution caused or likely to be caused has or may present a grave emergency, proceed to take such measures as may be deemed necessary and any measures so taken shall be deemed to have been taken under Sec. 356-K.

24. Sec. 356-K. Powers to take measures for preventing or containing oil pollution.—(1) Where any person fails to comply, or fails to comply in part, with any notice served on him under Sec. 356-J, the Central Government may, whether or not such person convicted of an offence under this Part by reason of his having so failed to comply, cause such action to be taken as it may deem necessary for—

(*i*) carrying out the directives given in the notice issued under Sec. 356-J; and

(*ii*) containing the pollution already caused or preventing the pollution threatened to be caused, of coastal waters or, as the case may be, of any part of the coast of India by oil escaped or threatening to escape from the tanker, a ship other than a tanker, a mobile off-shore installation or off-shore installation of any other type.

(2) Subject to the provisions of Part X-B, any expenditure or liability incurred by the Central Government in, or by reason of, the exercise of powers under sub-section (1) in relation to any tanker, ship other than a tanker, mobile off-shore installation or off-shore installation of any other type in respect of which a notice had been issued under Sec. 356-J, or its cargo of oil that had escaped or was discharged into the sea, shall be a debt due to the Central Government by the person or persons on whom the notice was served and may be recovered from that person, or as the case may be, from all or any of those persons and shall be a charge upon all or any tanker, ship; other than a tanker, mobile off-shore installation or off-shore installation of any type owned by that person or persons which may be detained by the Central Government until the amount is paid :

Provided that provisions of Part X-B of this Act shall not apply to measures taken in respect of any off-shore installation which is not a ship within the meaning of this Act except that in the event of pollution damage caused by any such off-shore installation the person who is liable for the damage may claim exoneration from any liability if he proves that such damage—

(*a*) resulted from an act of war hostilities, civil war, insurrection or a natural phenomenon of an exceptional, inevitable and irrelatable character; or

(*b*) was wholly caused by an act or omission done with intent to cause that damage by any other person; or

(*c*) was wholly caused by the negligence or other wrongful act of any Government or other authority responsible for the maintenance of lights or other navigational aids in exercise of its functions in that behalf.

25. Sec. 356-L. Power of the Central Government to give directions to certain ships to render certain services.—(1) Where for the purposes of taking any measures under sub-section (1) of Sec. 356-K, services of any Indian ship become necessary for—

(*i*) lightening or transporting any cargo or equipment from or to the polluting ship; or

(*ii*) providing any assistance to any other ship or equipment engaged in rendering service under Cl. (*i*);

the Central Government may, if it deems it necessary so to do, direct, by an order in writing, the owner of any Indian ship, tug, barge or any other equipment to provide such services or assistance as may be specified in that order.

(2) The owner of any ship, tug, barge or any other equipment with respect to which an order under sub-section (1) has been made shall be entitled to tariff rates of freight and charter hire at reasonable rates having regard to current market conditions :

Provided that where tariff rates of freight are not fixed or where there is any dispute about reasonable rates of charter hire the freight or, the case may be, charter hire, shall be paid at such rates as may be fixed by the Director-General by an order in writing.

(3) Where in pursuance of the proviso to sub-section (2), the Director-General makes any order fixing rates of freight or charter hire, he shall determine reasonability of such rates of freight or charter hire by examining such witnesses, documents and accounts as he may deem necessary.

26. Sec. 356-M. Oil pollution cess.—(1) With effect from such date as the Central Government may, by notification in the Official Gazette, specify, there shall be levied on every ship calling at any port in India being a ship which carries oil as cargo, a cess to be called Oil Pollution Cess (thereafter in this Part referred to as cess) at such rate not exceeding fifty paise,—

(*a*) in respect of each tonne of oil imported by a ship into India in bulk as a cargo;

(*b*) in respect of each tonne of oil shipped from any place in India in bulk as a cargo of a ship;

as the Central Government may, by notification in the Official Gazette, fix :

Provided that no cess shall be levied on a ship at any port if the ship produces evidence of having paid such levy at the same or any other port in India within a period of three months immediately preceding its present call at the port.

(2) The cess shall be collected by such officers and in such manner as the Central Government may prescribe in this behalf and shall, after deduction of such costs of collection, if any, as the Central Government may determine, be paid to such authority as the Central Government may specify.

(3) The proceeds of the cess shall, after due appropriation made by Parliament by law, be utilised for the purpose of providing oil reception facilities and equipments and materials for combating oil pollution at various ports in India and for such other like purposes as the Central Government may, by notification in the Official Gazette, from time to time, specify.

27. Sec. 356-N. Refusal of port clearance.—The officer whose duty it is to grant a port clearance for any ship shall not grant the port clearance until the amount of cess payable under Sec. 356-M has been paid or until security for the payment thereof has been given to his satisfaction.

Comment

The officers shall not grant the port clearance until the amount of cess has been paid. In other words, he shall refuse the port clearance until security for the payment has been given to his satisfaction.

28. Sec. 356-O. Power to make rules.—(1) The Central Government may, having regard to the provisions of the Convention, make rules to carry out the purpose of this Part.

(2) In particular and without prejudice to the generality of the provisions of sub-section (1), such rules may—

(*a*) prescribe the specifications of heavy diesel oil for the purpose of sub-clause (*iii*) of Cl. (*j*) of Sec. 356-B;

(*b*) prescribe the equipment to be fitted in Indian ships and other requirements to be complied with by those ships for the purposes of Sec. 356-E;

(*c*) prescribe the forms of oil record books for tankers and other ships, the manner in which such books shall be maintained, the nature of the entries to be made therein, the time and circumstances in which such entries shall be made, the custody and disposal thereof and all other matters relating thereto for the purposes of Sec. 356-F;

(*d*) prescribe the fees which may be levied for inspection of oil-monitoring system, oily water separator, oil-content metre, crude oil washing system, inert gas system or other equipments or contrivances carried out on board for preventing pollution of the sea by oil and the manner in which fees may be collected;

(*e*) specify the officers who shall collect the cess and the manner in which the cess shall be collected.]

* * *

29. Sec. 436. Penalties.— (1) Any person who contravenes any provision of this Act or fails to comply with a provision there of which it was his duty to comply with, shall be guilty of an offence and if in respect of any such offence no penalty is specially provided in sub-section (2), he shall be punishable with fine which may extend to two hundred rupees.

(2) The offences mentioned in the second column of the following table shall be punishable to the extent mentioned in the fourth column of the some with reference to such offences respectively.

* * *

30. Sec. [1]["460-A. Removal of difficulties.—(1) If any difficulty arises in giving effect to the provisions of this Act, in so far as they relate to the Safety Convention or to the Load Line Convention or to the Convention referred to in Cl. (*a*) of Sec. 356-B the Central Government may, by order published in the Official Gazette, make such provisions of this Act, as appear to it to be necessary or expedient for removing the difficulty and giving effect to the provisions of such Convention :

Provided that no order shall be made under this section after the expiry of three years from the date of publication of the Merchant Shipping (Amendment) Act, 1970 (25 of 1970), in the Official Gazette.

(2) Every order made under this section shall be laid as soon as may be after it is made before each House of Parliament while it is in session for a total period of thirty days which may be comprised in onesession or in two successive sessions".]

CHAPTER XVII

MOTOR VEHICLES ACT, 1988

(ACT NO. 59 OF 1988)

SYNOPSIS

1 Introduction 1140
2 Sec 110 1140

1. Introduction.—The Motor Vehicles Act, 1939 is also animportant piece of legislation dealing with pollution. Section 70 of this Act empowers the State Government to make rules to control pollution from the emission of smokes, visible vapour, sparks, ashes, grit or oil. Now this Act has been repealed by the Motor Vehicle Act, 1988 (59 of 1988), and Sec. 110 of the new Act empowers the Central Government to make rules for control of environmental pollution. Section 110 of the new Act runs as under :

2. Sec. "110. Powers of Central Government to make rules.—(1) The Central Government may make rules regulating the construction, equipment and maintenance of motor vehicles and trailers with respect to all or any of the following matters, namely :

(*a*) the width, height, length and overhang of vehicles and of the loads carried;

[1][(*b*) the size, nature, maximum retail price and condition of tyres, including embossing thereon of date and year of manufacture and the maximum load carrying capacity;]

(*c*) brakes and steering gear;

(*d*) the use of safety glasses including prohibition of the use of tinted safety glasses;

(*e*) signalling appliances, lamps and reflectors;

(*f*) speed governors;

(*g*) the emission of smoke, visible vapour, sparks, ashes, grit or oil;

(*h*) the reduction of noise emitted by or caused by vehicles;

(*i*) the embossment of chassis number and engine number and the date of manufacture;

(*j*) safety belts, handle bars of motor cycles, auto-dippers and other equipments essential for safety of drivers, passengers and other road users;

(*k*) standards of the components used in the vehicle as in-built safety devices;

(*l*) provision for transportation of goods of dangerous or hazardous nature to human life;

(*m*) standards for emission of air pollutnts :

Provided that any rules relating to the matters dealing with the

---

1. Subs. by Act 54 of 1994, Sec. 32 (*i*) (w.e.f. 14th November, 1994) for Cl. (*b*).

protection of environment, so far as may be, shall be made after consultation with the Ministry of the Government dealing with environment.

[1][(*n*) installation of catalytic convertors in the class of vehicles to be prescribed;

(*o*) the placement of audio-visual or radio or tape recorder type of devices in public vehicles;

(*p*) warranty after sale of vehicle and horms therefor.]

(2) Rules may be made under sub-section (1) governing the matters mentioned therein, including the manner of ensuring the compliance with such matters and the maintenance of motor vehicles in respect of such matters, either generally in respect of motor vehicles or trailers of a particular class or in particular circumstances.

(3) Notwithstanding anything contained in this section—

(*a*) the Central Government may exempt any class of motor vehicles from the provisions of this Chapter;

(*b*) a State Government may exempt any motor vehicle or any class or description of motor vehicles from the rules made under sub-section (1) subject to such conditions as may be prescribed by the Central Government".

CHAPTER XVIII

MUNICIPALITIES ACT

SYNOPSIS

1 Introduction 1142
2. Public nuisance created by pollution—Remedies ... 1142
3 The Madhya Pradesh Municipalities Act, 1961 . 1142
4 The Karnataka Municipal Corporation Act, 1976 1143
5 The Rajasthan Municipal Corporation Act, 1959 . 1143
6. The Uttar Pradesh Municipal Corporation Act, 1959 . . 1144
7 Injunction directing Commissioners of Municipality to construct a suitable *pucca* drain 1144
8 Corporation's liability for torts brought about at its instance . 1144
9 Duties of Municipal Commissioner or other executive authority—Act when the prohibitory act a mondatory duty 1145

1. **Introduction.**—Municipal Acts are the first legislations in the country which deal with environmental pollution caused by municipal solid wastes Although, environmental pollution is not dealt with under municipal enactments, the provisions which deal with prevention or suppression of nuisance are generally aimed at combating pollution at the local level.

Some of the provisions of the Municipal Acts relating to solid waste management will be discussed in the preceding paragraphs

2. **Public nuisance created by Pollution—Remedies.**—Public nuisance because of pollutants being discharged by big factories to the detriment of the poorer sections is a challenge to the social justice component of the rule of law. Likewise, the grievous failure of local authorities to provide the basic amenity of public conveniences drives the miserable slum dwellers to ease in the streets, on the sly for a time, and openly thereafter, because under nature's pressure, bashfulness becomes a luxury and dignity a difficult art. A responsible municipal council constituted for the precise pupose of preserving public health and providing better finances cannot run away from its principal duty by pleading financial liability. Decency and dignity are non-negotiable facets of human rights and are a first charge on local self-governing bodies. Similarly, providing drainage system—not prompous and attractive, but in working condition and sufficient to meet the needs of the people—cannot be evaded if the municipality is to justify its existence.

Responsibility of Municipal Council

The various Municipalities Act passed by the State legislatures and rules, regulations and bye-laws made thereunder have also provided for legal control and prevention of water pollution.

3. **The Madhya Pradesh Municipalities Act, 1961.**—A bare study of the statutory provisions makes this position clear. In this regard Sec. 123 of the M.P. Municipalities Act, 1961, is relevant. The relevant. The relevant portions are as under :

> Sec. "**123. Duties of council.**— (1) In addition to the duties imposed upon it by or under this Act or any other enactment for the time being

in force, it shall be the duty of a council to undertake and make reasonable and adequate provision for the following matters within the limits of the Municipality, namely,—

(*a*) * * * *

(*b*) cleaning public street, places and sewers, and all places, not being private property, which are open to the enjoyment of the public whether such places are vested in the council or not, removing noxious vegetation, and abating all public nuisances;

(*c*) disposing of night soil and rubbish and preparation of compost manure from night soil and rubbish.

* * *

4. The Karnataka Municipal Corporation Act, 1976.—

Sec. 58	The watering and cleaning of all public streets and public places in the city and removal of all the sweepings.
Sec. 255	Provision of the removal of filth.
Sec. 256	Public notice ordering removal of the deposit of rubbish and filth.
Sec. 261	Maintenance of establishment for removal of rubbish and filth.

* * *

5. The Rajasthan Municipal Corporation Act, 1959.—

Comments

Preservation of souitation and environment—Duty of Munispality.— Cleaning public streets, places and sewers, and all spaces, not being private property which are open to the enjoyment of the public, whether such spaces are vested in the board or not, removing noxious vegetation and all public nuisances are the primary duties of the Municipality. Furthermore, it provides that it is the primary duty of the Municipal Council to remove filth, rubbish, night-soil, odour or any other noxious offensive matter. The primary duties will have to be performed by the Municipal Board and there cannot be any plea whether the funds are available or not; whether the staff is avilable or not. It is for the Municipality to see how to perform the primary duties and how to raise resources for the performance of that duty. In the performance of primary duty no excuse can be taken and can be directed also as it is primary, mandatory and obligatory duty to perform the same.[1]

Construction of sewers and drains.—The statute imposes a duty upon the Municipal Boards and they are under a statutory obligation to perform such duties enumerated in Sec. 98 of the Act in accordance with the provisions in Chapter IX of the Act relating to drainage. It may be pointed out that the Municipal Board has no discreation in the matter and it which have been imposed upon it and are enumerated in Sec. 98 as primary functions. When the statute imposes a duty, the performance and non-performance of which is not a matter of discretion, then this Court has a power to issue a mandaus directing the local body to do what the statute requires to be done. In these circumstances, it would be proper and reasonable in the present case if the Municipal Board is directed to perform its statutory duties in this respect.

---

[1] L.K. Koolwal *v.* State of Rajasthan, A.I.R. 1988 Raj. 2 at p. 5.

The writ petition is, accordingly, allowed and the Municipal Board, Mandal is directed to remove the water and filth collected in the chowk in Mundara Mohalla, Mandal by the construction of proper sewers and drains, so as to remove the cause of possible nuisance in the locality, within a period of three months. As the Municipal Board has not opposed the writ peitition, the parties are left to bear their own costs [1]

6. The Uttar Pradesh Municipal Corporation Act, 1959.—

Sec. 114	The watering, scavenging and cleaning of all public streets and places in the cities and the remove of all sweeping thereform.
Sec. 115	Making arrangement for preparation of compost manuring from night soil and rubbish.
Sec. 385	Mukhya Nagar Adhikari to provide for cleaning of streets and removal of refuse.
Sec. 440	Licence required for dealing in dairy produce.

* * *

7. Injunction directing Commissioners of Municipality to construct a suitable *pucca* drain.—Injunction is the usual and proper remedy in the case of continuing nuisance. It ought to be granted in some form unless the injury complained of is trivial.The discomfort caused to the plaintiff by the construction of the *pucca* hackney carriage stand in front of his property which has no proper drain or chanel to drain off the urine of the horses with the result that offensive matter drains into and accumulates in a long strip of land in between the *pucca* stand and the plaintiff's land, cannot be said to be trivial. It is accordingly held that injunction in limited form is the proper relief. The Commissioners of Municipality are, therefore, directed to clean and to keep in a reasonably clean state the strip of land in between the hackney carriage stand and the plaintiff's land by providing a suitable *pucca* drain within six months from this date. If they fail to do so the plaintiff will have such a drain constructed and recover the costs thereof from the Commissioners of the Municipality.[2]

8. Corporation's liability for torts brought about at its instance.—The question to be considered is whether the Municipal Council is liable for the act of killing of the plaintiff's dog brought about by its employees who acted at the instance of the Council. A corporation is fictitious and a legal person having an entity in law distinct from its members and by its very nature can only act through its servants or agents, and not in *propria persona*. It is settled law that a Corporation is as much liable in an action on tort as an individual but there are conflicting theories on the legal basis of this liability where the act of the corporation complained of is an *ultra vires* act. Whatever difference

---

1. Rampal *v.* State of Rajasthan, A.I.R. 1981 Raj. 121 at p. 123.
1. Nirmal Chandra Sanyal *v.* Municipal Commissioners, Pabna, A.I.R. 1936 Cal. 707 at p. 710.

of opinion there may be on the question of the abastract legal doctrine as to how far an agent or servant of a corporation can be said to act within the scope of his employment in respect of a tort which is *ultra vires* the corporation. Prof. Salmond is of opinion that the act of the servant of the agent of the corporation is the act of the corporation itself and Prof. Winfield is of the opinion that in any event the corporation is a joint tort-feasor along with the agent or the servant. it is held that the defendnt is liable for the unlawful act of having brought about the destruction of the plaintiff's dog and the fact that the Municipal Council acted in excess of its statutory powers is not defence to the action but is only aggravating circumstance.[1]

9. Duties of Municipal Commissioner or other executive authority-Act when the prohbitory act a mandatory duty.—The Magistrate's responsibility under Sec. 133 Cr. P.C. is to order removal of such nuisance within a time to be fixed in the order. This is a public duty implicit in the public power to be exercised on behalf of the public and pursuant to a public proceeding. Failure to comply with the direction will be visited with a punishment contemplated by Sec. 188, I.P.C. Therefore, the Municipal Commissioner or other executive authority bound by the order under Sec. 133, Cr. P.C. shall obey the direction because disobedience, if it causes obstruction or annoyance or injury to any persons lawfully purusing their emplyment, shall be punished with simple. imprisonment or fine as prescribed in the Section. The offence is aggravated if the disobedience tends to cause danger to human health or safety. The imperative tone of Sec. 133, Cr. P.C. read with the punitive temper of Sec. 188, I.P.C. Makes the prohibitory act a mandatory duty.

Neglect of the Malaria Department of the State of Madhya Pradesh to eliminate mosquitoes, especially with open drains, heaps of dirty, public excretion by humans for want of lavatories and slums nearby, had created on intolerable situation for habitation. An order to abate the nuisance by taking affirmative action on a timebound basis is justified in the circumstances. The nature of the judicial process is not purely adjudicatory nor is it functionally that of an umpire only. Affirmative action to make the remedy effective is of the essence of the right which otherwise becomes sterile. Therefore, the court, armed with the provisions of the two Codes and justified by the obligation under Sec. 123 of the Act, must adventure into positive directions as it has done in the present case Sec. 133 Cr. P.C. autorises the prescription of a time-limit for carrying out the order. The same provision spells out the power to give specific directives. Court finds no reason to disagree with the order of the Magistrate.[2]

CHAPTER XIX

THE POLICE ACT, 1861

SYNOPSIS

1 Introduction . 1146
2 Sec. 30 . 1146
3 Sec 30-A . 1146
4. Sec. 31 1146
5 Sec 32 .. 1147
6 Sec 33 . 1147
7. Sec 34 ... 1147

1. **Introduction.**—The Police Act, 1861 also deals with noise pollution and punishment thereof. The relevant sections are reproduced here as under :

2. **Sec. [1][30. Regulation of public assemblies and processions and licensing of same.**—(1) The District Superintendent or Assistant District Superintendent of Police may, as occasion requires, direct the conduct of all assemblies and processions on the public roads or in the public streets or thoroughfares, and prescribe the routes by which, and the times at which such processions may pass.

(2) He may also, on being satisfied that it is intended by any person or class of persons to convene or collect an assembly in any such road, street or thoroughfare, or to form a procession which would, in the judgment of the Magistrate of the district or of the sub-division of a district, if uncontrolled, be likely to cause a breach of the peace, require by general or special notice that the persons convening or collecting such assembly or directing or promoting such procession shall apply for a licence

(3) On such application being made he may issue a licence specifying the names of the licences and defining the conditions on which alone such assembly or such processionis to be permitted to take place and otherwise giving effect to this section . Provided that no fee shall be charged on the application for, grnt of any such licence.

(4) *Music in the streets.*—He may also regulate the extent to which music may be used in the streets on the occasion of festivals and ceremonies.]

3. **Sec. [2][30-A. Powers with regards to assemblies and processions violating conditions of licence.**—(1) Any Magistrate or District Superintendent of Police or Assistant District Superintendent of the Police or Inspector of Police or any Police Officer in charge of a station may stop any procession which violates the conditions of a licence granted under the last foregoing section, and may order it or any assembly which violates any such conditions as aforesaid to disperse.

(2) Any procession or assembly which neglects or refuses to obey any order given under the last preceding sub-section shall be deemed to be an unlawful assembly.].

4. **Sec. 31. Police to keep order in public roads etc.**—It shall be the duty of the police to keep order on the public roads and in the public streets, thoroughfares, *ghats,* and landing-places, and at all other places of public resort and to prevent obstructions on the occasions of assemblies and processions on the public roads and in the public streets, or in the neighbourhood of places of worship, during the time of public worship, and

---

[1] Subs. by Act 8 of 1895, Sec. 10.

[2] Ins. by Act 8 of 1985, Sec. 11.

in any case when any road, street, thoroughfare, *ghat* or landing-place may be thronged or may be liable to be obstructed.

5. Sec. 32. **Penalty for disobeying orders issued under last three sections, etc.**—Every person opposing or not obeying the orders issued under the last [1][three] preceding sections, or violating the conditions of any licence granted by the District Superintendent or Assistant District Superintendent of Police for the use of music or for the conduct or assemblies and processions, shall be liable, on conviction before a Magistrate, to a fine not exceeding two hundred rupees.

6. Sec. 33. **Saving of control of Magistrate of district.**—Nothing in the last, [2][four] preceding sections shall be deemed to interfere with the general control of the Magistrate of the district over the matters referred to therein.

7. Sec. 34. **Punishment for certain offences on roads, etc.,—Power of police officers.**—Any person who, on any road or in any [3][open place or] street or thoroughfare within the limits of any town to which this section shall be specially extended by the [4][State Government] commits any of the following offences, to the obstruction, inconvenience, annoyance, risk, danger or damage of the [5][residents or passengers] shall on conviction before a Magistrate, be liable to a fine not exceeding fifty rupees or to imprisonment [6][with or without hard labour] not exceeding eight days; and it shall be lawful for any police officer to take into custody, without a warrant, any person who within his view commits any of such offences, namely :

First : Slaughtering cattle, furious riding, etc.—Any person who slaughters any cattle or cleans and carcass; any person who rides or drives any cattle recklessly or furiously, or trains or breaks any horse or other cattle.

Second : Cruelty to animals.—Any person who want only or cruelly beats, abuses or tortures any animal.

Third : Obstructing passengers.—Any person who keeps any cattle or conveyance of any kind standing longer than is required for loading or unloading or for taking up or setting down passengers, or who leaves any conveyance in such a manner as to cause inconvenience or danger to the public.

Fourth : Exposing goods for sale.—Any person who exposes any goods for sale.

Fifth : Throwing dirt into street.—Any person throws or lays down any dirt, filth, rubbish or any stones or building materials, or who constructs any cowshed, stable or the like, or who causes any offensive matter to run from any house, factory, dungheap or the like.

Sixth : being found drunk or riotous.—Any person who wilfully and indecently exposes his person, or any offensive deformity or disease, or commits nuisance by easing himself, or by bathing or washing in any tank or reservoir not being a place set apart for that purpose.

Eight : Neglect to protect dangerous places.—Any person who neglects to fence in or duly to protect any well, tank or other dangerous place or structure.

9 Sec. 20-A . 1152
10 Sec 23 . 1152

1. Introdction.—An Act to make provision for the prevention of adulteration of food relivant provisions of the Act are stated as follows—

2. Sec. (2). Definitions.—

[1][(*i-a*) "adulterated" an article of food shall be deemed to be adulterated—

(*a*) if the article sold by a vendor is not of the nature, substance or quality demanded by the purchaser and is to his prejudice, or is not of the nature, substance or quality which it purports or is represented to be;

(*b*) if the article contains any other substance which affects, or if the article is so processed as to affect injuriously the nature, substance or quality thereof;

(*c*) if any inferior or cheaper substance has been substituted wholly or in part for the article so as to affect injuriously the nature, substance or quality thereof;

(*d*) if any constitutent of the article has been wholly or in part abstracted so as to affect injuriously the nature, substance or quality thereof;

(*e*) if the article had been prepared, packed or kept under insanitary conditions whereby it has become contaminated or injurious to health;

(*f*) if the article consists wholly or in part of any filthy, putried, [2][* * *], rotten, decomposed or diseased animal or vegetable substance or is insect-infested or is otherwise unfit for human consumption;

(*g*) if the article is obtains from a diseased animal;

(*h*) if the article contains any poisonous or other ingredient which renders injurious to health.

(*i*) if the container of the article is composed, whether wholly or in part, of any poisonous or delecterious substance which renders its contents injurious to health;

[3][(*j*) if any colouring matter, other than that prescribed in respect thereof

---

[1] Renumbered by Act 34 of 1976 Sec. 2 as Cl. (i-a).

[2] The word "disgusting" ommitted by Act 34 of 1976, Sec. 2 (w.e.f. 1st April, 1976).

[3] Subs. by Act 34 of 1976, Sec. 2 (w.e.f. 1st April, 1976).

is present in the article, or if the amounts of the prescribed colouring matter which is present in the article are not within the prescribed limits of variability;

(*k*) if the article contains any prohibited preservative or permitted preservative in excess of the prescribed limits;

[1][(*l*) if the quality or purity of the article falls below the prescribed standard or its constituents are present in quantities not within the prescribed limits of variability, which renders it injurious to health;

(*m*) if the quality or purity of the article falls below the prescribed standard or its constituents are present in quantities not within the prescribed limits of variability but which does not render it injurieous to health :

Provided that, where the quality or purity of the article being a primary food has fallen below the prescribed standards of its constituents are present in quantities not within the prescribed limits of variability, in either case, solely due to natural causes and beyond the control of human agency, then, such article shall not be deemed to be adulterated within the meaning of this sub-clause.

* * *

[2][(*v*) "Food" means any article used as food or drink for human consumption other than drugs and water and water and includes,—

(*a*) any article which ordinarily enters into, or is used in the composition or preparation of, human food,

(*b*) any flavouring matter or condiments, and

(*c*) any other article which the Central Government may, having regard to its use, nature, substance or quality declare, by notification in the Official Gazette, as food for the purposes of this Act,]

* * *

3. **Sec. 3. The Central Committee for Food Standards.**—(2) The Committee shall consist of the following members namely :

(*a*) the Director-General, Health Services, *ex officio,*

[3][(*b*) the Director of the Central Food Laboratory or,

(*c*) two experts nominated by the Central Government;

[4][(*d*) one representative each of the Departments of Food and Agriculture in the Central Ministry of Food and Agriculture,

* * *

---

[1] Subs. by Act 34 of 1976, Sec. 2 (w.e.f. 1st April, 1976).

[2] *Ibid.*

[3] Subs. by Act 34 of 1976, Sec. 3 (w.e.f. 1st April, 1976).

[4] *Ibid.*

(*gg*) five representatives nominated by the Central Government to represent the consumers interests, one of whom shall be from the hotel industry;)

(*h*) medical profession nominated by the Indian Council of Medical Research;

(*i*) one representative nominated by the Indian Standards Institution referred to in Cl. (*e*) of Sec. 2 of the Indian Standards Institution (certification marks) Act, 1952 (36 of 1952).

* * *

4. Sec. 5. Prohibition of import of certain articles of food.—No person shall import into India—

(*i*) any adulterated food;

(*ii*) any misbranded food;

(*iii*) any article of food for the import of which a licence is prescribed, except in accordance with the conditions of the licence; and

(*iv*) any article of food in contravention of any other provision of this Act or of any rule made thereunder.

* * *

5. Sec. 7. Prohibitions of manufacture, sale, etc., of certain articles of food.—No person shall himself or by any person on his behalf manufacture for sale, or store, sell or distribute—

(*i*) any adulterated food;

(*ii*) any misbranded food;

(*iii*) any article of food for the sale of which a licence is prescribed, except in accordance with the conditions of the licence;

(*iv*) any article of food the sale of which is for the time being prohibited by the Food (Health) Authority (in the interest of public health;) [1][***]

(*v*) any article of food in contravention of any other provision of this Act or of any rule made thereunder, [2](or)

[2][(*vi*) any adulterant.]

[3][*Explanation.*—For the purposes of this section, a person shall be deemed to store any adulterated food or misbranded food or any article of food referred to in Cl. (*ii*) or Cl. (*iv*) or Cl. (*v*) if he stores such food for the manufacture therefrom of any article of food for sale.]

* * *

---

[1] The wor "or" omitted by Act 34 of 1976, Sec. 6 (w.e.f. 1st April, 1976).

[2] Ins by *ibid.*

[3] *Ibid.*

6. Sec. [1][16. Penalties.— [2][(1) Subject to the provisions of sub-section (1-A), if any person—

(*a*) Whether by himself or by any other person on his behalf, imports into India or manufactures for sale, or stores, sells or distributes any article of food—

(*i*) Which is adulterated within the meaning of sub-clause (*m*) of Cl. (*i-a)* of Sec. 2 or misbranded within the meaning of Cl. (*ix*) of that section or the sale of which is prohibited under any provision of this Act or any rule made thereunder or by an order of the Food (Health) Authority;

(*ii*) Other than an article of food referred to in sub-clause (*i*), in contravention of any of the provisions of this Act or of any rule made thereunder; or

(*b*) Whether by himself or by any other person on his behalf, imports into India or manufactures for sale, or stores sells or distributes any adulterant which is not injurious to health; or

(*c*) prevents a Food Inspector from taking a sample as authorised by this Act; or

(*d*) prevents a Food Inspector from exercising any other power conferred on him by or under this Act; or

(*e*) being a manufacturer of an article of food, has in his possesion, or in any of the premises occupied by him, any adulterant which is not injurious to health; or

(*f*) uses any report of certificate or a test or analysis made by the Director of the Central Food Laboratory or by a public analyst or any extract thereof for the purpose of advertising any article of food; or

(*g*) whether by himself or by any other person on his behalf, gives to the vendor a false warranty in writing in respect of any article of food sold by him,

he shall, in addition to the penalty to which he may be liable under the provisions of Sec. 6, be punishable with imprisonment for a term which shall not be less than six months but which may extend to three years, and with fine which shall not be less than one thousand rupees.

* * *

7. Sec. 16-A. Power of Court to try cases summarily.

* * *

8. Sec. 17. Offences by companies.

* * *

---

[1] Subs. by Act 49 of 1964, Sec. 9 (w.e.f. 1st March, 1965).

[2] Subs. by Act 34 of 1976, Sec. 12 (w.e.f. 1st April, 1976).

9. Sec. 20-A. Power of court to implead manufacturer, etc.

* * *

10. Sec. 23. Power of the Central Government to make rules.—[1][1-A] [2][In particular and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely] :

(*a*) specifying the articles of food or classes of food for the import of which a licence is required and prescribing the form and conditions, of such licence, the authority empowered to issue the same, the fees payable therefor, the deposit of any sum as security for the performance of the conditions of the licence and the circumstances under which such licence or security must be cancelled or forfeited;

(*b*) defining the standards of quality for, and fixing the limits of variability permissible in respect of, any article of food;

* * *

(*g*) defining the conditions of sale or conditions for licence of sale of any article of food in the interest of public health;

* * *

(*l*) prohibiting or regulating the manufacture, transport or sale of any article known to be used as an adulterant of food;

(*m*) prohibiting or regulating—

(*i*) the addition of any water, or other diluent or adulterant to any article of food;

(*ii*) the abstraction of any ingredient from any article of food;

(*iii*) the sale of any article of food to which such addition or from which such abstraction has been made or which has been otherwise artificially treated :

(*iv*) the mixing of two or more articles of food which are similar in nature or appearance;

(*n*) providing for the destruction of such articles of food as are not in accordance with the provisions of this Act or of the rules made thereunder;

1. Introduction.—Pollution Control in India was not unknown as the Indian Penal Code being one of the earliest legislation of the country contains provisions relating to offences affecting the public health, safety, convenience, decency and morals in its Chapter XIV. According to Blackstone, "common nuisances are a species of offence against the public order and economical regimen of the State; being either the doing of a thing to the annoyance of all the King's subjects, or neglecting to do a thing which the common good requires".[1] A nuisance,[2] *nocumentum*, or annoyance, signifies anything that worketh hurt, inconvenience or damage. Nuisances are of two kinds, public or common nuisances, which affect the public, and are an annoyance to all citizens and are, therefore, treated as public wrongs; and private nuisances which are done to hurt or annoyance of the lands, tenements or hereditaments of another.[3] Affecting as they do only a member of the public and not the public generally, they are treated as private wrongs for which the person injured has redress by a civil action, but they are not indictable. Where, however, besides being injurious to a private person, they are also detrimental to the public they are treated as public nuisances, and are then punishable by a public prosecution.[4]

Indian Penal Code 1860 was drafted by First Law Commission of India headed by Lord Maculay. The Chapter 14 of Indian Penal Code, consisting of 28 Sections (Sec. 268 to 294-A), dealing with Public Nuisance. The sole object of including this chapter was to safeguard Public Health, Safety, inconvenience by causing acts which make environment polluted, threaten life of animals and human beings is punishable under the Penal Code. To summarise with all those acts which endanger public, health, safety directly or indirectly has been brought within the perview of this code. The polluter of the environment can be punished under the provisions of the Indian Penal Code for certain types of Pollution.

---

[1] Hawk. P.C. 197, cited in 4 Black. 166.

[2] From Lat. *nocere*, to annoy—something that annoys or gives trouble.

[3] 3 Black, 216.

[4] 1 Hawk., P.C. 198, 225.

Fouling public water, springs, reservoir tanks voluntarily by physical means or contaminoting wells etc., will amount to water pollution.

Voluntarily vitiating atmosphere in any place so as to make air noxious to health, for healthy breathing; or passing such effluents in public way or neighbourhood by running brick-klin, tannery causes Air Pollution.

Interference due to smells, noise, fumes, gas, water, heat, vibrations, smoke, germs, public ceremonies, explosives, substantially causes Environmental pollution. The substantive law for the protection of Indian citizens are governed by principles of "nuisance" which may broadly be classified in 'public nuisance' and 'private nuisance' which are well classified in the Indian Penal Code due to following two reasons; first, in the difference of the remedies and defences applicable to each and secondly, in the fact that a private individual has no right of action in respect of public nuisance unless he can show that he has sustained some special damage over and above that is inflicted on the community at large.

The word "nuisance" is derived from the French word *nuire* and Latin word *Nocere* which means 'to do hurt or to annoy'. Nuisance has been defined to be anything done to the hurt or annoyance of the lands, tenements or hereditament of another. Law of nuisance affords a right to every person to have wholesome air and water. Nuisance is that branch of law which is closely connected with protection of environment.

Environmental pollution in many instances is a question of public nuisance materially affecting the reasonable comfort and convenience of life of a class of people. An individual should prove special or substantial injury by the act of pollution in order to get a standing to sue or to get relief by way of compensation of injunction and so class action may not be possible. The law of nuisance as it exists today, covers water and air pollution and provides some remedy against the hazards of pollution.

Typical nuisance actions concern pollution by oil, noxious fumes, interference with leisure activities, toxic effluents communicated in the air or by noise from railways, aircrafts, industrial installations. In India public nuisance action can be brought before a court either by a civil or by a criminal action. An action for public nuisance can be brought by the Advocate General or with the leave of the Court by two or more persons even though no special damage is caused to such persons.

The important provisions of the Indian Penal Code relating to pollution control with its commentary is given here as under :

2. **Sec. "268. Public nuisance.**—A person is guilty of a public nuisance who does any act or is guilty of an illegal omission which causes any common

injury, danger or annoyance to the public or to the people in general who dwell or occupy property in the vicinity, or which must necessarily cause injury, obstruction, danger or annoyance to persons who may have occasion to use any public right.

> "A common nuisance is not excused on the ground that it causes some convenience or advantage".

3. Sanitation of village.—The *lambardar* of a village, where a fair was annually held, used to make arrangements every year at the time of the fair for the sanitation of the place. In one year he failed to do so, and he was convicted of his offence because of his failure to make the usual arrangements, and because the public roadway had been for several hundred yards covered with foetid matter. It was held that the conviction could not be sustained as there was no legal obligation on the accused to attend to the sanitation.[1]

4. Scope of public nuisance.—Where a riparian owner of land on one bank of a river throws up an embankment on his own land to protect his fields from flood; and this results in accumulation of water on the fields of the owners of land on the other side of the river, it was observed that such cases frequently give rise to litigation in which the parties have their respective rights tried out in the Civil Courts, *i.e.*, ordinarily speaking, the rights of parties in a matter of this kind are considered to be private rights, and the Courts ordinarily deal with them as such. The familiar types of nuisance cases such as a tannery by its stink, or some kinds of machinery by their din, create an annoyance whose intensity increases as one gets nearer to them; it is the nearest neighbours who are most aggrieved. But the people who live or own property nearest to the embankment are not aggrieved at all; they are benefited by protection from flood. The persons aggrieved are persons further off beyond the other, the western bank of the stream. Therefore, an embankment of the kind, in question, even if it tends to cause injury to some owners of property, cannot be described as a public nuisance.[2]

Act not coming within the scope of public nuisance.

5. Common danger.—Either injury, danger or annoyance must be the necessary consequence of the act of the nuisance-feasor. The danger, here spoken of, may arise to the public health or safety in a variety of ways. Some of the more important cases of such danger have been specifically provided for in the Act. Others will be punishable under the more general provisions of Sec. 290. A person fouling the water of a stream by putting into it bundles of stalks of *tur* plants, would be so punishable.[3] The same fate will befall one who makes the atmosphere noxious to health by depositing dust and sweepings on the road in front of his house[4] or keeping on his premises vegetable matter excluding offensive odour to persons using the public street.[5] Of course, this does not apply to the throwing of rubbish into one's own garden, so long as the nuisance does not affect the public or the passers-by.[6]

Common danger.

Negligent blasting in a quarry

6. Blasting of stone.—The negligent blasting of stone in a quarry so as to endanger the safety of persons living in the vicinity is a public indictable nuisance.[1] So the erection of buildings and making fire which set forth noisome, offensive and stinking smokes, and making great quantities of noisome offensive and stinking liquors near to the common highway and near to the dwelling-houses of several of the inhabitants, whereby the air was impregnated with noisome and offensive stink and smells, was held to be a common nuisance.[2] So the steeping of stinking skins in water near the highway and also near several dwelling-houses, was held to be an indictable nuisance.[3] So allowing a building near a highway to be ruinous and dangerous to the public is a common nuisance as it is a danger to the passers-by.[4] All these cases proceed upon the assumption that every one has the right to pure and fresh air.[5]

The "public" contemplated in the section is the general public, and not an individual of particularly refined susceptibilities. So, where a respectable man of 55 years passed urine in a grazing ground *poramboke* under cover of a tamarind tree in a village, it was held that it may be that the habit of promiscuous urination is opposed to the interests of public health, decency and morals, but it would not be itself be sufficient to constitute it a crime. It is common knowledge that in most of the villages there are no public latrines or urinals and it is the usual practice for men to pass urine in public places, of course, without any indecent exposure. And such an act does not cause any annoyance to villagers in general. It may be that the act is likely to cause annoyance to others not injured to such sights; much familiarity has dulled the susceptibilities of people living in villages and in this country generally, and no actual annoyance is likely to be caused to villagers by such an act. It is not likely that a person who is a respectable man of 55 years, would make any indecent exposure of his person while performing the act.[6]

Presumption as to ordinary mode or burial or cremation.

7. Disposal of the dead.—The disposal of corpses by cremation is customary amongst high caste Hindus. It was in vogue amongst the ancient Romans, but with the advent of Christianity cremation gave place to burial as another method of disposing of the dead and the right of Christian burial became the recognised mode of the disposal of human remains, the denial of which is regarded a posthumous punishment analogous to the ex-communication of the living.[7] In this view, the law presumes that, in the case of Christians the ordinary mode of disposal of the dead is by burial, as in the case of Hindus the presumption would be in favour of cremation. But there is nothing illegal in burning the body in the one case, or in burying it in the other, unless the burning or burying is done in a manner so as to amount to a public nuisance.[8] As Stephen, J., remarked : "To burn a dead body in such a place and in such a manner as to annoy persons passing along public roads or

8. Price, 12 Q.B.D. 247 at pp. 254, 255.

other places where they have a right to go is beyond all doubt a nuisance, as nothing more offensive both to sight or to smell can be imagined.[1] The question whether such an act amounts to a nuisance, then depends no less upon the nature and situation of the place, as upon the manner in which it is done.

But the question, whether a cremation ground constitutes a public nuisance depends upon the higher considerations of general convenience or the necessities of the whole community. And it has been accordingly held that when persons entitled to use a particular spot, dedicated for the communal purpose of cremation, use it for that purpose in a manner neither unusual nor calculated to aggravate the inconveniences necessarily incidental to such an act as it is generally performed in this country, they cannot be convicted of a public nuisance on the ground that their act caused material annoyance and discomfort to persons near the place on the occasion referred to.[2] The existence of a burning *ghat* or cremation ground is not in itself a nuisance, if it is one set apart or so used from time immemorial, as if its use was sanctioned by the usage of the community. But, even in such a case, the fact that it is a cremation ground does not excuse a nuisance. If it is in an offensive state or the cremation is carried on upon it in such an offensive manner as to be a source of injury, danger or annoyance to persons living in the vicinity, it is a nuisance, and the Magistrate has jurisdiction to abate it under Sec. 133 of the Criminal Procedure Code.[3] In such a case, it is immaterial whether the cremation ground is public or private.

8. Sec. "269. Negligent act likely to spread infection of disease dangerous to life.—Whoever unlawfully or negligently does any act which is, and which he knows or has reason to believe to be, likely to spread the infection of any disease dangerus to life, shall be punished with imprisonment of either description for a term which may extend to six months, or with fine, or with both".

9. Principle.—It is an essential rule for the preservation of society that no member thereof should jeopardize its existence by any act criminal, unlawful or negligent. Indeed, individual responsibility for its preservation is not the limited by those words, but it is limited by criminal law which enforces it within those limits by its pains and penalties. The offence extends as much to wilful acts as to acts done heedlessly but in presence of the danger thereby threatened to society of which the accused had knowledge or belief. His responsibility will, therefore, vary with his knowledge of the infectious character of the disease. His ignorance of that fact is, then, a sufficient defence, whatever havoc his act may have played on his fellow-beings.

10. Criminal dissemination of infection.—This and the next two sections are intended to avert the great danger to society from the spread of infection. The spread of infection from human intercourse cannot, of course, be altogether prevented by the measure here enacted, but they lay down the limit within which a certain course of action is compulsory, and which is consistent with the underlying principle of criminal law that no one shall be punished

2. Saminadha Pillai, I.L.R. 19 Mad. 464, followed in Muhammad Mohindin *v.* Municipal Commissioners, I.L.R. 25 Mad. 118 at p. 131.
3. Indra Nath Banerjee, I.L.R. 25 Cal. 425.

for what he could not avoid. It has been held a public menace to expose in a public place a human being, or an animal, suffering from disease communicable to man, and it would seem to be a public nuisance to erect near a town or highway, a hospital for infectious disease so as to cause serious risk of infection to persons working or passing near.[1] But on application to restrain the erection of such hospitals for fear of danger, the Courts, having regard to the public convenience of hospitals, will not grant injunctions except in a very clear case; and statutory authority for selection of the particular site would be an answer to an indictment for erection or maintenance of such hospital.[2]

It may be public nuisance to pollute water by trade refuse, or by sewage, or to allow land to be made a shooting ground for filth.[3]

Hale discusses the question, whether if a person infected with the plague should go abroad with intent to infect another, and another be thereby infected and die, it would not be murder by the common law, and seems to consider it as clear, that though where no such intent appears it cannot be murder, yet if another should be affected by an action of such a person it would be a misdemeanour.[4]

The rule with respect to infectious disease is thus laid down by Lord Blackburn[5] :

> "Those who have the charge of a sick person if he is helpless (whether the disease be infectious or not) are at common law under a legal obligation to do, to the best of their ability, what is necessary for the preservation of the sick person, and the sick person if not helpless is bound to do so for his own sake. Where the disease is infectious, there is a legal obligation on the sick person, and on those who have the custody of him, not to do anything that can be avoided, which shall tend to spread the infection ; and if either do so, as by bringing the infected person into public thoroughfare, it is an indictable offence, though it will be a defence to an indictment if it can be shown that there was a sufficient cause to excuse what is *prima facie* wrong".[6]

In *R* v. *Vantandillo*,[7] the defendent was indicted for carrying her child, while infected with small-pox, along a public highway, in which persons were passing, and near to the habitations of the King's subjects. Le Blanc, J., in passing sentence, observed that although the Court had not found upon its records any prosecution for this specific offence, yet there could be no doubt, in point of law, that if anyone unlawfully, injuriously and with full knowledge of the fact, exposes in a public highway a person infected with a contagious disorder, it is a common nuisance to all the subjects and indictable as such.[1]

[7] (1815) 4 M. & S. 73.

Under this section, the elements of criminality are thus present (*i*) in the infectious nature of the disease, (*ii*) its knowledge or belief in the accused, and (*iii*) his precipitating the danger by his unlawful or negligent act.

Disease must be infectious

In the first place, then, the disease must be infectious. In medical science diseases communicated by man to man are spoken of as being either infectious or contagious. The former are those which are communicated through the atmosphere without actual contact and the latter are those which are communicated through the medium of touch. But, in either case, the communication of the disease is by contact, direct or indirect, and the term "infectious" is here used as including all diseases so communicated, whether they be called infectious or contagious. There are a number of diseases about which medical authorities are agreed that they are infectious. There are others which are suspected to be, but have not yet been proved to be infectious. The section deals only with the former and not with the latter.

11. Small-pox.—Infectious diseases have been defined in the Public Health (London) Act, 1891,[2] to include small-pox, cholera, diptheria, membranous croup, erysipelas, the disease known as scarlatina or scarlet fever, and the fevers known by any of the following names, typhus, typhoid, enteric, relapsing, continued or puerperal. The section is confessedly inexhaustive but the diseases named may be taken to be those which are regarded as undoubtedly infectious. As regard small-pox, however, the theory of the aerial convection or dissemination of the disease has not received the unequivocal sanction of medical science.[3] So Fitz-Gibbon, L.J., in a case,[4] remarked : "It seems probable that the dread of small-pox is to a great extent the result of tradition. The scourge of the eighteenth century retains its terror for those who do not realise that it has been deprived of most of its dangers. Vaccination is not only a preventive, but it also modifies the disease." But, though small-pox may not have been proved to be infectious the fact that it is so believed to be and as such held in great terror by the people, is sufficient to render the negligent march of a person suffering from small-pox, through a crowded street as public nuisance, punishable, though not under this section.[5]

12. Plague, cholera and glanders.—In India plague,[6] cholera,[7] and glanders,[8] have been judicially held to be infectious diseases within the meaning of this section. Persons suffering from plague or cholera, having themselves caught the diseases by coming in contact with someone suffering

Spreading infectious disease

from it, may well be presumed to know or believe that they should not travel by train,[1] or tram or hackney carts as, by doing so, they are likely to spread the infection. The accused in a case resided in plague-stricken house in the Ambala Cantonment, and had been in contact with a plague patient. He was taken to the plague shed in company with the patient who died there. The next day, the accused left the shed against orders, and travelled by rail to the neighbouring town of Shahabad, and thence to Karnal. He was held to have committed an offence under this section as he had sufficient reasons to believe that his act was likely to spread the infection of plague, a disease dangerous to life.[2] The same view was taken of the accused in another case who had removed a plague-stricken person to a house where several persons were living, one of who caught the infection.[3] The case would, of course, have been different if the patient had been removed to an unoccupied house or adequate means had been adopted to safeguard the inmates.[4] So, where a person brought a horse infected with glanders into a public place thus creating the danger of spreading the disease, he was held to be guilty of an indictable offence.[5]

Accused's knowledge or belief.

The question whether the accused knew or believed that this act was likely to spread the infection is one of fact dependent upon many circumstances. The knowledge of the infectious character of an infectious disease would, as a matter of course be assumed in a medical man. But it cannot be assumed in the case of any other man. For, there is no presumption that every one knows that diseases are infectious. It is indeed a subject upon which in many cases, even doctors disagree. Take, for instance, the case of plague. Approved medical testimony is doubtful as to its infectious character. That it is contagious admits, however, of no doubt. In the decided cases the Courts do not appear to have observed any distinction between contagious and infectious, and diseases that are contagious are necessarily regarded as infectious. So in Madras the accused Krishnappa was fined for travelling by train while suffering from cholera, and his companion Murugappa was similarly convicted of abetting him by purchasing his ticket and accompanying him.[6]

Act must be done unlawfully or negligently.

The question, then, whether an act is or is not done negligently must depend upon the nature of the act done, and the amount of care which was, under the circumstances, necessary. A person suffering from infectious disease may not be negligent in taking his stroll leisurely in a lonely place. But he would be clearly negligent if he did the same in a crowded fair. The measure of diligence necessary in such cases is, then, the care required

reasonably to safeguard other persons from the danger of contagion. The act may be done either negligently or unlawfully. The word "unlawfully" has not been defined in the Code though the word "illegal" has been.

"Unlawfully" defined.

There are, indeed, several sections of the Code in which the two terms have been used indiscriminately. An act, however, may be lawful though it may be illegal; and an act may be "unlawful" though not illegal.[1] Lord Ellenborough, C.J., speaking of such offences referred to the act as done *unlawfully* and *injuriously*,[2] which words he said precluded all legal cause or excuse.[3] The word "unlawfully" would, then, appear to mean inexcusably or unjustifiably, and not necessary illegally in the sense in which that term has been defined in Sec. 43. A person whose act necessarily exposes the public to the risk of contagion would be deemed to have done that act unlawfully. But the mere omission to fulfil the dictates of one's moral duty is not unlawful. Where, therefore, the mother of a child suffering from small-pox refused to part with her child, who had been ordered by the Magistrate to be removed to a hospital, and was convicted under this section, the High Court in quashing the conviction observed that the accused's act in opposing the removal could not be held to be unlawful or negligent within the meaning of this section, as indeed, "it may well be said that the carrying of a patient through a public street would be more risky to the public than keeping her in a private house".[4]

Spreading the disease is an offence.

13. **Syphilis and gonorrhoea.**—Syphilis and gonorrhoea are contagious diseases and the question has arisen whether a prostitute, who, while suffering from syphilis, communicates the disease to a person, who has sexual intercourse with her, can be convicted under the section "for a negligent act and one likely to spread infection of any disease dangerous to life". In the view of West, J., she could not be convicted under this section, though she might be of cheating if the intercourse was induced by misrepresentation on the part of diseased person. The accused's act of sexual intercourse would not spread infection without the intervention of the complaining party, himself a responsible person, and himself generally an accomplice.[5] But it is submitted that there is a fallacy in this reasoning. In the first place, it is scarcely correct to describe the complainant as an accomplice. He was *ex-hypothesi* ignorant of the disease and the communication of the infectious disease to him *did* spread the infection to him within the meaning of the section. The act was, to say the least, negligent, and it, therefore, amounted to an offence under this section. Indeed, this is in accordance with the view of Lord Hale,[6] and the case is not unlike one in which the accused, an apothecary, having inoculated children, while they were suffering from small-pox, allowed them to be carried along the public street. Lord Ellenborough, C.J., said that the charge laid would be made out if it was shown that what was done was in the manner of doing it, incautious, and likely to affect the

health of others.[1] This case is, of course, no authority for condemning inoculation altogether. It is, indeed, a useful prophylactic against certain diseases, but it must be done by a qualified man in a proper manner.[2] If it is done negligently, so that it has the effect contrary to what are its avowed virtues, the inoculator would be justifiably convicted under this section.[3]

The question of criminal liability for communicating venereal diseases is discussed at length in *R.* v. *Clarence*,[3] :

14. Sec. "270. **Malignant act likely to spread infection of diseases dangerous to life.**— Whoever malignantly does any act which is, and which he knows or has reason to believe to be, likely to spread the infection of any disease dangerous to life, shall be punished with imprisonment of either description for a term which may extend to two years, or with fine, or with both".

Maliciously causing infections

15. **Principle.**—In this case the act of the accused is "malignant" or malicious, otherwise his act is the same as that punishable under the provisions of the last section. It is comparatively easy to conceive of an unlawful or negligent act disseminating infection, but it may not always be possible to trace an act to a malignant origin. Indeed, if it could be unmistakably traced, the case would then be one of homicide and not mere nuisance under this section. As the Law Commissioners observed : "If any person died of plague, and his death could be traced to infection so caused maliciously, the person who caused it would be chargeable with homicide."[5] On the other hand, it is contrary to the principles of the Code to punish acts which the doer, when he committed them, knew to be likely to cause certain results, if in fact, such results were not produced in the same manner as if such evil consequences had actually followed from them.[6]

Scope

This section is then intended to deal with those intermediate cases in which the malignant act is not the proximate cause of death, but at the same time it is ultimately traceable to it. The difference between the one case and the other would be one of degree and not of kind.

* * *

16. Sec. "277. **Fouling water of public spring or reservoir.**—Whoever voluntarily corrupts or fouls the water of any public spring or reservoir, so as to render it less fit for the purpose for which it is ordinarily used, shall be punished with imprisonment of either description for a term which may extend to three months, or with fine which may extend to five hundred rupees, or with both".

17. **Principle.**—The water of a public spring or reservoir is *res communiae* to which every one has a right in common. Its ownership may be said to have been jointly vested in the public, for it is for their joint use and benefit that it exists. No one should, therefore, disturb its public enjoyment by an act inconsistent with its beneficial use. Such an act is actionable as a private

[6] *Ibid.*

nuisance, but, when it fulfils the requirements of the section, it constitutes a public nuisance for which the section prescribes a punishment.

18. Fouling water of public spring.—As stated in the preceding paragraph, it is a public nuisance to voluntarily foul the water of a public spring or reservoir, so as to render it less fit for its ordinary use. Three things are, then essential to constitute this nuisance : (*i*) the act must be voluntary, (*ii*) it must relate to a public spring or reservoir, and (*iii*) it must foul the water to the extent of contaminating it.

(*i*) Act must be voluntary.

If the act was not voluntary, the accused cannot be convicted whatever may be the consequence. Now, a person is said to cause an effect voluntarily when he causes it by means whereby he intended to cause it, or by means which, at the time of employing those means, he knew or had reason to believe to be likely to cause it.[1] Intention and knowledge that the act done will foul the water, is then, essential. It must be, at least, prominently present in the mind of the accused, if it was not indeed his primary object. The fact that a certain act is followed by a certain result is not sufficient, for the act may have been prompted by any other intention, and the knowledge of the effect may be wanting. For instance, it cannot be held to be a nuisance under this section if a person bathes in a tank not set apart by any lawful order for bathing purposes,[2] unless the accused was aware that its water was used for drinking purpose, and that the bathing will necessarily foul it.[3] So, while merely angling in a tank, the water of which is used for drinking purposes, is not such a nuisance, it may become a nuisance if the bait used is of a foul kind,[4] or the fishing is done with basket nets which rake up the mud and so render the water less fit for drinking purposes.[5] But the practice of catching fish in tanks in villages where the water is low in the hot weather is almost universal and a person accused of rendering the tank water unfit for use by fishing in it has a good defence in setting up and proving the practice. Cultivating paddy in the bed of a tank, the water of which was used as of right by the public for drinking purposes, would be a nuisance punishable under this section, as it would necessarily lead to the contamination of water so as to render it the less drinkable.[6] In all these cases, the act was deemed to be "voluntary" because the accused could not but have foreseen the evil result of his action.

But, where a man acts negligently and the evil consequence is conceivable but not apparent, his act cannot be said to have been done voluntarily within the meaning of this section. Such was the case of a dog-killer who buried the carcass of a dog in the bed of a public river near a town, the water of which was used by the people for household purposes, but the accused was acquitted because the Court held a river to be neither a spring nor a reservoir within the meaning of the section.[7] The fact that an act is done on purpose does not make it an offence, unless the purpose was to render water less fit for the purpose for which it is ordinarily used. A person bathing, fishing, or navigating in a river may do so on purpose, but his object may be to exercise his public right without detriment to the water used by him, or he may consider the fouling so temporary and insignificant as not to imperil the right of the public to its use. The nuisance which the section punishes is one which is in the nature of mischief, the object of which is to inconvenience those who draw their supply of water from a public spring or reservoir.

(ii) Public spring or reservoir

This raises the next question. For a nuisance to be public, it must relate to a public spring or reservoir. A well,[1] is an example of a spring, and a tank or a cistern is an example of a reservoir. A river is, however, neither a spring nor a reservoir so that the section cannot apply to it,[2] or even to stagnant pools formed therein, which are not "springs" nor can they be reservoirs.[3] The later term conveys the sense of an artificial pool or lake from which pipes convey water to a town. In its extended sense it would include a tank or cistern from which water is drawn, but would it include a canal which is an artificial water course ? Probably not, if its water is not stagnant, but flowing. If it is stagnant, a canal may become a reservoir and it would, then, be treated as such.

So an open channel of water used for drinking purposes would probably be similarly construed. But the question whether a river or a canal is a "spring or reservoir" has only a limited bearing on the question, for, if it cannot be so regarded, it does not necessarily follow that the nuisance-feasor cannot be reached under the more general provisions of Sec. 290, if the act was such as to cause common injury or danger to the public.[4]

The term "public" as used in connection with the "spring or reservoir" has not been defined. In ordinary parlance, a place is said to be public, if it is a *res publicae*, but the term is also applied to a place where the public have a right to go. As Grove, J., remarked in a case cited before : "A public place is one where the public go, no matter whether they have a right to go or not. The right is not the question."[5] It was held in *Ram Karan Lal v. Emperor*,[6] that a place is a public place if people are allowed access to it, though there may be no legal right to it. So, a well is a public well, if people are allowed to use its water. But in a Patna case,[7] where the complainant claimed a well to be her private well, Choudhury, J., of the Patna High Court, held that the well was not a public well, even though some of the neighbours were permitted to draw water from the well, because "there is nothing to show that they have been using the water of this well by right which one has got in a public well". Considering the case of *Reg.* v. *Wellard*,[1] his Lordship further observed that "that case cannot be taken as an authority for the proposition that as a general rule, a place is a public place if people are allowed access to it, though they may have no legal right to it". It must, however, be noted that in the Patna case the complainant herself claimed the well to be her private well, and that was enough to hold that Sec. 277 could not apply to the case, without going into the question whether the well was public or not. The offence depends upon considerations of public health, and no one, because he is the owner of a spring, can foul it to injure the public health. He may ban its use by the public, but so long as the public are allowed access to it, there remains the legal obligation implied by the section.

(*iii*) Fouling necessary

Thirdly, the act must "corrupt" or "foul" the water, so as to render it less fit for the purpose for which it is ordinarily used. The words "corrupt" or "foul" are here used in their normal etymological sense as meaning rendering putrid, filthy, turbid or muddy, as against their figurative sense as rendering it unholy, as by the touch of a person of a low caste.[2] A person of low caste who draws water from a public well cannot, therefore, be said to corrupt or foul the water within the meaning of this section.[3]

Fouling water.

The water may be corrupted or fouled in a variety of ways. A person may foul water by spitting,[4] or by watering or washing cattle, or by washing himself or his clothes therein.[5] He may deposit rubbish therein, or sow waternuts or other aquatic plants which have necessarily the effect of corrupting and fouling it. He may strew branches of trees for fishing purposes and thus cause their putrefaction.[6] He may bathe or throw corpses therein, or he may extract its lime and mud for manuring purposes, and thus make it fouled and muddy. The section is not confined to fouling water as affecting human health. Any fouling, interfering with its purity, is enough to bring the offender within the penal visitation of this section. And the section is not confined only to water used for drinking purposes. A tank reserved for the bathing of men cannot be used for washing cattle. A tank reserved for the drinking of cattle cannot be used for wallowing buffaloes. The purposes for which it was ordinarily used must not be defeated by an act which fouls the water and has that effect.

19. Degree of fouling immaterial.—As the section is worded, the degree of fouling is immaterial. The offence is complete, if the act renders it less fit for the purpose for which the water is ordinarily used. So, where a person spat into a public well the water of which was used for drinking purpose, he was held to have been rightly convicted of this offence, since it rendered the water less fit for drinking purposes.[7]

20. Procedure.—This offence is cognizable, but summons should ordinarily issue in the first instance. It is bailable but not compoundable, and is triable by any Magistrate and summarily.

---

1. (1885) 14 Q.B.D. 63.
2. "Corrupt"—from Lat. *cor.* together and *umpo* to break-lit., to charge from a sound to a putrid or puttrescent state, to cause to rot; *figuratively* it means to deprave, defile, impair or desecrate, "Foul"—from Lat. Skr. *puteo, puy,* to be putrid. The two words primarily thus convey a similar sense—the sense in which they have been used in the section.

21. Sec. "278. Making atmosphere noxious to health.—Whoever voluntarily vitiates the atmosphere in any place so as to make it noxious to the health of persons in general dwelling or carrying on business in the neighbourhood or passing along a public way, shall be punished with fine which may extend to five hundred rupees".

Nuisance, setting of a noxious trade.

22. Vitiating atmosphere.—This section applies to trades producing noxious and offensive smells, such as, making candles in a town by boiling stinking stuff,[1] a manufactory for making spirit of sulphur, vitriol and *aqua fortis*,[2] or a tannery where skins are steeped in water by which the neighbouring air is vitiated.[3] So, it is apprehended, would be the burning of bricks or lime in a kiln the smoke from which is peculiarly noxious. The setting up of a noxious trade in the proximity of a populated locality is always a nuisance. But in this connection a question often arises is the carrying on of such a trade in the neighbourhood of other similar establishments justifiable, and is the fact that it has been suffered for long any defence to an indictment ? As to the former, it was held that a person who set up a noxious trade in the neighbourhood of other similar manufactories, which emitted noxious smells, could not be indicted unless the annoyance was materially increased by the new addition.[4] As to the latter, it was laid down in the same case,[5] that the fact that a noxious trade has been carried on for fifty years would be a good defence to an indictment for causing a public nuisance. But this case is not reconcilable with the view that the right to nuisance cannot be acquired by prescription.[6]

Old nuisances

But the Courts have discriminated between a nuisance created for the first time in a neighbourhood and a nuisance of long standing before the neighbourhood became populated. If a noxious trade is established in a place remote from human habitation and public roads, and persons afterwards come and build houses within the reach of its noxious trade, or new roads are laid out in its neighbourhood, the new arrivals cannot put an end to the trade by complaining its nuisance, for, in such a case, the nuisance did not go to them, they went to the nuisance.[7] However, in an Ajmer case,[8] the opposite opinion has been expressed. At any rate, the new arrivals can complain if the nuisance has since increased, and, if it has thereby occasioned more inconvenience. So in an indictment for carrying on the business of a horse-boiler, it appeared that the trade had been carried on before the defendant set up the business. It was urged for him that the neighbourhood was full of horse-boilers and other noxious trades, and evidence was given of the trade being carried on in an improved manner. Lord Tenterden observed that the trade was a nuisance but, considering that the neighbourhood had always been occupied by the trade, it would not be a nuisance unless it occasioned more inconvenience.[9]

Foul smells.

Another question, whether a person has a right to substitute a smell of one kind by a smell of another kind due to a change in the process of manufacture, is suggested by a case in which, the plaintiff, a riparian owner, questioned the right of the defendant to pollute his stream, by letting into his river the waste from his paper mills of a new material called *esparto*, a spanish grass, which he had substituted for rags, from which he had been formerly making paper, and the waste of which he had a right to shoot into the river. It was held that the right possessed by the defendant was not to foul the stream by discharging into it the refuse of his mill, whether it be refuse of rag or grass, and that the question at issue was whether the change in the material had increased the pollution.[1]

A nuisance of this description has sometimes to be tolerated because it has been sanctioned by the Legislature. Such is the nuisance of smoke and smell from locomotive steam-engines on the railway. But even in such cases, it is the duty of a company laying out a line to pay due consideration to the protests of the people, but once the line is ready, the nuisance, if any, would have to be tolerated.[2]

The accused was convicted under this section for performing the office of nature in front of his door-step in a public street, but his conviction was reversed,[3] presumably because there was no proof that the atmosphere was thereby vitiated.

23. **"Noxious to the health of persons in general".**—The words "noxious to the health of persons in general" dwelling in the neighbourhood are important as they exclude sectarian prejudices, and only appeal to the general sentiment of the neighbours, regardless of caste or creed. Section 278 is directed against a public nuisance and not a private nuisance. Where the petitioner out of malice threw a human skull into the house of the complainant, and the skull was in a highly offensive condition, it was held that the petitioner could not be convicted under this section.[4] The setting up of a slaughter-house may be strenuously objected to by high cast Hindus, but it is not *per se* an offence under this section, unless it is a nuisance under Sec. 268, or emits noxious smells, in which case, it would be a nuisance punishable under this section.

* * *

24. **Sec. "284. Negligent conduct with respect to poisonous substance.**—Whoever does, with any poisonous substance, any act in a manner so rash or negligent as to endanger human life, or to be likely to cause hurt or injury to any person,

or knowingly or negligently omits to take such order with any posionous substance in his possession as is sufficient to guard against any probable danger to human life from such poisonous substance,

shall be punished with imprisonment of either description for a term which may extend to six months, or with fine which may extend to one thousand rupees, or with both".

25. Principle.—This section furnishes another instance of an offence the principal ingredient of which is negligent act or omission, the object aimed at being the same protecting people from danger, hurt or injury from substances which are naturally dangerous. It will be noticed that all the three sections bearing on the subject are divided into three clauses. The first clause deals with a rash or negligent act, while the second clause deals with a conscious or negligent omission. In the former case, the substance may be or may not be in the accused's possession; in the latter case, the substance must be in his possession, and consequently, he is necessarily called upon to exercise greater vigilance. In the first case, therefore, he cannot be charged for an omission, but in the second case his responsibility being undivided he may be charged both with an act under the first clause and omission under the second clause. In short, a person in possession of a poisonous substance may as much be charged for a rash or negligent act as for a mere negligent omission, but a person not in possession cannot be charged for a mere omission, however negligent. Again the commencing period of liability in each case varies. In the first case, there is not liability until the accused does some act; in the second case, his liability commences with and continues during his possession. Lastly, the quantum of diligence required in each case also varies with possession. In the one case, the act must be regulated to guard against not only danger to human life, but also the probable hurt or injury to any person. In the other case, the measure of diligence is the probability of danger to human life. The third clause lays down the punishment which is the same in all the three sections.

Quantum of diligence

26. Nuisance with respect to poisons.—In order to sustain a conviction under this section, the first thing to enquire is Was the accused in possession of the poison, or was he not in possession ? If he was not in possession the next question is comparatively a simple one : What was his act and was it so "rash or negligent as to endanger human life or to be likely to cause hurt or injury to any person" ?

In the second case, that is, if he was in possession of the poison it is, sufficient to sustain a conviction that he had omitted to take such order with it as is sufficient to guard against any probable danger to human life from such substance. It is not necessary that the negligent omission here punishable should be followed by any disastrous consequences. Where such consequence does ensue, it is of course an aggravating circumstance, but the offence remains the same so long as the consequence is traceable to nothing more than culpable negligence. The accused, a police sergeant at Ludhiana, took over a desk containing poisonous powders, and other powders, which might be easily mistaken one for the other, without taking any precaution whatever to guard against this misuse of the poison, and the only order he took with the poison subsequently was to hand over the key of the receptacle in which the poisonous powders were kept to a subordinate official, who, by mistake, issued some of the poisonous powders to a Deputy Inspector suffering from fever, who took one of the powders and died. It was held that on the above facts a conviction under this section was sustainable, but that such conviction did not attribute to the accused's criminal responsibility for death of the Deputy Inspector as being the result of his negligence.[1] This case is not unlike that of the chemist's assistant who delivered laudanum in a phial with a paregoric label to a customer who had come to purchase a penny worth of paregoric. The mother of a child, for whom the medicine was sent, gave six or seven drops of the contents of the phial supposing it to contain paregoric, and the child died. The laudanum and the paregoric bottles had stood side by side in the shop. The assistant being indicted, Baley, J., told the jury : "If you think there was negligence on the part of the prisoner, you will find him guilty; if not you must acquit him".[1]

---

[1] Hosein Beig, (1882) P.R. No. 16.

27. **Hurt or injury to the accused.**—It has been stated that the language of this section generally corresponds with that used in Secs. 285 and 286. In one particular, however, the language of this section is different, for, while Secs. 285 and 286 speak of injury to any *other* person, this section speaks of injury to *any* person, from which it may be inferred that in case of poisons a person may be convicted of negligently injuring himself. It is, however, doubtful if this was really the intention of the Legislature.

28. **Sec. "285. Negligent conduct with respect to fire or combustible matter.**—Whoever does, with fire or any combustible matter, any act so rashly or negligently as to endanger human life, or to be likely to cause hurt or injury to any other person,

or knowingly or negligently omits to take such order with any fire or any combustible matter in his possession as is sufficient to guard against any probable danger to human life from such fire or combustible matter,

shall be punished with imprisonment of either description for a term which may extend to six months, or with fine which may extend to one thousand rupees, or with both".

29. **Nuisance by fire.**—This section deals with a public nuisance by fire or any combustible matter. Matter is combustible if it is inflammable or capable of taking fire. A combustible thing must be distinguished from an explosive, in that the latter is not only combustible but it also instantly bursts and expands with force and noise. Thus, straw and dry leaves are combustible, while gun-powder and dynamite are explosives. But whether the nuisance be by a combustible matter or by an explosive, the penalty in each case is the same—only the accused would, in the one case, be punishable under this section while in the other case he would be more appropriately punishable under the provisions of the next section.

Adverting now to the terms of this section, it will be observed that it makes the same difference between combustibles in possession and those not in possession. In the one case a person may be punished for a mere omission if it is negligent, while in the other case no one can be punished for an omission, howmuchsoever negligent.

Act of smoking results in fire; criminal liability.

The two clauses are not, however, mutually exclusive and exhaustive. For, it is conceivable that a person may be guilty of an act as well as an omission. Such, for instance, would be the case where the owner of a thatched hut surrounded by other thatched huts was in the habit of lighting a fire or leaving it burning when he could have seen that the hut might catch fire any day and that it would then cause a general conflagration in the village. But a person merely smoking in such a hut could not be deemed to be so negligent as to bring himself within the penalties of this section, if a spark from his pipe escapes and sets fire to the roof. The danger in such a case was too remote and the act could not, therefore, be said to be done negligently so as to endanger human life. It is impossible to lay down a general rule as to what degree of diligence will suffice in each case. It must depend upon the circumstances. A person may safely cook his meal under his thatch when there is no wind, but he is likely to set it on fire if he lights a fire when a high wind is blowing. Even the season of the year may make all the difference. The circumspection required in the hot weather is necessarily greater than what is called for in the rains. A person marching through a forest may light his cigarette but, if he throws away the lighted match-stick, he may set the whole forest ablaze and thus cause general conflagration and widespread injury.

---

[1] Tessymond's case, 1 Lew 169.

The proximity of naked fire to the stores of turpentine and varnish is always a matter of probable danger to human life, namely, the life of the persons working in the room. This was particularly so with respect to turpentine which has a low flash point, *i.e.*, 76° F to 110° F. The use of naked fire could in conceivable circumstances even raise the temperature of the room itself above the flash point of turpentine and if the turpentine ever happened to be exposed it might easily catch fire.[1]

Arson

Where the act is attributable to something more than a mere negligence or omission, the act of the accused would constitute the graver crime of arson, for which he would be punishable under the provisions of Secs. 435 and 436. Such was the case of the irate husband who, having had a quarrel with his wife about some rice, smashed the crockery, and then went out and set fire to his house, thereby causing risk of injury to the neighbouring houses, but doing no actual mischief. It was held that the act being wilful and not merely rash or negligent, the only section appropriate to his case was Sec. 436 and not this section.[2]

* * *

30. Sec. "286. Negligent conduct with respect to explosive substance.—Whoever does, with any explosive substance, any act so rashly or negligently as to endanger human life, or to be likely to cause hurt or injury to any other person,

or knowingly or negligently omits to take such order with any explosive substance in his possession as is sufficient to guard against any probable danger to human life from that substance,

shall be punished with imprisonment of either description for a term which may extend to six months, or with fine which may extend to one thousand rupees, or with both".

31. Explosive substance; definition of.—This section does not define an "explosive substance" but the Explosive Act[3] defines it as follows :

---

[1] Kurban Hussein Mohammed Ali Rangawalla *v.* State of Maharashtra, A.I.R. 1965 S.C. 1616 at p 1619.

[2] Hari, (1877) B.H.C.R. (Cr. C.) 126.

[3] Act IV of 1884.

> "4. (1) Explosive (*a*) means gun-powder, nitro-glycerine, dynamite, gun-cotton, blasting powders, fulminate of mercury or of other metals, coloured fires, and every other substance, whether similar to those above-mentioned or not, used or manufactured with a view to produce a practical effect, by explosion, or a pyrotechnic effect; and (*b*) includes fog signals, fireworks, fuses, rockets, percussion caps, detonators, cartridges, ammunition of all descriptions, and every adaptation or preparation of an explosive as above defined".

This Act makes elaborate provisions for the custody and transport of explosives.

32. Nuisance by an explosive.—The provisions of this section are closely analogous to the English rule of common law, under which the erection of gunpowder mills or keeping gun-powder magazines, near a town is a nuisance for which an indictment or information will lie.[1] So in several cases in which the accused were indicted for keeping great quantities of gun-powder near certain buildings, or for depositing in a populous neighbourhood an explosive fluid called wood naphta, it was held that the charge was good. Though it did not state that the substance emitted any noxious odour or effluvia so as to do any harm, yet the offence was complete because to deposit a substance of such a nature in such large quantities was in itself a danger to life and property. But "the substance must be of such a nature and kept in such large quantities and under such local circumstances as to create real danger to life and property. The well-founded apprehensions of danger, which would alarm men of steady nerves and reasonable courage passing through the street in which the house stands, or residing in adjoining houses, is enough to show that something has been done which the law ought to prevent by pronouncing it a misdemeanour".[2]

Petroleum.

In England,[3] as in this country,[4] the subject of explosive has been elaborately dealt with by the Act bearing that name. Petroleum is not an explosive, but it is almost as dangerous and the Legislature has consequently made special provisions for its carriage and storage.[5] A gun or revolver, though it uses a cartridge which is an explosive, does not thereby become an explosive substance itself.[6] An Assistant Collector left a loaded six chambered revolver upon his office box on the platform of a railway station, while he went into the station-master's room to change his clothes. His peon took up the revolver and, as he apparently did not know how to handle it, one chamber went off wounding a police constable, who was standing near, in the leg. He was convicted under this section, but his conviction was quashed by the High Court on the ground that a revolver is not an explosive substance, though it was added that, if there had been evidence of rashness or negligence, the accused could have been convicted under Sec. 337.[7]

Gun or revolver.

CHAPTER XXII

SPECIFIC RELIEF ACT, 1963

(ACT NO. 47 OF 1963)

SYNOPSIS

1 Introduction to perpetual injunctions . 1172
2 Sec 36 1172
3 Sec. 37 . 1172
4. Sec 38 1172
5 Sec. 39 . 1173
6 Sec 40 .. 1173
7 Sec 41 1173
8 Sec 42 . . 1174

1. Introduction to perpetual injunctions.—These types of injunctions are governed by the provisions of Secs. 37 to 42 of the Specific Relief Act of 1963 The purpose of perpetual injunction is to permanently restrain the defendant from doing the act complained of; protect the plaintiff indefinitely and disband successive actions in respect of every infringement. A perpetual inunction will generally be granted in cases where a strong probability of grave damage to plaintiff accrues and where damages would not be an adequate remedy. The test of balance of convenience also applies in the award of permanent injunctions considering the relative consequences which will result to the parties from grant or denial of such injunction. The consideration of good faith or intentional misconduct of the parties and the public interest in computed to acess the damages. This mode of injunctive relief, however, is more effective in abating pollution.

In Part III of Specific Relief Act under the topic Preventive Relief under Chapter VII specifically provides for Injunctions Generally.

2. Sec. "36. Preventive relief how granted.—Preventive relief is granted at the discretion of the Court by injunction, temporary or perpetual".

3. Sec. "37. Temporary and perpetual injunction.—(1) Temporary injunctions are such as are to continue until a specified time, or until the further order of the Court, and they may be granted at any stage of a suit, and are règulated by the Code of Civil Procedure, 1908.

(2) A perpetual injunction can only be granted by the decree made at the hearing and upon the merits of the suit; the defendant is thereby perpetually enjoined from the assertion of a right, or from the commission of an act, which would be contrary to the rights of the plaintiff".

Chapter VIII of Specific Relief Act deals in Perpetual Injunctions.

4. Sec. "38. Perpetual injunction when granted.—(1) Subject to the other provisions contained in or referred to by this Chapter, a perpetual injunction may be granted to the plaintiff to prevent the breach of an obligation existing in his favour, whether expressly or by implication.

(2) When any such obligation arises from contract, the Court shall be guided by the rules and provisions contained in Chapter II.

(3) When the defendant invades or threatens to invade the plaintiff's right to, or enjoyment of property, the Court may grant a perpetual injunction in the following cases, namely :

(*a*) where the defendant is trustee of the property for the plaintiff;

(*b*) where there exists no standard for ascertaining the actual damage caused, or likely to be caused, by the invasion;

(*c*) where the invasion is such that compensation in money would not afford adequate relief;

(*d*) where the injunction is necessary to prevent a multiplicity of judicial proceedings".

5. Sec. "39. Mandatory injunctions.—When, to prevent the breach of an obligation, it is necessary to compel the performance of certain acts which the Court is capable of enforcing, the Court may in its discretion grant an injunction to prevent breach complained of, and also to compel performance of the requisite acts".

6. Sec. "40. Damages in lieu of, or in addition to, injunction.—(1) The plaintiff in a suit for perpetual injunction under Sec.38, or mandatory injunction under Sec. 39, may claim damages either in the addition to, or in substitution for such injunction and the Court may, if it thinks fit, award such damages.

(2) No relief for damages shall be granted under this section unless the plaintiff has claimed such relief in his plaint :

Provided that where no such damages have been claimed in the plaint, the Court shall, at any stage of the proceedings, allow the plaintiff to amend the plaint on such terms as may be just for including such claim.

(3) The dismissal of a suit to prevent the breach of an obligation existing in favour of the plaintiff shall bar his right to sue for damages for such breach.

7. Sec. "41. Injunction when refused.—An injunction cannot be granted.—

(*a*) to restrain any person from prosecuting a judicial proceeding pending at the institution of the suit in which the injunction is sought, unless such restraint is necessary to prevent a multiplicity of proceedings;

(*b*) to restrain any person from instituting or prosecuting any proceeding in a court not subordinate to that from which the injunction is sought;

(*c*) to restrain any person from applying to any legislative body;

(*d*) to restrain any person from instituting or prosecuting any proceeding in a criminal matter;

(*e*) to prevent the breach of a contract the performance of which would not be specifically enforced;

(*f*) to prevent, on the ground of nuisance, an act of which it is not reasonably clear that it will be a nuisance;

(*g*) to prevent a continuing breach in which the plaintiff has acquiesced;

(*h*) when equally efficacious relief can certainly be obtained by any other usual mode of proceeding except in case of breach of trust;

(*i*) when the conduct of the plaintiff or his agents has been such as to disentitle him to the assistance of the Court;

(*f*) when the plaintiff has no personal interest in the matter".

8. Sec. "**42. Injunction to perform negative agreement.**—Notwithstanding anything contained in Cl. (*e*) of Sec. 41 where a contract comprises an affirmative agreement to do a certain act, coupled with a negative agreement, express or implied, not to do a certain act, the circumstances that the Court is unable to compel specific performance of the affirmative agreement shall not preclude it from granting an injunction to perform the negative agreement :

Provided that the plaintiff has not failed to perform the contract so far as it is binding on him".

1. Pollution problems.—India is vast country with diverse climate, topographical and hydrological characteristics from region to region.

The problem of water pollution due to discharge of industrial waste has already become a serious problem in the country. With the increase of industrialisation most of the natural water sources have become polluted. The considerable degradation of raw water sources projects adverse effects on the quality of water and subsequently its utility at downstream.

2. (*i*) **Major sources of water pollution.**—

A—**Domestic Sewage**	*B*— **Industrial waste water**
1. Residences	1. Pulp and Paper Industry
2. Hotels	2 Distillery
3. Institutions	3. Refinery
4. Offices	4. Tannery

Almost all the industrial areas of India have thus become the main figure of pollution problems. At present there are more than 100 industries which are located between Bombay and Kalyan alone; whereas hundreds more are located within Greater Bombay itself. The industries in the seaward areas of Bombay city are direct discharging untreated wastes into the sewers, while those waters are not in sewered areas one discharging sewage finally into the sea, creeks or into other watercourses which enter the creeks and the sea. At some sources the pH has become as 1.2 to 1.4, this indicates acidic conditions.

(*ii*) **Industrial water major parameters.**—

1. Dairy B.O.D., Oil and Grease, Solids.
2. Pharmaceuticals Solids, C.O D., pH.
3. Oil refinery Free and Emulsified Oil, B.O.D., Phenolic Compounds.
4. Distillery B.O.D., C.O.D., Solids, Colour.

There is heavy industrial sewage expelled out of the various types of industries, such as, jute mills, textile mills, tanneries, formidable pump, paper mills, large distilleries, etc., having variable characteristic and it is discharged into Hoogly estuary in Calutta-Asansol region.

The highly industrialised belt of Durgapur-Asansol in West Bengal having steel plants, coke-oven plants, distillery, pulp and paper mills, coal-based chemical industries. A fertilizer plant and several other industries discharging effluents in Damodar river. This river has become highly polluted river in the country. This water is unfit for drinking or for fish life.

About 1,59,100 cubic metres of waste water having a BOD load of over 43,000 kg is discharged daily into the river from major industries. This is equivalent to sewage produced by a city of over one million persons. Only partial treatment has been provided by few industries.

Kanpur city has 45 tanneries, 10 textile mills, 3 woollen mills, 2 jute mills and a number of chemical and pharmaceutical industries which discharge a pollution load into river equivalent to that from a population of another 3.0 million people. This needs a very special alternation for seeing the hazardous effects.[1]

Before accurate analytical tests were available the criterion of wholesomeness of a river was whether cattle could drink it or fish survive in it. For many centuries rivers have been regarded as the natural depository of refuse and rubbish, although they were reasonably free from heavy pollution, except near towns, up to above 1,825. This apparent freedom from pollution was due to the fact, that natural waters undergo a process of self-purification during which inorganic matter may be diluted or deposited and organic matter oxidised.

In the nineteenth century, following the Industrial Revolution, the effects of pollution became obvious, especially with drinking water, as piped supplies were then rare. One of the earliest Acts consequent on this was the Gasworks Clauses Act of 1847 which made it an offence to foul water courses by waste matter from gasworks. Other Acts followed and rights of enforcement were vested in various bodies, such as, County Councils, Sanitary Authorities, etc., but the neglect to compel compliance with these Acts led to a mistaken belief that a prescriptive right to pollute could be claimed if the pollution had continued without interruption for twenty years.

This may have been correct if no public nuisance was committed or injury to health occurred, but the 1876 Rivers Pollution Prevention Act commenced to seal this escape off and nowadays there is no way in which water can be legitimately polluted.

Pollution has not been defined by Statute, but Coulson and Forbes in "The Law of Waters" give a definition which has acquired a special application in Common Law. "The addition of something to water which changes its natural qualities so that the riparian proprietor does not get the natural water of the stream transmitted to him".

The definition has formed the basis for many successful actions to prevent continuing pollution of streams and rivers. Generally speaking, Common Law is the means by which riparian owners and other who seek to protect and preserve their proprietory rights, claim damages and injuctions through the Civil Courts. Statutes prescribe safeguards and cause offenders to be dealt with in the Criminal Courts.

At present, Common law is probably the most vital way of dealing with the pollution as the aggrieved party can secure heavy damages for proved pollution, whilst the River Boards and other authorities set up by the River Boards Act of 1948 can secure fines and conviction on successful prosecution, but reparation has to be obtained by other means.

As may be expected, the actual polluting material can be of many different types and some pollutants may have indirect effects whilst substances not normally considered as polluting may become so in special circumstances.[2]

[2] *Water Treatment* by G.V. James Technical Press, Scotland, pp. 163, 164.

3. River pollution in India.—River water pollution in India has reached a crisis point. A list of India's polluted rivers reads like a roll of the dead.

Water is among the most essential requisites that nature provides to sustain life on earth. The total quantity of freshwater earth can satisfy all needs of human population if it would have been evently distributed and accessible. Out of the world's freshwater resources, about 75% is held within ice sheets and glaciers, nearly 24.5% in groundwater and remainder occur in rivers (0.03%), lakes (0.3%) and in the atmosphere (0.06%).

(*i*) *Major rivers in India.*—The reported area of India in respect of river basin is 3.05 million square kilometres against the total geographical area of 3.28 million square kilometres. The difference is due to areas for which statistics are not available such as remote mountains, inaccessible areas and desert areas. It has been estimated that rains in India contribute 400 million hectare metres (HM) of water, out of which 215 million HM constitute groundwater, 70 million HM evaporates and only 115 million HM forms surface water.

Total annual river flow of the world is 37000 cubic kilometres, while that of Indian rivers is 1645 cubic kilometres, i.e., 4.5% of total world river water. Land mass of our country is crisscrossed by various rivers. In our culture and tradition rivers are not only geomorphological and hydrological objects but have got very important place and most of them are considered sacred. They are the life-line of many cities, towns and villages. River water is used in many ways like bathing, drinking, mnunicipal water supply, navigation, irrigation and fishing. Simultaneously it is used as a course for discharge of industrial effluent, municipal sewage and disposal of solid waste. During many festivals people take holy dip in the rivers.

Table of Details of Major Rivers of India[1]

S No.	Name of the River	Length in India (km)	Basin Area in India (Sq km)	Average annual Discharge (MCM)	Place of origin	Destination
1.	Ganga	2525	861404	493400	Gangotri Glacier, Uttar Kashi, U.P.	Bay of Bengal
2.	Indus	1270	321290	41955	Near Mansarover Lake, Tibet	Arbian sea
3.	Godavari	1465	312812	105000	Nasik, Maharastra	Bay of Bengal
4.	Krishna	1400	258948	67675	Mahabaleshwar, Maharashtra	Bay of Bengal
5.	Brahmaputra	720	187110	510450	Kailash Range, China	Bay of Bengal
6.	Mahanadi	857	141600	66640	Raipur, M.P.	Bay of Bengal
7.	Narmada	1312	98796	40705	Amarkantak, M.P.	Arbian Sea
8.	Cauvery	800	87900	20950	Coorg. Karnataka	Bay of Bengal

A 35 km. stretch of the Gomti receives about 1,80,000 cum of sewage and wasted from pulp and paper factories near Lucknow, everyday. A high MPN of coliform bacteria 34,000 to 1,44,000 per 100 ml. an average BOD count of 160 mg/1 (maximum upto 2000 mg/1) and SS concentrations upto 964 mg/1 have been recorded. The recovery is not complete even 65 km. downstream from Lucknow due to the river's low-self-purifying capacity.

---

[1] Source: Central Pollution Board, 1998.

The Sone river suffers heavy pollution near Dalmianagar, where effluents from paper, chemicals cement and sugar factories are discharged into its waters. Many years ago, carp fish were eliminated here, along 22 km. zone. Discharges from paper mills and chemicals units at Mirzapur (Bihar) are so toxic that the fish mortality rate is the highest recorded for an Indian river.

Rising in the Chota Nagpur hills, the Damodar river flows its 540 km. course first through the mining belt of Bihar. It then receives effluents from chemical and metallurgical factories between Bokaro and Sindhri including the Bokaro steel plant, a thermal power station and the Sindhri fertilizer unit. The lower Damodar Valley from Asansol to Durgapur is one of the most highly industrialised region in India. Seventy major industries and 250 coal mines are spread around Asansol alone. In terms of oxygen depletion, eight industrial units in Durgapur dump wastes that are equivalent to the sewage from a city of one million population. Fish kills are a common occurance in summer. "The river is heading towards ecological disaster", predict Central Inland Fisheries Research Institute in Calcutta.

The Damodar finally joins the Hooghly near Calcutta. "Near Calcutta, Tolly's Nullah, a cannall from the Ganga and the Hoogly"…. are the regular dumping grounds for the citys' dead and putrefying dogs and cats.

(*ii*) *Peninsular rivers*.—Data or detailed reports on the pollution of the peninsular rivers are scanty.

The Godavari river at Rajamundhari receives the effluent of a paper mill. The 2.4 km. polluted strech was long ago covered with aluminium hydroxide, killing plankton and other aquatic life on the river bed. Hot water discharges form the Kothagudem thermal power station have destroyed aquatic life in the Soni river, a tributary of the Godavari.

A 18 km. stretch of the Bhadra river, a part of the Krishna river system, suffers high fish mortality and other problems due to discharges of pulp, paper and steel mills at Bhadravati. The Bhadra and the Tunga rivers join to form the Tungabhadra, a major tributary of the Krishna. The pollution of the Tungbhadra by the Harihar Polyfibres factory at Harihar is one of the horror stories from Karnataka.

The Cauvery is Tamil Nadu's main river and also the most polluted. It receives wastes from paper and chemical plants. An Electricals Industry has been reported to dum lethal chemicals into it. Effluents from tanneries have given it a strong colour and distillery wastes have led to mass fish kills.

Channeling of raw sewage from Hoshangabad town into the Narmada has led to a spurt in enteric diseases and skin problems among the hundreds of daily bathers in this river. The public sector Nepanagar Paper Mills consistently dumped untreated effluents into the Tapti before installing a Rs. 2.5 crores filter plant, under court orders (*iii*) *Coastal rivers*.—The coastal rives are relatively short and rain-fed. Their torrential flow during the monsoons reduces to a trickle in summer.

Periyar, the largest river in Kerala, has a number of factories on its lower banks; including fertilizers, chemicals, metallurgical and rayon units. Over 170 million litres of effluents are discharged into the river containing suspended solids, metals, urea, ammonia, fluorides, chlorides and other chemicals. The presence of mercury and redioactive wastes (from the Indian Rare Earths Ltd.) in the effluent, is a cause for serious concern. The toxic chemicals affect the aquatic flora and fauna. Fish kills have been common. Due to forceful action by the Kerala State Board for Prevention and Control of Water Pollution, treatment measures by the industries have visibly improved its water quality.

The lower stretch of the Chaliyar river is substantially polluted by the Gwalior Rayons factory at Mavoor. The 54.8 million litres of effluents dumped into the river contain inorganic and organic matter creating a high content of COD and BOD, suspended solids and metals like zinc. For a stretch of about 5 km, the river contains no dissolved oxygen in the summer months.

The Kalu river which flows through Bombay's industrial suburbs of Ambarnath and Ulhasnagar, has a dangerously high concentration of mercury and lead near Ambivali village. A monoculture of the plant species Pycreus macrostachyos growing on the river banks, accumulates both mercury and lead. Milch cattle grazes on these plants and the heavy metals enter the food chain. Since these are "cumulative" poisons, the people in this area, especially children who drink milk, are being slowly poisoned.

The Rushikulya is a small coastal river in Orissa. Chemical wastes from the Jayshree Chemicals Limited (JCL) a Bangur concern which manufactures caustic soda, have eliminated the Khainga fish from the river. Total fish catch has declined from 200 kg a day in 1967, before the JCL started operations, to a bare 5 kg. per day. Eight hundred fishing families unable to bear hunger, have migrated from Ganjam. Polluted water flowing through irrigation channels has hit paddy production in 13 villages. Various State and Central Government agencies have sent investigative committees to the area but no effective action has been taken according to a newspaper report.

(*iv*) *Other inland rivers*.—The rivers of Madhya Pradesh have turned into a network of drains. Some 220 industrial units including paper mills, distilleries and textile mills produce 675 million litres of waste. The M.P. State Board for Prevention and Control of Water Pollution has served notices on 170 units. Berely one fifth of them had set up treatment plants in 1980. "What the people of Bhopal (the state's capital) drink is gutter water", remarked a former State Governor.

The Khan river originates at Nimoli tank near Indore and flows for 64 km. before joining the Kshipra near Ujjain, where thousands of Hindus congregate for the Kumbha festival, a sepsis zone exists for three-quarters of the Khan's length. Indore city pours over 35 million litres a day of raw sewage and industrial effluents. The BOD value rises to 250 mg/1 at this stage and the Dissolved Oxygen content is zero. Well water in 22 villages has been rendered unfit for drinking just before it joins the Kshipra. The Khan undergoes natural aeration at a series of rapids and falls. In response to public protests, the district authorities have installed a Rs. 150 million treatment plant to ensure safe water for Ujjain.

In general, the volume of untreted municipal wastes, entering our rivers is much greater than the industrial effluents. But the former are less harmful to the rivers because they are highly biodegradable. The municipal wastes do pose a grave threat to millions of people who use the waters in the polluted stretches. Industrial pollutants are highly toxic to plant and animal life. Since some toxins can enter the food chain, particularly heavy metals, they are also hazardous to people.

The Hooghly estuary is choked by the untreated industrial wastes from more than 150 major factories around Calcutta including 87 jute mills, 12 textile mills, seven tanneries, five paper and pulp factories and four distilleries. Raw sewage pours into the river continuously from 361 outfalls.

Every river has a self-purification capacity. The Ganga because of its sheer size and volume of water it carries is considered to be more self-purifying than most. Can it, however, handle the massive amount of wastes thrown into it ? Dr. D.S. Bhargava told an international conference last year that between Rishikesh and Varanasi, the Ganga has the highest BOD rate constant value and the reaeration rate constant value among major rivers. Both of these are higher by an order of magnitude than any other values reported thus far. Dr. Bhargava observed that coliform organisms reduced significantly in very short times. Thus the Ganga is able to handle fairly successfully the sewage wastes in short stretches. Toxic materials from industrial pollution are reduced mainly by dilution by additional water flows joining the river.[1]

4. **Polluted river stretches.**—Based on the long term water quality data generated over the years, the Central Pollution Control Board has identified river stretches where the existing water quality is below the water quality required by their designated best use criteria. These stretches are referred as polluted river stretches. While identifying these stretches, dissolved oxygen, biochemical oxygen demand and total Coliform have been taken as the critical pollutants. So far, 13 heavily polluted and 26 medium polluted river stretches have been identified. On behalf of the Ganga Project Directorate, the Central Board conducted detailed surveys of the polluted stretches. The action plans for most of the stretches are complete.

Polluted River Stretches[2]

River	Polluted Stretch	Desired Class	Existing Class	River	Polluted Stretch	Desired Class	Existing Class
Yamuna	Delhi-Itawah	C	D, E		Sabarmati Ashram to Vautha	D	E

Betwa	Along Mandideep and Vidisha	C	D
Beas	Upstream of manali to mandi	A	C
	Mandi downstream to Himachal Pradesh Border	A	C

The Ganga Action Plan (GAP) was formulated and launched primarily to arrest degradation of river water quality by a comprehensive programme of interception, diversion and treatment of domestic sewage and prevention of toxic and industrial chemical wastes from identified grossly polluting industrial units/stations entering into the river. The evolution of the Ganga Action Plan (GAP) since its inception in 1986 has had many interesting lessons to offer both for the river basin management and project implementation. Further GAP has also pursuaded government to look into the growing problem of pollution and deteriorating water quality in the other rivers of the country.

National River Action Plan.

The National River Action Plan (NRAP) has been conceived as larger plan to carry out pollution abatement works in all the polluted river stretches. About 44 towns would be covered by the NRAP in the first instance for tackling the pollution load in their river stretches. The states covered are : Andhra Pradesh, Gujarat, Himachal Pradesh, Karnataka, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu and Uttar Pradesh. An amount of Rs. 900 crores is estimated as the cost of treatment of 1650 million litres of waste water per day likely to be generated by those 44 towns.

Industrial units are being persuaded to adopt clean technologies, and to install and operate the treatment plants. 17 categories of major polluting

Industrial Pollution control.

industries were indentified and targets were fixed to adopt pollution control measures. The progress in this regard, is being monitored regulary.

Water quality Atlas.

In year 1997 Central Pollution Control Board has brought out a water quality atlas containing 37 maps. Among these, 36 maps belong to major river basins and one belong to minor river basins and coastal water quality monitoring stations. Each river basin plate has been prepared in three sets. The first set shows the designated best use classification of the stream, while second set is for water quality monitoring for impact assessment of municipal wastewater. Water quality monitoring for impact assessment of priority industries is shown in the third plate. This atlas may be used as a ready reference to know about the health of major rivers of our country.

Foreign collaborations.

Foreign collaborations also being made to adopt new technologies. With the help of the Dütch Scientists, a method of bio-monitoring was evolved for the Yamuna. The Thames Water International of Britain helped in evolving the yardsticks for the biomonitoring of the Ganga.

Pollution prevention pays

Over the years progress of the society has become synonymous with environmental degradation. Our effort is to break this association and to prove that we may progress without the pollution. It is a proven fact that pollution prevention pays.

5. River basins.— Every water body has got a definite basin area. The basin area is the extent of the area from where water may be expected in the river. It includes tributaries and even drains. Indian rivers have been divided into three categories depending upon basin area. Major rivers are those rivers whose basin area is 20,000 square kilometres or more. The rivers having basin area in between 2,000 and 20,000 square kilometres are grouped as medium rivers and rest rivers are minor rivers.

(i) Major Basins.—Major river basins are thirteen in number and as a group they cover 80% population and 85% of total river discharge. The names and details of major rivers are presented in table 1. Three major rivers, i.e., the Ganga, the Brahmaputra and the Indus are snowfed rivers, originating in the Himalayas. Rest of the ten rivers are originating either in Central India or peninsular regions; 3 in Madhya Pradesh, 2 each in Bihar, Maharashtra and Karnataka and one each from Vindhyan and Aravalli hill ranges. The Himalayan rivers are International while rest are intersatate rivers. Among the states, several different major river basins are distributed; while Maharashtra has five river basins; Karnataka, Gujarat and Rajasthan has four each; Andhra Pradesh, Bihar and Orissa 3 each; Haryana 2; West Bengal, Kerala, Tamil Nadu, Assam, Sikkim, Arunachal Pradesh, Nagaland, Utter Pradesh, Punjab, Delhi, Jammu and Kashmir and Himachal Pradesh one each.

(ii) Medium and Minor Basins.— Among the fourty five medium river basins, four are International and eleven are interstate. A total of seventeen rivers having a combined basin area of 63500 square kilometres join the Arabian Sea, while other 24 having a combined basin area of 210596 square kilometres fall into the Bay of Bengal. Rest four rivers originate in India and ultimately cross the national boundry. Medium

river basins occupy 8% of total basin area and about 119940 million cubic meter water flows through them.

There are fifty five minor river basins having a combined basin area of about 2 lakh square kilometres. Most of them originate from Eastern and Western Ghats. In addition to these there are few desert rivers too, which flow for some distance to get lost into the deserts. The total area of minor basins is 9% of total basin area of Indian rivers while runoff is 127 MCM.

6. Siltation.— It has been estimated that about 70-80% of total annual discharge of the river flows during monsoon period of about 55 days, as a result floods are very common in our country. Flood brings silt, solid wastes, fertilizers and pesticides as agricultural run-off along with them into the river. They shrink after the monsoon and summer is marked by a vast area of sand with very little or no water in most of the rivers.

In our rivers, siltation rate is among the highest in the world. It has been estimated that about 135 thousand million metric-tonnes (MT) of sediment load and 32 thousand million tonnes of soluble matter enter into ocean through various rivers in our country. This figure constitutes 90% of the total solid waste going into the ocean. The rest 10% which goes into the ocean is constituted by wind, rain and earthquakes. The water flowing through our rivers is 5% of the water flowing through all the rivers of the world. But, Indian rivers carry 35% of the sediments that go to all the oceans is the world.

7. Central Pollution Control Board's role in river pollution prevention.— As rivers are the life-line of majority of population and also a symbol of purity, it is essential to keep them pollution free. Many important steps have been taken in this direction by Central Pollution Control Board, which was constituted in 1974 under the Water (Prevention and Control of Pollution) Act. 1974.

Use based classification.

In the early eightees, an atlas of the Indian River System was prepared on the 'designated best use'. Actually every river stretch has a distinct water use—as some is used for irrigation, other for mass bathing and still others for drinking. The best use classification in essential, for maintaining the quality of river water of the particular stretch. The whole concept was unique as not even many technically advanced countries possess such detailed use based river atlas.

Monitoring.

The river water quality monitoring is most essential aspect of restoring the water quality. To evolve a methology for monitoring, the Yamuna river was adopted by Central Pollution Control Board. Its water quality monitoring at selected locations was started in the late seventees and still continues. The data for water quality is generated for almost all major, medium and minor rivers in India through a network of 480 water quality monitoring stations.

Ganga Action Plan.

Exensive survey of the Ganga river in 1980-81, gave the basis for the formulation of the Ganga Action Plan. It is a tribute to the river, which sustain most of the Northern, Central and Eastern Indian population. Despite initial doubts over technical and economic aspects of the plan, mainly raised by so called developed countries, the nation is proud to successfully complete the first phase of the plan and now entering into the second, incorporating the stretches of the Yamuna and the Gomati. In addition to improving the water quality in the river, the other important achievement of the plan is to produce a large force of trained man-power in the field.

8. Primary water quality criteria for various uses* of fresh waters, as laid down by the Central Pollution Control Board

	Characteristics	A*	B*	C*	D*	E*
1.	Dissolved oxygen (DO), mg/1, Min.	6	5	4	4	–
2	Biochemical oxygen demand (BOD), mg/1 Max	2	3	3	–	–
3	Total coliform organism** MPN/100 ml Max	50	500	5,000	–	–
4	pH value	6.5–8.5	6.5–8.5	6-9	6.5-8.5	6.5-8.5
5.	Free ammonia (as N), mg/1, Max.	–	–	–	1.2	–
6	Electrical conductivity, micromhos/cm, Max.	–	–	–	–	2,250
7	Sodium adsorption ratio, Max	–	–	–	–	26
8	Boron, mg/1, Max.	–	–	–	–	2

* Use class · (A) drinking water source without conventional treatment but after disinfection, (B) outdoor bathing Organized, (C) drinking water source with conventional treatment followed by disinfection (D) propagation of wildlife, fishries, (E) irrigation, industrial ecoling controlled waste disposal. **If the coliform is found to be more than the prescribed tolerance limits, the criteria for coliforms shall be satisfied if not more than 20 percent of samples show more than the tolerance limits specified, and not more than 5 per cent of samples show values more than 4 times the tolerance limits. There should be no visible discharge of domestic and industrial wastes into Class A waters. In case of Class B and C the discharge shall be so regulated/treated as to ensure maintenance of the stream standards Source : ADSORBS/3/1978-79.

9. Pollution.— After a barrage or dam construction on a river, downstream area does not get enough water, as a result for the dilution of pollutants from incoming drains, sewage streams and effluents, required quantity of water is lacking and river stretches gets polluted. Any form of water while flowing, has got some self-purification capacity and that is why a polluted river water after some distance becomes pollution free.

The river Ganga is considered to be most sacred among all the rivers. It is the largest river in length and basin area. Its basin occupies 34.39% area among total basin area of all the major basins. With regard to average annual dischage, it is next only to Brahmaputra. The Ganga is most widely used river and many populous cities are situated in its basin. At many stretches, due to lean flow in summer and excess discharge of pollutants, its water is being polluted. The main problem with our rivers is not the industrial effluent because it is only responsible for 20% of pollution in the rivers. Rest 80% of pollution comes from domestic and municipal sources.

The water quality of rivers is deteriorated not only by the increasing wastewaters discharge but also due to excessive abstraction of water from the rivers, mainly for irrigation rendered them dry or with meagre flow in non-monsoon periods. Meagre flow followed by increasing wastewater load has left many river stretches in alarming conditions. Any action plan to control pollution may not suffice in such situation. Hence the action plan should also include provision for maintenance of sufficient flow in the course of the river.

For effective prevention and protection measures of water resources, both the nature of return wastewater that users shall be permitted to dispose off in natural water courses and the nature of water source acceptable for beneficial use needs to define qualitatively in quantitative terms.

10. Problem of water scarcity.— In a country having 113 river basins, it is quite natural that a tremendous variations would be encountered both in the quantity and quality of water. It is important to mention that all the major rivers are also not perennial. Here although average annual rainfall is very high but monsoon is restricted to only three months in most parts. As a result, most of the rain-fed rivers get almost dry during summer and late winters. The Brahmaputra, Ganga, Mahandi and Brahamani pass through the regions of high rainfall having average annual discharge of a minimum of 0.47 MCM/ square kilometre and they are perennial. Five major rivers; The Krishna, Indus, Tapi, Narmada and Godavari pass through regions of medium rainfall and having annual average minimum discharge of 0.26 MCM/square kilometres. The remaining four major rivers, i.e., Cauvery, Mahi, Sabarmati and Pennar pass through the areas where rainfall is low and average discharge being in the range of 0.06 to 0.24 MCM.

As a result of technology advancement and population pressure now a days most rivers are not in the natural state. The flow of almost all the major rivers is restricted due to construction of barrages, dams and reservoirs, Even then, many areas face the water crisis.

11. Pollutional effects.—Pollution affects streams and stream uses in many ways, classified for out present purposes as effect on public health and safety, effect on acquatic and other life, damage to property, other economic loss, and intangible loss. The last-named effect is by no means last in importance, although it is a difficult item to evaluate quantitatively.[1]

12. Effect on public health and safety.—The principal hazard to public health from polluted streams is the presence of pathogenic bacteria from domestic sewage. Pathogens are not ordinarily a problem in industrial waste disposal, except when sanitary and process wastes are mixed in the discharge from an industrial plant. There are adequate texts on the treatment of domestic sewage to destroy bacteria. In rare cases the presence of acids and other industrial wastes in a stream has been beneficial, because they serve to inactivate pathogenic and other bacteria resulting from untreated municipal sewage. In the long run, however, this is a poor excuse for failure to provide adequate waste treatment.

Another public health hazard caused by industrial waste is pollution with toxic materials, which may enter a municipal water supply or may be harmful to people using the stream for recreational purposes, these toxic substances include acids, alkalies, and specific poisons like the cyanides or heavy metal salts. A hazard that has appeared since about 1948 is radio-active waste from institutions, industrial plants, and laboratories.

---

[1] Vide *Principles of Industrial Waste Treatment*, by C. Fred Gurnham, p. 25.

Danger to public health from polluted waters comes not only from direct use of the water but also from food fish that have lived in the polluted stream. Many poisonous substances are absorbed by fish often in concentrated form, hence the eating of fish from polluted waters may be even more hazardous than the drinking water. Shell-fish, especially, frequently thrive in contaminated water and thereby become toxic to human beings.

Discharge of toxic wastes underground instead of into surface streams is a suitable disposal means under certain conditions, however, if there is any possibility of later withdrawal of the ground water for domestic use, the hazard may be intensified. Danger also exists if the polluted underground aquifer reaches the surface during its normal course of flow. With underground disposal, the hazards are postponed, but a reservoir of wastes is accoumulated and sewage of toxic materials may persist long after discharge at wastes has been stopped. Cyanides, chromates and heavy-metal ions have been especially troublesome in ground waters after pollution by wastes from metal finishing industries.

Hazard to the public other than danger to health is less common, but is illustrated by danger of fire from floating oils, solvents, or flammable solids. Severe fires have occurred on the surface of streams heavily polluted with petroleum products, either by accidental spills or by gradual accumulation from small discharges.[1]

13. Effect on aquatic and other life.—Pollution of natural waters may be disastrous to fish and other organisms naturally inhabiting the stream. With mild pollution fish may acquire a flavour that renders their flesh unfit for food use, whereas with more severe contamination the fish are sickened or killed. When pollution develops slowly fish may deliberately leave the polluted areas, but if the pollution occurs by a sudden discharge fish are killed outright. It is not uncommon for thousands of fish to be killed because some industrial plant has dumped one of its wastes of process solution into the stream. Polluted waters are also a hazard to land animals that drink from the stream.

Most common of the toxic materials discharged into natural waters is acid, large quantities of sulphuric acid, in particular, reach streams from abandoned coal mines, from metal-working plants, from chemical manufactures, and from smaller industries of various types. Alkalies are less common, but are equally harmful to fish and other life; common sources of alkaline effluents are pulp mills, textile mills, and chemical plants. Other specific chemicals that are harmful to aquatic life include cyanides from metal-plating operations and from plastics manufacture, and phenols from coke plants and other chemical industries.

Damage to fish life occurs from substances that are not in themselves toxic, but cause asphyxiation by injuring the gills. Suspended solids, such as, silt and coal culm have been particularly troublesome in this respect and their effect on fish life may be as serious as the effect of poisons. Silt blankets on the stream bottom also cut off much of the food supply of fish life, and so drive fish from the stream.

Fish and other aquatic animals require the presence of an appreciable concentration of dissolved oxygen, this oxygen content is likely to be reduced or completely exhauasted by industrial wastes and other pollution. Organic wastes, under the influence of bacterial action, deplete the dissolved oxygen by consuming it in biochemical oxidation reactions, this oxygen depletion is the most important single aspect of pollution in natural streams. Replenishment of dissolved oxygen after it has been consumed or reduced occurs naturally by reaeration of the stream though its surface, and by the photosynthetic reactions of green aquatic plants. Reaeration, however, is retarded by oilfilms on the surface or by floating soilds that decrease the amount of surface available. Turbidity, colour, and suspended soilds affect the rate of dissolved oxygen replenishment because they diminish light penetration into the water and thereby retard photosynthesis. High-temperature wastes also retard dissolved oxygen restoration because oxygen is less soluble in warm water.

---

[1] Vide *Principles of Industrial Waste Treatment*, by C. Fred Gurnham, pp. 25, 26.

The degree of pollution of a stream, especially the degree of dissolved oxygen, depletion, determines the types of aquatic life that survive, and it is often possible to evaluate the pollutional condition of a stream from the relative abundance of specific organisms. Grossly polluted waters are characterized by the presences of gray fungus growths, bottom-feeding or scavenger organisms, and plentiful bacteria. With a lesser degree of pollution, or in a stream that has partially purified itself after severe pollution, the predominant life forms are blue-green algae, diatoms, and certain chlorophyll plants. In pure or slightly polluted streams the naturally occurring organims include green algae, plankton, insect larve, mussels, and snails, as well as fish and other high forms of life.[1]

The effect of potentially toxic materials in rivers is normally measured by their action on fish as demonstrated by some form of bioassay. The procedure involves the use of a series of dilutions of the suspect material to which test fish are exposed under standard conditions. The prescribed measure of acute toxicity is the median tolerance limit (TL_m) sometimes referred to as the 50% lethal dose (LD_{50}). This is the concentration of material under test at which 50% of the test fish are able to survive for a specified period of exposure (usually 48 or 96 h).

TABLE

Some Compounds Toxic to Fish

Material	Occurrence	Approx LD_{50} mg/1
Acridine	Coal-tar wastes	0 7—1 0
Adrin	Insecticide	0 02
Alkyl benzene sulphonate	Sewage effluent	3—12
Ammonia	Sewage effluent gas works effluents	2—3
Chloramine	Chlorinated effluents	0.06
Chlorine	Chlorinated effluents	0.05—p2
Copper sulphate	Metal processing Algae control of reservoirs·	0.1—2 0
Cyanide	Gas liquor Planting wastes	0.04—0.1
DDT	Insecticide	0.1

---

[1] Vide *Principlesof Industrial Waste Treatment,* by C. Fred Gurnham, pp. 26, 27, 28.

Material	Occurrence	Approx LD_{50} mg/l
Determents synthetic (packaged)	Sewage effluent	15—80
Fluoride	Aluminum smelting	2 5—60
Gammexane	Insecticide	0.035
Hydrogen sulphide	Bottom muds, sludge	0.5—1.0
Methyl mercaptan	Oil refineries Wood pulp processing	1.0
Naphthalene	Coal-tar wastes Gas Liquor	10—20
Parathion	Insecticide	0.2
Potasium dichromate	Flow guaging	50—500
Silver-nitrate	Photographic wastes	0 005
Zinc	Galvanising Rajon manufacture	1—2

Note : These figures are intended only as a guide, the actual LD_{50} in any particular situation will depend on environmental factors the species of fish involved and the duration of the exposure.[1]

14. Damage to property.—Discharge of acids and occasionally of other industrial wastes leads to property damage through corrosive attack. Acid wastes affect steel objects, such as, ships and navigation aids, and also damage concrete structures in the stream. Corrosion by acid wastes may be even more harmful when the water is taken into a plant for use as cooling water, or for treatment for municipal or industrial use. Piping, pumps, values, and other equipment in the plant are then subjected to corrosive action, and damage may be severe.

Another type of property damage caused by stream pollution, including pollution by industrial wastes, is depreciation of shore properties. The recreational advantages offered by natural waters are a benefit to residences and vacation areas, but pollution of these waters destroys the recreational value and hence lowers the value of shore property.

Heavy loadings of suspended solids in streams, especially of such materials as silt, coal washings, and sand and gravel washings, frequently led to deposits on the stream bottom. In reservoirs, which are ideal settling basins although not so intended, silting reduces the water containing capacity and impairs the usefulness for power generation, water supply, flood control, river regulation, or other purpose.[2]

15. Other economic loss.—When it is necessary to use polluted waters as a source of municipal or industrial water, the added cost of treatment caused by pollution may be substantial. Most obvious is the increased requirement of chlorine, both for disinfection to destroy pathogenic bacteria and for oxdation of organic matter. Organic matter may not in itself be harmful, but if disease-producing bacteria are to be removed, chlorination is required and the chlorina demand of the organic matter must be satisfied. Water treatment costs are also increased in the removal of suspended solids, taste, odour, colour, hardness, and specific chemicals that may be present.

Discharge of hot wastes into a small stream may raise the temperature so that the water is not suitable for downstream industries as cooling water.

---

[1] Vide *River Pollution, Principles of Water Quality Control*, by T.H.Y. Tebbut, p. 63.

[2] Vide, *Principles of Industrial Waste Treatment* by C. Fred Gurnham, at pp. 28, 29.

This is especially true when a series of industrial plants withdraw water, each discharging it hotter than before. Down-stream users must then pump a large quantity of water in order to achieve a small degree of cooling, or they must go to a different source of water, such as, private wells.

Interference with navigation by the formation of sludge banks is not common, but has occurred in some rivers. The most noteworthy examples are the deposition of coal in finely divided form from coal washeries, and the deposition of fine silt from sand-and gravel washing operations. These deposits have at time interfered with traffic on supposedly navigable rivers.[1]

16. Intangible loss.—Intangible losses caused by stream pollution result principally from the destruction of recreational facilities. This loss is difficult or impossible to evaluate quantitatively, but it nevertheless real. In many States tourist trade and vacationing are major industries, to the extent that this business is lost by stream pollution, the damage can be estimated as an economic loss. Destruction of recreational facilities for people living in the neighbourhood is less readily evaluated, but is an important and significant effect of pollution.[2]

17. Hydraulic overload.—The increased volume of sewage caused by industrial wastes leads to increased pumping costs as the treatment plant, or even to over-loading of pumps if these have not been properly designed for the added duty. Another effect of hydraulic overload is the decrease in detention time in treatment units, especially in sedimentation basins, where the more rapid flow may not permit adequate settling. The increased, quantity of liquid also increases chemical requirements in the treatment process of coagulation and chlorination.[3]

18. Settleable solids overload.—Industrial wastes with high concentrations of settleabe solids place an added burden on the sewage treatment plant, or what is worse, the solids may settle in sewage-collecting system, causing flow reduction and septic conditions. Excessive settleable solids reaching the treatment plant result in overloading the screens, grit chambers, settling tanks, and sludge-huddling mechanisms. Disposal of solids is also more difficult because of the greater volume, which may require an increase in the capacity of sludge-digestion tanks, filters, drying beds, and sludge transportation equipment.

Industrial waste solids are objectionable, not only because they add to the total solid loading, but also because they differ from normal sewage solids, in their characteristics. Coarse and floating solids, such as, hair, feathers, and rags, occur in certain industrial wastes, and cannot be handled by conventional sewage processing equipment. Oils and greases are troublesome because they cause sludges and floating scums that do not settle, drain, or dry properly. Hydrocarbon oils are not digestible, and form heavy scum layers that overload digesters and interfere with the digestion of other organic substances.[3]

19. Organic overload.—Many industrial wastes carry a higher organic load, as measured by the BOD test or the oxygen requirement of purification processes, then the sewage organic load of the community. This is especially true in small-town industries, such as, dairies, laundries, cannaries, beet sugar refineries, and other organic processing industries. Unless such wastes are pretreated at the industrial plant before discharge to the municipal sewerage system, there may be overloading of treatment plant purification units like trickling filters or activated sludge equipment. The usual result of such overloading is insufficient purification of sewage, evident as a treatment plant effluent of poor quality. Organic overloading may, in addition, disturb the treatment processes themselves, as illustrated by the bulking of activated sludge resulting from wastes high in Carbohydrates.[1]

---

[1] Vide *Principles of Industrial Waste Treatment*, by C. Fred Gurnhum, at p. 29.

[2] *Ibid.*, at p. 30.

20. Chemical effects.—The chemical effect of corrosion has already been discussed; it is particularly troublesome in wastes containing acids and salts. A further chemical effect is the increased requirement of chemicals used in treatment processes, as coagulants used to aid sedimentation, chemicals used for pH control, and chlorine used as a final disinfection treatment. Many industrial wastes have a high chlorine demand, and whereas they do not require chlorine for disinfection, their mixture with domestic sewage does require such treatment. Total chlorine requirements of such mixture may be for in excess for the requirement of sewage alone.

Specific industrial wastes cause unusual problems in the operation of a municipal sewage treatment plant; for example, iron wastes often precipitate insoluble resides that clog equipment. Air diffusers, used in the aeration of activated sludge, may be rendered inoperable by iron pickle wastes, and restoration of their usefulness by cleaning is difficult and never fully satisfactory. Under extremely high iron loadings, such as, occurred at Worcester, Massachusetts, during World War II, trickling filter beds become completely clogged and useless. Discharge of synthetic detergents into municipal sewage has caused frothing troubles in aeration tanks, with froth blankets several feet thick reported in severe cases. Since this sewage froth may be carried by wind into inhabited areas, the hazard to public health is obvious.

Some constituents of industrial wastes, such as, neither affect not are affected by sewage treatment processes to any appreciable extent, but pass into the plant effluent unchanged. If these constituents are pollutional in the receiving stream, the treatment is not satisfactory, the fault, however, is in the original discharge rather than in the sewage treatment plant. Dilution is, of course, provided by the municipal sewage, but this may not be adequate to prevent pollution by brines, colours, and other contaminants. The problem is worse in the plants providing only primary treatment, since then such pollutants as acids or alkalies, soluble oils, cynides and chromates pass unchanged into the receiving stream.[2]

21. Biological effects.—Many sewage treatment processes are based on biological and bacterial action, and may be reterded or stopped entirely by the presence of certain industrial waste constitunts. Extremes of acidity of alkalinity have this effect, as does the presence of heavy-metal salts, cyanides, phenols, formaldehyde, and other specific chemicals. In designing the Waterbury, Connecticut, sewage-treatment plant, it was necessary to avoid biological treatment process because of toxic metal wastes inevitable in the sewage.[3]

---

[1] Vide *Ptinciples of Industrial Waste Treatment*, by C. Fred Gurnham, at p. 39.

[2] *Ibid.*, pp. 39-40.

[3] Mitchell, R.d., J.G. Cassanos, and D.A. Okun, "Effect of Metal Wastes on Sewage Treatment Plant Design at Waterbury, Connecticut". Sewage and Industrial Waste, 23-1001-11 (1951) *vide Principles of Industrial Waste Treatment*, by C. Fred Gurnham, p. 40.

22. Toxic effects in secondary treatment.—Secondary treatment of sewage, based on aerobic biological action in trickling filters or activated sludge tanks, follows after settling or other forms of primary treatment. Precipitated and other insoluble toxic materials in the incoming mixture of sewage and wastes are removed by the sedimentation operation, and do not affect the secondary treatment, but soluble substances are not removed by settling, and may retard or stop bacterial activity in the secondary process. Heavy metals like copper are usually precipitated by the normal constituents of sewage, and do not enter the secondary treatment part of the plant. Chromates, however, and other metal ions that escape precipitation may interfere seriously with activated sludge plant operation or with trickling filters. Soluble organic materials, such as phenols and aldehydes enter the secondary units, frequently with disastrous results to the process.[1]

23. Toxic effects in sludge digestion.—The sludge that accumulates in primary settling tanks and other clarifiers is frequently processed by anaerobic bacterial treatment in order to destroy part of its organic content and to reduce its total volume. The presence of toxic materials in the sludge has a retarding action on the anaerobic bacteria, and may delay completion of the digestion reactions or stop them altogether. Most common of these toxic substances are the heavy-metal compounds, including salts of copper, zinc, and chromium. Because iron and aluminium salts have no effect on this process, salts of these elements can safely be used during primary treatment to aid in settling and dewatering. Soluble toxic materials affect the digestion process because sludge pumped to the digester is usually about 95 per cent liquid, and hence dissolved substances are carried into the digster to any appreciable degree. It is primarily the insoluble or relatively insoluble metal salts, however, that accumulate in the digester and cause trouble. A cumulative effect has been noted with copper salts, which may be present in raw sludge in only trace quantities and do not interfere with digestion, but accumulate over a period of several months to build up a copper concentration in the digester that stops digestion more or less suddenly.[2]

24. Pollutional effects of industrial wastes.—The effects of different types of waste waters, when discharged into a stream or a river are very complex. The waste waters may pollute them to such an extent that they are unfit for water supply for domestic as well as industrial purposes. The discharge of polluting substances changes the quality of river water. This effect charge the biology and bio-chemistry of river water.

The use of river and other water resources include the supply for domestic, industrial, agricultural, fisheries and navigation purposes, etc.

Polluting substances may broadly be classified under two main categories: (1) substances which are itself directly toxic or harmful, and (2) substances whose polluting effects are due to the results which follow from their decomposition or oxidation by chemical or biological action for example : (*i*) suspended matter, organic or inorganic, which may kill aquatic organisms, (*ii*) poisonous substances like cyanides, chromium and phenol which may kill fish and other organisms and water also become harmful for human consumption, and (*iii*) substances, such as, oils, dyes or form-forming substances by which water looks ugly. The organic matter which undergoes oxidation in presences of dissolved oxygen in water on which life of fish and other aquatic organisms depend.

---

[1] *Vide Principles of Industrial Waste Treatment* by C. Fred Gurnham, p. 40.

[2] *Ibid.*, pp. 40, 41.

25. Classification of water pollution.—Water pollution can be classified as below :

I. Physical pollution

(*a*) *Temperature.*—The rise of temperature by a few degrees centrigate can be bad to the stream because of the fact that the solubility of oxygen in water is limited to less than 10 parts per million (ppm). As the solubility of oxygen in water is inversely proportional to the temperature, the water at a higher temperature would have less dissolved oxygen in it. By rise of temperature, it will increase the biological activity thus require greater amounts of dissolved oxygen for respiration purposes. The lower content of dissolved oxygen in the stream water would restrict some of the more delicate fish from its natural growth.

(*b*) *Turbidity.*—Turbidity is mainly due to the presence of colloidal matter or finely divided suspended matter by suspended stage. Common examples of turbidity are river water in monsoon. The waters polluted with milk wastes, sewage or certain ceramic wastes also gives rise in turbidity. Iron and manganese salts can also give rise to turbidity.

(*c*) *Suspended matter.*—Suspended matter can be either inorganic or organic. The suspended matter reduce the penetration of sunlight into water and thus reducing the normal plant life. The most important of the suspended matter that creates unsightliness in water.

(*d*) *Colour.*—The colour is considered as aesthetic pollutant. Colour can be due to toxic elements. Colour in water can be due to natural or artificial sources. When water runs through pasty soil. it obtains a brownish tint which is primarily due to lignins and other related bodies which are also obtained due decomposition plant. These colours can be considered an aesthetic pollution. Artificial colours are discharged from textile industries and tanneries, etc.

(*e*) *Foam or froth.*—Foam is a suspension or dispersion of gas or air bubbles in a liquid medium, such as, water. With the increased use of synthetic detergents advanced the problem of foam in sewage effluents and rivers has increased. Foam is hazardous because it can carry suspended solids including pathogenic bacteria. Foam is also caused by natural dropping of water from a height, only for a few seconds. When certain pollutants, such as, detergents are present in water, the foam appears at surface.

(*f*) *Radio-activity.*—Radio-active substances present in sufficient concentration can damage tissues and organs of the body and can give rise to diseases such, as leucomia and cencer, as well as impaired fertility. It can also produce genetic effects in the offspring. While we are all being exposed to small quantity of natural radio-activity occurring in our environment, it is important that we make sure that we are not getting it beyond certain limits through water supplies.

II. *Chemical pollution.*—Chemical Pollution can be due to in organic and organic chemicals.

(*a*) *Inorganic pollution.*—Inorganic pollution can be due to acids, alkalis toxic inorganic compounds, soluble salts or inert insoluble substances.

Stream contaminated with acids give rise to corrosion of metal and concrete structures, pumps. Acids may also liberate foul-smell. Acids as well as alkalis can be toxic to all aquatic organisms and effect self-purification of streams and also kill fish and other aquatic life. Alkalis can also destroy aquatic life. Industries, such as, textiles, certain operations of tanneries and coke-ovens, are known to discharge alkalis.

Several salts of metals are toxic to fish and other aquatic life. These are usually found in metal-plating wastes. Besides metallic salts, cyanides which are extermely toxic are also encountered in plating wastes. Wastes that are toxic to fish are usually toxic to human beings. The toxicity can be known by its affect in fish.

Several insoluble inorganic materials, such as, clay, calcium carbonate, calcium sulphate, etc., that are present in some industrial wastes are undersirable in a stream because they increase its turbidity and suspended solids.

Soluble salts commonly found in streams include chlorides, sulphates, and bicarbonates of sodium, potassium, calcium, magnesium, iron and manganese. In small concentrations, these are harmless to fresh water fish. However when the dissolved soild go beyond a limit, the streams would not support fish life. Water is classified as fresh water if it contains upto 100 mg/1 of chloride, brackish if it contains 100 to 1,000 mg/1 and saltish if it contains more than 100 mg/1.

(*b*) *Organic pollution.*—When carbohydrates, fats, proteins organic substances found in sewage and industrial wastes, it is said to be organic polluted. The pollution is termed as organic pollution. Carbohydrates, fats and proteins are degreded in aqueous medium by soil water and sewage micro-organisms. During this process, the dissolved oxygen in the stream water is used up. The reduction in dissolved oxygen certain limits creates disturbance in the aquatic life or kills it.

The presence of oil in sewage may give rise to a film on water which gives an ugly appearance. Such films also reduce the dissolution of oxygen into water. When the quantity of oil is large, there is a risk of fire also.

The toxic substances like phenols which may destroy bacteria, fish and other aquatic life in rivers and streams from coke ovens oil floating on water may prevent aeration of stream. Some insecticides spread on crops can reach streams due to rains. Care must be taken to exclude toxic organic chemicals from the water bodies.

III. Physiological pollution

Taste and odour may be considered as physiological pollution. This pollution do not effect public health. It is often found that a water is safe for public health but with taste and odour is often not accepted by the public.

Many industrial wastes make the water unpleasant in a taste for, example, salts or iron and manganese, chlorine, hydrogen sulphide, etc. Certain algae are also found to create odours and tastes in water. Many of these can be removed fairly easily by conventional methods of water purification.

Water having bad odour is not liked by public. Odour may be cause by the presence of strong smelling chemical compounds, such as, ammonia, phenol, free-chlorine, sulphide or cyanide. The organic materials, such as essential oils, with algea and other organisms may also cause bad taste.

IV. Biological pollution

Biological pollution is a result of pollution of water by means of wastes containing pathogenic forms of bacteria, fungi, algae, viruses, protozoa and heliminthic parasites. Most common sources of this type of pollution is domestic sewage or human excreta. The diseases related to this type of pollution are cholera, typhoid, dysentery, gastro enteritis, poliomyelitis and infectious hapatitis. A few industrial wastes contain pathogenic organisms. Tannery wastes, from slaughter-house handling tuberculotic animals may contain tubercle bacilli.

26. Pollution effects on fish, plant and human life.—According to Ellis, the injurious effects of industrial wastes on fish are caused by following factors :

(1) Materials in suspension, such as, untreated sewage, paper pulp, mud, saw dust, rock-powder, etc. Cover the bottom and bring biological life therein which is important as fish food.

(2) Materials having an oxygen demand reduce the dissolved oxygen content of the stream to a point where fish cannot exit. A dissolved oxygen contain of 5.0 mg/1 is taken as the minimum for fish, but the value is affected by various other factors.

(3) Most of the fishes require a pH value of 6.5 to 8.4. Acid or alkaline conditions created in the stream by the discharge of wastes affect the fish life directly.

(4) Salinity of the water is important for fresh-water fishes as they cannot tolerate sudden changes in climatic pressure.

(5) Fishes are killed specifically by toxic substances even when all other conditions of the environment are favourable. Most of these materials are effective even in very low concentrations.

(6) High carbon dioxide concentration in water is also harmful to fish.

Effects of Water Pollution

1. Typhoid Fever
2. Dysentery
3. Hookworm Disease
4. Jaundice
5. Poliomyeities
6. Pneumonia
7. Influenza
8. Whooping Cough

27. Effects on plant and animal life.—Apart from their effect on fish, polluting waste waters have a profound effect on the plants and animals. With severe pollution by liquids containing directly toxic substances, all plants is and animals may be killed. With less severe pollution, the results may be very complex. Suspended solids, which influence the amount of light transmitted by the water and the nature of the bed of the stream and the presence of nutrient substances in the waste influence the plant life in the stream. These effects in turn influence the aquatic invertebrate animals which live in association with plants. It is now well established that pollution of a stream by organic matter affects the distribution of sessible microscopic plants, and, in fact, it has been suggested that the condition of a surface water might be judged by examination of the microflora rather than by chemical tests. Aquatic weed growth is also influenced by pollution. Plant growth and soil condition may also be affected if industrial wastes are discharged on soil.

28. Effects of pollution in water to be used for different purposes.—Water is required for (1) domestic use, (2) industrial use, (3) irrigation, (4) navigation, and (5) recreation. The first requirements of water for domestic supply are that it should not be toxic and should not contain pathogenic bacteria, or substances which are physiologically harmful. The quality of water required by industry would depend on the use for which it is put like cooling processes, etc. Some of the industrial wastes are coloured, contain toxic substances, cause taste and odour, increase turbidity and render the water unfit for domestic consumption and industrial use and require expensive treatment for their removal. Use of water for agriculture may also be affected if the industrial wastes increases the Na per cent, Boron, etc., in water. Navigable inland waterways include canals, part of some, fresh-water streams, and estuaries. Discharge of wastes containing acids may cause corrosion of steel work. The putrescible matter present in industrial wastes and create obnoxious conditions and affect the aesthetics of environment. Pollution can also render the water unsuitable for bathing and recreation.[1]

29. Effects of industrial wastes of sewerage system.—Municipal sewerage system certainly provide a convenient means for disposal of industrial wastes if sewers serving the plant are adequate in capacity and if the Municipality will permit such use. Domestic wastes in the sewer provide dilution for the industrial wastes, thereby making their ultimate discharge to a stream more acceptable. In addition sewage treatment processes often serve to reduce the pollution characteristics of the industrial waste. On the other hand, discharge of industrial effluents into a sewer should not be premitted to damage the sewerage system or to interfere with sewage treatment process, and it should not introduce unreasonable hazards to sewer or treatment plant personnel. If the only treatment provided to the industrial waste by discharge to a sewer is dilution with sewage, the dilution must be adequate to prevent pollution in the ultimate-receiving stream.[2]

[2] *Vide Principles of Industrial Waste Treatment*, by C. Fred Gurnham, p. 35.

30. Hazards to personnel.—Safety of sewer workers and sewage plant operators is the most important consideration in the discharge of industrial wastes into municipal sewers. These hazards are of two main types, danger from fire and explosion and danger from toxic materials, especially toxic gases.[1]

31. Flammable and explosive wastes.—Discharge of petroleum products into municipal sewers, either deliberately or accidentally, has led to sewer explosions in a number of cities. Sometimes the explosions have been severe enough to disrupt the sewer pipe itself or to open joints in the pipe, more commonly the blasts result in the blowing-off of manhole covers, sometimes with injury to people and damage to property in the neighbourhood. Gasoline and similar hydrocarbon products are the most common causes of this hazard, but other oils, solvents, and chemicals have been known to cause dangerous conditions. Fires and explosions from sewer gas have also occurred with injury to personnel. Sewer gas has a high content of methane (CH_4), produced by the anaerobic decomposition of organic material contained in domestic sewage or certain industrial wastes. Decomposable solid material is especially troublesome when it settles in the sewage collecting system. Other flammable gases that may be introduced to a sewer atmosphere in conjunction with industrial waste discharge present a similar or worse hazard that the usual concentrations of methane gas.[2]

32. Toxic materials.—Discharge of poisonous gases, or of liquids that may evolve poisonous gases and vapours, presents a serious hazard to sewer workers and treatment plant personnel; these wastes should never be tolerated except at such low concentrations that the hazard does not exist. The principal danger to sewer workers is not usually toxic materials themselves, but asphyxiants, such as, carbon dioxide and methane, which are hazardous because they displace oxygen from the sewer atmosphere. Petroleum vapours present the same danger, and in addition are somewhat toxic, especially after prolonged exposure. Bacterial decomposition of sulphur-bearing compounds, such as sulfates, under the anaerobic conditions of most sewages, leads to formation of the very toxic hydrogen sulphide in the sewage and sewer atmosphere. Cyanides in industrial wastes present a particular hazard in sewers because of their easy hydrolysis to hydrogen cyanide, a gas of high toxicity. Lockett and Griffths,[3] have reported laboratory tests on the hydrogen cyanide content of air in contact with sewage-carrying cyanide wastes. A sewage containing 50 ppm of cyanide (CN or HCN), at a temperature of 70°F and at pH values of 2.8 to 8.1, produced a HCN concentration in the air of 0.09 to 0.14 milligram per litre (mg/1). Other tests on sewages up to 1000 ppm. of cyanide are tabulated in the original paper. The toxicity of HCN in air is quoted as 0.025 mg/1, slight symptoms after several hours; 0.12, very dangerous within 1 hour; and 2.5 fatal. These investigators concluded that, at moderate air flows, 50 ppm of cyanide in sewage produces a dangerous atmosphere, whereas 20 ppm, is safe. Ventilation is not particularly helpful unless it is extreme. The effect of pH below 7 is not important, probably because cyanide are readily hydrolyzed even in neutral solutions. A pH above

---

[2] *Ibid.*, pp. 35, 36.

[3] Lockett, W.T. and J. Griffith's "Cyanides in Trade Effluents and their Effects on the Bacterial Purification of Sewage"; *Inst. Sewage Purif., Jours and Proo*, 1947, Pt. II, pp. 121-40.

8 suppresses HCN formation but does not stop it. In large sewer where men may work for several hours, the concentration of cyanide in normally alkaline sewage should not exceed 10 ppm. In small branch sewers, 20 ppm may be permitted. Sudden dumpings of high concentrations of cyanide, of course, present the greatest hazard.[1]

33. Damage to sewers.—Damage to sewage treatment plant equipment is caused by industrial waste discharges because of hydraulic effects or because of the chemical action of waste constituents.[2]

Domestic Sewage—Major Parameters[3]

Solids
1. Oil and Grease
2. Sulphates
3. Nitrogen
4. Phosphates
5. Chlorides
6. C.O.D.
7. B.O.D.
8. Fluorides
9. Coliforms

34. Hydraulic effects.—Hydraulic overloading of sewers can result from the discharge of too much industrial waste, although permissible discharge rates can be computed if sewer sizes and slopes are known. Hydraulic overload is most likely to occur from such large-volume discharges as cooling waters from power plants or from sudden or batch dumpings of process tanks. Depositions of solids in sewers and sewer catch basins is an inevitable result of the discharge of industrial effluents too high in settleable solids and precipitates. Settled solids cut down sewer capacity, and may lead to flooding and overflowing, with resulting unsanitary conditions. Coarse solids like paper, cloth, garbage and sticks are especialy troublesome, as they may clog or injure pumps, valves, and sludge moving mechanisms at the treatment plant. Discharge of such coarse materials into a municipal sewer should not be permitted under any conditions.

Stoppage of small sewers frequently occurs because of grease accumulations. The quantity of grease normally present in domestic wastes is not troublesome, but restaurant and institutional kitchens often discharge greasy wastes that form desposits on sewer walls. Certain industries are also offenders in this respect unless adequate grease removal is provided by pre-treatment of wastes before discharge; chief among these industries are meat packers and commercial laundries. Grease that reaches the treatment plant is a source of trouble in clodging equipment and in retarding the desired chemical and bacterial activity.[4]

35. Chemical effects.—The principal chemical effect of industrial wastes on sewers is corrosion caused by acids, salts, hydrogen sulphide, and similar active agenst. These acidic materials corrode both steel equipment and concrete structures. Municipal sewage is normally slightly alkaline, hence small discharges of acids are neutralized without damage. Overdoses, on the other hand, especially if continued over a long period of time, frequently lead to extensive destruction of sewere pipe and structures.[5]

---

[2] *Ibid.*, at p. 37.
[3] Source : Central Pollution Board, 1998.
[4] Vide *Principles of Industrial Waste Treatment*, by C. Fred Gurnham, pp. 36, 37.
[5] *Ibid.*, at p. 38.

36. Waste and waste treatment.—Sewage consists of any waste water and solids that find their way into the sewers and are transported through the sewer system. Domestic sewage is all the sewage that an average town produces, excluding industrial wastes but including water from factories that is of non-manufacturing origin. Chemical or biological waste resulting from a manufacturing process is classified as industrial waste water. Same industrial waste waters can be process in a municipal treatment plant without any special provisions. Some industrial wastes require considerable pre-treatment before going into city sewers. Still other types of industrial wastes must be treated by the manufacturer before discharge into a receiving stream. Fresh domestic sewage is gray-coloured, that is, dirty-looking, water. Solids represent an insignificant percentage (approximately 0.1%) of total volume. Hydraulically, all calculations for sewage flows and mechanical handling are computed for water and exclude the solid content. The organic material in sewage is in the process of decomposition at all times unless the waste is heavily chlorinated or otherwise disinfected. This decomposition process is aerobic, or nonseptic, as long as the water that transports the waste has dissolved oxygen present. If the putrefaction process consumes all the available dissovled oxygen before reaching the treatment plant, then the process turns anaerobic and putrefaction continues in the absence of oxygen in both cases, the decomposition is caused by bacteria and other micro-organisms. The essential difference is that different species of bacteria predominate under aerobic (in presence of oxygen) and anaerobic (in absence of oxygen) conditions. Anaerobic bacteria produce foul-smelling gases and the sewage turns black. If either air containing oxygen or oxygen gas is transmitted into the water in adequate quantities, septic sewage turns dark brown or gray and loses its foul smell. Thus, by artificially supplying adequate air in sewage, as non-septic state can be maintained at all times. While the terms "sewage" and "wastewater" are used interchangeably but the term sewage is becoming obsolete. Waste water, the preferred term, includes both organic and mineral matter. The mineral matter may combine with the water to form dissolved solids, such as, chlorides, or it may be present as undissolved suspended matter. This may form sludge deposits, and it may contribute to the hardness of the water in the effluent. The organic portion of the sewage undergoes biological decomposition process. This decomposition process consumes available dissolved oxygen.[1]

It is necessary before a sewage treatment effluent can be discharged into a nearby stream permission may be taken from regulatory agencies. The regulatory agency may not permit any effluent to be discharged into the stream. For this treatment of sewage is required.

Sewage treatment is a broad term that applies to any process, or combination of processes, that can reduce the objectional properties of water carried waste, that is, waste water, and it is less dangerous and repulsive to man.

A number of treatment units are employed for treatment of different ingredient of wastes. The treatment units are as "screens, grit chamber, skimming tanks and sedimentation tanks". All, these treatments are called Primary Treatment. For the degradation of organic materials, biological decomposition process are employed. These are categorised under *Secondary Treatment.*

To get for pure non-harmful effluent, the treatment process employed is *Tertiary Treatment.*

---

[1] *Waste Water Systems Engineering*, by Dr. Homer W. Parker, P.E., pp. 1, 2.

37. Primary treatment methods.—Liquid wastes from industries and community sewage should be effectively treated and disposed. The responsibility of treatment of community sewage is with Municipality and of Industry lies with the Industries. It is possible to dispose industrial sewage along with the Community sewage, if they do not damage the sewers and also do not effect with the final disposal system. It is much easier to treat Industrial wastes with city sewage rather than the waste independently. In order to make them fit for disposal along with domestic sewage or for their separate disposal, the wastes have to be given a series of treatments. These include pre-treatment, primary, secondary and tertiary treatments. Many times the primary treatment is avoided and the wastes are directly treated by secondary treatment biological units primarily. For degradation of organic material, biological decomposition processes are employed. There are classified under secondary treatment.

(1) *Physicial Treatment.*—Waste waters generally contain materials, such as, waste-paper, rags, bricks, grit, oil and grease, etc. These wastes obstruct pipelines, channels and pumping units and hence their removal is necessary. This helps to reduce load on subsequent treatment processes.

The following methods/processes are employed for removal of the above mentioned wastes in sequence.

(*a*) Screens
(*b*) Comminutor devices
(*c*) Grit chambers
(*d*) Pre-aeration
(*e*) Plain/Primary sedimentation
(*f*) Oil and grease removal.

(*a*) *Screens.*—These are employed for removal of waste matter, such as, large pieces of woods, brick and other floating items. It consists of bars unually spaced at 7.5 cm to 12 cm and the bars are sloped at an angle of 45-60° from the vertical. Bar screens consist of a series of bars evenly spaced to from alone on the rack of 60° from the horizontal. Operating between the bars is commonly between 2.5 cm and 7.5 cm. When bar screens are used at large plants as primary screening device, they are usually cleaned mechanically. The bars may be set vertically or at small angle from the vertical. Screenings are removed by travelling rakes and are deposited either on a platform or in cans or truck.

The matter excluded by screens is known as screenings. The screenings can be disposed of either by direct burial or incineration.

(*b*) *Comminutor devices.*—Grinders, cutters or shredders are called as comminutors and are used to break-up or cut up solids to such a size that they can be returned back to the sewer without danger of clogging the pump or pipeline or affecting subsequent treatment devices. A comminutor is essentially a slotted drum revolving in the path of the waste. As the drum revolves against the cutting surface the materials which have passed through the slotted opening are cut into small pieces. Comminutor are of two types, one with stationary drum and other have moving blades which cut the materials, collected on the screens.

(*c*) *Grit chambers.*—Grit means inorganic solids, such as, sand dust, stones, cinder and other heavy inorganic sludges. Grit may damage pumps by abrasion and also cause serious operational difficulties. In sedimentation and sludge digestion by tanks the grit accumulate around and the outlets and plug them. Grit chambers may be constructed after screen.

Grit chambers are generally designed as long channels and the velocity of waste flow is reduced to 30 cm/sec. which allows settling of the grit material. Devices are employed for velocity control. For storage of grit, grit chambers may have hopper slots at the bottom. Grit is removed by hand to buckets or wheel barrows using shovels. Normally two or more channels are provided for continuous operations. Grit can be removed by scrappers. These require much less grit storage space then manually operated units.

Grit may condition some organic matter which decomposes and creates bad odour. To avoid this nuisance caused, the organic matter is sometimes washed.

(*d*) *Pre-aeration.*—Aeration before primary sedimentation is termed as pre-action. It is done : (1) to obtain greater removal of suspended solids in sedimentation takes, (2) it helps in removal of grease in the waste, (3) to reduce BOD and (4) for the removal of volatile organic substances.

Compressed air is sent into the waste for a period of 20-30 minutes at the rate of about 0.1 M^3 of air/gallon of waste and is maintained for 30 minutes. For the removal of volatile organic from industrial wastes pre-aeration is done.

Air is used for the agitation of waste and as well to flocculate lighter suspense a solids to heavier masses which settle more rapidly in the sedimentation tank. It also helps to separate grease and oil in the waste from the suspended solids and to carry them to the surface.

(*e*) *Plain sedimentation unit.*—The major function of this unit is to remove settleable solids which are mainly organic in nature from the waste. The settled solids are taken from the units continuously or at frequent intervals so that the decomposing and formation of gases may not take place. The separated solids digested in sludge digesters. It also helps in the removal of all grease from the waste water.

Sedimentation tanks are designed on the basis of surface loading and detention time. The normal values of surface loading are between and, and detention period is the time in hours the waste is held in tasks. This was at one time the only factor used for designing sedimentation tanks. However, it has been now replaced by surface loading. The detentation period in most of the sedimentation tanks used in waste treatment will be about 2 hours.

Inlets and outlets are designed to reduce the entrance velocity and distribute the flow uniformly throughout the cross-section of the tanks invariably consist of weirs of sufficient area or length so that velocity at the outlets is low enough to prevent carry over of bottom sludge. Baffles before outlets prevent loss of floating solids and grease.[1]

(*f*) *Oil and grease removal.*—The type and the quantity of these vary from waste to waste, Industries discharging these include dairy, soap and vanaspati factory machine shop, petroleum refinery, act. These materials, because of their lower solubility in water, are not readily available for biological degradation and they often accumulate on the surface causing scum problems and also start decomposing slowly giving rise to foul odours. These have to be removed from the wastes before they are subjected for biological treatment.

---

[1] Course *Manual on Industrial Waste Treatment*, NEERI, Nagpur.

Grease traps or interchapters are often employed in industries to remove and recover the grease and oils. They are designed as small skimmers tanks with submerged inlet and bottom outlet. Oil separators are also used in refinery industry for separating the oil from the waste water.

38. Scum is not allowed to accumulate.—Sedimentation tanks are provided with scum-removal devices at the surface. Insufficient skimming allows scum to foil around and also to escape in the settled waste. It is desirable to skim continuously small amounts of scum.

39. Efficiency of plain sedimentation.—About 40-60 per cent of the suspended solids are normally removed from the domestic sewage by plain sedimentation. It has also been reported that the BOD removal efficiency will be around 40 per cent. These figures of course are very general and may not apply to specific cases. It has also been reported that the removal of both suspended solids and BOD will be higher if the waste is fresh. In case of industrial wastes, this cannot be predicted and has to be assessed in the laboratory before disigning the sedimentation tanks.[1]

40. Chemical treatment.—Chemical treatment has been recognised as intermediate treatment and the efficiency obtained in this is greater than the physical processes but less than the secondary treatment. Chemical treatment is most often used for treatment of industrial wastes, for example, neutralisation of alkaline and acidic wastes, removal of colour, suspended solids and precipitation of toxic metals, etc.

41. Chemical coagulation or chemical sedimentation.—Chemical coagulation consists of adding to the water small amounts of certain chemicals which form floc which coalesces the suspended impurities and then cause them to sink rapidly. This allows the process to be carried out in a such smaller basin than plain sedimentation. Coagulation and sedimentation remove only the suspended and colloidal impurities in the water and do not remove dissolved matter. Coagulation consists of mixing the coagulants with the waste water in sufficient strength to produce the floac which settles down when coasts flows slowly either horizontally or vertically upward through a sedimentation tank. The most common coagulants in use are alum and ferrous sulphate in contribution with line. Ferric chloride, ferric sulphate, sodium aluminate, chlorinated cooperas are also used to a lesser extent. Application of this method is adopted in the treatment of pulp and paper wastes, tannery waste, petroleum refineries, etc.

42. Removal of dissolved pollutants by chemical precipitation.—Apart from removal of suspended and collodial particles, chemical precipitation is also being used to remove soluble inorgenic and organic matter from wastes *e.g.* cannery wastes : For example, under some conditions, treatment of wastewaters with calcium hydroxide is reasonably effective in the removal of nitrogen and phosphorus. Chemical precipitation produces about 10-25 per cent by volume of sludge, which will normally dry on sand beds in about a week without producing an odour. Lead from battery wastes as insoluble carbonate or phosphate; zinc from viscose rayon wastes and dye wastes, heavy metals like Ni from plating shop wastes as hydroxide can be precipitated. Radio-active waste can also be concentrated by utilising precipitation reactions. Wastes from phosphatic fertilizer industries containing fluorides and phosphates. These are also removed by chemical precipitation.

---

[1] Course *Manual on Industrial Waste Treatment*, NEERI, Nagpur.

Primary or pre-treatment units used for industrial waste treatment include screens, sedimentation tanks, pre-aeration units, act., and chemical precipitation, oxidation and reduction of industrial wastes. These methods find wide use in treatment of different industrial wastes.

43. Introduction to secondary treatment—Biological principles of waste treatment.—The treatment of organic wastes may usually consist of three of the steps, *viz.*, Primary treatment, secondary treatment and sludge disposal. These units serve to reduce the organic load on subsequent sewer-dairy treatment units (biological treatment) facilities. Sludge removed from the settling or floatation tanks is further treated in separate units.

Biological oxidation is usually accomplished in fixed bed units (trickling filters) or in activated sludge process. It is employed in removing the colloidal and dissolved organic matter. A trickling filter generally consists of a circular structure containing a bed of suitable depth of crushed stone, crushed slag or other reasonably hard and insoluble medium. Waste is trickled over the bed by distributors. The liquid tickles downward through the bed to the underdrains. As sewage is continuously trickled over the medium a gelatinuous film if micro-organism develops on the surfaces of the medium. This film is composed of microbial cells in various stages of activity organic matter in various stages of decomposition and residues. Colohds are absorbed by the film, where they are hydrolysed and then soluble organic diffuse into the microbial cell; where they are further oxidized by enzymatic action.

The activated sludge process is an efficient process of treatment. The activated sludge process may be defined as a system in which flocculated biological growths are continuously mixed and contracted with organic waste in the presence of oxygen.

Since sludge from primary and secondary units requires further treatment, it is concentrated by gravity thickening or flotation. The concentrated sludge is treated by either dewatering or digestion. The treatment units based upon biological decomposition are classified as aerobic and anaerobic units. The aerobic units include:

Aerobic	Anaerobic
Land treatment	Cess pools
Intermittent sand filter	Septic tank digerator
Contact beds	
Modification of activated sludge	High rate digestion
Oxidation ponds	
Aerated lagoons oxidation ditch	

It is desired to know whether an industrial waste is biologically treatable or not. This can be measured by characterising waste for N, P and BOD. It is always desired to know BOD.

Many industrial wastes do not form a balanced substrate for good microbial growth. When discharging industrial into a water course, this nutritional deficiency can be an advantage since the rate of metabolism will be retarded.

In biological waste treatment systems a nutritional deficiency can be a handicap. If a waste deficient inheritant is to be stabilized, biologically, it is essential that enough nutrient be made available for optimum cellular growth by supplementing it artifically conditions. The two most critical elements are nitrogen and phosphorus. In aerobic system a BOD : N : P of 100 : 5 : 1 and in an aerobic system BOD : N : P of 100 : 5 : 5 shall be maintained for a balance growth.

44. Aerobic decomposition.—The most efficient method for reducing the organic content of dilute liquid wastes is by aerobic biological treatment, trickling filters, activated sludge, oxidation ponds, oxidation ditch, biological disc and aerated lagoons are the few popular methods of treatment in operation today. All these systems are dependent on the biochemical principles. The organisms decompose complex organic compounds and use the energy so liberated for their bodily functions, reproduction, growth, locomotion and so on. Micro-organisms are actually small chemical factories in which raw materials are processed through a series of reactions to field a finished product. The microbial end product is protoplasm.

The aerobic treatment is preferred to anaerobic as it gives stable effluent fit for discharge to receiving waters and does not tend to create odorous conditions. Part of the organic matter is used by bacteria to produce energy and is converted to stable the products. The quantity of oxygen required to stabilise organic matter depends on the BOD satisfied during treatment; this is the BOD convertted to protoplasm and the BOD discharged in the effluent. Various treatment methods have been estimated as satisfying the following percentages of applied BOD :

Conventional activated sludge	...	45 per cent.
High rate trickling filters	...	55 per cent.
Low rate trickling filters	...	80 per cent.

Industrial wastes contain, carbohydrates, fats and proteins in addition to many other constituents. Protein, starch, cellulose and fats cannot pass through bacterial membrane, unless they are hydrolysed by decoration of extracellular enzymes to simpler forms. The energy produced by this process is not available to the bacteria as hydrolysis takes place only outside the cell.

45. Anaerobic decomposition.—Anaerobic decomposition of organic. matter is a mixed culture process consisting of two phases : (*a*) degradation of higher organic matter into volatile organic acids and (*b*) fermentation of these organic acids into methane and other gases. The former process is accomplished by both facutative and anaerobic bacteria which are abundant in nature. The second phase is brought about by a specific group of obligate anaerobes, methane bacteria. All the bacteria which are known as methane bacteria do not survive below pH 6.0.

The methane bacteria cannot utilise the conventional carbon and nitrogen sources, such as, carbohydrates, fat and protein. The only organic subtrates metabolised by these bacteria are short chain fatty acids and simple alcohols.

46. Introduction to tertiary treatment.—Tertiary treatment is the third major step on the treatment process. This treatment requires pre-treatment by primary and secondary treatment. Synthetic detergents, pesticides of all kinds, and other petro-chemicals which are not readily removed either by the primary or secondary treatment, or by the natural stream purification processes. Those may persist almost indefinitely and even pass through modern water treatment plants without being removed, or even being detected.

The advanced waste treatment research programme sponosored by the US Public Health Service has shown that in addition to chemical coagulation and sand filteration the following methods should promise of economic and practical feasibility in effluent reclamation. (*i*) Absorption by active carbon; (*ii*) foam fractationation; (*iii*) gae hydration; (*iv*) solvent extraction; (*v*) freezing; (*vi*) ion-exchage process, including dialysis; and (*vii*) distillation. Tertiary treatment, however, usually, includes chemical coagulation, primary absorption of slum floc, rapid filtration, if necessary followed by secondary absorption on active carbon. Some of these methods are described below :

47. Chemical precipitation.—For precipitation, certain chemicals are used, namely, alum, ferrous sulphate, and ferric chloride. By using chemicals large volumes of sludge are produced and the control of chemical dosage is difficult because of wide fluctuation in the composition of the effluent.

48. Separation beds.— In seperation beds, the waste first comes in contact with course material which is just reverse to that of conventional files. This idea has been successfully used in water treatment in the USA and in Russia. Filtering in the direction of coarse to fine makes it possible to use the entire depth of bed to store the material removed from the waste, rather than accumulating all of the materials on the surface as in the case with a conventional sand filter. The suspended matter so removed has less influence on loss of head.

49. Intermittent sand filters.—The intermittent sand filter consists of a bed of sand or gravel, covered with growth of active aerobic organisms, similar to the trickling filter. For use as polishing units, sand beds are built about 1.10 to 2.2m depth. Uniformity of sand size between 0.20 and 0.35 mm is generally recommended.

50. Rapid sand filters.—Filtration consists of passing the water through some porous material to remove the suspended and colloidal impurities. For large quantities of water or effluent, sand is generally used as the filter medium, as it is inexpensive and effective. Another filter medium that is finding increased favour is anthracite, coal, graded to proper size. Passing water or effluent through a bed of proper-size filter media will not only remove coarse particles of suspended matter but also the material in colloidals suspension, including the bacteria and the impuirities that impart colour to water. The rapid sand filters are of two types : gravity filters and pressure filters (gravity rapid sand filters do not require coagulation and sedimentation. Pressure filtures are often preceded by coagulation and sedimentation. Rapid sand filters are being used extensively for the tertiary treatment of sewage.[1]

51. Slow sand filters.—These are usually 12 to 30 inch deep, and consist of a layer of sand or fine pan ash, resting on a layer of coarser material, which in turn rests on a system of drainage pipes. Construction is much simpler than that of the rapid sand filter since no back washing facilities are required. Recently, Water Pollution Research Laboratory in England conducted some experiments on the polishing of trickling filter effluents by slow sand filters. It was found that on an average 60- 68 per cent of the suspended solids were removed by these filters, leaving average concentrations of 15.3 and 12.1 ppm. respectively. Corresponding figures for BOD removal were in the region of 37 to 55 per cent at hydraulic loadings of 1.6 to 1.8 mgad.[1]

---

[1] Course Manual on Industrial Treatment, NEERI, Nagpur.

52. Treatment by oxidation.—Oxidation is chemical reaction and is unique among the advanced waste treatment processes. Oxidation has the potential ability to completely destroy organic constituents and could be applied to supplement or assist in improving the efficiency of existing waste treatment facilities without necessarily requiring any equipment change. Oxygen, chlorine, potassium permanganate, hydrogen peroxide and ozone are being used as oxidants. Work is in progress in the USA in this direction.

53. Microstrainer.—The microstrainer, a device originally developed for use at water works, was first employed for treatment of humus tank effluent at Luton and has since been adopted at several other works. The microstrainer consists of a drum revolving on a horizontal axis at a peripheral speed of up to 30 m/min. and is covered with a stainless steel fabric of special weave. Solids retained by the fabric are continuously washed off by strained effluent sprayed under pressure through the drum. Recently the water pollution Research Laboratory in England install a small microstrainer, 5 ft. in diameter and 3 ft. wide. While the daily average concentration of suspended matter in the filter effluent ranged from 20 to 120 ppm, the concentration appearing in the microstrainer remain relatively constant, and was usually less than 20 ppm.[2]

54. Introduction to anaerobic treatment methods.—Anaerobic decomposition of organic matter is a mixed culture process consisting of two phases (*a*) degradation of higher organic matter into volatile organic acids and (*b*) fermentation of these organic acids into methane and other gases. The former process is accomplished by both facultative and anaerobic bacteria which are abundant in nature. The second phase is brought about by a specific group of strict anaerobes, *i.e.*, methane bacteria. All the bacteria which are known as methane bacteria do not survive below pH 60. They have many physiological properties in common by they are heterogeneous in cellular morphology Some are rods, some are cocci, while others occur in clusters of cocci known as sarcina. Some of the species form endospores. The methane bacteria cannot utilise the conventional carbon and nitrogen sources, such as, carbohydrates, fats and proteins. The only organic substrates metabolised by these bacteria are short chain fatty acids and simple alcohols.

Industrial water contain carbohydrates, fats and proteins in addition to many other constituents. Protein, starch, cellulose and facts are too large to pass through bacterial membrane. Bacteria secrets what are known as extra cellular enzymes which attach and hydrolyse the complex food materials around the cell yielding simpler derivatives, such as, amino acids, hexoses, fatty acids and glycerol which are readily useable by bacteria. Energy produced by this process is not available to the bacteria as these occur outside the cell.

---

[1] Work done by Water Pollution Laboratory, England.

[2] Extracts from the work done by Water Pollution Research Laboratory, England.

Under anaerobic conditions however, this oxidation is not possible and to the bacteria discharge various fermentation end products back into solution. The nature of the end-products depends upon the bacterial species, as well as the environmental conditions imposed and the deegree of stabilisation.

The first step in biological utilisation of proteins involves their hydrolysis resulting in the production of various amino acids. Within the cell, deamination, decarboxylation and transmination of the amino acids occur. The nature of these reactions varies under aerobic conditions. All the amino acids are not degraded in the same fashion.

Bacterial deamination under anaerobic conditions may proceed with or without reduction to form the corresponding saturated or unsaturated acids. Anaerobic decomposition of proteins resulting in the formation of same compounds of very unpleasant odour, such as, mercaptans, amines, organic acids, phenols, alcohols, hydrogen sulphide and amonia. The acids formed by aerobic and aerobic conditions can be further oxidised.

Anaerobic treatment as applied to waste water treatment represents the controlled application of the process which occurs under natural conditions when organic matter decays in the presence of water and in the absence of air. This action is the result of a mixed culture of certain facultative and anaerobic bacteria which form methane and carbon dioxide from the breakdown of cerbonaceous material. The biochemical reactions involved in anaerobic treatment can be broadly divided into three groups—(*a*) Hudrolytic (*b*) Oxidation and (*c*) Fermentative.

During the oxidative reactions, bacteria use the combined oxygen present in nitrites, nitrates, sulphates and certain organic compounds as the ultimate hydrogen accepter. In the third stage methane bacteria convent these fatty acids into methane, carbon dioxide, etc.

Anaerobic digestion is now filling need for a process capable of handling wastes containing high dissolved organic matter, which either cannot be handled by aerobic processes or if possible only at extremely high capital and operating costs. Anaerobic treatment has been found to be most efficient method for obtaining high BOD reduction at relatively low cost if the waste treated has or can be conditioned to have certain physical and chemical characteristics.[1]

55. Lagoons.—Lagoons are simple devices for processing wastes and have a variety of applications. Any industry which has sufficient land with suitable topography adjacent to its factory should seriously consider the use of lagoons for the treatment of its wastes. Lagoons can be classified into storage lagoons, absorption lagoons and lagoons using biological stabilisation.

Storage, lagoons are the simple retention basins and help in avoiding river pollution by holding the wastes during low river flows. These will reduce settleable solids considerably and BOD to a lesser extent. Such lagoons require a very large area and are also likely to contaminate ground water if the tank bottom is permeable.

Absorption lagoons allow the waste to seep into the soil and have very limited application for the treatment of wastes as they contaminate ground water. They can be used in only porous soils where ground water pollution is not a serious consideration.

---

[1] Course Manual on Industrial Waste Treatment, NEERI, Nagpur.

Lagoons in which biological stabilisation is made use of are of two types : (*a*) aerobic and (*b*) anaerobic ones. Oxidation ponds and aerated lagoons make use of aerobic processes for the establisation of wastes whereas anaerobic lagoons, as the name indicates, make use of anaerobic processes.

56. **Anaerobic lagoon.**—A lagoon can be maintained aerobic or anaerobic by controlling the BOD load on it. Anaerobic lagoons for the treatment of wastes are designed on the principle of anaerobic digestion. Once methane fermèntation is established, these lagoons will be self-sustaining and provide a BOD reduction on about 70 per cent in the wastes that are treated in this system. Temperature has a profound influence on the performance of the lagoon and temperatures between 20 and 35° C are ideal for this system.

At start seeding the lagoons with anaerobic sludge or cow-dung is essential. Once the lagoon starts functioning, further addition of seed sludge is not normally required. There is bad smell due to foul gases. In healthy lagoons, the odour problem can be kept at a minimum. Smell nuisance is also mininum in lagoons treating wastes low in nitrogen and sulphur. An interesting example of anaerobic lagoon for treating strawboard mill effluents at Nobles Ville, India, USA, for over 40 years, was reported by Krancher. The lagoon occupied an area of about 150 acres with a depth varying from 5 to 25 feet and had a capacity to 47 x 10^6 cft. (1.33 x 10^6 m^3). The waste have a BOD of 800, 1250 mg/1 was treated to yield effluents with 20 to 100 mg/1 BOD. The colour remained the same during treatment.

Settled straw board waste was treated by using a combination of anaerobic lagoon and oxidation pond. Total detention time of 22 days in a set of ponds in series could reduce the BOD from 700 mg/1 to 90 mg/1 and the COD from 235 Omg/1 to 600 mg/1. Anaerobic lagoon set up by the author for treating prehydrolysate effluent (BOD 40,000 mg/1) from Rayon pulp mill is in operation and is giving over 90 per cent reduction in BOD.

57. **Anaerobic digestion.**—The primary and secondary sludges produced in the waste treatment employing trickling filters and conventional activated sludge process contain organic matter (over 70 per cent) which redily purify and are not easily dewaterable. Hence they have to be further stabilised by bilogical means. This is carried out in anaerobic digesters. This process decomposes the highly putrescible organic matter to carbon dixide and methane and at the same time releases the bound water from the sludge. Thus the solids obtained after digestion are reduced in quantity, easily dewaterable and at the same time can be dried without any nuisance.

Anaerobic digestion has been applied to treat several organic wastes, such as, meat-packing, milk, yeast, distillery, starch, straw board, citrus and antibiotic wastes. Full scale plants of digester capacity of about 7,360 M^3 have been installed and successfully operated in several parts of the world, for treatment of yeast waste, butanol, acetone fermentation waste, meat packing waste, etc. Digestion can be carried out in open or covered tanks. In the open tanks, gas escapes directly to atmosphere while with covered tanks gas is collected and used as a fuel for gas engines or heat.

It has been found that digestion proceeds in almost any range of temperature but the time taken to complete the process varies greatly with the temperature. Rapid changes in temperature are also deterimental to the process at a temperature of 55° F about 90 per cent of the desired digestion is completed in about 55 days. As the temperature increases, the time decreases so that at 75° F the time is cut down to 35 days; at 85°F to 26 days at 95°F to 24 days. These figures are averages and are not exact values for all sludges of various nature. The normal detention time in standard digesters varies from 30 to 70 days depending upon the temperature conditions.

The gas produced during anaerobic digestion contains about 70 per cent methane and 30 per cent carbon dioxide. The gas produced is expressed variously and the yields amount to 0.31 to 0.61 M^3 / kg of organic matter added or 0.56 to 1.5 M^3 / kg (9-24 cft) of organic matter oxidised. The heat value of digested gas varies for 77,500 to 91,500 Kcal per litre (550-650 BUT / cft). One thousand cubic meters of sludge gas is equal to about 1000 litres of gasoline in heat value.[1]

58. Aerobic methods of treatment of industrial wastes—The method of biological treatment used in Industrial waste treatment are essentially the same as the one used in domestic sewage treatment. The common methods used include : (1) Trickling filter; (2) Activated sludge; (3) Oxidation ditch, (4) Aerated lagoons and (5) oxidation ponds.

The most preferred method for reducing organic matter of waters is by aerobic biological treatment as it gives stable effluents fit for discharge into water bodies and does not tend to create odourous conditions. Part of the organic matter is used by aerobic bacteria to produce energy and is converted to stable and products like carbon dioxide, sulphates, nitrates and water and the remainder is used for synthesising new cells. Oxygen must be supplied continuously in aerobic process. The most commonly used conventional aerobic methods are trickling filters and activated sludge process and its modifications.

59. Trickling filters.—A trickling filter is a device for bringing settled waste water into contact with biological growths. Trickling filters are sturdy units, not easily upset by shock loads and of for their consistent performance. Like all biological units they are affected by temperature, therefore, cold weather slows down biological activated in the filter. Those solids which are largely organic, are not removed but are converted to living microscopic organisms temporarily attached to the filter medium and stable organic matter. The attached material eventually sloughs off and is carried away in the filter effluent. For this reason, trikling filters should be followed by secondary sedimentation tanks to remove permanently the solids from sewage.

A typical trickling filter unit consists of three parts : (*i*) the bed of filter medium; (*ii*) an underrainage system; and (*iii*) mechanism for distributing the waste water evenly over the surface of the filter.

Based on nydraulic and BOD loading trickling filters are classified as "standard rate" or "high rate". Hydraulic load is the number of gallons of wastewater applied for acre of filter surface per day or to be precise, per acre foot per day. The organic loading is the number of pounds of BOD per cubic feet of filter medium.

---

[1] Course Manual on Industrial Waste Treatment, NEERI, Nagpur.

60. **Standard filters.**—These are operated at a hydraulic loading of 1.1 to 4.4 million gals. per acre per day with an organic loading 5.0 to 25.0 lb. per 1000 cubic feet of filter medium per day.

61. **High rate trickling filters.**—The filter are designed for the hydraulic loadings of 8.7 to 44.0 million gallons per acre per day and organic loading 25.0 to 50.0 pounds per 1000 cubit ft. or filter medium per day. The higher hydraulic rate is attained by recycling filter effluent with the normal waste-water flow in proportion upto ten to one and recirculating it through the filter. The higher BOD loading is attained by applying a larger volume of waste-water flow per acre of the filter. This effects a reduction in BOD concentration of the waste-water as applied to the filter, even though the total BOD load per day is higher.

62. **Activated sludge process.**—The present day conventional activated sludge process is basically a completely mixed aerobic system capable of producing a very stable effluent with as low as 5 to 10 ppm. of BOD. The conventional activated sludge process consists of four functional steps (*a*) primary sedimentation to remove settleable organic solids, (*b*) aeration, (*c*) separation of the biological active sludges and (*d*) return of settled biological sludge to be admixed with the raw wastes.

For domestic sewage from communities with normal *per capita* water consumption rates, the requirements are as follows :

Preliminary sedimentation for about 2 hours, aeration for 6 hours based on sewage flow *plus* 25 per cent return sludge and final sedimentation for 2 hours at an overflow rates of 600 gal. per sq. ft. day. Conventional activated sludge treatment plants were found to produce in general 90-95 per cent BOD reduction.

The present knowledge concerning conventional activated sludge treatment has been summarised by Haseltine. According to this report BOD removal in activated sludge units average about 90 per cent for BOD loadings upto 0.3 lb /lb of seration solids. At loadings between 0.3 and 0.5 lb / lb, the efficiency becomes somewhat erratic. Waste sludge from conventional sewage treatment plants was found to vary from 10 to 30 per cent per day of the total aeration solids.

Although the concept of BOD loading in terms of activated sludge solids is an extremely important one, the common practice is to base design consideration on BOD loadings in terms of a unit aeration capacity, usually per 1000 cu. ft. Experience has demonstrated that loading at 25 to 30 lb/BOD/day /1000 cu. ft. are about the upper level that can safely be adopted if the aeration solids can be held at about 2000 mg./l. The aeration process may be considered as three functional steps (*a*) a rapid absorption of waste substrate by the activated sludge, (*b*) progressive oxidation and synthesis of absorbed organics and organics concurrently removed from solution and (*c*) further aeration resulting in oxidation and dispersion of sludge particles Air required is about 0.5 to 2.0 cu. ft. per gallon of sewage.[1]

---

[1] Extracts from Course Manual on Industrial Waste Treatment, CPHERI, Nagpur, and *Water and Waste Engineering* by Fair, Gayer and Okun.

63. Low cost waste treatment methods.—It is gatheréd from NEERI Reports that NEERI conducts and come to conclusion that the plants—A survey of 12 sewage treatment plants were not working satisfactorily due to one or more of the following reasons (1) plants were not designed properly, (2) plants were idle because of mechanical breakdown and lack of maintenance and (3) plants were not working because of lack of skilled operations. This was finally concluded that to overcome the above difficulties the plants should be of (*i*) simple design, (*ii*) simple to construct and (*iii*) plants have least amount of mechanisation and (*iv*) require little or no skilled supervision for operation. These requirements are met by "Low cost waste treatment methods". These include (*a*) stabilisation ponds, (*b*) aerated lagoon and (*c*) oxidation ditch.

Table—Estimate of treatment units

	Process	For construction of a plant (including land cost at Rs. 10,000 / acre	Capital cost *plus* capitalised running cost	Running cost loan repayment
1.	Waste stabilisation pond	3.80 to 15.70	10.60 to 27.20	0.93 to 2.30
2.	Aerated lagoon	12.00 to 19.00	32.20 to 55.80	2.80 to 4.80
3.	Oxidation ditch	14.00 to 21.00	43.75 to 79.50	3.80 to 6.06
4.	Conventional treatment	16.00 to 25.00	40.88 to 152.00	3.55 to 13.02

Except the urban centres like Calcutta, Bombay, Delhi, Madras, Hyderabad, Ahmedabad, Bangalore, Kanpur, and Poona the rest of the urban centres in India required waste treatment plants of capacities less than 4 MOD (corresponding to a population of 135,000 persons).

64. Waste stabilisation ponds.—These ponds include the ponds under different names, *e.g.*, oxidation ponds, redox ponds, muturation ponds, sewage lagoons, anaerobic lagoons, facultative lagoons, etc. These ponds are widely used for treatment of domestic and industrial sewage. Waste stabilisation ponds are classified according to the biological process taking place, namely, aerobic, anaerobic and facultative.

65. Aerobic ponds.—Aerobic ponds are shallow ponds of 0.3 m depth or less so designed to maximise the growth of algae through photosynthetic action. Aerobic conditions are maintained throughout the depth of the pond all the time and the waste material is stabilised entirely through aerobic micro-organisms.

66. Anaerobic ponds.—Anaerobnic ponds are those designed for higher organic loading so that photosynthetic algae action is precluded and anaerobic conditions previal throughout the pond volume. Such ponds are built deeper. The effluent from an anaerobic pond will usually have high BOD and require further treatment.

67. Facultative ponds.—Facultatives ponds are relatively shallow about 1.75 m depth and predominantly aerobic during the sunshine hours as well as for some hours of the night In the few remaining hours of the night, the upper layers of the pond may or may not be aerobic but the bottom layers are generally anaerobic.

In oxidation pond green algae, blue green algae, flagellates and (yellow green) algae are important.

Green algae : Chlorella, Scenedesums, Chlaamodamonus, etc. Blue green algae : Anacystics, Anabaona, Oscillatoria, Flagellates ; Buglena, Trechelomones, Phacus. Yellow green : Asperionella, Navicula, Cyclotella.

In oxidation ponds, sewage or industial waste is let into a relatively shallow pond of about 1.2 m. depth with suitable inlet and outlet devices and having a relatively large capacity to give about 10 to 12 days detention time. In the presence of sunlight and sufficient nutrients the algae flourishes with a large number of aerobic bacteria and other organisms. The treatment process depends on the effective use of bacteria for breakdown or stabilisation of organic matter and on the presence of algae for oxygen supply.

As long as algae can provide an excess of oxygen above that required by micro-organisms aerobic environment will be maintained. If sufficient oxygen is not available particularly in the bottom layer of a pond from anaerobic or facultative bacteria then the required defficiency of oxygen from chemical compounds like nitrates, sulphates and organic materials which also produce various volatile acids, which are in turn further degraded to methane and carbon dioxide by methane bacteria. As long as sufficient quantities of nutrients are present there are only two other significant factors necessary for successful operation, namely, sunlight and enough detention in the pond for the bacteria to finish their job of stabilisation. The amount of sunlight received by a pond depends upon its area, the intensity of radiation received at that latitude and altitude, the degree of coloudiness and other meterological data.

68. Aerated lagoons.—Aerated lagoons have come into use in Western countries in last ten years. In India start has been made by NEERI and the first installation is the set of two lagoons (constructed 1969) at NEERI + campus, each to treat 20,000 gpd of sewage, one with a fixed aerator and another a floating aerator of NEERI design. The aerated lagoon is generally an earthen basin having an operational depth of 8 to 12' and aerated by surface aerators installed on floats or on a permanent base. Raw sawage or industrial waste-water can be fed into the lagoons after screening and grit removal without any primary setting. The lagoon acts as a setting-cum-aeration basin in which artificial aeration places algal-oxygenation of waste stabilisation ponds. Detention time ranging from 3 to 5 days or more is provided depending upon the type waste. BOD removal efficiency of 70.90 per cent can be attained.

69. Oxidation ditch.—Oxidation ditch is essentially an extended aeration system in which low organic loadings, high biological solids concentration in the order of 4,000 mg / 1 and extended period of aeration are normally used. This system requires sludge return involving separation of solids from the effluent and returning the same into the system back. Oxidation ditch is an oval-shaped closed circuit channel of simplest possible construction. Raw waste enters into the cannel where mechanical rotors intensively aerate the mixed liquor containing a high concentration of activated sludge solids (MLSS) in the channel and keep the mixed liquor in circulation. The channel depth is 1.0 to 1.5 metres only and can be constructed in simple masonry or earth work as long as water tightness is ensured. The extended aeration plants can be designed on the basis of BOD loading 0.2 lbs /lb MLSS. With these loadings efficiency of BOD removal vary from 95 to 98 per cent.[1]

70. Quality of treated effluents.—The quality of effluent produced will depend largely on the concentrations and types of contaminates in the waste water and on the treatment processes applied.

Table shows the high average quality obtainable by applying advanced treatment processes to secondary effluent.

TABLE

Quality of Water from Renovation system for production of potable water

	Concentration in effluent in (mg / l)	United States Public Health Service drinking-water standard (mg / l)
(1)	(2)	(3)

1. Introduction.—Domestic water supply in temperate countries is in a fortunate position. The chief ground for its provision is stated to be improvement of the public health, but people are prepared to pay an economic price for good water readily available, which rarely costs much of their income ion any case. So the health aspects do not need to be looked at critically from an economic view point and water is provided of a quality such that risk of disease is minimal. The diseases related to water supplies are numerous, therefore, the water supply needs proper attention by the Government.

Human health in most developing and underdeveloped countries is poor. We can measure it by when people die and the sorts of disease from which they suffer. If we compare the likely fate of one thousand babies born alive in a poor developing country and a rich industrial one, their survival. In the rich country a few babies, perhaps 24 out of the thousand, die shortly after birth, and then the vast majority survive through childhood and early adult life with only occasional tragedies from cancers such as leukaemia and from road accidents. Most people survive into their fifties when mortality from diseases of the arteries becomes appreciable and there is a rapidly increasing death rate among people in their seventies and eighties. These relatively affluent people all enjoy excellent water supplies and sewerage systems and water-related disease is in consequence rare, except for a possible effect of water softness on heart disease.

In tropical developing country a large amount of misery, sickness and death due to infectious disease related to water supplies, which is prevented by the multiple household tap systems of safe water in richer countries. The way

---

1. By David J. Bradley, pp. 14-17.

in which water improvements reduce disease depends on the particular diseases involved and, since the engineer and local authority may be unable to provide the ideal system for the people unless they completely neglect most of the population, we consider the degree to which infections may be reduced by different sorts of water improvements.

2. Water pollution.—Pollution means such alterations of the physical, chemical or biological properties of water or discharge of any sewage or industrial waste or of any other liquid, gaseous or solid substances into water which may or is likely to create a nuisance or render such water harmful or injurious to public health or safety or to domestic, commercial, industrial, agriculture or other legitimate uses or to the life and health of animals or plants or of aquatic organisms.

3. Affect of water supplies on health.—Some sort of relationship between water and health has been recognized from the time of Hippocrates, if not earlier, in the association of marshy places with fevers, and many unsophisticated communities in the tropics have similar views and are very discriminating in their choice and use of water.

Snow (1855) was the first to show a precise relation of a disease to water in his well-known studies of cholera, and he was closely followed by Budd who demonstrated the spread of typhoid through water supplies. Later in the nineteenth century a different type of relation to water was shown by Manson in 1877 for filariasis and Ross for malaria. Both infections were shown to be transmitted by mosquitoes, whose larvae live in and are dependent on surface water. Before the guinea worm, and subsequently schistosomiasis or bilharziasis, were shown to depend on fresh water invertebrates for their spread. The relation of personal hygience to health had been recognized for many years and "cleanliness is next to godliness" is very much a nineteenth century maxim, though only relatively recently have a series of epidemiological studies shown that the details of access to water determine the incidence of several infective diseases. Furthermore, the supplies of water available greatly influence facilities for disposing of human excreta and these in turn affect the spread of many important diseases.

In the tropics, we cannot safely take such a limited view. Such water-borne diseases as malaria, schistosomiasis, guinea worm and yellow fever are either terrible scourages of, or threats to, many tropical populations. The hazards from bad water are thus much greater. Poverty is much more serious for many tropical areas; in the rural areas where most people live—and around the edges of the cities, which are the fastest-growing communities, most people cannot afford a conventionally good water supply at present, and the choice in the short run may be between doing nothing and providing somewhat improved supply. If an ideal water system is not possible, there are options as to what needs should be met by the partial improvements. To make the right decisions we need again the broad picture of water-related disease. So, because of these two tropical characteristics—warmth and poverty—a wider view than in temperate lands is necessary.

4. Classification of water-related infections.—Between 20 and 30 different infective diseases may be affected by changes in water supply. They are usually classified, by the microbe causing them, into viral, bacterial, protozoal and helminthic diseases. But this is not very helpful in considering effects of improved water supplies. What affects them is the mode of spread, and it is more useful to have four main categories :

(*a*) Infections spread through water supplies—water-borne diseases.

(*b*) Diseases due to the lack of water for personal hygiene—water-washed diseases.

(*c*) Infections transmitted through an aquatic invertebrate animal—water based diseases.

(*d*) Infections spread by insects that depend on water—water-related insect vectors.

In temperate lands there is a pre-occupation with the health effects of polluted water. Faecal pollution means that, if those who pollute the water are suffering from intestinal infections, those who drink the water will ingest the organisms and may also get the infections. The big worries for municipal water supplies in temperate and tropical countries are that faecal pollution may allow the organisms which cause such diseases as typhoid, where the infecting dose of bacteria to someone who drinks the water is extremely low, to be spread through the water supply and cause a large outbreak of typhoid among the many people who drink the water. Such infections can clearly be accurately described as water-borne diseases, where the pathogenic organisms are carried passively in the water supplies, and they are prevented by attention to water quality.

If people have very little water, either because there is extremely little water available or because it is so far away in a well that the effort to bring much of it to the home is very great, then it may impossible to maintain reasonable personal hygiene. There may be too little water for washing oneself, or food untensils or even clothes. Remaining unwashed not only allows skin infections to develop unchecked but also make it easier for intestinal infections to spread from one person to another on dirty figures. In practice, these are an important group of diseases in the tropics and may be called the water-washed infections as they result from lack of water for washing or personal hygiene Clearly their prevention depends on availability, access to, and *quantity* of domestic water than its quality.

Classification of infectous diseases in relation to water supplies

Category	Examples	Relevant water improvements
I Water-borne infections .		
(*a*) Classical	Typoid, cholera	Microbiological sterility
(*b*) Non-classical	Infective hepatities	Microbiological improvement
II Water-washed infections .		
(*a*) Skin and eyes	Scabies, trachoma	Greater volume available
(*b*) Diarrhoeal diseases	Bacillary dysentery	Greater volume available
III. Water-based infections .		
(*a*) Penetrating skin	Schistosomiasis	Protection of user
(*b*) Ingested	Guinea worm	Protection of Source
IV. Infections with water related insect vectors :		
(*a*) Biting near water	Sleeping sickness	Water piped from source
(*b*) Breeding in water	Yellow fever	Water piped to site of use
V. Infections primarily of defective sanitation :	Hookworm	Sanitary faecal disposal

In the tropics there are some worm infections which are not spead passively from person to person in the water. The parasite eggs or larvae which reach water are not directly infective to man, but are infective to specific invertebrate water animals, chiefly snails and crustaceans. They undergo development within these intermediate hosts from which, after a period of days or weeks, further larvae mature and may be shed into the water. These larvae are infective to man who is infected by drinking or contact with the water. Such worms, whose transmission is based upon an aquatic organism, may be called water-based infections and rather specific action to remove the intermediate hosts from the water, or other special action, is needed to make the water safe.

Lastly, there are many tropical infections spread by biting insects. Most of these, most notably the mosquitoes, breed in water bodies, sometimes as small as household domestic water containers. Yet other insects capable of transmitting disease, the tsetse flies, in some cases only bite near water, to which those lacking piped supplies must be necessity come. These water-related insect vectors may sometimes be affected by improvements in domestic water supplies.

It is not possible to separate water-related diseases completely from those affected by sanitation, nor is it desirable to attempt that. All the water-borne and some of the water-based diseases depend on faecal access to domestic water sources. The chain of transmission may be broken by safe disposal of faeces as well as by protection of the water supplies. Even some of the water washed intestinal infections may be reduced if better sanitary conditions reduce soiling of the hands. There are a few infections, of which the human hookworm is most important, where sanitation is much more important than water because transmission is from faeces to soil and by direct penetration back through the human skin. The same applies to several East Asian worms whose eggs escape in the faeces but infective stages reach man encysted in fish and in other articles of food.

5. Water-borne diseases.—The classical water-borne diseases are due to highly infective organisms where only rather few are needed to infect someone, relative to the levels of pollution that readily occur. The two chief ones have a high mortality if untreated and are diseases which a community is very anxious to escape : typhoid and cholera. Both are relatively fragile organisms whose sole reservoir is man.

These two diseases occur most dramatically as the "common source outbreak" where a community water supply gets contaminated by faeces from a person suffering from, or carrying, one of the infections. Many people drink the water and a number of these fall ill from the infection at about the same time.

Typhoid is the most cosmopolitan of the classical water-borne infections. In man it produces a severe high fever with generated systemic, more than intestinal, symptoms. The bacteria are ingested and very few are sufficient to infect. The typhoid patient is usually too ill to go out polluting the water and is not infective prior to falling sick. However, a small proportion of those who recover clinically continue to pass typhoid bacteria in their faeces for months or years; these carries are the source of water-borne infections. Gallstones predispose to the carrier state as the bacteria persist in the inflamed gall bladder. In the tropics. lesions of *Schistosoma haematobium* in the bladder also act as nidi of infection, producing urinary typhoid carriers, whilst rectal schistosomiasis combined with typhoid leads to a persistent severe fever lasting many months. Typhoid bacteria survive well in water but do not multiply there.

Cholera is in some ways similar to typhoid, but its causative bacteria are more fragile and the clinical course is extremely dramatic. In classical cholera the onset of diarrhoea is sudden and its volume immense so that the untreated victim has a high probability of dying from dehydration within 24 hours of little more.

Several other infections are water borne but are less important than typhoid and cholera. Leptospirosis, due to a spirochaete, has its reservoir in wild rodents which pollute the water. Leptospiers can penetrate the skin as well as being ingested. They produce jaundice and fever, called "Weil's disease" which is severe but not common.

6. Water-washed diseases.—All the infections that can be spread from one person to another by way of water supplies may also be more directly transmitted from faeces to mouth or by way of dirty food. When this is the case, the infections may be reduced by the provision of more abundant or more accessible water of unimproved quality. This applies particularly to the diarrhoeal diseases due both to bacteria and to viruses as well as protazoa. The most through studies, of *Shigella* infections in the southern United States, have shown that simply making water more available tends to roughly have the frequency of infection (Hollister *et al.*, 1955; Stewart *et al.*, 1955).

The diarrhoeas are the most important water-washed diseases in tropical areas. They are responsible for vast amounts of morbidity in people of all ages (Van Zijl, 1966) in Sough America and South-East Asia particularly, (Scrimshaw, Taylor and Gordon, 1968) and along with malnutrition, measles and malaria are very important in the very high child moralities of those areas where between one-eighth and one third of all children born may not reach their fifth birthdays. The diarrhoeal dieases are responsible for the majority of the economic losses ascribed to water related diseases in many countries. They result from a range of infectious agents but to fall a low incidence under good hygienic conditions.

The second main group of water-washed diseases are infections of the body surface, the skin and the eyes. Though rarely shortening life, they make many people miserable. 70% of pre-school children in Ankol, Uganda, for example (Cook, 1967) had either skin ulcers infected by bacteria, or scabies due to a small mite that burrows in the skin, or fungus infections of the skin. More water, together with improved personal hygiene are needed to reduce the frequency of these infections. They may give some guide to the public health worker as to the hygienic state of a community. In the extreme circumstances of the New Guinea Highlands, Feachem (1973) found that over 90 per cent of the people suffered from skin infections at some time each year and the prevalence at any one moment, as in Ankole, was high enough to be measured on a village-sized sample.

The eye infections are related to water availability also, and are a particular problem in arid countries where the drying effect of the air on the conjunctive is combined with dust and sand and the scarcity of domestic water. A specific infection of the eye, due to a virus-like microbe, is trachoma, which may lead to inflammation, turning in of the eye lashes and subsequent capacity of the cornea producing partial or complete blindness. Many other bacteria may follow the trachoma agent and their relative roles in producing the frequent chronic eye lesions of the tropics is variable. Trachoma itself produces much less damage where water supplies are adequate.

7. Water-based diseases.—Water-based diseases are all worm infections. Several are due to flukes or trematodes whose larvae depend on aquatic snails. The eggs pass from excreta to water and the larvae emerging from the snails may be ingested with domestic water directly or no food plants or animals which acquire encysted larvae from the water. By far the most important, however, the schistosome worms, can bore their way directly through the human skin and they are therefore a hazard to all in contract with infective water, whether for domestic use or not. It is thus not only necessary to provide domestic supplies but also to persuade people to keep out of the water at transmission foci. In spite of some scepticism regarding the efficacy of water supply improvements as a control measure. Jordan and his colleagues in St. Lucia (unpublished reports) have found this approach highly successful.

Guinea-worm infection of dracunculiasis is transmitted through cyclops a minute crustacean, and has a wide but patchy distribution in Africa and Asia. The adult worm lies beneath the skin, often of the leg. It matures near to the rainy or planting season usually.

The importance of guinea worm is great: it produces arthritis of joints adjacent to the active worm and effectively disables these infected for a couple of weeks, which, because of the timing of the infection, fall at the short planting season. Since in affected villages the prevalence may exceed 70%, the economic consequences are grave.

8. Water-related insect vectors of disease.—In rural areas the journey to fetch water may bring women into the preferred habitat of *Glossina or Simulium*. The former genus, of tsetse flies in Africa, has several members confined to riverine bush so that people get bitten when going to the few residual water-holes in the dry season when man-fly contact is most concentrated. They can transmit humans sleeping sickness, a chronic lethal infection if untreated, and may be controlled by selective bush clearing near the water point.

Of much greater importance is the urban problem of water storage jars acting as breeding site for the "yellow fever mosquito" *Aedes aegypti*. This occurs throughout the tropics not only where water has to be fetched to the house and stored, but also where an intermittent piped supply makes for larger storage jars, not limited by the carrying capacity of the family. Such containers are the preferred habitat of *Aedes aegypii*. It carries several virus diseases from person to person. Under conditions of intense dengue transmission, cases of the more severe dengue hamorrhagic fever with an appreciable mortality begin to occur, possibly due to the superimposition of one strain of dengue on an individual with antibodies to another strain leading to bone marrow damage so that the blood does not properly clot. The mosquitoes can be killed by putting a suitable, insecticide, of very low human toxicity, into the water containers.

9. Water pollution control methods.—

A. Physical

1. Screening
2. Mixing
3. Flocculation
4. Sedimentation
5. Filteration

B. Chemical

1. Disinfection
2. Absorption
3. Adsorption
4. Precipitation

C. Biological

1. Oxidation Pond
2. Aerated Lagoons
3. Trickling Filter
4. Activated Sludge Process

10. The need for data on community water supply.—Data are required at all levels and for all phases of community water supply programmes. The Scientific Group concentrated its attention on the possible sources of information the different phases of programmes for which data are needed the types of data to be collected, and considerations in establishing priorities for data requirements.

Sources of data.—The first step towards developing or improving a data collection programme is to locate and analyse the available information. The search should not stop with the more obvious sources, as relevant data may be found in unexpected places. The following agencies may supply pertinent information :

(*a*) The national planning agency and the planning departments of the institutions responsible for community water supply.

(*b*) The ministry or other agency responsible for environmental health, the control of pollution and surveillance of water quality; and urban and rural community water supply programmes.

(*c*) National, regional, State, and local water authorities; semi-autonomous bodies or private companies supplying water.

(*d*) Financing institutions or lending agencies such as national and international banks; bilateral and multilateral agencies; national. State or provincial subsidizing agencies; and local financing organizations.

(*e*) Bilateral technical assistance organizations.

(*f*) National, State and local organizations for the management, administration, operation and maintenance of water supply schemes.

(*g*) Government and private construction agencies.

(*h*) Housing agencies.

(*i*) Census bureaux.

(*j*) The agencies responsible for hydrological, meteorological and geological surveys.

(*k*) Land surveyors.

(*l*) The Government departments of industry, decentralization, relocation, and industrial development.

(*m*) Legal departments.

(*n*) Firms of consultants.

Individuals having unrecorded information should be urged to place their knowledge on record before it is lost. The accuracy of such date should be carefully checked.

As data are derived from any sources, it is suggested that a national reference centre on community water supply be established in each country. Its functions would be to maintain a list of existing and possible new sources of information; to serve as a repository of data not maintained by agencies for their own purposes; and to make available the data at its disposal. However, data are best maintained by the organisations that gather and use them.

11. Water supply technology.—(*i*) *Technical design.*—A community water supply system comprises may components of a technical nature, all of which have to be operated to prescribed performance standards and given adequate maintenance to enable them to function with maximum efficiency at all times. The need for this maintenance, all too frequently neglected, cannot be too strongly stressed.

The design of these components needs to be tailored to suit the technical development of the country involved, when due consideration to shortage of trained personnel, the local availablility of equipment and materials, the use of local talent, and traditional methods of approach. For these reasons, it is frequently necessary to adapt the designs that are generally available elsewhere and to ensure that the specifications involved are truly applicable.

It is obvious that standardized design and prefabrication are to be encouraged, since they provide economy in design staff, in production capacity, in supervision, and in stores and spares. There is, however, the need to keep water quality firmly in mined when considering the application of these standard designs to a particular situation. There is also a risk of retarding innovation; this should be guarded against by continuous research to develop improved designs.

When considering water treatment plant specifically, too much emphasis is frequently placed on the cost of the treatment process in comparison with the running cost of the water supply scheme as a whole. Only in very rare cases is the raw water quality such that these treatment costs become significant.

(*ii*) *Leakage in the distribution system.*—Available evidence suggests that, in many communities, water wastage from the distribution system can be as high as 50%. Saving the water lost by leakage can well postpone the need for future augmentation of the supply as well as avoid health hazards from the risk of polluted water entering the water main, particularly when supplies are intermittent. There is urgent need for demonstration of leak detection procedures and for advice on the organization of local service units to carry out this function.

It may be argued that proposals for new water supplies for areas as yet unserved should be directed from the start to the establishment of water supplies piped to dwellings, and should not necessarily go through the intermediate stages, such as the provision of street stand pipes and the like. The replacement of existing public fountain supplies by piped supplies will significantly contribute to the raising of the standard of health of the community.

(*iii*) *Quality aspects and surveillance.*—In framing policies and procedures for the control of water-borne diseases insufficient recognition is often given to the essentially preventive role of public water supplies and other environmental health activities.

(*iv*) *Standards for drinking water quality.*—Water quality standards are essential for the purposes of surveillance, both in the interests of public health and for operation control. Existing international and regional standards provide a basis for national standards, which should reflect the stage of development of the country. In framing these national standards, limits for bacteriological and toxic substances cannot be sacrificed, but it is recognized that local situations may demand some relaxation of certain chemical and physical requirements. At all times, however, drinking water standards must be adequate for safety and their application must be simple to supervise.

The International Standards for Drinking-Water published by WHO[1] have been useful, but periodic revision is necessary and the basis upon which toxicological levels of some contaminants is determined needs further examination.

(*v*) *Standards for raw-water quality.*—Consideration should be given to the desirability of framming raw-water standards, keeping in view the possible physiological effects of new pollutants.

(*vi*) *Standards for new materials.*—In the formulation of standards for new materials of construction and for treatment chemicals, health aspects must receive due consideration. It would be desirable for an international organization such as WHO to assess the available information on this subject and act as a clearing house.

(*vii*) *Control applications.*—The development and application of surveillance procedures to monitor raw-water quality and to maintain the quality of the drinking water throughout the distribution system is of the utmost importance.

12. Characteristics of good quality water.—

(*i*) It must be pleaant to taste and appearance.

(*ii*) It must be free from pathogenic organisms.

(*iii*) It must be free from toxic substances.

(*iv*) It should not be corrosive in nature.

(*v*) It should not contain excessive amounts of solid substances which causes physiological effects on human beings and other consumers.

(*vi*) It must be suitable for domestic and industrial purposes for which it is used.

(*vii*) It should have sufficient quantity of dissolved oxygen.

(*viii*) It should be available in large quantity.

13. Drinking water standards.[2]—

Characteristics	Limits, mg/l
Colour (HU)	5
Odour	Unobjectionable
Taste	Agreeable
Turbidity (NTU)	5
Total Dissolved Solids	500
pH	6.5-8.5
Total Hardness (as $CaCO_3$)	300
Calcium (as Ca)	75
Magnesium	30
Copper	0.05
Iron	0.3

Characteristics	Limits, mg/l
Manganese	0.1
Chlorides (as Cl)	250
Sulphates (as SO_4)	200
Nitrates (as NO_3)	45
Fluoride	1
Phenoic Compounds (as C_2H_5OH)	0.001
Mercury	0.01
Cadmium	0.05
Arsenic	0.05
Cyanide	0.05
Lead	0.05
Zinc	5.00
Chromium (as Cr^{6}++)	0.05
Mineral Oil	0.01
Residual Chlorine	0.2
Radioactive Materials:	
-Alpha Emitters (Mc/Ml)	10-8
-Beta Emitters (Mc/Ml)	10-7

14. Water quality standards.—World Health Organisation Technical Survey 1973-No. 517 refers to the collective views of international group of experts regarding the quality of water standards to ensure the safety of water supplies, standards have to be applied. Standards for drinking-water have been available for many years.[1]

While national standards may be set for drinking water, the qualities of river water, industrial effluents, and reused waste water are the responsibility of the local controlling authority. Even so, the standards set must take into account the possible transport of pollutants across borders or the effects of discharges on downstream water users. Standard setting is a most difficult and critical job, with important economic implications. Standards must be given the force of law, and an authority must be created to ensure that they are observed. A survey of existing water pollution legislation has been published by the World Health Organization (1967).

Standards governing the quality of water in rivers and lakes are becoming common. Some countries have, and others are formulating, standards applicable directly to effluents, though few countries yet have standards for the planned reuse of treated waste-water. As waste-water reuse grows, it is important that standards be set for the reuse purpose.

As waste-water—treated or untreated—has been reused in agriculture for a fairly long time, some countries have developed standards for this purpose.[2] A summary of some representative standards for the use of renovated water in agriculture is given in the following table.

---

[1] *See* for example : World Health Organization (1971) *International standards for drinking-water*, 3rd Ed., Geneva; World Health Organization (1970) *European standards for drinking-water*, 2nd Ed; Geneva.

	California	Israel	South Africa	Federal Republic of Germany
Orchards and Vineyards	Primary effluent no spray irrigation, no use of dropped fruit	Secondary effluent	Tenary effluent heavily chlorinated where possible No spray irrigation	No spray irrigation in the vicinity.
Fodder, fibre crops, and seed crops	Primary effluent, surface or spray irrigation	Secondary effluent but irrigation of seed crops for producing edible vegetables not permitted	Tertiary effluent	Pretreatment with screening and settling tanks, for spray irrigation, biological treatment and chlorination
Crops for human consumption that will be processed to kill pathogens	For surface irrigation, primary effluent. For spray irrigation disinfected secondary effluent (no more than 23 coliform organisms per 100 ml.)	Vegetables for human consumption not to be irrigated with renovated waste water unless it has been properly disinfected (< 1000 coliform organisms per 100 ml. in 80% of samples).	Tertiary effluent	Irrigation upto 4 weeks before harvesting only
Crops for human consumption in a raw state	For surface irrigation, no more than 2.2 coliform organisms per 100 ml. For spray irrigation disinfected, filtered wastewater with trubidity of 10 units permitted, providing it has been treated by coagulation.	Not to be irrigated with renovated wastewater *unless they consist of* fruits that are peeled before eating.		Potatoes and cereals-irrigation through flowirng stage only.

The Indian Standard Institution (1965) has laid down standards for industrial effluents discharged into public sewers, and South Africa (1956) has promulgated general standards for the return of municipal and industrial effluents to watercourses.

The standards laid down by the California State Department of Public Health (1968) cover recreational waters as well as irrigation. Very little information exists on standards for industrial reuse, and no standard for potable waters derived from effluents is known. The passages on health effects in this report (section 6) include some recommendations on quality criteria.

Not all health authorities will automatically accept renovated wastewater for drinking purposes, even though it may meet their quality standards for drinking-water, the reason being that the source of water is usually a part of the standards. In the past the source was usually considered to be a protected watershed or the "best source available", meaning that dilution, storage, sedimentation, and natural purification had taken place. As pointed out in this report, may water sources now in use cannot be considered clean. Time is always a favourable element in reducing pollution, and if wastewater is reused very soon it is wise to take additional safety precautions. Pipe-to-pipe renovation and reuse pose many risks, and storage is always advisable before any reuse. Groundwater recharge involving extended periods of underground storage can provide a considerable safety factor in waste-water renovation.

15. Typical characteristics.—Table 1 gives details of the World Health Organization standards for drinking water and Table 2 shows typical analysis for various sources of water.

TABLE 1

World Health Organization Drinking Water Standards[1]

A. *International Standards.*

Characteristic	Permissible	Excessive
Total solids	500	1500
Colour °Hazen	5	50
Turbidity units	5	25
Taste	unobjectionable	—
Odour	unobjectionable	—
Iron	0.3	1 0
Manganese	0 1	0.5
Copper	1.0	1.5
Zinc	5.0	15 0
Calcium	75	200
Magnesium	50	150
Sulphate	200	400

In 90% of samples examined throughout any year, coliform bacteria should be absent or the MPN should be <1/100 ml. No sample should have a coliform MPN> 10/100 ml.

Plate count, 37°C/ml	14	5000	25000	100000
22°C/ml	19	20000	49000	400000
Coliform MPN/100ml	68	30000	24000	2500000

Concentrations in mg/l except where noted.

It is indeed difficult to define pure water. A water may look clear, free from dirt, organic matter and odour but still it may be "Chemically" or "Bacteriologically" impure or unsafe. Scientifically, therefore, wholesome water means water that is chemically and bacteriologically pure besides being aesthetically acceptable and such waters should always conform to the prescribed standards.

Both chemical and bacteriological standards for drinking waters are recommended by different agencies. Bacteriological standards provide more simple and direct criteria for the maintenance of water quality. The incidence of enteric diseases in some of the advanced countries has been practically eliminated mainly due to the supply of pure water, made possible by the use of improved water treatment procedures. The waters supplied to the consumers were regularly checked for their bacteriological quality. When they did not meet the standards remedial measures were always taken to see that the quality improved and the water met the required bacteriological standards.

As a routine measure bacteriological examination of water meant for drinking purposes should be made for :

(1) Standard plate count

(2) The coliforms

(3) The E. coli type I (Faecal coliforms)

(4) The faecal streptococci or enterococci.

16. Standard plate count and raw water classification.—The tests for coliforms, E. coli I and faecal streptococci throw light on the sanitary quality of water whereas the plate count indicates the general nature of water. This test is more important to check the efficiency of treatment processes like coagulation, sedimentation and filtration. A sudden increase in the standard plate count is a cause for suspicion which may be due to faulty operation processes or an initially high concentration of bacteria due to unexpected and heavy pollution at the source. A high plate count is indirectly a measure of the available organic matter present in water. Any water containing organic matter in appreciable quantities is harmful for human consumption. As the standard plate counts do not necessarily reflect the sanitary quality of water, none has fixed standards based on this. Thresh and Beale (4) make an interesting comparison of early bacterial criteria relating the bacterial count to the quality of water. His tabulation of the recommendations of Miquel and Mace is shown below :

Designation of Quality	Number of Bacteria per ml after	
	Miquel	Mace
Very pure water	0-10	0-10
Very good water	10-100	20-100
Good or pure water	100-1000	100-200
Passable water	1,000-10,000	200-500
Impure water	10,000-100,000	500-1000
Very impure water	Over-100,000	Over 1000

TABLE 3

Typical Sewage Analysis

Characteristic	Activated-sludge plant			Biological filter plant		
mg/l	Raw	Settled	Effluent	Raw	Settled	Effluent
BOD	316	181	14	367	204	12
SS	371	130	5	426	138	17
PV	77	55	12	77	43	10

Group	Limiting monthly average coliform density (MPN/100 ml)	Treatment requirement
I	Nil	No treatment is required
II	Less than 50	Simple chlorination or equivalent
III	Less than 5000 (20% of samples should not exceed 5000)	Complete treatment with rapid sand filtration and post-chlorination
IV	More than 20% of samples may exceed 5000 but not more than 5% of these samples should exceed 20,000	Auxiliary treatment in addition to complete treatment.

17. Bio-monitoring.—Monitoring of environmental components is an important pre-requisite for pollution control activities. It is difficult to monitor water quality only by using physico-chemical methods due to large number of pollutants and their low concentrations. To overcome this difficulty, environmental scientists, all over the world, are exploring the possibility of using biomonitoring techniques in addition to physico-chemical methods due to large number of pollutants and their low concentrations. To overcome this difficulty, environmental scientists, all over the world, are exploring the possibility of using biomonitoring techniques in addition to physico-chemical monitoring.

Bio-monitoring is the introduction of biological variables for assessment of the structural and functional aspects of aquatic ecosystems. Through bio-monitoring, the cumulative effect of all the pollutants can be determined and the overall health of the aquatic ecosystems could be properly assessed. Bio-monitoring can be used as a cost-effective mean for supplementing the physico-chemical techniques.

18. Why to do Bio-monitoring.—Generally, the water quality management is performed to protect identified beneficial uses of water in terms of primary water quality criteria parameters. Five major uses of river water have been conceived. If a water body is put to multiple use, then the use which demands the highest the highest quality of water is called "designated-best-use" and accordingly the water body or its part is designated.

Measurement of chemical and physical characteristics have been used so far either to detect pollution or to control it. Biological monitoring of water quality could be useful for assessing the overall health of water bodies because of the following :

1. The number of chemicals to be monitored is unending.
2. Biological effects often occur at concentrations below analytical capabilities. Many of the pollutants are present in such low concentrations that instrument sensitivity is too poor to determine the micro-quantity of such pollutants.
3. The toxicants may act quite differently in mixture than individually. Such toxicants affect the ecosystem in a synergistic manner which cannot be detected by chemical analysis alone.
4. Chemical nature of toxicant is highly dynamic in environment with time and space, whereas biologicl system can integrate all environmental variables over a long period of time in terms of effects which can be easily measured and quantified.

Therefore, biological monitoring is more informative and useful in water quality management.[1]

19. Bio-monitoring parameter.—For evaluation of water quality only some components of aquatic ecosystem can be used fruitfully as bio-monitoring parameters. Central Pollution Control Board (CPCB), during development and testing of bio-monitoring methodology alongwith Dutch experts, has established the fact after a three-year exercise on Yamuna river. The benthic macro-invertebrates were found to be best suitable among all other living systems present in aquatic ecosystem. Two methods for evaluation of benthic macro-invertebrates were adopted. They are :

(*a*) Sequential comparison index for diversity and

(*b*) BMWP (Bio-monitoring Working Party) score system for saprobity.

20. Where to do Bio-monitoring.—Selection of the sampling locations and frequency of sampling is a very important aspect for water quality evaluation.

Following criteria kept inmind for bio-monitoring :

(*i*) Establish a reference station(s) upstream;

(*ii*) Locate a station down stream of each discharge point, after complete mixing;

(*iii*) Determine the linear extent of damage and establish stations at various distances downstream from the last discharge of concern;

(*iv*) To compare macro-invertebrate communities, all the sampling stations should be ecologically similar;

21. Artificial substream for Bio-monitoring.— In most of the cases, to get ecologically similar sampling site is very difficult. Hence, the data collected cannot be used fruitfully. To overcome this problem, artifician substratum is used all over the world for biomonitoring.

Artificial substratum is an in-situ sampler for colonization of benthic macro-invertebrate families in water bodies. Artificial substratum is an iron basket or cage of size 11" x 11" x 14", fabricated on galvanized iron mesh of size 1.5 x 1.5 cm. fitted on the iron angles. The cage is covered from the top with the help of a lid. All the sides of the cage is well supported by bigger iron mesh of size 1.5" x 1.5". Two handles are fitted on either side of the cage for lifting and one handle on the tope of lid.

The iron cage is filled 2/3rd of its volume by glass marbles. The lid is tightened by nut and bolts. The cage of artificial substratum is lowered in water body with the help of 8 mm. diameter iron chain. The length of the chain is selected on the basis of depth of the water body. The other side of chain is than tied on a strong support.

---

[1] Central Pollution Control Board, 1998.

The baskets of cages are retrieved after one month of exposure and the animals which colonizd during that period on the marble substratum are collected. Then the number of species of benthic macro-invertebrates are identified and evaluated for water quality.

22. Application of artificial substratum for Bio-monitoring of water bodies.—

1. Artificial substratum provides quantitative approach to bio-monitoring.
2. It provides establishment and collection of animals along the river, lakes, canals or water bodies where it is difficult to collect benthic animals in very deep waters with strong currents.
3. It helps in establishing biological communities in an area where ;
4. There is non-availability of proper substratum like in lined canals, reservoirs, raw water intake of water works, barrages etc.
5. Unstable substratumlike sand bed.
6. Human interferences like cattle wading, mass bathing and other activities which are constant source of alterations in substrate condition of water body.
7. During monsoon period when the rivers and canals are in floods.
8. Effects of shock loads of pollutants leading to an abrupt change in water quality.

23. Biological Water Quality Criteria for evaluation of water bodies.— This system is based upon the range of saprobic values and diversiy of the benthic macro-invertebrate families with respect for water quality. The system has been developed after making a calibration study on the saprobity and diversity of benthic animls collected from various water bodies used for biomonitoring through natural and articficial substratum.

TABLE 1

Criteria for Biological Water Quality Evaluation

Range of saprobic score	Range of diversity score	Water quality	Water quality class	Indicator colour
7 and more	0.2-1	Clean	A	Blue
6-7	0.5-1	Slight Pollution	B	Light Blue
3-6	0.3-0.9	Moderate Pollution	C	Green
2-5	0.4 & less	Heavy Pollution	D	Orange
0-2	0-0.2	Severe Pollution	E	Red

The ranges prescribed above are based as guideline. The abnormal combination of saproity with diversity range indicates sudden change in environmental conditions which may lead to destroy selected animals.[1]

1. Sample and sampling of water, sewage and industrial sewage water.[1]—All samples of water should be properly labelled and should be accompanied by complete and accurate identifying and descriptive data. Data should include the following :

1. Name of the sender.
2. Time and date of collection.
3. Source.

When samples are being collected from the same sampling point for different analysis, it is essential that the sample for bacteriological examination be taken first

Care should be taken to obtain a sample that is truly representative of existing conditions and to handle it in such a way that it does not deteriorate or become contaminated before it reaches the laboratory.

Samples from wells should be collected only after the well has been pumped for a sufficient time to ensure that the sample will represent the ground water which feeds the well. When samples are collected from a river or stream, it is best to take an "integrated" sample from top to bottom in the middle of the stream in such a way that the sample is made composite according to the flow. If only a grab sample can be collected, it is best taken in the middle of the stream and at mid-depth.

---

[1] Schedule of Charges and Analysis of Samples of Guidelines for Sponsored Project, 1973.

I. For chemical analysis.—It is recommended that samples be collected in glass or polyethylene container of 2.5 litre capacity. Sample bottles must be carefully cleaned before use. The sample should reach the place analysis within 48 hours after collection.

II. For bacteriological analysis.—Sterilised glass bottles of 250 ml capacity provided with ground glass stopper having an overlapping rim should be used. The stopper and the neck of the bottle should be protected by brown paper.

For dechlorination sodium thiosulphate should be added to the clean, dry sampling bottles before sterilisation in an amount to provide an approximate concentration of 100 mg. per litre in the sample, this can be done by adding 0.2 ml to 10 per cent thiosulphate solution to an 8 oz. bottle. The bottle is then stoppered and sterilised by either dry or moist heat.

The sample should be representative of the water to be tested and it should be collected with utmost care to assure that no contamination occurs at the time of collection or prior to examination. The sample bottle should not be opened till the time of filling. The stopper should be removed with care to eliminate soiling. During sampling, the stopper and the neck of the bottle should not be handled and these should be protected from contamination. The bottle should be held near the base, filled without rinsing, and the stopper replaced immediately. Then the brown paper wrapping should be tied to protect the samples from contamination. The sample bottles should be packed in ice immediately after collecting the samples. The ice-packed samples should reach the laboratory within 48 hours after collection.

(*a*) *Sampling from taps.*—The tap should be opened fully and the water allowed to run to waste for two to three minutes or for a sufficient time to permit clearing of the service line. The flow from the tap should then be restricted to permit filling the bottle without splashing. Leaking taps, which allow water to flow over the outer surface of the bottle, must be avoided at sampling points. It should be ascertained whether the tap from where the sample is collected is supplying water from a service pipe directly connected with the main or with a cistern or a storage tank. This information should be sent alongwith the sample.

(*b*) *Sampling direct from a source.*—When the sample is to be collected directly from a stream, river, lake, reservoir, spring or a shallow well, it should be representative of the water that will be taken for supply to the consumers. Hence, a sample should not be taken from a point which is too near the bank or too far from the point of the draw-off, or at a depth above or below the point of draw-off. Areas of relative stagnation in a stream should be avoided.

Samples from a river, stream, lake or a reservoir can often be taken by holding the bottles in the hand near its base and plugging its neck down ward below the surface. The bottle should then be turned until the neck points slightly upwards, the mouth being directed against the current. If no current exists, as in reservoir, a current should be artificially created by pushing the bottle horizontally forward in a direction away from the hand. If it is not possible to collect samples from this situation in this way, a weight may be attached to the base of the bottle which can then be lowered into the water. In any case, damage to the bank must be guarded against, otherwise fouling of the water can occur. If the sample is to be taken from a well, fitted with a hand-pump, water should be pumped to waste four to five minutes before the sample is collected. If the well is fitted with a mechanical pump. The sample should be collected from a tap on the discharge. If there is no pumping machinery, the sample can be collected directly from the well by means of a sterilised bottle fitted with a weight at the base. In this case, care should be taken to avoid contamination of the sample by any surface scum. Where it is not possible to collect the sample directly into the bottle as for example where there is a high bank the sample may be obtained by means of suitable metal jug. The jug is sterilised by pouring into it a tea-spoonful of methylated spirit and titling the jug in such a way that the spirit comes in contact with the entire inner surface of the jug and igniting. The jug should be lowered into the required depth and then drawn up and the down two or three times before it is brought to the surface. It should be rinsed out at least twice before the sample is taken. Should the jug come in contact with the bottom or skid along the surface, so that it may have collected the surface film, the sample should be discharged, the jug re-sterillised and another sample drawn. The water from the jug should be poured into the bottle and the glass stopper of the bottle be replaced, care being taken to avoid the cover being caught between the stopper and the neck of the bottle.

(*c*) *For biological analysis.*—For this purpose two samples should be collected in clean two-litre, wide-mouthed bottle with a glass stopper or a bakelite screw up.

In making the collection, the bottle, after the stopper is removed, is thrust as far as possible mouth downward into the water. It is then inverted and allowed to fill.

One bottle to be stoppered as such. To another bottle add 5 ml of commercial formal in to every 100 ml of water sample. Both the bottles should be despatched, with the label (date, time, place of collection) on the sample stating the once with formal in.

Samples should be despatched as soon as these are collected. These should reach the laboratory within 48 hours of collection.

III. Industrial wastes and sewage effluents samples.—The sample to be collected should be representative of the industry or the sewage treatment as the case may be. For example, in case there is a great variation in flow and/or characteristics during the day, the frequency of sampling should also be adjusted such that only a representative sample is collected. The sample should be collected in clean vessels and in case of 24 hours sample collection, the portion taken each time should bear a certain fixed proportion to the flow at that time. Portions collected each time should be stored in a clean polythene carboy or some suitable container large enough to accommodate all the samples to be collected during the period.

After the collection is over, the sample should be mixed thoroughly and a representative sample (about 5 litres) be transferred without much aeriation or allowing suspended solids to settle to another clean container. The container should be labelled giving (*i*) the source of the sample; (*ii*) the period of the collection; and (*iii*) the date of collection. The sample should, as far as possible, be preserved in ice and transported to the laboratory within the shortest possible time, preferably within 24 hours.

If, for some special items of analysis, some preservative is to be added to the sample, this fact should also be clearly stated.

2. Indian standards for inland surface waters subject to pollution.—(IS : 2296.1965) : This standard gives information about the characteristics of the effluents for the inland surface water and their tolerance limits for their use for public water supply and bathing *ghats* , for fish culture and for irrigation purposes.

This standard mentions about the limits for—5 day B.O.D. at 30% Do and per cent saturation.

—The total dissolved solids C' norgaine

—Phenolic compounds

—Cynides

—Fluorides

—Arsenic

—Chromine

—Lead

—Selenium

—Chloride

—Free carbon dioxide

—Ammonical nitrogen

—Boron

—Sulphates

—Electrical conductance

—Per cent sodium

—Chloroform organisms

—Radio-active materials

3. Indian standards for disposal of industrial effluents.—On this issue there are three Indian standards indicating the tolerance limits for industrial effluents to be discharged into inland surface waters.

Public sewers and inland irrigation.

IS : 2490-1947 refers to the tolerances limits for industrial effluents discharged into inland surface waters.

IS : 3356-1974 refers to tolerance limits for industrial effluents discharged into public sewers.

IS : 3307-1965 refers to the tolerance limits for industrial effluents discharged on land irrigation.

All the above standards give the details of the tolerance limits of the

—5 day B O D at 20° C

—COD

—Subspended matter: Total dissolved solids (Inorganic) Temperature, oil and grease, phenolic compounds, cynides, sulphides fluorides, total residual chlorine, insecticides, arsenic, cadmium, chromium, copper, lead, mercury, nickel, selenium, zinc, chlorides, bough, sulphates, per cent sodium, ammonical nitrogen, radio-active materials, alpha-emitters, beta-emitters.

The safe limits for their disposal are described in the relevant I.S. Codes as mentioned above.

4. Indian standards for effluents of the electroplating industry.—Indian Standard Code IS : 2490-(Pt. V) 1979 : Refers to the tolerance limits for effluents from electroplating industry, fit for disposal. This code gives the limits for presence of cadmium, nickel, zinc, cynides, suspended solids, hexavalent, chromium, copper. The details for the testing of the effluent are mentioned in IS : 2448 (Pt.I)-1966-and IS-2448 (Pt.II)-1968.

5. Indian standards for specific tolerances for effluents of straw board industries.—IS : 2490 (Pt. V)-1979 refers to the details of specific tolerances for disposal of effluents from straw board industry. This code has mentioned the tolerance limits from biochemical oxygen demand for 5 days at 20°C, suspended solids Pt. value, coloured odour. The details for methods of tests are given in IS : 2488(Pt. I)-1966.

6. Indian standards for tolerance limits for sewage effluents discharge into inland surface water.—IS : 4764-1973 gives the details for the sewage effluents fit for the disposal into inland surface waters. The details for the tolerance limits for total suspended solids and 5 day B.O.D. at 20 Z are given to this Code. The details for methods of tests are given in IS : 4733-1972.

7. Indian standards for specific tolerances for effluents of distilleries.—IS : 2490 (Pt.II)-1979 gives the details for the tolerance limits for suspended solids, Pt.II value, 5, days B.O.D. at 20% and colour and odour.

For the details for testing refer IS : 2488 (Pt. I)-1966.

8. Tolerances for water for processed food industry.—The special requirements for individual food industries are specified in IS : CODE 4521-1967. The Code has mentioned Bacteriological tolerance limits such as coliform bacteria, MPN index for 100 ml less than 1, standard plate count per ml 50 and proteolytic and lipolytic organism combined count per ml 5.

This code has detailed out physical and chemical radio active tolerances.

The tolerances for food industry like bakery (Bread—manufacture, cracker and cake making), citrus fruits, confectionery, edible oil refining meat packing, starch and corn products in sugar refining have also been referred in this Code.

9. Limits for discharging effluents in inland water fixed up by U.P. Water Pollution Control Board.—U.P. Water Pollution control has fixed up limits for total suspended solid, pesticide size of total suspended solids Ptt. value, temperature, colour and odour, B.O.D. 5 days at 20%, oil and grease, phenolic compounds, radio active materials, insecticides, total residual chloric, fluorides, arsenic, cadmium, chromium, copper, lead, mercury, nickel, salenium, C.O.D total dissolved solids (inorganic), sulphates, chlorides, per cent sodium, 5 day B.O.D. at 20% oil and grease and boron.

10. Classification of pollutants.—The pollutants are classified as very clean, clean, fairly clean, moderate, doubtful and bad. this classification is done on the basis of B.O.D., D.O., permanaganate values, ammonia, nitrate and suspended solids.

11. Indian Standards.—*Standards for drinking water.*—In this standard the permisive and excessive limits for drinking water have been discussed. This standard speaks out in detail for—

(1) Physical properties—Tubidity, teste and odour.

(2) Chemical—(*i*) pH value (*ii*) Total solids, their permissive and excessive limits, such as—

—Calcium.
—Magnesium.
—Copper.
—Zinc.
—Chrorides.
—Sulphates.
—Phenlic substances.
—Fluorides.
—and Nitrates.

(3) Toxic substances—such as,—

—Arsenic.
—Chromium.
—Cynides.
—Lead.
—Salenium.

(4) Radio-active substances-includes

—Alphaei matters.
—Metae mitters.

(5) This standard also mentions the standards for biological quality of treated waters. MPN index of coliform bacteria should be zero or less than I.O. The samples should not contain and MPN of Coliforms as exceeding 10 per 100 mal.

12. Tolerance limits for inland surface waters.—IS : 2296-1982—Deals with the tolerance limits for inland surface water subject to pollution, which is used for following purposes.

(*i*) Drinking water source without conventional treatment followed by disinfection.

(*ii*) Out door bathing.

(*iii*) Drinking water source with conventional treatment followed by dis-infection.

(*iv*) Fish culture and wild life propagation.

(*v*) Irrigation, industrial cooling and controlled waste disposal.

The above have been confirmed as class A, class B, class C, class D and class E respectively.

For details of tolerance limits IS : Code 2296-1982 may be referred.

13. Effluent standards—Recommendations by U.S. National Committee.—Various organizations have been formed to study the effects of ionizing radiation on the human body and each has recommended standards to limit the amount of exposure. The recommendations of the U.S. National Committee on the Radiation Protection (NCRP)[1] have received wide acceptance in the United States and are in close agreement with the standards published by the International Commission on Radiation Production (ICRP).

---

[1] National Bureau of Standards Hand Book 69. Maximum Permissible Body Burdens and Maximum permissible Concentration of Radionuclides in Air and water for occupationl Exposure, June, 1959.

To consider these as well as other recommendations, a Federal Radiation Council[1] was formed in 1959 (public law 8 G-373) to provide a Federal policy on human radiation matters directly or indirectly affecting health, including guidance for all Federal agencies in the formulation of radiation standards and in the establishment and execution of programs of co-operation with various States.

The Federal Radiation Council adopted a term "Protective Action Guide" (PAG)[2] which is defined as the projected absorbed dose to individuals in the general population which warrants protective action following a contaminating event. The projected dose is the dose that would be received in the future by individuals in the population group from the contamination event if no protective action is taken.[2]

A basic assumption to the PAG is that a condition requiring protective action is unusual and should not be expected to occur frequently. The guide expresses a balance between the benefits from normal peacetime operations which release radioactivity to the environment and the health risks associated with exposure to ionizing radiations.[3]

The council recommended a set of Radiation Protection Guides (RPG) which represents a balance between risk and benefit.[4]

The RPG for the several radionuclides considered are :

	Range I μμc/day	RangeII μμc/day	Range III μμc/day
Radium 226	0-2	2-20	20-200
Iodine 131	0-10	10-100	100-1000
Strontium 90	0-20	20-200	200-2000
Strontium 89	0-200	200-2000	2000-20,000

TABLE I

Example of Maximum Permissible Concentrations of Isotopes in Water and Air

Element			Occupational 40 -hr. week Table I		Off site 168-hr. week Table II	
Atomic number	istope		Column 1 air (μc/ml)	Column 2 Water (μc/ml)	Column 1 air (μc/ml)	Column 2 Water (μc/ml)

"Range" refers to the limit within which the following appropriate action would be required Range I, periodic confirmatory surveillance as necessary, Range II, quantitative surveillance and routine control : Range III, evaluation an application of additional control measures as necessary

The types of action considered would be—

(1) Altering production, processing or distribution practices

(2) Diverting affected products to other than human consumption.

(3) Condemning foods, if necessary.

Except for a small list of exempt isotopes, handling radio-active material requires a licence from the Atomic Energy Commission or "Agreement States". An "Agreement State" is a State which has an acceptable agreement with the AEC to regulate the use of radio-active materials.

The Atomic Energy Commission has also issued effluent standards for average concentrations of radio-nuclides released to the environment by licenses, which will expose the average population to average population to levels less than those recommended by the several national and international committees on radiation protection. The requirements are indicated in the Federal Register 10 CFR Part 20. The maximum permissible concentrations in some of the effluents are tabulated in Table 6-1.[1] These have also been adopted by several states that have entered into agreement with AEC to regulate atomic energy activities within their respective states. Each user of radio-active elements or of processes which produce radioactivity must be licensed by either the AEC or the respective state regulatory body.[2]

14. Standards of water quality.—Some agencies in the administration of water pollution control programmes have fixed standards of quality for the waters of the State. In some States stream standards, applied to the quality of the receiving waters after discharge of wastes, have been adopted. Other States have applied effluent standards to the quality of the waste effluent from a specific source before discharge to the receiving water. In some States waters are classified according to their use, with standards of quality set for the respective use. Opinion is divided as to the value of stream classifications. Proponents have urged that this method is an essential element of any comprehensive programme, and that no enforcement action can be undertaken without determination of the use to which particular waters should be put and the quality which these waters must have in order to be suitable for such use. Others have severely criticized this approach. They maintain that the process is administratively difficult and time consuming, that classifications once made are hard to change and tend to create vested interests. and that the tendency will be to reduce waters to mere carriers of wastes because of the pressure of special interests. The suggested State Water Pollution Control Act gives the agency permissible authority to fix standards of water quality such as to protect the public health and welfare and the present and prospective future use of State waters for all legitimate purposes. Standard-setting on a case-by-case basis is thus made possible. Standards once promulgated have a definite legal effect and their violation is made unlawful. Their adoption must be preceded by a public hearing conducted by the Board, and due notice of such hearing must be given.

15. Permits.—Potentially one of the most effective techniques for control of water pollution is a permit system, under which discharges of wastes into any waters of the State are prohibited except as permitted by the Board after examination of plans, specifications or other relative data and inspection of the construction of disposal systems. Through this means the Board can either prohibit discharges altogether or condition their approval on treatment adequate to protect legitimate water uses. The Act authorizes the Board to require permits for waste discharges and plant construction which, if not controlled, would result in increased pollution. The Board is empowered to issue such permits, to continue them in effect, or to revoke, modify or deny them, under such conditions as it may prescribe.

16. Enforcement.—The Act affords a variety of methods for proceeding against any alleged polluter. It is made unlawful to cause any pollution of the waters of the State to violate any order issued by the Board, including an order establishing standards of water quality. Pollution of waters of the State is declared to be a public nuisance and is therefore subject to abatement in accordance with State practice for abatement of nuisances. Violation of the provisions of the Act or any order or determination by the Board of failure to perform any duty imposed by the Act is declared to be a misdemeanor. In addition, the Attorney-General has the duty to bring an action for an injunction against any person violating any provision of the Act or any order of the Board. The principal method of making the programme effective through compulsory process, however, is by administrative action. The Board is empowered to issue orders against alleged polluters after adequate opportunity for hearing. Such orders, if not appealed to the courts, become final and are enforceable in much the same way as the judgment of court. The same administrative hearing procedure is employed in cases of revocation, denial or modification of permits. Appeals may be taken to the courts from orders of the Board. Such appeals do not involve trial *de novo* but are primarily reviews of the legal propriety of the agency's decision. If the prescribed statutory procedure has been followed and the determination is supported by substantial evidence, the order of the Board will be affirmed by the Courts. It is recognized that the provisions of the Act for administrative hearings and judicial review will not be appropriate in all cases.. Each State will necessarily adapt them to its own administrative and judicial practice and existing statutes. The provisions of the Act, however, embody principles which are desirable in this type of legislation.

---

[1] Federal Register Title 10 CFR 20, Standards for Protection against Radiation-17th November, 1960.

[2] Vide *Industrial Waste Disposal*, by Ross, R.D, pp. 275-77.

17. **Administrative powers.**—The act confers on the Board the requisite administrative powers to carry out its responsibilities. Thus, the Board is empowered to hold hearing, subpoena witnesses and evidence, enforce its subpoenas, administer oaths, require the prior submission of plans, specifications and other data, require the proper maintenance and operation of disposal systems, require the keeping of records and the making of reports, enter on property at reasonable times for the purposes of inspection and investigation, administer State grants and issue rules and regulations deemed necessary to the accomplishment of the Act's purposes.[1]

18. **Recommended limits by Technical Commission on pollution of water surfaces.**—The work done by the International Water Supply Association, and in particular to the Technical Commission Pollution of Surface Waters, which has stated that every effort should be made to secure international and public recognition of pollution as a major problem and that an attempt should be made to set limits to the allowable population in surface waters. This is particularly necessary as the increased pollution, rising standards of living, and increased demands for wholesome water supplies make it more than ever necessary to resort to surface waters as a source of potable water. The Commission recommends the following limits measured at the point of intake ·

1. No disagreeable taste or odour.
2. pH between 6.5 and 8.7.
3. Five days BOD at 20°C not greater than 4.
4. Not less than 70 per cent saturation with dissolved oxygen.
5. Free ammonia as nitrogen. Not greater than 0.5 p.p.m.
6. Chlorides. Not more than 200 p.p.m.
7. Phenols. Not greater than 0.001 p.p.m.

---

[1] *Vide* Ross's *Industrial Waste Disposal*, at pp. 314-28.

8. Oils and fats. Not allowed.
9. Toxic Substances:

Lead (Pb) less than 0.1 p.p.m.
Salenium (Se) less than 0.05 p.p.m.
Arsenic (As) less than 0.2 p.p.m.
Chromate (Cr) less than 0.05 p.p.m.
Cynide (CN) less than 0.01 p.p.m.

19. Radioactivity.—Alpha-emitters, not greater than 1 micro microcurie per litre. Beta-emitters, not greater than 10 micro microcuries per litre over and above the naturally occurring radio-isotope potassium 40.

Due to the extremely toxic effect of many ingredients of trade wastes the standards of acceptance into a water course is stringent, the following are the type of limits imposed by River Boards in the United Kingdom :

1. pH should be within the range 5 to 9.
2. Temperature should not exceed 32 5°C.
3. Suspended solids must not exceed 30 p.p.m.
4. Five days BOD at 20°C must not exceed 20 p.p.m.
5. Four hours oxygen observed from N/80 per manganate must not exceed 20 p.p.m.
6. Oil and grease should not be visible and certainly less than 4 p.p.m. Tars should be eliminated.
7. Cynide must not exceed 0.2 p.p.m.
8. Phenols, Formaldehyde, sulphide, or free chlorine should not exceed 1 p.p.m. either in total or individually.
9. Toxic metals, such as chromium, zinc, copper, murcury, lead, tin and nickel must not exceed 0.5 p.p.m. either in total or individually.
10. Total iron should not exceed 40 p.p.m. including any present in the suspended solids.
11. Insecticides should be eliminated.
12. Radio activity should be eliminated but in any case maintained within a quantity permitted by prescription.
13. Detergents should be eliminated, but any case maintained below 2 p.p.m.

In West Germany, legal limits have been fixed for effluent discharge, the industries affected being as varied as gravel-washing, tanneries, dairies, etc. The standards laid down are:

pH	5.6 to 9
Temperature	30° C.max
Five days B.O.D.	25 to 70 p.p.m.
Sulphides	2 p.p.m.

Cadmium	3 p.p.m.
Zinc	3 p.p.m.
Copper	1 p.p.m.
Total chromium	2 p.p.m.
Total iron	2 p.p.m.
Suspended solids	3 p.p.m.

It is always possible that it may be necessary to set individual standards for individual discharge. In Britain, as a result of experience in the working of the Rivers (Prevention of Pollution) Acts of 1951 and 1961, the River Authority is empowered to impose more stringent limits than the 30 p.p.m. suspended solids and 20 p.p.m. BOD of the Royal Commission. The individual standards set may take into account the depth of the river, its gradient and rate of flow, the character of the river bad, the presence or absence of weirs and waterfalls, the dilution available, and the use to which the river is put. It must always be born in mind that rapid flow prevent settlement of suspended matter, and that a muddy bed may not suffer much harm from the deposition of solids, especially organic once such as, those derived from sewage, because they will not seriously alter the biology of the river bed. Two H.M.S.O. publications are relevant on these points.

Hamence has investigated the composition of muds from polluted and clean rivers, estuaries, etc. and had found that the phosphorus content (P.05) of dry muds from clean rivers and estuaries in the range 0.15 to 0.36 per cent polluted mud may contain as much as 1.0 per cent. Lead appeared to be a common constituent of all muds (more so then in the soil from the neighbouring banks.) It was suggested that this lead could be the result of atmospheric pollution (in dry atmospheric deposits the lead may run as high as 3,690 p.p.m.).

The presence of copper and zinc can indicate sewage pollution, for these elements can come from human use of them for domestic or industrial purposes.

Standards of acceptance into a sewerage system may imposed when this exists as an alternative to river discharge, and these standards may be as stringent as those governing direct discharge to a watercourse in order to avoid interference with the organisms in a sewage words, or the materials of construction of the system.

The standards may be as follows :

1. pH must not less than 6.
2. Temperature should not exceed 60°C.
3. Suspended solids must not exceed 400 p.p.m.
4. Five days BOD should not exceed 300 p.p.m.
5. Four hours oxygen absorption should not exceed 125 p.p.m.
6. Oil, grease, and tars should not be visibly detectable.
7. Cynide should not exceed 10 p.p.m.
8. Toxic metals, such as, chromium, zinc, copper, lead, tin and nickle must not exceed 10 p.p.m. in solution and more than 30 p.p.m. in total.

9. Materials likely to cause blockage of the sewers should be eliminated.

10. No ingredient of the discharge should adversely affect the materials of construction of the sewers or sewage work.[1]

1. Introduction.——With a long coastline of over 8,000 km. India has a variety of natural coastal ecosystems. The eastern coast is low-lying, with lagoons, marshes, beaches and deltas, while the western coast is dominated by rocky shores. The islands of Lakshadweep, like those of Maldives, are composed of atolls, while the Andaman and Nicobar Islands arise from a submerged mountain chain and are volcanic in origin.

Coastal areas in the country are home to some of the richest, most diverse and fragile of natural resources. In the coastal zone the terrestrial, marine and atmospheric ecosystems interact in complex, dynamic and often unknown ways. Coastal habitats such as mangroves serve to protect coasts, prevent coastal erosion and mitigate the effects to natural disasters like cyclones, typhoons and tidal waves. The ecosystems help stabilise the physical environment by dissipating wave action, buffering salinity changes and by stabilising sediments.

However, the rich coastal habitats of India are being threatened, among other things, by pollution, especially from land-based sources, "development" projects, such as ports and big dams, irresponsible tourism, deforestation, natural disasters, overfishing and destructive fishing practices. Expansion of human activities, especially of a commercial nature, have also led to excessive withdrawal of groundwater in the fragile coastal belt, and many parts of the coastline are being threatened by salinity incursion. Coastal resources and habitats are being depleted and degraded with frightening rapidity and conflicts over scarce coastal resources are on the rise.

In the coastal zone then, there is greater pressure on natural resources, often disrupting complex processes which play a crucial role in maintaining the coastal ecosystem. The importance, fragility and productivity of coastal resources and habitats, as well as the greater pressure of population on them, call for unique approaches for their management.Except for those trapped in geological formations or kept in tightly monitored repositories and those readily degradable before they reach the sea, all wastes eventually reach the oceans through atmospheric deposition, land run-offs, outfall discharges and accidental spills. The resulting contamination of seawater is varies from one area to another.

Coastal waters, particularly those along thickly settled population or heavily industrialised shores that are poorly flushed by tidal currents, are in general the most polluted by untreated sewage reaching them through rivers or outfalls. Domestic and industrial effluents release to the sea both microbial and chemical agents.

While microbial pollution is largely confined to coastal waters, man-made or released chemicals are found in the open ocean as well. Currents carry them offshore from coastal waters. Winds deposit them in gaseous form or as dust on the surface, from where they sink to deeper layers. As a result man's fingerprint is found everywhere in the oceans. Chemical contamination and litter can be observed from the poles to the tropics and from beaches to abyssal depths. But, the open sea is still relatively clean. Low levels of lead, synthetic organic compounds and artificial radionuclides, though widely detectable, are biologically insignificant. Oil slicks and litter are common along sea lanes, but are at present, of minor consequences to communities of organisms living in open ocean waters.

Marine pollution is a serious threat to marine biodiversity. The diversity of species in the oceans is impressive. Of the 33 animal phyla, 32 occur in sea and 15 of these have no representative on land. Researchers estimate that the deep sea, which has hardly been visited, let alone explored, may harbour 10 million unnamed species, making it about as rich in diversity as the tropical forests. The biodiversity of the oceans is a vital resource. Finfish and shellfish are the world's largest source of animal protein and their demand could increase by 30% in this decade. But, conserving marine biodiversity presents special challenges. Marine organisms are sensitive to change in currents and the salinity of water. The permeability of invertebrates may make them more vulnerable to pollutants. Radioactive substances, organic chemicals and fertilizers washed off the land, all tend to accumulate in the sea, thus changing the environment in which marine organisms live, and ultimately affect them.

2. Coastal Vs. Open Ocean.—The world ocean can be divided into two zones, the coastal ocean and the open ocean. It has been estimated that coastal waters to the edge of the continental shelf constitute nearly 10 percent of area of the world's oceans and includes estuaries, lagoons, lakes, inshore waters and many marginal seas and bays. These areas are the sites of high biological diversity and productivity. The marine primary production of organic material (i.e., photosynthetic formation of plants) forms base of the food chain that ends up in fish, birds, marine mammals and ultimately at man. Nearly 99 percent of the world fish catch originates from the coastal waters whereas the deep ocean with (constituting 90 percent of the total area) limited in nutrients and lack of light to sustain life is almost a biological desert.

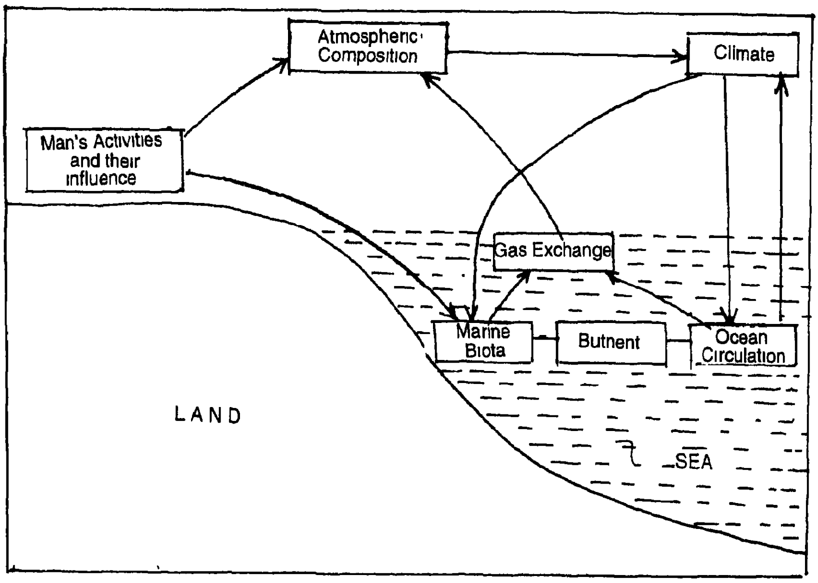

Fig. 1 Land-Ocean-Atmosphere Interaction

Ocean Areas, Types of Pollutants and Effects on Uses and their Duration

Ocean Area	Type of pollutants	Effects on uses and pollution trends	Duration of effects
Coastal waters (10% of total area : 99% of total fish production highly productive area)	Sewage, indus-trial wastes, litters, petroleum hydro-carbons	Living resources destroyed and or rendered unus-able, Industrial uses of sea water adversely influenced; amenities reduced; recrea-tional values diminished	Short-term. Mainly during the period of discharge
	Synthetic organic chemicals, metals and radioactivity	Living resources decreased and or rendered unusable	Long-term: metals and synthetic organic chemicals deposited in sediments may be released for a long time through normal leaching and or dredging disturbances
Open Ocean (90% of total area : 1% of total fish production)	Synthetic organic chemicals, metals, petroleum hydro-carbon, and radioactivity	Increasing concen-trations in water and biota may indicate dange-rous trend	Long-term: duration depends on the residence time of pollutant

3. The coast.—The coast is a transitional space between the terrestrial and marine environments, where both the environments interact intimately with each other. The coastal zone (both land and the sea) is generally viewed as a common resource available to all. The multiplicity of uses of coast and coastal waters are, for industry, transport, recreation, mariculture and fish production as also the source of various nonliving resources.

4. Coastal problems in global perspective.—Nearly 60% of the World's population live within 60 km of coastline and use the coastal resources directly or indirectly for their livelihood. The UNCED Rio '92 conference has already focussed the problems associated with the coastal environment and its resources. Agenda-21 (Chapter No. 17) addressed threats posed by sedimentation, pollution, harmful fishing practices and climate change. With the passage of time, in the next few decades, marine living resources, off-shore minerals and above all the alternative energy sources like the Ocean Thermal Energy Conversion (OTEC) and "Tidal Power Generation" would gain more importance as the land based resources are increasingly depleted due to greater demands of the growing human population.

The multifarious demands on coastal zone has already resulted in over-exploitation of many marine resources and marked degradation of the quality of coastal habitats and environments. Industrial and urban pollution including swage, solid waste and chemical discharges combined with unplanned construction activities, land reclamation and human manipulation of the hydrological cycle have resulted in appreciable and measurable changes to coastal environments in many countries. Such changes pose problems for environmental management in both developed and developing countries. Besides, natural calamities including floods and storms, other episodic events often unpredictable in their occurrence, affect society's use of the resources and complicate the management problem. In addition to the current problems of coastal pollution, habitat degradation, coastal erosion, harmful algal blooms and unplanned water management must now be added to the threat of global climatic change.

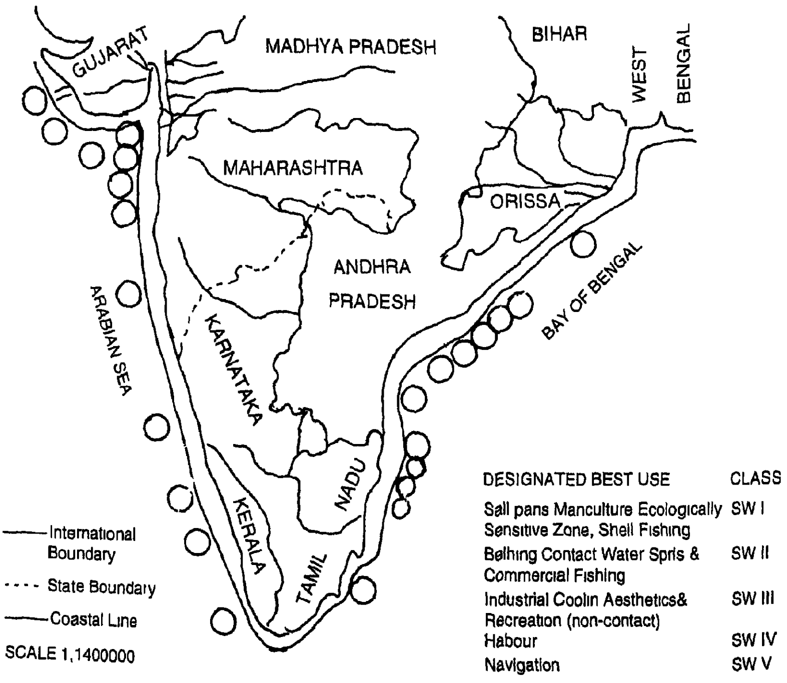
In order to cope up with these, a wide range of on going International Programmes such as the Coastal Marine System (COMAR) Project of UNESCO, the Regional Seas Programme of UNEP, the Fisheries Programme of FAO, the Integrated Global Ocean Station System (IGOSS) activities of IOC and WMO, the Marine Meteorological Programme of WMO, the Coastal Zone Activities of IUCN etc., have been launched to study the different aspects of the coastal zone and its resources aiming towards prudent utilisation and sustainable development.

5. The coast and the seas around India.—With a geographical area, scanning 329 million hectares, India is the seventh largest country in the world in term of landmass. The riverine country has 14 major, 44 medium and 55 minor rivers and a coastline of about 6,000 kilometres. About 25% of the country's population lives in the coastal areas and depends upon fishing and other marine activities.

The mainland of India is girdled by sea fronts on three sides (0.13 million sq. km of territorial waters). The western coast is about 800 km longer than the east coast, which is about 2,600 km long. Situated on the north of equator, the landmass stretched on the north of equator, the landmass stretches across the Tropic of Cancer and forms into a peninsula in the southern part with Arabian sea in the west and Bay of Bengal in the east. The east coast is much wider than the west coast. The physical, chemical and biological characters of the two seas differ considerably because of diverse meteorological and geographical conditions.

The Arabian sea, characteristically, exhibits negative water balance as the evaporation exceeds precipitation and land run-off resulting in mostly high saline watermass along the west coast. The Bay of Bengal, in contrast, is an area of positive water balance as the precipitation and river run-off far exceeds evaporation. Consequently, the salinity profile is relatively lower and variable along the east coast.

6. Classification on the basis of water uses.—Coastal waters around the country have multiple uses. Through a survey during 1980-86, all the activities throughout the coast were identified and based on the 'Designated Best Use' concept (exact or near quality requirement for different uses) the following classification of sea water has been made (Map 1).



GUJARAT
MADHYA PRADESH
BIHAR
WEST BENGAL
MAHARASHTRA
ORISSA
ANDHRA PRADESH
BAY OF BENGAL
ARABIAN SEA
KARNATAKA
KERALA
TAMIL NADU

State Boundary
Coastal Line
SCALE 1,1400000
DESIGNATED BEST USE CLASS
Sall pans Manculture Ecologically Sensitive Zone, Shell Fishing SW I
Belhing Contact Water Spris & Commercial Fishing SW II
Industrial Coolin Aesthetics& Recreation (non-contact) SW III
Habour SW IV
Navigation SW V

Map—Designated Best Use Classes

Designated Best Use	Class
Salt pans, Shell fishing, Mariculture and Ecologically Sensitive Zone	SW-I
Bathing, Contract Water Sports and Commercial fishing	SW-II
Industrial cooling, Recreation (non-contact) and Aesthetics	SW-III
Harbour	SW-IV
Navigation and Controlled Waste Disposal	SW-V

To restore the water quality for each class, a set of primary water quality criteria parameters have also been developed by the Central Pollution Control Board.

Sources of Coastal Pollution at Fixed Location

Port & Harbours ·	
– Major	11
– Intermediate	16
– Minor	78
Ship visit	10,000 y^{-1}
Cargo handling (total)	120 million tonnes y^{-1}
– POL products	55 million tonnes y^{-1}
– Iron ore	28 million tonnes y^{-1}
Fishing Harbours :	
– Major	6
– Minor	35
Fishlanding Centres	135
Pollution Sources at Sea	Dumping of waters Accidental oil spills^{+}

+ – *40% of global oil production transported through Arabian Sea and southern Bay of Bengal*

Coastal Pollution Generation

Area of the country	3.3×10^6 sq km
Coastal Population	212.5×10^6
Territorial Waters	0.13×10^6 sq km
Exclusive Economic zone	2.015×10^6 sq km
Mangroves	6.70×10^3 sq km
Estuaries	39.00×10^3 sq km
Backwaters	35.00×10^3 sq km
River Runoff	1645 cubic km y^{-1}
No. of Coastal Industries	450
West Coast	232
East Coast	218 (includes 143 aquaculture farms)
Industrial Waste	0.6×10^9 m^3 y^{-1}
Domestic Sewage	10.9×10^9 m^3 y^{-1}

Solid Wastes and Garbage (generated by Coastal Population)	40 million tonnes y^{-1}
– Fertilizer used	12.6 × 10^6 tonnes y^{-1}
– Pesticides used	0.067 × 10^6 tonnes y^{-1}
– Synthetic detergents used	0.125 × 10^6 tonnes y^{-1}
Tar Deposition on Beaches	
West Coast	750–1000 tonnes y^{-1}
East Coast	Data not available

– *A portion washed out to the rivers and seas*

7. **Coastal Monitoring Programme.**—With noticeable increase in marine pollution and consequent decline in marine resources, especially in the Mediterranean Sea, Red Sea etc., serious concern was expressed in United Nations Conference on 'Human Environment' in Stockholm (June, 1972) attracting global attention towards urgent need of identifying the critically polluted areas of the marine environment, especially in coastal waters, for remedial action. Beginning with the resolution of the above conference and in the light of the agreement of the United Nations last Convention on the Law of the Sea (1982), which was also signed by India, a model comprehensive Regional Seas Programme was launched under United Nations Environment Programme (UNEP). In India, organised efforts were initiated since 1986 to assess the state and trend of marine coastal pollution in the seas around the country upto 5 km offshore through systematic monitoring network of 173 selected stations under a project "Monitoring of Indian Coastal Waters" which was continued upto March 1992. The project was administered jointly by the Department of Ocean Development (DOD) and the Central Pollution Control Board (CPCB) with the National Institute of Oceanography (NIO) as Nodal Agency shouldering the responsibility for training of manpower and establishing monitoring methodology. Subsequently, the DOD has launched a project 'Coastal Ocean Monitoring and Prediction System (COMAPS)' in almost similar manner in late 1990 extending the study area upto 25 km offshore through ten executing units in the country which is still continued.

8. **Objectives of the programme.**—The main objectives of the Coastal Monitoring Programme were to :

(*i*) develop a reliable data-base and assess the state and trend of pollution for rational planning and management of marine coastal waters;

(*ii*) identity pollution sources and initiate regulatory actions through Pollution Control Acts; and

(*iii*) evaluate efficacy of the regulatory action in pollution abatement.

9. **Monitoring stations.**—A network of 173 selected monitoring stations were established for the monitoring programme with Statewise break up as follows :

State	Length of Coastal Stretch (km)	No. of Monitoring Stations			
		Inland	Coastal	Offshore	Total
Gujarat	1,660	10	8	11	29
Maharastra & Goa	720	7	8	8	23
Karnataka	290	4	5	3	12
Kerala	560	7	9	6	22
Tamil Nadu	1,050	10	17	8	35
Andhra Pradesh	930	8	12	8	28
Orissa & West Bengal	650	6	10	8	24
Total	5,860	52	69	52	173

10. Some highlights of the observation.—Based on the mean values of the data generated under the monitoring programmes, a synoptic view of the coastal water in terms of a few water quality determinants is illustrated below :—

(*a*) Salinity.—Meso-haline to poly-haline with increasing trend from north to south, reaching euhaline condition along Tamil Nadu in the east coast was observed in contrast to the west coast where euhaline range was observed mostly except a portion of south Gujarat (meso to polyhaline). Waters along the east coast remained considerably under riverine influence in general.

(*b*) Dissolved Oxygen (DO).—DO concentration was observed to be steady all along the coast and Biochemical Oxygen demand (BOD) generally very low indicating effective assimilation of organic wastes. However, the exceptions were observed in the inshore creeks and bays of Maharashtra (Bombay) and Gujarat.

(c) Nutrients.—Nitrate and phosphate concentrations wee found to be low to moderate in the east coast and moderate to high in the west coast except Karnataka and portion of Kerala coast. In general, the concentrations were comparatively higher in the west coast than those of the east. Effective utilisation of nutrients by phytoplankton was intercepted due to high suspended solids in some areas especially near the river mouths.

Eutrophication and harmful algal blooms were however, not observed.

(*d*) Bacteria.—Microbial population (including pathogens) in the coastal waters along the entire coast, river mouths and shore waters, in particular, were on the increase (marginally less in few occasions), indicating large scale sewage pollution.

11. Major coastal problems.—Major coastal problems are :

(*i*) Erosion of riverbanks, islands, siltation/sedimentation in the river mouths; subsidence/destabilization of beaches-hindrance to man's activities including habitation and navigation and effect on productivity of coastal ecosystem;

(*ii*) Exploitation of mangroves for various human needs, (fuel, fodder, construction of houses and other domestic purposes), erosion of coastal land/island and destruction of ideal habitats for wild life, breeding and nursery ground of fish and shellfish;

(*iii*) Unregulated abstraction of ground water leading to saline water intrusion into coastal aquifers, subsurface layer compaction and sinking—this effect coupled with other geophysical and hydrological modifications in the coastal zone lead to rise of mean sea level (local) rendering coastal lands more prone to flooding;

(*iv*) Dredging of navigational channel and subsequent increase in suspension load in the watermass inhibits productivity, dumping of dredged materials leads reduction of benthic biodiversity;

(*v*) Unplanned development of tourist resorts adds to the pollution load on coastal waters;

(*vi*) Pollution by sewage, industrial and agricultural wastes impair the water quality and productivity, contamination to marine food items, hazards to human health;

(*vii*) Pollution at sea by oil spills and ships wastes deteriorates water quality, productivity and impair aesthetics of beaches by deposition of tar balls;

(*viii*) Cyclones, tidal surges etc., cause loss of lives, properties and coastal agricultural productivity; and

(*ix*) Over exploitation of marine coastal resources (e.g., Fishers, mangroves etc.) and endangered marine species including reptiles and mammals.

12. Status of coastal pollution.—The rivers contribute to coastal pollution by transporting a wide range of pollutant through land drainage. All the Indian rivers carry annually about 1645 cubic kilometres of water to the ocean. As almost all the rivers are polluted in our country, there is no doubt that they carry huge quantities of pollutants along with them. In addition to this, it has been estimated that about 135 thousand million metric tonnes of sediment and 32 thousand million metric tonnes of soluble matter enter into ocean through various rivers in our country. This figure constitutes 90% of the total waste going into the ocean, the rest 10% of the waste matter which goes into the ocean is constituted by wind, rain and earthquakes. It may be noted that the water flowing through all the rivers is 5% of the water flowing through all the rivers of the world, while Indian rivers carry 35% of the sediments that go to all the oceans in the world.

Three of the country's four largest metropolitan cities with burgeoning population are situated along the coast. Besides the nine coastal states; Gujarat, Maharastra, Goa, Karnataka, Kerala, Tamil Nadu, Andhra Pradesh, Orissa and West Bengal, the three union territories; Pondicherry, Andaman and Nicobar Islands and Lakshadweep Islands have significant coastal stretches,. There are varying degrees of pollutants added to the coastal areas because of the multiple variety of effluents flowing into the sea.

On the Maharastra coast, three municipal corporations, Bombay, Thane and Kalyan and other 23 local bodies discharge their untreated or partially treated sewage directly or indirectly into the sea. In addition, a large number of industrial units, including chemical industries and oil drilling, concentrated near Bombay and along the coast of Maharastra cause degradation of marine coastal environment. In Goa, the drainage network formed by the Mandovi and Zuari rivers provide the navigational pathways for oil tankers and ships loaded with exportable iron ores. Pollution caused by oil slicks due to pumping of oil bilges from harbours, leakages or overflow from pipelines have been reported.

In Karnataka, about 12 towns located near the 300 kilometres long coast, discharge untreated wastewater or about 30 tonnes of organic load directly into coastal waters everyday. Three major industries along with a host of medium and small units located near the coast dump 30,000 cubic metre of industrial effluents into the sea everyday. The New Manglore Port, mainly used for export of Kudhremukh iron ore and the Karwar port, which is being developed by the Indian Navy, are also potential sources of pollution.

Along the Kerala coast, 14 municipal bodies discharge about 650 tonnes of organic matter per day into coastal waters. Another 3,00,000 cubic metre of industrial effluents, emanating from 200 large and medium and 2,000 small scale industries are directly/indirectly discharged into the sea. The heavy traffic of marine vessels for fishing, port and defence-related operations makes the coastal waters more vulnerable to oil spills and water quality degradation.

In the 1,050 kilometres long Tamil Nadu and Pondicherry coasts, the major polluting industries are textile, chemicals, fertilizers, pulp and paper, cement, sugar, mining and mineral processing. In Andhra Pradesh, which has a coastline of 930 km, pollution is caused not only by industrial units but also by port-related operations at Vishakhapatnam and Kakinada where intensive mechanised fishing leads to heavy traffic of marine vessels.

The problem is almost similar in case of Orissa and West Bengal though the region is relatively free from industries. Besides a large quantity of untreated sewage from coastal towns and important tourist resorts like Puri, Chandipur and Digha, the Port related operations at Paradip and Gopalpur in Orissa and Haldia and Calcutta in West Bengal as also intense mechanised fishing form the potential sources of coastal pollution.

An exceptionally high concentration of lead and cadmium, 820 microgram per litre (μg/l) and 336 μg/l respectively, were observed in Thane creek of Bombay coast, while the mercury concentration is 778 μg/l. The high levels of pollution, particularly in Thane creek and Mahim creek are caused by the discharge of huge quantities of domestic and industrial wastes. A major portion of the waste is released in Ulhas river and Bassein creek also. Sediment along the creeks and near-the-shore stations showed significant concentration of lead.

The Cochin region of the Kerala coast is found to be affect most by petroleum hydrocarbons. During the pre-monsoon period, a concentration of 162 μg/l was recorded in the estuarine area, while in coastal area, the concentration recorded was 49 μg/l. This has been mainly due to the operation of oil tankers as well as the movement of mechanised fishing vessels. Further, it was also observed that the concentration of nutrients is high in the estuarine part, and that in the coastal and offshore regions being in descending order except for a few observation. Along the coasts of West Bengal and Orissa, however, the coastal water quality remains almost stable.

Lead, Cadmium and mercury were found in very low concentrations in the water. The sediment samples were rich in metals, particularly lead.

In Gujarat, the industrial development in the arid region of Saurastra is sparce, but many large and medium industries are established along the coast. The nearshore areas of South Gujarat are low lying and marshy and get inundated during sporadic floods common in the rivers of the region. Hence, major developments have flourished on the banks of the rivers and estuaries several kilometres interior from the coast. The wastewater emerging from the cities and varieties of industries is released into the rivers and ultimately goes to the sea. The prominant discharges in Mahi, Narmada, Tapi, Mandola, Purna, Ambika, Auranga, Par, Kolak and Damanganga are from industries such as dyes, textile, organic chemicals, pharmaceuticals, pulp and paper, pesticides, fertilizer and inorganic chemicals.

13. Coastal pollution—Critical issues.—The critical issues are :

(*i*) Growing microbial population (including pathogens) in coastal waters indicating wide scale sewage pollution;

(*ii*) The wastewater generated from the coastal cities, towns, rural areas and industries is released into rivulets/rivers in the proximity of the coast and or directly into the coastal waters often with minimal or without treatment;

(*iii*) Rejects of coastal aquaculture farms (faces/excreta/uneaten foods) often rich in organic carbon and nitrogen may lead to localised eutrophication thereby resulting algal blooms.

(*iv*) Oil spills in coastal seas and estuaries and dumping of toxic and hazardous wastes;

(*v*) Activities in Ports and Harbours—The potential sources of coastal pollution at fixed locations; and

(*vi*) Coastal creeks, canals, rivulets and estuaries being the first water bodies to succumb to pollution (few observations in Bombay and Gujarat are indicative of the gravity of the future problems in other such were bodies in the coast) may be viewed seriously.

14. Pollution control mechanism and conservation of coastal area.—The pollution control Boards at Centre and littoral States have adopted 5 km into the sea from the highest high tide, as the extent, over which their authority to control waste discharges will extend for the purpose of the Water (Prevention and Control of Pollution) Act, 1974.

Under the Environment (Protection) Act, 1986 rules were framed for regulation of activities in the coastal area by declaring coastal stretches as :

Inland boundary	Coast	Ocean Boundary
200 ft from MHT ←	Washington State →	3 nm from CB
2 km MHT ←	Brazil →	12 km from MHT
1000 yrds from MHT ←	California →	3 nm from CB

200 m from MHT ←	Coasta Rica →	MLT
10 km from MHT ←	China →	15 m depth
1-2 km ←	Israel →	500 m from MLT
1 km from MHT ←	South Africa	
100 m from MHT ←	South Australia →	3 nm from CB
400 m from MHT ←	Queensland →	3 nm from CB
500 m from HTL ←	Spain →	12 nm
300 m from MHT ←	Sri Lanka →	2 km from MLT

MHT = Mean High Tide, MLT = Mean Low Tide; HTL = High Tide Line, CB = Coastal Baseline; and nm = natural mile.

Coastal Regulation Zone (CRZ) for regulating activities in the CRZ. It declares coastal stretches of seas, bays, estuaries, creeks, rivers and backwaters which were influenced by tidal action (in the landward side) upto 500 metres from the High Tide Line (HTL) and the land between Low Tide Line (LTL) and HTL as Coastal Regulation Zone and imposes restrictions on the setting up and expansion of industries operations and processes.

15. **National programmes.**—In recent past, Ministry of Environment and Forests (MoEF) has taken several important steps for conservation of mangrove and coral reef habitats in the country. A national committee on wetlands, mangroves and coral reefs has been constituted to advise the government on appropriate policies and programmes for the conservation of these ecosystems, to suggest specific sites for conservation action and to identify research and training priorities.

16. **National Mangrove Programme.**—On the basis of national committees recommendations, 15 mangrove areas have been identified for conservation and preparation of management action plan. The plans broadly cover survey, demarcation, natural generation in selected areas, afforestation, protection measures and awareness activities.

17. **National Coral Reef Programme.**—A national strategy for conservation of corals and coral reefs in India has been developed in recognition of the fact that these constitute the most productive marine ecosystems, which are deteriorating rapidly. Comprehensive management action plans are being developed for the coral reefs of Andaman Nicobar Islands, Gulf of Kutch, Gulf of Manner and Lakshadweep islands.

18. **Pollution Standards and Reference Materials.**—The Group of Experts on Standards and Reference Materials (GESREM) is working as a part of IOC's programme on the Global Investigation of Pollution in the Marine Environment (GIPME) and is also co-sponsored by IAEA and UNEP with the mission to provide pollution standards and reference materials as well as guideline for their production to different laboratories with emphasis on providing them to the laboratories in developing countries.

19. **Large Marine Ecosystem (LME) Concept.**—Large Marine Ecosystem (LME) concept defined as large regions of the world ocean generally around 200,000 sq km characterised by unique bathymetry, oceanography, productivity within which marine populations have adapted reproductive,

growth and feed strategies and which are subject to dominant forcing functions such as pollution, human predation and oceanographic conditions. It has been a growing concern world wide that LMEs are often subjected to considerable stress from human interferences including pollution and heavy exploitation of renewable and nonrenewable resources, against a background of increasing global change.

20. **International Society for Mangrove Ecosystem (ISME).**—ISME was established in 1990 as a result of a UNDP/UNESCO (COMAR) project with the support of Japan. Projects launches in Latin America, Africa, Southern Asia and the Pacific with the objectives to :

- present the latest information on conservation, use and management of mangroves; identify and quantify the environmental, ecological and socio economic values of mangroves, and
- develop a model data-base for the acquisition, storage and the manipulation and analysis of information through such means as 'computerised geographic information system.

National Oceanographic Data Centres (NODC).

Today, NODCs 36 countries (including India) are working jointly through the IOC' committee on International Oceanographic Data and Information Exchange (IODE). Major features are :

- data acquisition and processing;
- data and information dissemination ; and
- international data exchange

Each centre has defined mission both to meet the specific needs of its own nation's marine institutions/organisations and to fulfil its role within the international oceanographic data exchange frame work.

21. **London Dumping Convention (LDC) 1972, renamed as London Convention (LC) 1972.**—London Dumping Convention (1972) has been renamed as London Convention (1972) at its fifteenth Consultative Meeting held at IMO in London November, 1992 and resolution has called for amendments on the immediate banning of the disposal of low level radioactive wastes (high level radioactive wastes are already prohibited) and also emphasized that need for national waste management practices in the marine environment and coastal zones.

22. **Global warming and sea-level rise.**—Doomsday predictions of a rise of sea level upto 3.5 m during the next 100 years have stirred controversy and debate. These high estimates, based on the assumption of rapid melting of polar ice, are now generally rejected. A global sea level rise of one half metre during the next century is the more generally accepted figure. An estimate in 1990 indicates the rise from 0.2 to 0.7 metres by the year 2070 (World Development Report, 1992). However, the uncertainty of these estimates is considerable. The uncertainty is due to lack of understanding of a number of factors. For example, atmospheric warming is likely to increase precipitation, which could lower the sea level by returning snow and ice to the polar caps, causing them to grow. Conversely, higher evaporation rates could produce more high clouds, adding to the greenhouse effect. As the atmospheric constituents, clouds and ice extent change, so will the albedo (the fraction of incoming solar radiation reflected by the earth). These are all subject to speculation. It is not certain which effects will dominate.

Based on the past records, the climate is near to an interglacial peak, characterised by relatively warm temperatures and high sea level. During the most recent glacial period 16,000 years ago, the global temperature was 3-4°C cooler, the sea level more than 100 m below its present level, and the shoreline located close to the continental shelf break. For parts of previous interglacial stages during the past few hundred thousand years, temperature as much as 3°C warmer than at present had occurred with higher mean sea-level stands.

The temperature of the atmosphere and ocean surface waters probably rose by about 0.5°C during the past century, although scientific opinion on the exact amount varies. Such a temperature increase may well be a result of increasing green-house gas concentrations, although it could equally represent a natural climatic recovery from the Little Ice Age (1400 to the late 1800 A.D.).

23. Relative sea-level change : Global Vs. Local.—During the past century mean global sea level has risen by 0.15 m but, locally the relative rise or fall varies to a great extent, depending upon several influencing factors. For example, Scandinavian countries have experienced 1.5 m/century uplift (i.e., a fall of relative sea level). On the contrary, Bangkok, Thailand has been sinking at the same rate (i.e., a rise of relative sea level) primarily due to groundwater extraction since 1960. For historical Venice, with a 30 centimetre rise and no defence, the pizza at San Marco would be flooded 360 times a year by normal tides. In the past fifty years, relative sea levels in Venice have increased by 23 centimetres, largely because of subsurface layer compaction and sinking as a result of groundwater pumping. These examples illustrate the importance of local and regional processes in determining the local sea level. In comparison, the recent 0.15 m/century global sea-level rise is small.

Global long-term sea level changes during the next few decades will be of lesser importance compared to effects which would take place locally on short time scales as a consequence of tides, waves, storm surges and seasonal cycles. Higher relative mean seal level may cause more frequent flooding associated with a combination of these local events. As time goes by, even the lower storms would cause destructive floods.[1]

24. Government initiatives.—Concern about environmental degradation of coastal areas prompted the Ministry of Environment and Forests (MoEF) to issue "Environmental Guidelines for Development of Beaches" in 1983 and to advise States to prepare Master Plans for the development of coastal stretches. The document proposed Environmental Impact Assessment (EIA) procedures to gauge the effect of activities that have a direct impact on the coastal land-sea interface area and its hinterland. Significantly, the document recognises that "direct impact" on the coastal ecosystem could be experienced as a consequence of activities even in hinterlands areas, and, therefore, it is not prudent to restrict the EIA to activities within a geographically defined coastal stretch.

In 1991, the MoEF issued a notification under the Environment (Protection) Act, 1986, declaring coastal stretches as the Coastal Regulation Zone (CRZ) and regulating activities within this area. (The Environment (Protection) Act, 1986, an umbrella legislation for environmental protection, was enacted as a result of the decisions taken at the United Nations

---

[1] Source : Central Pollution Control Board, March 1996.

Conference on Human Environment, held in Stockholm, in June 1972, in which India participated.) The provisions of the CRZ notification are to be implemented by the coastal States and Union Territories.

The Act defines the coastal stretches of seas, bays, estuaries, creeks, rivers and backwaters which are influenced by tidal action, in the landward side, up to 500 m from the high tide line (HTL) as part of the Coastal Regulation Zone. In addition, the land between the low tide line (LTL) and HTL is also included in the CRZ. In the case of rivers, creeks and backwaters the distance has been specified to be not less then 100 metres on both sides of the HTL or the width of the waterbody, whichever is less. Significantly, the provisions of the notification are also applicable to ecologically sensitive areas such as mangroves, coral reefs and areas close to spawning and breeding grounds of marine life, areas which may technically fall outside the coastal zone.

25. Four categories.—The CRZ has been classified into four categories for the purpose of regulating development activities. This approach is quite unique in that it takes into account current development reality and then tries to regulate further development. Norms regulating development and construction activities within the CRZ have been specified with maximum restrictions applying to the ecological sensitive areas of CRZ-I. Certain activities are completely prohibited within the CRZ, including the establishment and expansion of existing industries, manufacturing, handling or disposal of hazardous substances, dumping of city or town wastes, land reclamation and embankment building, dumping wastes from thermal power stations and mining of sands, rocks and substrate.

CRZ-I includes areas that are ecologically sensitive as well as the area between the HTL and the LTL, CRZ-II includes areas that have already been developed up to or close to the shoreline, CRZ-III includes areas that are relatively undisturbed and those which do not belong to either Category I or II, and CRZ-IV includes coastal stretches in islands.

The notification states that clearance shall be given for any activity within the CRZ only if it requires waterfront and foreshore facilities. It also specifies that environmental clearance from the MoEF will be required for activities such as construction necessary for defence purposes, for ports, harbours and light houses, foreshore facilities for thermal power plants, as well as for all other activities with investment exceeding Rs. 5 crores.

Significantly, it has been stated that in CRZ-III, construction/reconstruction of dwelling units between 200-500 m of the HTL will be permitted, so long as it is within the ambit of traditional rights and customary uses.

The notification thus attempts to prevent uncontrolled and environmentally harmful development through various methods : (*a*) Several industrial and construction activities are completely prohibited, (*b*) Some activities require environmental clearance by appropriate authorities before they are permitted in the regulation zone, and (*c*) Specific rules applying to construction and development in the CRZ have been formulated.

Though the CRZ notification was issued in 1991, little action was taken till an NGO, the Indian Society for Enviro-Legal Action, field a public interest litigation in the Supreme Court in 1994, seeking the court's intervention in direction the States to comply with its provisions. The writ petition also challenged the validity of the amendments to the main notification of 1991, especially those which sought to provide the Centre with discretionary powers to permit any construction within the 200 metre "No Development Zone" along any part of the coastline. The amendment was sought partly to accommodate the interests of the hotel and tourism industry.

The court upheld the validity of the main notification of 1991. It also ordered the setting up of coastal zone management authorities at the Central and State levels and the speedy formulation and enforcement of management plans.

In response to the Supreme Court directive, preliminary Coastal Management Plans have been prepared by the Governments of West Bengal, Kerala, Gujarat, Tamil Nadu, Orissa, Karnataka, Maharashtra, Andhra Pradesh, Lakshadweep and Andaman and Nicobar islands. All these plans classify coastal stretches according to the zoning guidelines proposed by the CRZ notification.

At the same time, the classification of CRZ areas by State Governments is being questioned by environmental activists and people's groups. It is alleged that the classification of CRZ areas is prompted by economic and industrial considerations so that even areas that are ecologically sensitive and fragile are classified as CRZ-II or CRZ-III. IN Gujarat, for instance, environmentalists claim that the environmentally fragile Kharo creek in Kutch has been reclassified from CRZ-I to CRZ-III, to facilitate the construction of a cement jetty by Sanghi Industries Ltd. It is being demanded that the classification procedure be unbiased and that all sensitive coastal areas be classified as CRZ-I area.[1]

26. Problem soap suds.—Yet another rich source of phosphorus is the synthetic detergents which have replaced soaps for washing clothes. Sodium tripolyphosphate ($Na_5P_3O_{10}$) was used earlier as "filler" to lessen manufacturing cost, adjust pH to make the water alkaline, and soften hard water. It is now replaced by trisodium nitrilotriacetate (NTA) which is biodegradable. But it can form toxic complexes with mercury, lead, cadmium and arsenic.

Another source of nuisance is the foaming agent added to synthetic detergents. It does not clean clothes better, but is added to impress the consumer who thinks that the more suds are formed, the better is the product. I have seen sewage outfalls in the sea with foam covering a vast area.

The danger of sewage lies in harmful bacteria which cause typhoid, dysentery, diarrhoea, cholera, etc. While these cannot survive long in seawater, they may be taken in by animals, like oysters and clams, which strain water through their system to feed on minute organic matter. Once these harmful germs get into these filter-feeders, they live inside them. If these oysters or clams are eaten without sufficiently cooking to destroy the germs, we may end up ill.

In some countries, bevalves grown in sewage contaminated seas are transferred to clean seawater for some days so that the harmful germs inside their bodies are flushed out. Some countries even prohibit swimming in the sea when the count of coliform bacteria (harmless germs living in our intestines) exceeds 100 to 1,000 in 100 ml seawater.

---

[1] Source : Central Pollution Control Board, 1996.

It is when sewage contains man made chemicals, like pesticides or heavy metals, that serious trouble begins. DDT, banned in developed countries, is still used in developing countries. It tends to get more and more concentrated as one moves up in the food chain. Thus, fish growing in seawater with just 0.1 part of DDT per billion parts water will have 57 mg DDT per kg body weight. This increases to 800 mg per kg in seagulls which feed on these fish. DDT affects calcium metabolism. So, these seagulls lay eggs with thin shells, which break when the mother birds sit on them. And no baby gulls are hatched.

In India, our daily diet contains 0.27 mg of DDT, with the result that human milk contains more DDT than FAO's permissible limits. Cow's milk is no better.

DDT has reached even remote places like the Arctic Circle and the Antarctica, where there are no farmers to use it. Yet, polar bears, seals and penguins have it in large concentrations in their bodies.

Much more dangerous than DDT are the other organic pesticides like aldrin, endrin and dieldrin, which were used two decades ago in abundance. The trouble with these, as with DDT, is that they are not easily degradable.

Chlorinated and hydrogenated hydrocarbons are used in fire extinguishers, aerosol propellants, flame retardants, and as solvents, while polychlorinated biphenyls (PCBs) are used for electric insulation, coolant fluids, transformer oils, in heat exchangers, and as components of paints and lacquer. Of the amount produced, as much as 25 per cent leaks into the environment, of which one tenth finds its way into the oceans. And, like DDT, their proportion increases as we go up in the food chain. Thus, the marine plankton (tiny plants and animals in the sea) show 0.03 mg PCB per kg seawater. This increases to 2.5 mg/kg in herring which feed on this plankton and to 14,000 mg/kg in sea eagles, eating the herring.

Heavy metals, like chromium, lead, cadmium, mercury and nickel too are major health hazards. They are fatal to sealife, but we tend to wake up only when humans are affected. A classic example is the so called Minamata disease, named after a place in Japan, where a factory manufacturing vinyl chloride and acetaldehyde was dumping mercury waste into the sea. The town was lucky that only 43 of its 50,000 inhabitants died.[1]

27. **Oil hazard.**—Coming to oil, the world was blissfully ignorant about this potential hazard until awakened, with a rude shock by the Torrey Canyon disaster. This oil tanker ran aground in the English Channel on March 18, 1967, spilling 95, 000 tonnes of its cargo of 117,000 tonne crude oil into the sea. Frantic efforts were made to destroy the oil; the Royal Air Force dropped incendiary bombs to burn the spilt oil, but failed. This may sound surprising, as we all know that oil is highly inflammable. But crude oil is a mixture of hundreds of different chemicals, ranging from the highly volatile petrol with a low flash point to the viscous, tarry, high boiling point components. The petrol which makes almost a quarter portion of crude oil, quickly evaporates from the seawater, but the remaining hydrocarbons are difficult to burn.

One way of getting rid of the oil slicks is to emulsify the oil by using detergents. These are not related to the domestic variety and consist of three fractions : the active ingredient, a solvent which gives them a characteristic smell, and a surfactant which facilitates the penetration of the active ingredient into the oil. Detergents emulsify the oil, which breaks up into smaller drops.

---

[1] The Hindu Survey of the Environment, 1993.

Psychologically, it is a case of "out of sight, out of mind". The authorities may claim (rightly) that the slick has disappeared, but the public do not realise that oil broken into smaller droplets will mix readily with seawater, thereby enhancing the poisonous effect of the oil. The result — mass mortality of marine life. Moreover, the detergents should be used in the proper manner. On land, their application should be followed by hosing water, otherwise the emulsified oil will sink deeper into the sand or mud. Detergents only disperse oil, they do not remove it. Eventually, the oil will come out of its emulsified state and affect the areas again.

The concentration factors of radioactive material in some sea organisms

	Cobalt	Manganese	Zinc	Iron	Selenium	Copper
Seaweeds :	10^2-10^3					
Ark shell	10^4	10^4	10^4			10^4
Clam	10^3	10^3			10^3	10^3
Oyster		10^2-10^3	10^3-10^5			
Sea hare	10^4	10^2	10^2	10		10^2
Octopus		10^2-10^3	10^2-10^3			10^2-10^3

Yet another way to make the oil disappear, at least from sight, is to use pulverised chalk and sodium stearate, or even sand plus fuel ash coated with a silicon compound to make it sink. But this smothers and poisons the creatures living at the sea bottom. These form a link in the food chain of fish, which then die of hunger or poisoning by eating the contaminated food. Fish, oysters and clams, living on the sea bed which are collected for human consumption, also perish.

A safer method, since it does not use poisonous chemicals, is to spray steam (on land). During spraying, the rocks can be hosed down with "Teepol" or a soapy solution. While animals, which come in contact with the steam will perish, there is no residual toxic effect.

Even in crisis management methods, different interests come into play. Thus hoteliers, beach resort owners and the tourism industry try their best and persuade the authorities to prevent the oil from being washed ashore on the beaches, where their patrons swim or sunbathe. On the other hand, fishermen cry foul if detergents or sinking agents are used, which ruin their catches and affect their livelihood.

The toxicity of fuel oil no. 1 is 20 ppm (parts per million) for fish and 0.4 to 0.6 ppm for other marine forms. The rates for degradation by natural means vary from 36 to 360 micrograms per sq. m a year. The isoprenoids, alicyclic and aromatic components of crude oil can be detected even two years after an oil spill. Even one and a half years after 600 tonnes of oil spit into the sea, the mud at the bottom contained 70 mg hydrocarbons per kg (of mud) which was still poisonous to marine life.

28. Eco-friendly way.—A more eco-friendly way is to use bacteria to "eat up" the oil. Many bacteria eat components of oil, but no single germ can decompose all the components. Here, genetic engineering has come to our help by combining the abilities of several different bacteria to produce a "supergerm" which can break up all the components of crude oil. This is much quicker than the natural biodegradation of oil.

The best way out of these predicaments will be to contain the oil before it spreads out, but using floating booms. These should be 60 to 120 cm above and below the sea surface. The oil is then scooped up or sucked in by pumps and the water separated. But this method works only when the layer of oil is thick. While it is feasible in harbours and clam seas, it does not work in turbulent weather or in rough seas with high waves. Moreover, the collection has to be rapid, for a cubic metre of oil spreads within ten minutes to a patch of 48 m diameter. After 100 minutes the oil film will be only 0.1 mm thick, spread over 100 m.

In addition to oil tanker collisions, accidents on shore installations also result in leaks. One of the earliest was the high pressure oil well blowout in Santa Barbara in the U.S., when 3150 kl oil leaked out for 300 days before it could be stopped.

While such mishaps attract a lot of public attention, they account for only 10 per cent of the pollution caused by another slow but insidious method that escapes public notice. This is the deliberate discharge of oil waste into sea. When tankers reach their destinations, they are filled with seawater, to avoid floating too high on their return journey, which will be hazardous as well as uncomfortable for the crew. This dirty water is pumped out when the tanker takes in a fresh cargo. It is this, which leads to the presence of tar balls found on our beaches.

Dredging sand and gravel for building material disturbs the sea bed, sucking in marine life along with the sand. Dredgers also keep navigation channels in ports open by scooping out the silt which would otherwise fill them up. They then, go to a far off site where the silt is thrown back into the sea. This makes the waste turbid, decreasing photosynthesis. It also settles on the living creatures at the bottom, burying or choking them.

Moreover, toxic pollutants which had settled down on the sea bed are brought up to the surface, resuspended and reintroduced into the water where they can be harmful. To save fuel unscrupulous owners often throw the dredged material much nearer the harbour than the stipulated distance away. The silt is then likely to be washed back into the port by currents and tides.

29. **Radioactive wastes.**—With the fear of rapid depletion of fossil fuels (coal, oil and natural gas) man has been looking towards alternate sources of energy, one of which is nuclear. Nuclear plants produce small quantities of radioactive isotopes, but these, when released *via* the cooling water into the sea, are far less hazardous than the naturally occurring radioactivity of earth.

The major risk of radioactive materials is not that of polluting the whole ocean but of damaging a small, restricted area, where the material cannot be rapidly dispersed or diluted. Especially dangerous are the highly radioactive products resulting from the recovery of spent nuclear fuels, known as fission products. Some of them can remain half alive for thousands of years. At present, they are buried underground, but so much spent material is accumulating that alternate ways of disposal are being sought. One of these is to pack it into sturdy containers and bury them below the sea-bed, either at the mid-ocean ridges or in the oceanic trenches where the natural forces will take them down to interior earth.

Although radioactive wastes are diluted before releasing into the sea, many living organisms selectively absorb them. Thus the radioisotopes of cesium, zinc and cobalt are accumulated in the soft tissues, while those of radium, strontium and calcium are found in the bones. Seaweeds concentrate cobalt and iodine. Even the bottom sediment accumulates plutonium by a concentration factor (CF) of 10^4-10^5. The CF is the proportion of a substance in a living organism (or sediment) compared to the concentration of that substance in water.

Power stations which produce electricity from heat are not 100 per cent efficient. This is because the series of steam turbines utilise superheated steam at 500°C down to 100°C. At this temperature, on account of thermodynamic inefficiency and economic, heat is not extracted from steam, and is cooled with water. The efficiency of conversion of heat to electricity in coal based power stations is 40 per cent, while that of nuclear power plants is still less, 33 per cent. Since it requires 3413 BTU (British Thermal Units) of heat to produce one kilowatt-hour of electricity at 100 per cent efficiency, 3800 BTU/kwh in coal-fired stations, and 6412 BTU/kwh in nuclear plants are discharged as waste.

This heat is beneficial in temperature countries and can serve a useful purpose. Since feeding and therefore growth of cold blooded animals is related to temperature, they can grow quicker in warm waters. (This is known as thermal enrichment). However, in tropical countries, where the plants are animals are living in waters of temperatures only a little lower than the lethal limit, further heating can lead to distress and even death.

·Marine diatoms grow best at 18-20°C, green algae at 30°C, and blue-green algae at 35°-40°C. With the heating of seawater by discharged coolant water, the enhanced temperature will lead to the replacement of diatoms and green algae by blue-green algae, which, therefore, are indicators of thermal pollution.[1]

1. Introduction.—As the quality of air in Indian cities deteriorates with every passing day, primarily due to vehicular pollution, the need for an integrated approach involving automobile industry, refineries, pollution control boards and enforcement agencies (transport departments) is being increasingly recognised. In view of the fact that the transport sector alone accounts for about 70 percent of the air pollution in our cities, most of which is in close proximity to the breathing zone, it is essential to chalk out a long-term plan to combat this menace.

2. What is air pollution.—WHO has defined the air pollution as substances put into the air by the activity man in concentration sufficient to cause harmful effect to the health, vegetation, property or to interfere with the enjoyment of his property.

According to U.S. Department of Health, Education and Welfare, "The presence in the outdoor atmosphere of one or more contaminants or combinations thereof in such quantities and of such duration as may be, or may tend to be injurious to human, plant or animal life or property or which unreasonably interfere with the comfortable enjoyment of life or property or conduct of business" is defined as air pollution and contaminates as such are termed air pollutants.

Central Pollution Control Board has defined the term air pollution as being limited to the situations in which the outdoor ambient atmosphere contains materials in concentrations which are harmful toman and his environment. The definition adobted by the CPCB expert committee is as follows :

"Contamination of Surrounding air with unwanted odour, sound, gases or dut. Any interference with comfortable living conditions".

"Air Pollution means the presence in the outer atmosphere of one or more contaminants such as dust, fumes, gas, mist odour, smoke or vapour in quntities, characteristics and of duration, such as to be injurious to human, plants, or animal life or to property or which unreasonably interfere with the comfortable enjoyment of life and property".

3. Concept of air pollution.—It is difficult to define air pollution as such. Air Pollution in common paralance, envolves unwanted introduction of emissions (substances) into atmosphere which are either foreign to it or are in quantities exceeding natural concentration in such quantities and of such duration as may be or tend to be injurious to human being, plant, animal life and property or which unreasonably interfere with comfortable enjoyment of life and property such contaminations are termed as Air Pollution.

Air Prevention and Control of Pollution Act 1981 Section 2

(*a*) "air pollution" means any solid, liquid or gaseous substance [1][(including noise)] present in the atmosphere in such concendration as may be or tend to be injurious to human beings or other living creatures or plants or property or environment;

(*b*) "air pollution" means the presence in the atmosphere of any air pollutant,

(*c*) "approved appliances" means any equipment or godget used for the bringing of any combustible meterial or for generating or consuming any fume, gas or particulate matter and approved by the State Board for the purpose of this Act;

(*d*) "approved full" means any full approved by the State Board for the purposes of this Act;

(*e*) "automobile" means any vehicle powered either by internal combuston engine or by any method of generating power to drive such vehicle by burning fuel;

---

[1] Ins. by Act 47 of 1987, S. 2 (w.e.f. 1st April, 1988).

(*f*) Board menas the Central Board or State Board;

(*g*) "Central Board" means the [1][Central Pollution Control Board] constituted under Sec. 3 of the Water (Prevention and Control of Pollution) Act, 1974;

(*h*) "chimney" includes structure with am opening or outlet from or through which any air pollutant may be emitted;

(*i*) "control equipment" means any apparatus, device, equipment or system to control the quality and manner of emission of any air pollutant and encludes any device used for securing the efficient operation of any industrial plant;

(*j*) "emission" means any solid or liquid or gaseous substance coming out of any chimney duct or flueor any other outlet;

(*k*)" "industrial plant" means any plant used for any industrial or Trade purposes and emitting any air pollutant into the atmosphere.

Air constitutes one of the important elements of our life as we can live without water for sometime but it is impossible to survive for long time without air. Air Pollution in not a new problem. It had been endangering our life for centuries. With advent and expansion of industrilization, urbanisation and growing population, new dimentions of the problem has been realised in the ugly form of smog, acidrains, haze, smoke, odours in excessive concentration beyond the assimilative capacity in the atmosphere coming from various human activities like transportation, domestic activities, industrial, agricultural, construction deteriorating the air quality. The later aspect of the problem has plunged in the recent research work on the depletion of ozone layer and "Green House Effect"

4. **Ambient Air Quality.**—The ambient air quality is a dynamic and complex environmental phenomenon exhibiting variations with time and space. It evaluation is the fundamental requirement towards assessment of the nature and extent of air quality variations. CPCB has established a national network of 290 stations spread over 92 cities and towns across the country under the National Ambient Air Quality Monitoring (NAAQM) programme to determine present air quality status and trends and to assess the potential for health hazard and damage to property besides providing background air quality data as needed for industrial siting and regulating pollution to meet the prescribed ambient air quality standards.

The pollutants monitored under this program are sulfar dioxide (SO_2), nitrogen dioxide (NO_2) and suspended particulate matter. In addition to these, a number of specific parameters like ammonia, respirable suspended particulate matter (RSPM), lead, trace metals and poly aromatic hydrocarbons (PAHS) are also monitored in selected stations.

5. **Evidences of air pollution.**[2]—Air pollution is a relatively recent phenomenon even in the advanced countries of the world. The first dramatic place of evidence of air pollution came in 1930 in Belgium when the Meuse valley was blankted by a heavy smog which caused 63 death and 6,000 person

---

[1] Subs. by Act 47 of 1987, Sec. 2.

[2] Singh Promod—Air Pollution and its control, Allahabad Farmer, Vol. 1, July, 1979, pp. 209.20.

got sick. The five day London fog of 1952 which killed 40,000 people and smog in Danora (Penneylvania U.S.A.) which killed 20 persons. In India, the magnitude of the problems has not been fully assessed, except in few cities Bombay, Delhi, Calcutta, etc. On the whole, pollution from the industry appears to the pass unnoticed. One explanation for this is the restricted spatial spread of industry and another could be the absence or ineffective functioning of air monitoring station/stations in major cities and towns. The air monitoring stations set up by the National Environmental Engineering Research Institute (Neeri) in Bombay, Calcutta, Jaipur, Ahmedabad and Nagpur is unable to formulate realistic standards permissible for levels of air pollutants and have lack of sophisticated monitoring to accept instruments. Above all, there is little enthusiasms to accept such concept ecology. Air itself is a mixture of gases, principally nitrogen (75%) Oxygen (23%) and argon (126%). Traces of other gases, neon, krypton, helium, hydrogen, xenon and ozon are also there. Carbon-di-oxides (0.04%) and water vapour play important roles in biological process and the temperature changes of the atmosphere.

TABLE

Approximate constitution of the atmosphere at 10°C and normal pressure.

(*a*) Major constituents			(*b*) Minor constituents		
	g/m^3	(% by wt.)		mg/m^3	(ppm by wt.)
Air	1172	100	Neon	14	12
Nitrogen	879	75	Krypton	4	3
Oxygen	269	23	Helium	0.8	0.7
Argon	15	1.26	Xenon	0.5	0.4
Water vapour	8	0.70	Hydrogen	0.0	0.4
Carbon dioxide	0.5	0.04			

Air is never completely pure, because such gases as sulphur-dioxide, Hydrogen sulfide, corbon mono-oxide, methane, etc., are being let in to it by natural processes such as volcanic eruptions, decay of vegetation, forest fires and dust storms. This is pollution of natural origin. It hardly attains serious proportion in terms of total air pollution problem except perhaps in the immediate vicinity for a very limited period.

The problems of air pollution derives its importance and severity through the activities of the human race. The burning of the fuels (fossils or otherwise), the production and use of pesticides and fertilizers to increase out crops, the investigations into the potentialities of nuclear energy (both military and peaceful). The propultion of trains, ships, auto mobiles, planes, rockets and missiles the extensive refineries for oil and minerals, the conversion of raw materials into finished goods, clearing of lands construction and destruction of roads and buildings, the whole range of chemical and other industrial complexes; in short, everything that we do not become an advanced and prosperous community puts an ever increasing and harmful foreign material into the atmosphere.

The story does not end with the introduction of this poisonous substance into the air but takes serious turns because of complex reactions amongst the constituents of this infusion under the influence of the solar radiation. Many of the secondary compounds so formed are more toxic and more harmful than their parents. For example, the peroxyacetylnitrate (PAN), is produced in the atmosphere by the action of solar radiation on the exhaust gases from the cars. The PAN is regarded to be one of the most widespread and irritating pollutants.

Air stays no where for a long time. It means air pollution ignores the city and State Boundaries, whether it is the south eastern part of Bombay or West Delhi or any other part of Calcutta, it will surely expend to all its surrounding areas. Levels of D D T of over 100 ppb have been found in the liver and fat of the animals that never leave Antarctica ice peak as Adelie penguin.

Major Air Pollution Episodes

Location and date	Remarks
Meuse Valley (Dec. 1930)	6000 ill; 60 deaths, 5 previous episodes.
Donora Pennsylvania (Oct. 1948)	5910 ill; 20 deaths; 1 previous episode
Pz Rica, Mexico (Nov 1950)	320 ill; 22 deaths; Industrial accident
London, England (Dec. 1952)	Unknown number ill; 4000 deaths, 6 previous episodes 9 subsequent episodes
New York, New York (Nov. 1953)	Unknown number ill, 165 deaths; 3 subsequent episodes.
New Orme, J. Lousiana (Oct. 1953)	200 ill; 2 death; subsequent episodes
Yokohama. Japan (1956)	Many ill, patients recovered when removed from area; subsequent episodes
Worldwide episode (Nov. 1962)	Atleast 1000 deaths
Eastern United States seaboard (Nov. 1966)	Many ill, data incomplete
Bhopal (India) (1984)	More than 1,00,000 persons effected. (Lungs effected, eye effected; deaths more than 10,000) Due to poison Gas MIC (Methyl Iso Cynide).

6. **Classification of air pollutants.**—Air pollutants can be broadly classified as follows :

I. **Aerosols.** —(*a*) *Smog.*—The word "smog" was introduced by Dr. Harold Antoine Des Voenx at a Public Health Congress in 1905. As the word suggests, it represents the combination of smoke and fog. In the past any kind of pollution was usually termed as smog. It is now known that there may not be a fog for the appearance of smog as also, it is not necessary that pollution should always give rise to smog.

Two kinds of smog.—(*i*) Particularly in places whereas coal is the principle fuel, *e.g.*, in Calcutta and London, smog covers the areas at nights or cold days when the temperatures are below about 10°C and calm meterological condition exist.

The main constituents of such a smog are sulphur compounds, smoke and fly ash. With prolonged and serious exposures it may result in high mortality rates.

(*ii*) The other type of smog is the photo-chemical smog which usually arises in big metropolitan cities which are highly motorised and where adverse meteorological conditions do not permit free flow of air. It is now recognised that this smog is caused by the interaction of some olefinic hydrocarbons and oxidants under the influence of solar radiation, giving rise to perxy-nitrates.

The main constituents of this type of smog are nitrogen oxides, perioxy nitrates, hydrocarbons, carbon monoxide and ozone. It reduces visibility, causes eye irritation, vegetation damage and cracking of rubber.

(*b*) *Smoke.*—It mostly consists of soot, fly ash and other solid and liquid particles to be about 0.075 or 3 millionth of an inch. This is too small to be seen in the best microscope. Depending on the nature of the fuel and the efficiency of combustion, various volatile gases and other acids may accompany the smoke. The smoke may have different colours, black, brown, blue, grey, white and yellow. The colour depends on the nature of the material burnt as well as the facilities of combustion.

Coal smoke contains a high proportion of carbon and when viewed in bulk it is nearly black. It also contains tarry hydrocarbons which add to is sticking powers and its tendency to form sooty deposits in chimneys and else where. Smoke sticks to the outside walls of buildings, for rain will not wash it away, unless the stone is slightly soluble or very smooth. It is also responsible for the dingy appearance of very many urban buildings. Quite obviously, smoke does not remain permanently in the atmosphere and the average time for which smoke particle remains in suspension has been estimated as one to two days.

(*c*) *Ash.*—Ash is unburnable solid material that is set free when a fuel is burnt. The sparks, which fly upward from a fire are red hot particles of ash. Coal contains from 2 to 10 per cent. or more of mineral matter, but only a fraction of this is released in a finely divided state when the coal is burnt on a great and the ash which is small and light enough to be carried up the flue represents, on a very general average, about 0.3 per cent of coal.

(*d*) *Fumes.*—Fumes are synonymous with dirt and are mostly composed of solid particles. On a large scale they are produced by the chemical plant, rubber and metal industries, during calcination, distillation or chemical action by the condensation of the sublimation products from solid matter. Fumes are generally less than 1 micron in diameter and commonly consist of metals and metallic oxide and chlorides from the metal industries. Fumes are emitted as dusts condensed from the more volatile elements, e.g., zinc, lead, sulphur, etc.

(*e*) *Mists.*—Well-known examples are steam, fog and sulphurtioxide. They are made of liquid particles and are released in spraying and impregnating operations in industries. Organic mists are formed by the action of sunlight on the hydrocarbons and nitrogen oxides released from automobile exhausts.

(*f*) *Dust.*—These can arise from natural dust storms or released from industries which involve such operations as sawing, grinding, drying, spraying, crushing, etc. The dust particles act as centres of catalysis for many of the chemical reactions taking place in the atmosphere, particularly when the dust is finely divided. Flourine containing dust from some industries can damage vegetation and cause flourosis among animals through the cattle feed.

II. Odours.—Odours are offensive and are caused by the presence of minute quantities of pollutants in the ambient air. They can cause nausea disturb sleep.

III. Gases—(*a*) *Sulphur dioxide.*—Sulphur dioxide is a gas, with a choking smell. It is formed in considerable quantity when coal, coke or certain fuel oils are burnt. Though it is not chemically active as sulphur trioxide, hydrochloric acid and flourine compounds which are also liberated during the combustion of coal, it is emitted in much greater quantity and thus capable of doing more harm. The average burnable sulphur content of Indian coal and also coke, is about 1 per cent. When the fuel is burnt, only a small amount of sulphur remains with the ashes and the rest is released as sulphur dioxide in the flue gases.

It is estimated that an average of nearly 3 tons of sulphur dioxide emitted from every hundred tons of coal burnt. Sulphur dioxide is soluble in water and it is particularly liable to attack paint, metals, stone work and slates when water is present. It is oxidised also into sulphuric acid which has its corrosive action.

(*b*) *Nitrogen oxides.* (NO, NO_2, N_2O).—During any process of combustion, some atmospheric nitrogen combines with oxygen to form nitrogen oxides. As such, furnace effluents and engine exhausts always contain the oxides of nitrogen. These oxides of nitrogen combine with the olefinic hydrocarbons to produce the peroxy nitrates and ozone. Nitrous oxide (N_2O) is comparatively stable gas and less toxic.

(*c*) *Ozone* .—All the harmful effects of the smog arise from ozone and from chemicals formed by the action of ozone on hydrocarbons in the air. Ozone is a smelly poisonous gas. It is also produced in great abundance in the upper troposphere under natural conditions. However, the fraction of this natural ozone that manages to reach the ground level is usually too small to pose an air pollution problem.

(*d*) *Carbon monoxide* (Co).—It results from incomplete combustion of carbonaeous matter in all combustion processes and can cause death at high concentrations. Concentrations of carbon monoxide from 10 to 70 mg/m^3 are common in busy streets, concentrations of 120 mg/m^3 or more are considered dangerous.

(*e*) *Hydrocarbons.*—The aromatics, napthenes, olefines and paraffins constitute the hydrocarbons that originate from numerous sources. The most predominant source being the unbrunt or partially burnt gasoline.

(*f*) *Inorganic acids.*—The commonest is sulphurous acid (H_2 So_3) produced by the combination of So_2 and water (H_2o). It is also produced in small amounts during the combustion of coal and petroleum, oxides of nitrogen also from acids when combined with the water, though less readily.

Other inorganic acids of lesser importance are hydrochloric (HCL), hydrobromic (HBr) and hydroflouric (HF). They are produced by certain industrial, process. Hydrogen flourine is particularly hazardous for vegetation even at very low concentrations.

(*g*) *Organic acid.*—They result chiefly by incomplete combustion processes. An appreciable fraction is also contributed by industries. Chief among these are acetic acid, furmaric acid and tannic acid; the later being extensively used in leather tranning industry.

(*h*) *Fluorine.*—Coal contains up to 0.7 per cent. of chlorine and upto 0.01 per cent of fluorine. When coal is burnt both these elements probably escape to the atmosphere in gaseous form HCI (hydrocloric acid), HF (hydrogen fluoride) and SiF_4 (silicon tetraflouride). The concentrations at street level as result of chimney emissions from the burning of coal of lightly to be about 0.04 mg/m^3 of chlorine compounds and 0.004 mg/m^3 of fluorine compounds. Fluoride can be accumulated by vegetation from air borne gases and particles water or soil. Rao, D.N.Etal, have found the effects of fluoride on cattle near the aluminium plant in Mirzapur. They have examined 84 cows and found that 72 were having fluoratic teeth.

IV. Comparison of combustion pollutants

Contaminant	Power plant emission (gm/kg fuel)			Refuse burning emission (gm/kg/refuse)		Automotive emission (gm/kg/fuel)	
	Coal	oil	Gas	Open burning	Multiple Chamber	Gasline	Disel
Carbon-monoxide	Nil*	Nil	Nil	50.0	Nil	165 0	Nil
Oxides of sulphur (SO_2)	(20)x	(20)x	(16)x	1.5	1 0	0.8	7.5
Oxides of nitrogen (NO_2)	0.43	0.68	0.16	2.0	2.0	16.5	16.5
Aldehydes and Ketones	Nil	0.003	0.001	3 0	0 5	0.8	1.6
Total hydrocarbons	0 43	0.05	0.005	7.5	0 5	33.0	30.0
Total particulate	(7 5)*	2.8	Nil	11	11	0.05	18.0

Mobile sources.—A sources of air pollution which move from one place to other is termed as mobile sources. The automobile is a mobile sources. All transportation equipments are morale sources Table shows the major emission and type of vehicle.

V. Emisions from Mobile Sources

Power plant type	Fuel	Major emissions	Vehicle type
Otto cycle	Gasoline	HC, OO, NO_x	Auto, truck, bus, aircraft, marine, motor cycle, tracter.
2-Stroke cycle	Gasoline	HC_x, OO, NO_x Particulate	Motorcycle, outboard motor
Diesel	Diesel oil	NO Particulate, SO_x	Auto, track, bus railroad, marine tractor.
Gas turbine (Jet)	Turbine	NOx, Particulate	Aircraft, marine, railroad
Steam	Oil, coal	NO_x, SO_x, Particulate	Marine

x—% Sulphur in fuel

y—% Ash in fuel

VI. Classification of air pollution sources and emissions

Type	Category	Examples	Important Pollutants
Combustion	Fuel Burning Transportation	Domestic burning thermal power plants cars, trucks, aeroplanes and railways	Sulphur and nitrogen oxides carbon monoxide, nitrogen oxides lead, smoke organic vapours odours, etc.
Manufacturing Processes	Refuse buring Chemical plant	Open burning dumps Petroleum refineries fertilizers, cement, paper mills, ceramic, day products and glass manufacture.	Fly ash and particulates Hydrogen sulphide, sulphur oxide, fluorides, odours, organic vapours and dusts.
	Matallurfical plants waste recovery	Aluminium refineries, Steel plants Scrap metal yards, rendering plants	Metal furnaces (Ph and Zn), Fluorides and particulates. Smoke, soot, odours, organic vapours, metal fumes.
Agricultural activities	Crop spraying	Pest and weed control	Organic phosphates, chlorinated hydrocarbons, Pb, As.
	Field burning	Burning of refuse, fire wood and dry cattle dung	Smoke, fly ash, soot, sulphur oxides, particulates and organic vapours.
Solvent usage	Spray painting, solvent extraction, inks, solvent cleaning	Furniture and appliances finishing, dyeing, printing and chemical separations	Hydrocarbons and other organic vapours.
Nuclear Energy programmes	Fuel fabrication ore preparation spent fuel processing Nuclear device testing	Gaseous diffusion Crushing, grinding and Screwing Chemical separators, Bomb explosions	Flurodes Uranium beryllium dust and other particulates. Argon 41, Iodine 131 Radioactive fallout, Sr-90 CS 137, C-14 etc.

Rossana, A.T. "Air Pollution Principles", presented at International Section of the Pollution Control Association, Washington (Nov. 1966).

7. What air pollution does.—Air pollution adversely affects man and his environment in many ways. It soils his home and interferes with the growth of plants and shrubs. It diminishes the value of his agricultural products. It obscures his view and adds unpleasant smells to his environment. Most important, it endangers his health.

The extent of air pollution depends heavily on how weather disposes of the pollutants. The ability of the atmosphere to dilute and disperse them is limited to two factors-wind speed and the depth in the atmosphere to which air near the surface can be mixed. Although considerable variation occurs from day to day in the extent to which these factors disperse air pollution, the same patterns tend to repeat themselves over months or years. On some few days in a year, strong winds and highly unstable atmospheric conditions may disperse even the heaviest blanket of pollution. On many other days, weak winds and highly stable conditions let small quantities of pollutants accumulate and build up to serious proportions. Between these extremes, variations in weather conditions create verying levels of pollution over a given area.

8. Sources of Pollution.— Although each ear air pollution problem must be evaluated on the basis of its own individual characteristics, sources of pollution. The sources in general may be classified into broad categories :

I. Natural Sources and Man Made Sources.

A. Natural sources.—All human beings and animals are exposed to natural radiation from time immemorial :

(*i*) ***Cosmic rays.***—Cosmic rays originate in the outer space. They weaken as they pass through the atmosphere. At ordinary populous altitudes with impact of about 35 mards a year. At altitudes above 20 kms cosmic radiations become significant. Sources have calculated that a commercial pilot receives about 300 mards per year from these radiations.

(ii) Environmental radiation.—There are two types of major sources (*a*) terrestrial radiation and (*b*) atmospheric radiation :

(*a*) *Terrestrial radiations.*— are emissions from elements e.g., radium, uranium, thoriam, isotopes of potassium which are present in soil, buildings, works, mollutaine. The scientists have evaluated that human derives about 50 mards per year from such radiations. Places near uranium mines radiations can be as high as 20,000 mards a year.

(*b*) *Amospheric Radiation.*—The main sources of this type are the gases. Radon and thoron emmit radiation in smell quantities which is estimated to be about 2 mard per year.

(iii) Internal radiation.—Human beings are subjected to internal radiotions which are present in the living tissues of the body including minute emissions of uranium, thorium and related substances, isotopes of potassium, strontium, carbon inflict about 25 mards a year on the body which may extend upto 90 mards.

(*iv*) ***Dust storm.***—Deforestation, Excessive Cutting of trees, urbanization has raised the dust percentage in the air giving rise to Physiological problems to local inhabitants. Production of machines due to entry of dust has caused wear and tear in them and resulted in production check. The dust particles has been the source of many diseases. The cause suffocation, lung problems and had been seen to become problem in the domestic life.

(*v*) ***Forest fire.***—Due to forest fire huge quantity of carbon dioxide and carbon Monooxide gases are emitted causing ecological empalance. It not result in deplition of Forest Reserves but also into loss of natural habital of animals. The forest produce in also hampered and the ultimate result is smog causing low visibility. To conclude with we can say that multidimentional loss due to forest fire.

B. Man made sources

(*i*) *X-rays.*—The greatest man source of radiation exposure to the general public at the present time is x-rays effecting not only patients but radiologists technicians and the workers of the organisation where these machines are implanted causing damage to the body. From single X-Ray film, radioactive omissions varies from .02 to 3.00 radiation.

(*ii*) ***Radioactive fallout.***—Nuclear explosions release tremendous amount of energy, in the form of heat, light, ionizing radiations and radioactive substances harmful for human beings causing ecological empalance. The recent explosion done at india in 1998 had to have long term pollution effects. The gulf war has caused temperature rise of whole world changing the climatic conditions. From the significant impact will be obsewed by the coming generations.

(*iii*) ***Domestic appliances.***—Domestic furnaces using coal kerosene, cowdung cakes, firewood. Lighting in houses by burning vegetable oils, peraffin, and gases sewers and domestic drains emeneting foul gases which are dangerous to life and prominent large source of Air Pollution. Every day appliances e.g., T.V. sets, luminous wrist watches are also radioactive but the radiations from these are insignificant.

(*iv*) ***Industrial pollutants.***—In recent years, many types of industries have sprung up e.g., chemical industries, metallurgical industries, oil refineries. fertilizer factories, thermal power plants, steel plants, power station, burning coal and crude oil like Naptha, Steam locomotices used in railways steamer have contributed significantly to the air pollution :—

(*a*) Pollutants in cement industries are cement dust, particulate matter, carbon monoxide and sulphur dioxide.

(*b*) Thermal power plant emit sulphur dioxide, oxides of nitrogen and particulate matter.

(*c*) Steel industries emit, particular matter, carbonmonoxide and sulphordioxide.

(*d*) *Fertilizer industries emit.*—Ammonia, Sulphur-dioxide, Oxides of nitrogen, Urea dust, Acid mist and Flouride.

(*e*) *Refinery industry emit.*—Hydrocarbons, oxides of Sulphur, Oxides of Nitrogen, Carbon monoxide, Smoke, Hydrogen Sulphide.

Almost all industrial units and power generating stations use combustion of coal coke, petroleum for generation of heat and power. Thus produce smoke and sulphurdioxide. Although the modern industries employ smoke particulate and dust removal techniques. The reduction of oxides of sulphur emissions by industry and power stations is still a problem. In addition to smoke and sulphurdioxide many industrial manufacturing processes are potential sources of numerous other air pollutants, including toxic gases, heavy metals, complex organic compounds, dust and grit. The industrial plants that appear to be major sources of pollution include iron and steel foundries, coking ovens, pulp and paper mills, petroleum refineries, chemical plants and cement works etc.

Commercial activities the dry cleaning, spray painting, printing, food manufacturing units emit organic solvents and obnoxious smells into the atmosphere. The organic solvents emitted from commercial activities participate in photo-chemical smog formation and contribute to photo-chemical air pollution.

(*f*) *Sulphuric acid and phosphatic fertilizer industries.*—Gascons flourine compounds, particulate matter sulphur dioxide and sulphur troxide are the pollutants released by sulphuric acid and phosphatic fertilizer industries. These pollutants when emitted into the atmosphere shall not exceed the limits prescribed in this standard.

(*i*) *Flourine.*—Flourine-based gases shall not exceed the following limits when analysed as prescribed in IS : S 182 (Par XIII).

(*a*) Phosphoric acid plants—Existing 1.5 kg/tonne

New : 0.65 kg.tonne 4 $P_2\,O_3$

(*b*) Single Super phosphate plants—Existing : 0.5 kg/tonne

New : 0.1 kg/tonne

(*c*) Triple super phosphate plants—Existing 0.3 kg/tonne

0.075 kg/tonne.

(*ii*) *Particulate matter.*—Particulate matter emitted through stacks shall not exceeds 500 $\mu g/Nm^3$ for single superphosphate plants and shall not exceed 4 kg/tonne of the product in the case of triple superphosphate plants when analysed as prescribed in IS : 5182 (Part XV).

(*iii*) *Sulphur Dioxide.*—Sulphur dioxide emission shall not exceed the following limits when analysed on prescribed in IS-5182 (Part II) 1969.

(*a*) Existing plants upto 200 tonnes per day: 16 kg/tonne of the product (100 per cent. H_2SO_4).

(*b*) Existing plants above 200 tonnes per day : 12 kg/tonne of the product (100 per cent H_2SO_4).

(*c*) New plants upto 200 tonnes per day : 4 kg/tonne of the product (100 per cent H_2SO_4).

(*d*) New plants above 200 tonnes per day : 1 kg/tonne of the product (100 per cent H_2SO_4).

(*g*) *Petroleum refineries.*—The atmospheric emission from petroleum refineries are sulphur dioxide, oxides of nitrogen, hydrocarbon vapours, smoke are particulate matters.

(*i*) *Sulphur Dioxide.*—The emission of sulphur dioxide except from the catalytic regenerating unit shall not exceed 3 kg/tonne of crude processed. In case of catalytic generating units, it shall, however, not exceed 5.5 kg/tonne. The sulphur dioxide shall be determined as prescribed in 15 : 5182 (Part III).

(*ii*) *Particulate matter.*—Particulate matter emission when analysed as prescribed in 15 : 5182 (Part XV) shall not exceed a limit of 125 g/m^3 for common stacks excluding catalytic regenerating unit. The limit shall not exceed 600 $\mu g/nm^3$ for new plants all stacks put together.

(*iii*) *Smoke.*—The smoke other than white smoke shall not be darker than number 2 on Ringlemann's chart for a period or periods aggregating more than 5 minutes in any 60 consecutive minutes and more than 6 hours in any 10-day period. The emission of smoke from a flare shall be so controlled that the shade is not darker than 2 on the Ringlemann's chart for more than an aggregate times of 6 hours in any 10 day period.

(v) Automobile pollution

1. *Major Pollutants*

(*a*) Lead

(*b*) Carbon monoxide

(*c*) Nitrogen oxides

(*d*) Hydrocarbons

(*e*) Smoke

(*f*) Aldehydes

2. *Air pollution with special reference to motor vehicles.*—(*i*) *Sources, nature and composition of pollutants.*—There are four recognised sources of pollution from the ordinary automobile, namely, the exhaust pipe, the crank case, the carburettor and fuel tank. Tyre and road dust and asbestors particles from the brake linings are not generally included in any discussion of the problem, some pollution from these sources will certainly continue, even if all other emissions can be eliminated.

The distribution of pollutants according to source within the vehicle are :

(*a*) Evaporation loses, tank and carburettor : 20 per cent of the hydrocarbons.

(*b*) Crank case blow by : 25 per cent of the hydrocarbons.

(*c*) Exhaust : 55 per cent., of hydrocarbons and almost all of the lead, carbon monoxide and nitrogen oxides.

Exhaust emissions from uncontrolled petro-powered vehicles have approximately the following composition :

Hydrocarbons	900 ppm.
Carbon monoxide	3.5 per cent.
Oxides of nitrogen	1500 ppm.

On the basis of the total emission given above, it has been estimated that an uncontrolled vehicle in the USA covering 12000 miles a year emits the following pollutants :

Exhaust :	Hydrocarbons	300 lb.
	Carbon monoxide	700 lb.
	Nitrogen oxides	90 lb.
Crank case :	Hydrocarbons	130 lb.
Evaporation :	Hydrocarbons	90 lb.

(*ii*) *Diesel vehicles.*—As compared to petrol powered engines, diesel engines emit much smaller amounts of carbon monoxide and no lead, the concentrations of hydrocarbons and nitrogen oxide are about the same. Since diesel vehicles are less numerous, they do not influence atmospheric pollution in cities to a marked degree, on the other hand, they frequently emit visible smokes and unpleasantly ordorous gases. Thus, on narrow roads where passing is difficult and in congested city streets, diesel vehicles are frequently a cause for complaint and they are looked on with much disfavour by the public. Consequently, diesel engine emissions desereve as much attention as those from petrol-powered vehichles. The most important source of diesel engine emissions is the exhaust, although small quantities of hydrocarbons (10-15 ppm) escape from the crank case in four-cycle engines. According to various analytical studies, the composition of diesel engine exhaust is as follows :

Pollutant	Concentration
Carbon monoxide	Less than 1000 ppm.
Hydrocarbons	100-600 ppm.
Oxides of nitrogen	10-1000 ppm.
Formaldehyde	5-20 ppm

3 *Automobiles as a source of air pollution.*—High atmospheric concentrations of hydrocarbons and of photochemically produced pollutants arising from emissions from motor vehicles do not appear as yet to present a serious problem in most areas of the world. As economic prosperity increases, however, the number of motor vehicles in use tends to rise, with a consequent increase in the volume of motor fuels burned per unit area of a city per day and a growing danger of air pollution from this source. A watch should therefore be kept for increases in the atmospheric concentrations of the substances already mentioned. In addition, a rise in the concentration of carbon monoxide in the air of city streets must be regarded as potentially serious. Pollution arising from fuel additives must be kept constantly under review. Research on the many compounds emitted by motor vehicles, including polycyclic hydrocarbons should be urgently pursued.

Types of pollutants emitted by petrol (gasoline) engines, as well as by diesel engines on the same but vary in proportion due to difference in the mode of operation of the two types of engines. For example, diesel engine uses less of volatile fuel than gasoline engines and it normally works with excess air.

Exhaust pipe is the major source of air pollution from automobiles and accounts for about 65 to 73 per cent of the pollution while about 20 per cent occurs through blow by gases from crank case breather and the remaining through evaporative emissions from fuel tank breather, carburetter and spillage losses. Due to nature of Thermodynamic cycle followed by diesel operation, the diesel-driven vehicles emit much less pollutants both in quantity and intensity of hazard than the petrol-driven vehicles.

Due to homogeneity of mixture and very high temperature during combustion black smoke hardly exists and the petrol exhaust is almost colourless. In diesel engine the exhaust is usually dirty due to improper mixing of fuel and air, lower combustion temperature and presence of conardson carbon in low octance fuel. The smoke from diesel engine may be white, blue or black.

Concentration of some pollutants from petrol and diesel-driven vehicles

			In parenthesis diesel-driven vehicles	
Mode of operation	Carbon Monoxide (%)	Hydrocarbon (%)	Nitricoxide No (ppm)	Formaldehyde (ppm)
Idling	3—13	0.1—1.0	15—45	5—70
	(0—0.1)	(0.01—0.06)	(50—70)	(5—20)
Accelerating	2—15	0.02—0.0	600—200	10—30
	(0.1—0.3)	(0.018—0 025)	(800—900)	(5—40)
Normal running	0.5—5	0.02—2	300—1000	1—15
	(0—0.01)	(0—0.15)	(150—320)	(5—20)
Decelerating	2.5—6	0.05—2.6	12—30	240—320
	(0—0.1)	(0—0 66)	(10—50)	(7—70)

The major effect of carbon monoxide depend upon its capacity to impair oxygen transport. Initial symptoms at a concentration of 0.01 per cent are mild discomfort to headache. Greater doses may lead to visual difficulty, difficulty, paralysis, coma and death. Oxides of nitrogen even at the concentration of 5 ppm for eight hrs. tend to form acid in human lungs, irritation, bronchitis and odema of lungs are some of the common effects of nitrogen dioxide on man. Tebban *et al.* have shown that as many as 18 aromatic hydrocarbons may be produced on a result of the incomplete combustion of natural gas. Tetra-ethyl lead tetra methyl lead and lead alkyls are well-known additives (as small as 2 to 3 ml/gallon) that are used in petrol to tone down the detonation effect. About 60 per cent. of added lead gets air borne which can be inhaled. It directly enters in the blood. The symptoms of lead poisoning are complete loss of appetite, nervous depression, lethargy, stupor and collapse with or without manifestation of gastritis and diarrhoea. In case of acute lead poisoning the onset is sudden. Hydrocarbons and oxides of nitrogen emitted from automobile exhaust are major sources for production of photochemical smog. Effects of products of photo-chemical smog are human discomfort, eye-irritation, bronchial irritation and reduced visibility.

Air pollution through automobiles can be controlled by catalytic converters, modification of fuel, such as, use of non-loaded fuel in petrol engines, such as, natural gas, ethane, methane and butane, liquified petroleum gas (L.P.G) as fuel in petrol engine changes in engine design, diesel smoke control, crankcase emission control and legislation. The control of emissions from motor vehicles as described in report by W.H.O Expert Committee—

> "Motor vehicles contribute to air pollution by emitting hydrocarbons Carbon monoxide and oxides of nitrogen: these emissions occur both from the exhaust and from the crank-case ventilator tube (or down-draught tube). In strong sunlight, certain of these hydrocarbons and oxides of nitrogen may be converted in the atmosphere into a "photochemical" pollutant of oxidizing natue. In addition, diesel engines when misused or badly adjusted, are capable of emitting black smoke. To deal with these forms of pollution a number of means are being devoloped.

Emissions from the crank-case are being controlled by means of a device that returns them to the engine intake. To control hydrocarbon emission in the exhaust, devices are being developed that will burn the hydrocarbons in the exhaust system of the car. These devices are not yet fully satisfactory but considerable progress has been made. Thinking amongst research workers is turning towards the use of improved forms of fuel supply to the engine and this should reduce the concentration of hydrocarbons in the exhaust.

Work has also been undertaken on the use of liquid petroleum gas as a fuel for internal combustion engines, with the aim of reducing hydrocarbon emissions. The smoke from the diesel engine can be eliminated by careful control of the conditions of use and maintenance of the engine. A number of countries have enacted legislation specifying these desirable conditions and have instituted a programme of regular inspection to ensure that the vehicles travelling on the highways are properly maintained". There is no pollutants exhaust limits are fixed by Government of India. The limits of pollutants in various countries are shown as below :

Motor vehicles are a major source of air pollution thoughout the urban areas. Motor vehicles, trucks, trains, aircraft and other forms of transport contribute to air pollution by emitting hydrocarbons, carbon monoxide, nitrogen oxide, lead and particulate matter. In strong sunlight, certain of these hydrocarbons and oxides of nitrogen may be converted into a 'Photochemical' pollutant of oxidising nature in the atmosphere. In addition, diesel engines, when misused or badly adjusted, are capable of emitting black smoke and malodourous fumes.

Transportation is the single largest contributor in the air pollution problem specially in the urban areas contributing 50% of world's air pollution load. This source includes road vehicles, railways, aircrafts, ships and other combustion engines. In the process of combustion of fuel, i.e., diesel and petrol a number of air pollutants are discharged into the atmosphere. The most common air pollutants emitted from the engines are carbon monoxide (91% by weight of all vehicle emissions) unburnt hydrocarbon (0.05%) oxides of nitrogen, oxides of sulphur and inorganic lead and particulate matters. Of the pollutants emitted by transportation, lead and carbonmonoxide are deadly toxic. While oxides of sulphur in excess concentration give rise to acid rains. The air pollutants from transportation undergo a series of complex interrelated chemical reactions in the upper atmosphere. In areas of high traffic density temperature inversion conditions result in photochemical smog. The latter has ill health effects. Transportation also accounts for man-made ozone.

Two-wheeler predominance.—Another distinctive feature of vehicular population in India is the fact that nearly 70 per cent of the vehicles are two and three-wheelers which are mostly two-stroke engine driven, while petrol driven vehicles and the diesel driven vehicles makes up 8 per cent of the total. Evidently, two-wheelers are becoming the most popular has been growing at a rate of about 20 per cent a year and it is estimated that these vehicles will be around 36 million by the turn of the century as against 7 million in 1987. It is expected that passenger cars and diesel vehicles will double by that time. While two wheelers are preferred for personal transport, three-wheelers (autorickshaws) serve as an important mode of intermediate public transport. The two and three-wheelers are likely to constitute 80 per cent of the vehicles in 2000 A.D. and most of these will operate in the urban areas.

Although the fuel demand for the road transport sector has increased considerably over the period, the average vehicle-miles travelled per unit of fuel consumed have shown marginal improvement. The consumption of gasoline and diesel by the road transport sector has increased from 1.5 and 7.2 million tonnes respectively in 1980-81 to 3.5 and 14.8 million tonnes—which is approximately one per cent of world field consumption.

Compared to several European countries and the U.S., the vehicular population in India is still relatively low. But, even with this modes population, vehicular pollution has become a serious problem in the urban area. Apart from a concentration of vehicles in the urban area, the other factors are the types of engines used, age of vehicles, congested traffic, poor road conditions and outdated automotive technologies.

The principal pollutants emitted by vehicles are carbon monoxide (CO), hydrocarbons (HC), oxides of nitrogen (NO), and particulate matter (PM), vehicles using petroleum-based fuels also emit polnuclear hydrocarbons and aldehydes in traces. A verying amount of SO_2 is also emitted depending upon the sulphur content in the fuel. In additions, the exhaust gases for petrol driven, vehicles contains lead compounds because of the addition to tetra-ethyl lead in motor spirit. The exhaust pipe is the major source of air pollution from the automobiles which accounts for 65-70 per cent of pollution, while about 20 per cent occurs through blow from the crankease breather and remaining through evaporative emissions from the fuel tank breather, carbureattor and spillage losses. Heavy duty diesels-powered vehicles and motor cycles are the major sources of CO and HC emissions.

Noise radiation from automobiles leads to traffic noise. It is a major source of noise pollution in urban areas. Trucks, buses, motors, heavy vehicles, passenger cars, their concentration, engine roar due to improper maintenance and ear piercing blow of horns produce undesirable noise to the annoyance of the people living in residential areas adjacent to roads.

Control Strategies.—For prevention and control of vehicular pollution, it is necessary to have a multi-pronged approach. This should, *inter-alia* be addressed to the following tasks : (1) Upgradation of fuel quality and use of cleaner fuel. (2) Reduction of lead content in motor-spirit. (3) Enforcement of emission standards for vehicles on the road and at the manufacturing stage. (4) Public transport facilities. (5) Improvement of roads and traffic systems. (6) Zoning of areas for regulation of traffic movement. (7) Restriction on indiscriminate growth of urban centres, industrial and commercial activities.

The pollution load from vehicular exhaust depends on the characteristics of fuel and efficiency of combustion. The main pollutants from gasoline include lead, carbon mono-oxide, hydrocarbon and sulphur dioxide, the quantum of which varies with the quality of fuel. A high aromatic content results in increased emissions of hydrocarbons while a high sulphur content increases the sulphur dioxide emission. Similarly, the exhuast from diesel driven vehicles carries a significant amount of unburnt hydrcarbon, oxides of nitrogen carbon mono-oxide and sulphur dioxice. To meet the growing demand for diesel, the technique of increasing the boiling range for extraction heavier fractions is often used. It results in an increase of sulphur, asphaltic content and carbonanceous material in the fuel which in turn causes vehciular exhaust, containing significant amount of particulates, smoke and sulphur dioxide. On the other hand, through proper refining it is possible to have fuel with a lower sulphur content.

Emission factors (g/km) of pollutant for Indian vehicle

Type of vehicle	SO_2	Nox	PM	HC	CO
Motor cycles (LTV)	0.02	0.07	0.2	10.0	17.0
Petrol driven cars (MTV)	0.08	3.2	0.33	6.0	40.0
Disel driven cars (MTV)	0.39	0.99	2.0	0.28	1.1
Heavy duty diesel (HTV)	1.5	21.0	3.0	2.1	12.7

Sulphur contents in various types of fuels used in India are as follows :

Fuel	Sulphur content (per cent)
Kerosene	0.25
Fuel oil	3.5.4.5
Gasoline	0.25
Diesel—HSD	1.0
Diesel—LDO	1.8

The quality of fuel used in India is one of the worst in the world. It is, therefore essential to upgrade the quality of fuel through a reduction of sulphur, tetraethyl lead and aromatics and an increase 1.1 the celane number. Hydrosulphurisation units for reduction of the sulphur content and *** reformer units for lead free petrola are required to be installed in the refineries. An increase in the cotane number by 3 to 5 units will result in fuel economy and improvement in vehicular exhaust quality. This is possible through reduction of aromatic in the refining process. Lowering of aromtics will also help in reducing emission of volatile organic compounds (VOC) during combustion.

Keeping these considerations in view, the CPCB has recommended the following specifications for diesel and petrol.

Diesel	
Sulphur	0.5%
Cetane number	45
Petrol	
TEL	0.15 gm/l
Sulphur	0.15%
Aromatics	25% by volume(maximum)
Benzene	11% by volume (maximum)

Due to techno-economic reasons, the refineries are not in a position to introduce modifications in the process technology and install catalytic reformer units as needed for production of lead free petrol. Hence, it has been proposed that the refineries should do so in a phased manner so as to reduce the lead-content to 0.15 g/litre by 1995 and subsequent phasing out of lead to 0.03 g/litre by 1997. It is also proposed that till such time the refineries, which are producing petrol with a high lead content, comply with the desired specifications, it should be ensured that metropolitan cities with a high density of vehicular traffic are provided with petrol with a relatively low content of lead. To reduce the consumption of leaded petrol, it is proposed that the transport authoirities encourage the use of compressed natural gas (CNG).

For vehicles on road and for new vehicles, emission standards have been prescribed. As yet, a cost-effective design for a catalytic converter or such other control devices which could be used for leaded petrol is not commercially available. It is still in the research and development stage. However, with requisite maintenance which includes carbureattor adjustment for regulating the air-fuel mixture, it is possible to comply with the standards. With this in mind, a procedure has been established for periodic testing of emissions and imposition of penalties for non-compliance of standards. Public awareness compaigns have also be launched for encouraging proper driving habits and vehicle maintenance to meet the standards.

Various other measures that are required for containing vehicular pollution control include the following :

1. Proper location of inter-State bus terminals and freight terminal to avoid the use of urban roads by such traffic.
2. Measures to make road carriageways available only for moving traffic through restrictions in encroachment of road and footpaths, parking on carriageways and streamlining of traffic signal systems.
3. Priority to energy conservation in transportation network.

The pollution problems posed by vehicular traffic in urban area have already reached alarming proportions. In order to prevent further deterioration, it is necessary to take an integrated approach, some components of which are mentioned in the preceding paragraphs.

Apart from conventional curative meausres, we may have to find innovative ways for ways from urban transport which sould be economic, efficient and environmentally acceptable. For a long term solution, we also need to look at policy measured for regulating the haphazard growth of urban areas.

Levels in Delhi.—Monitoring by the CPCB at different traffic intersections of Delhi shows that ambient CO and NOx levels exceed the prescribed limit. High levels of HC and NOx in the ambient air**** plenty of sunlight provide a conductive environment*** photochemical smog formation. This leads to high oxidation levels in the atmosphere. A high ozone concentration in the urban environment of Delhi with a maximum of 600 ug/m*, over a short duration (15 minutes), has been reported recently by the Central Road Research Institute. The ratio of volatile organic compounds (VOC) to oxides of nitrogen indicates that high levels of ozone may occur in the downwind urban regions under favourable metrological conditions. Since Indian fuel contains a low percentage of sulphur, significant quantities of sulphur oxides are not expected to be released from mobile sources. But due to high levels of suspended particulate, it is necessary that the synergistic effect of TSP and SO* are viewed seriously with respect to respiratory diseases. Lead, which is added to the fuel, also come out through the exhaust. Lead monitoring from the ambient air*** this shows that in some areas it has exceeded the World Health Organisation standard. The ambient level of polynucler aromatic hydrocarbons (PAH) has also been measured in some of the metropolitan cities of India. The levels of PAH were found to be high in some places like Delhi.

The carbon dioxide emitted by the road transport sector in different States and Union Territories of India and major urban centres have been estimated for 1998. Among metropolitian cities, Delhi has contributed over 7,00,000 tonnes while approximately 5,00,000 tonnes of CO* has been contributed by Bombay. Motor vehicles in India contribute to about 0.52 per cent of the world road transport related CO*, emissions. In India, motor vehicles contribute about 10 per cent of total fossil fuel related CO*, emission as compared to the world average of 15 per cent. A study by the CPCB on the ambient noise levels in the metropolitan cities has shown that the noise levels exceed the standard and that the vehicles are the major source of noise.

In this emission scenario, it is necessary to focus attention on pollutants causing local and regional health disorders as well as global impacts. A study by the CRRI on the effect of environmental pollution due to road traffic on the health of Delhi traffic policemen showed exececessive CO in their breath; a majority of them complained of eye irritation, respiratory problems, discomfort, annoyance and other problems due to noise.

TABLE

Pollutant levels at various traffic intersections of Delhi

Intersections	Area use	Pollutant levels SO_2	 NO_2	 CO
AIIMS	Sensitive	*	#	#
Azadpur	Mixed use	*	#	*

legends :* Within Air Quality Standard Limit
Exceeds Air Quality Standard Limit

Aliphatic hydrocarbons.—The importance of alphatic hydrocarbons (saturated and unsaturated) produced by motor vehicles seems to rest mainly in their contribution to the formation of photochemical pollution, since no concentrations approaching those that would produce even the mildest physiological effects have been reported. However, they make a significant contribution to the odour of exhaust products. Aldehydes have also been shown to contribute to exhaust odour. Earlier suggestions that they were responsible for eye irritation are less well supported. Recent reports that aldehydes may act as cross-linking agents with proteins of the lung, causing ciliostasis, are of uncertain significance, since they are usually found only in very low concentration.

Unpleasant odours.—In streets carrying heavy traffic, and under certain meteorological conditions, bad odours may be given off by motor vehicles. The malodorous substances, though not clearly defined, are principally products of incomplete combustion and various components of fuels. The concentration of such substances may be very low but they may greatly distress pedestrians and the occupants of buildings along the roadside. Despite the reassurance of toxicologists, the public tends to fear such odours not only because of the discomfort they cause but also because they are believed to be a threat to health. In certain individuals, such psychological reactions may provoke somatic responses. For these reasons, bad odours must be controlled even if they are not known to have any toxic effect.

Hydrocarbons.—Ethylene is the only hydrocarbon from raw exhaust known to have a definite effect on vegetation at the levels normally found in the air.

Ethylene produces symptoms of early senescence, chronic injury, flower and fruit drop, and growth suppression in a great variety of experimental plants. All plants seem to be affected by ehtylene.

Effects on materials.—Undiluted motor exhaust can be a quite corrosive on materials directly exposed. After dilution and maturation of the photochemical complex, corrosive effects are still observed. However, on structural materials, such as stone and masonary, these do not appear to be as severe as those that result form the reducing and acidic type of air pollution associated with coal combustion. Nevertheless, extensive damage to materials does occur.

Metals.—In the communications industry certain electrical switches have wire springs made from a nickle brass alloy. Cracking of these springs has been noted in the Los Angeles area and subsequent investigation showed that this failure was due to the presence of finally divided ammonium nitrate derived from motor vehicles exhaust. A few metals, notably palladium and other platinum-group members, will catalyse the polymerization of organic gaseous pollutants to resinous solids. These solids accumulate on surfaces and can cause electrical contacts to open. It is also believed that electrical contact metals can be degraded by such oxidizing agents as ozone and oxides of nitrogen.

Textiles.—Since stressed nylon monofilaments are susceptible to acid destruction, damage to such fabrics can be caused by air pollution in the form of acid mists or acid dusts. Such pollutants may derive from motor vehicle exhaust, the acidity being due to oxides of nitrogen and also to sulphuric acid produced by photochemical oxidation of sulphur dioxide.

Ozone, under conditions of high humidity, is strongly suspected of contributing to the feeding of nylon carpet and polyester cotton. Exhaust gases also contain aldehydes and phenolic compounds (in the form of tar droplets), both capable of attacking nylon.

Rubber.—The damage caused by photochemically produced oxidants was the accelerated cracking of rubber products, especially when they are folded, bent, or otherwise stressed.

It has been reported, that free radicals formed in the photochemical complex formation also cause rubber to crack.

The damage that minute levels of atmospheric ozone can cause is remarkably large. Major economic losses result from ozone damage to automobile and truck tyres, insulated wire and cable, hoses, window gaskets, boots, and lineman's gloves.

The losses take many forms, including increased costs of cleaning of repainting or replating metallic surfaces of replacement of deteriorated or corroded parts or structures

4. *Controls*

(1) Using lead free petrol
(2) Using catalytic converter
(3) Reduced use of automobiles
(4) "By-pass highways" to avoid heavy traffice in cities
(5) Encourage public transportation
(6) Imposing heavy fine on violation of emission standards

Air Quality in Selected Cities in India 1978-79, NEERI Nagpur.

Emission limits.—The emission can be effectively controlled by keeping an eye over the type of fuel, the process and the equipments used. By selecting appropriate raw materials the emission can be reduced. So regulatory control should not be provided on the emission only but the central should be kept on fuel, equipment and process.

Emission limits can be classified in two heads are subjective and other objective. Subjective limits are entirely based on visual appearance or smell of the emission. The objective limits are based on physical and chemical measurement of the emission.

U.S. standards for maximum 2-hrs. emission from new sources.

Particulate matter

Steam power plants	0.1 lb/million BTU fired
Portland cement plants	
Kiln	0.3 lb/ton feed
Clinker cooler	0.1 lb/ton feed
Municipal incinerators	0.08 grain/scf at 12 percent. CO$_2$
Suphuric acid plants	0.15 lb/ton acid (as H$_2$/SO$_4$)

	Sulphur dioxide
Steam power plants	
liquid fuel	0.8 lb/million BTU fired
solid fuel	1.2 lb/million BTU fired
Sulphuric acid plants	4.0 lb/ton acid
	Nitrogen oxides (as NO_2)
Steam power plants	
Gaseous fuel	0.2 lb/million BTU fired
liquid fuel	0.3 lb/million BTU fired
Solid fuel	0.7 lb/million BTU fired
Nitric acid plants	3.0 lb/ton acid

(*vi*) ***Pollution due to agricultural activities.***—The agricultural practices that contribute most to air pollution are soil preparation crop spraying, weed burning and animal breeding. Soil preparation, particularly in high speed wind periods cause dust particles to be emitted into the air. Weed burning produces smoke. Crop spraying with insecticide pollute air with pesticide contents. Air pollutants in such operations may be carried to far off distances. Animal wastes like animal dungs if improperly disposed of cause emission of methane—a green house effect creating gas. Rice fields and digestion of termites proliferating on dead wood left by clearing of forests also produce methane. These cause pollution in the Air through their contribution may be insifnificant.

(*vii*) ***Pollution due to combustion or incineration.***—Industrial and domestic combustion of coal, oil and other fuel is another source of smoke, dust and sulphur dioxide. The London disaster was due to domestic coal burning.

A significant amount of air pollution results from burning of fossil fuels for home or commercial or community heating units and energy generation in industrial sector. Fuels are primarily derived from fossilized plant materials and consist mainly of carbon or its compounds. Such as coal, coke, oil and natural gases.

The combustion of fuels give rise to gaseous products like carbon dioxide and carbon monoxide in addition to smoke particles hydrocarbons sulpherdioxide and oxides of nitrogen, depending upon nature of fuel and efficiency of combustion units.

The above mentioned emissions do not remain permanently in the atmosphere. The either after remaining suspended for some days in the air settle down or are washed away by rain. In large concentration they contaminate soil property and water bodies. The sulphur dioxide contents give rise to acid rains. The large concentration of carbondioxide in the atmosphere produce green house gas and may eventually lead to global warming.

It is impossible to end using fosil fuels given rise smoke especially in the developing countries in the absence of scope viable alternative. Nuclear fuel is certainly an alternative. None the less its waste disposal problem makes it environmental unviable.

Burning of municipal domestic and industrial wastes which includes rubber tyres, plastic articles, electricity cables etc., without proper combustion equipment emit considerable amounts of smoke and obnoxious odours. Landfill techniques of disposing of the garbage and other wastes in open spaces do emit bad smells in the process of decomposition of organic materials. Soluble constituents of the garbage and industrial wastes after coming in contact with rain water contaminate ground water or nearby rivers.

Incineration of refuse which accounts for 5% of world air pollution load releases large amounts of carbon monoxide, hydrocarbons oxides of nitrogen and sulphur ammonia organic acids and particulate pollutants into the air in urban areas. Current thinking in the wake of increasing nuisance caused by incineration of wastes has been that open burning should be abolished and that it must be restricted to well designed multi-chamber incinerators. The greatest obstacle toban open and inadequate burning of trash, however, has been the cost of municipal waste collection and consequent increase in taxes.

(viii) Noise pollution[1]*sources*

(*a*) Projection of Salellites into space.

(*b*) Automobiles.

(*c*) Factories.

(*d*) Industries.

(*e*) Aircraft.

(*f*) Trains.

(*g*) Domestic noise from the radios, transistors, etc.

(*h*) Community noise (religious and cultural), bursting if crackers.

(*i*) Construction and civil engineering works.

(ix) Miscellaneous sources.—Burning of refuse, agricultural activities (e.g., crop spraying, pest control) and nuclear energy programmes also contribute to air pollution.

Apart from the above mentioned man-made sources air pollution may ensue from sewage treatment plants, construction and demolition activities. Sewage treatment plants emit gases of obnoxious odour like ammonia and green house gases like methane.

Construction activities like houses bridges, roads railways tracks aerodromes and the demolition of structures and buildings account for dust pollution. Nuclear energy production activities such as ore preparation, fuel fabrication, nuclear fission, spent fuel processing and the testing of nuclear devices account for the dispersal of radioactive substances into the atmosphere. These nuclides may undergo further disintegrations in the atmosphere where they are globally dispersed, and also get deposited upon the earth's surface as radioactive fall out. Concentration and dispersal of radioactive substances in the atmosphere thus, keep the population world over under a constant threat of radioactive pollution. The threat of radioactive pollution. The threat of radioactive pollution perpetually looms over us in view of increased future use of nuclear fission reactors and nuclear energy.

---

[1] For details *see* Chapter—on Noise Pollution.

Besides above sources in congested towns unhygienic living conditions open drainage system, unplanned building constructions, absence of proper sewage system also become the sources of atmospheric pollution.

Carbon mono-oxide (CO) is a colorless, odorless, poisonous gas, slightly lighter than air, that is produced by the incomplete burning of the carbon influels. Carbon monoxide emissions can be prevented by supplying enough air to insure complete combustion. When this occurs, carbon dioxide a natural constituent of the atmosphere, is produced instead of carbon monoxide.

Almost two-thirds of the carbon monoxide emitted comes from internal combustion engines, and the overwhelming bulk of that comes from gasoline-powered motor vehecles.

Particulate matter includes particles of solid or liquid substances in a very wide range of sizes, from those that are visible as soot and smoke to particles too small to detect except under an electron microscope. Particulates may be so small that they remain in the air for long periods and can be transported great distances by the winds.

They are produced primarily by stationary fuel combustion (31 per cent) and industrial processes (27 per cent). Forest fires and other miscellaneous sources account for 34 per cent.

There are established techniques for controlling particulates from a boiler stack or from a waste air stream—among them filtering, washing, centrifugal separation, and electrostatic precipitation. These work well for most of the particles, but complete removal, especially of the very finest particles, is technically and economically difficult.

Sulphur oxides (SO_X) are acid, corrosive, poisonous gases produced when fuel containing sulphur is burned. Electric utilities and industrial plants are its principal producers since their most abundant fuels are coal and oil, which contain sulphur as an impurity. The burning of coal produces about 60 per cent of all sulphur oxides emissions, oil about 40 per cent, and industrial processes that use sulphur 22 per cent.....Most of the coal and oil is burned in electric power generation plants. About two-thirds of the Nation's sulphur oxides are emitted in urban areas, where industry and population are concentrated. And seven industrial State in the Northeast account for almost half of the national total of sulphur oxides. In rural areas, however, sulphur oxides sources may be large industrial plants, smelters, or power plants. Any one of these may throw out several hundred thousand tons of sulphur oxides in a year.

Government agencies and industry have sought to reduce suiphur oxide emissions in three ways: switching to low sulphur fuels (those with less than 1 per cent sulphur), removing sulphur from fuels entirely, and removing sulphur oxides from the combustion gases.

Hydrocarbons (HC), like carbon monoxide, represent unburned and wasted fuel. Unlike carbon monoxide, gaseous hydrocarbons, at concentrations normally found in the atmosphere are not toxic, but they are a major pollutants because of their role in forming photochemical smog. More than half the estimated 32 million tons of hydrocarbons produced each year comes from transportation sources, mainly gasoline-fueled vehicles. Another 27 per cent comes from miscellaneous burning and 14 per cent from industrial processes. About 60 per cent is produced in urban areas, largely because they are more automobiles.

Nitrogen Oxides (NO_x) are produced when fuel is burned at very high temperatures. Stationary combustion plants produced 49 per cent of the nitrogen oxide emissions; transportation vehicles, 39 per cent; and all other sources, 12 per cent.

Internal combustion engines operate at very high temperatures, and so do efficient, large electric power and industrial boilers. Nitrogen that is ordinarily inert combines with oxygen in high temperature flame and tends to stay combined if the exhaust gases are cooled too quickly. The control of NO_x from stationary sources requires careful adjustment of flames and stack gas temperatures. Control of nitrogen oxides from automobiles is more difficult because reducing other pollutants can increase the output of NO_x.

Under the influence of sunlight, nitrogen oxides combine with gaseous hydrocarbons to form a complex category of secondary pollutants called *photochemical oxidants*. These oxidants, together with solid and liquid particles in the air, make up what is commonly known as smog. The photochemical oxidant family of pollutants includes, among others, ozone, an unstable, toxic form of oxygen; nitrogen dioxide; peroxyacyl nitrates; aldehydes; and acrolein. In air they can cause eye and lung irritation, damage to vegetation, offensive odor, and thick haze.

Selected atmospheric pollutants[1]

POLLUTANT	PRINCIPAL HUMAN SOURCES	EFFECTS	REMARKS
CARBON DIOXIDE	Fuel combustion for heating, transport, energy production	No direct effect on people Over time, may lead to increase in earth's temperature	Normal constituent of atmosphere, Essential to plant life
CARBON MONOXIDE	Incomplete fuel combustion (as in motor vehicles)	Deprives tissues of oxygen People with cardio-respiratory diseases more sensitive	Contribution of natural sources small Smoking more significant for humans than exposure to traffic
SULPHUR DIOXIDE	Burning of sulphur-containing fuels like coal and oil	Combined with smoke, increases risk and effects of respiratory diseases Causes suffocation, irritation of throat and eyes Combines with atmospheric water vapour to produce acid rain Reduces crop yields. Leads to acidification of lakes and soils Corrodes buildings	
SUSPENDED PARTICULATE MATTER	Smoke from domestic, industrial and vehicular sources	Possible toxic effects depend on specific composi-	Chemically, a most dicerse group of substances. Natural

---

1. *Vide* India's Environment, 1982, p. 76.

POLLUTANT	PRINCIPAL HUMAN SOURCES	EFFECTS	REMARKS
		tion. Aggravates effects of sulphur dioxide Reduces sunlight and visibility. Increases corrosion	sources include dust-storms, volcanic eruptions and sea spray
OXIDES OF NITROGEN	Fuel combustion in motor vehicles and furnaces. Forest fires	Possible increse in acute respiratory infections and bronchitis morbidity in children Produces brown haze in city air Causes corrosion	Nitrogen oxide and nitrogen dioxide are the two components
VOLATILE HYDROCARBONS	Partial combustion of carbonaceous fuels, industrial processes, disposal of solid wastes	React with other pollutants to produce eye irritants (acrolein, aldehydes) Ethylene is harmful to plants, Aerosol particles reduce visibility. May produce unpleasant odours	
OXIDANTS AND OZONE	Emissions from motor vehicles. Photochemical reactions of nitrogen oxides and reactive hydrocarbons.	Cause eye irritation and impaired pulmonary function in diseased persons Corrode materials and reduce visibility Ozone is one of the most damaging pollutants for plants.	Mainly derivative products of atmospheric reactions between other pollutants Ozone is a natural and essential constituent of the upper atmosphere

9. Effects of air pollution.—The effects of air pollutants may be conveniently divided into following categories : (1) effects upon human health, (2) effects upon animals, (3) effect upon vegetation, (4) Effects to climate, (5) Effects to motor vehicle pollution on the environment, (6) Effects on inert materials, (7) Socio Economic effect (8) Other effects.

The undesirable consequences of air pollution cover a very wide spectrum ranging from material damage to personal discomfort and illness. Though, the stress is visible, but we still are in the infancy of understanding the full effects of atmospheric pollution. True evaluation of effect of air pollutant is a difficult and complex task, for the effects depend upon a number of variables such as the nature, concentration dispersal, and synergistic interaction of air pollutants. However, the ill effects that are of immediate concern are those that do, or may, in future, influence man's health, his well being and his enjoyment of the world as we know it, without undue alteration of biological or physical systems. The following common effects may here be given as under :

Effects of—

(A) Oxides of Nitrogen

(*i*) Respiratory ailments

(*ii*) Supressed growth in plants

(*iii*) Reduces oxygen in blood

TABLE

Estimated Emissions of Major Pollutants in India from Major fuel sources (1976-77)*

		Quantity Consumed per year (million tons)	Estimated pollutant emission (thousand tons)						
			Carbon monoxide	Sulphur dioxides	Nitrogen oxides	Organics including hydrocarbons	Particu-lates	Hydrogen	Ammonia
1.	*Commercial*								
	Coal	100.0	170.0	2000.0	400.0	2400.0	3200.0	120.0	120.0

	Total	562.0	3345.7	6825.8	2596.1	8997.3	10758.5	350.0	346.6

*This table does not include emissions from chemical and pulp-paper industries

C Estimated equivalent tonnage in terms of coal.

N.A. Not appreciable.

(B) Fluorides
  (*i*) Eye, nose and throat irritation
  (*ii*) Weight loss
  (*iii*) Reduced milk production in animals
  (*iv*) Necrosis of plant leaves
  (*v*) Fluorosis

(C) Hydrocarbons
  (*i*) Lung cancer
  (*ii*) Eye and respiratory irritation

(D) Sulphur Dioxide
  (*i*) Throat and eye irritation
  (*ii*) Direct effect on lungs
  (*iii*) Acidic and poisonous
  (*iv*) Corrosive
  (*v*) Necrosis of plant leaves

(E) Carbon Mono-oxide
  (*i*) Nervous breakdown
  (*ii*) High risk of heart attack
  (*iii*) Reduces oxygen in blood
  (*iv*) General weakness

(F) Hydrogen Sulphide
  (*i*) Damage to brain
  (*ii*) Highly corrosive
  (*iii*) Damages tomato, tobacco, cucumber, soyabean plants
  (*iv*) Pungent odour

(*i*) **Effects upon human health.**—To discuss the cause of which air pollution is thought to play a part, chronic bronchitis and lung cancer, are demonstrably closely linked to other factors particularly cigarette smoking. The study of industrial polpulations-groups of men exposed in their occupation to high concentrations of pollutants suspected of influencing the development of these diseases.

Among the sixteen air pollutant groups, seven are thought to have potential chromic effects (column 2) at levels actually observed. On the other hand, most of the generally recognized air pollutants may, in appropriate combinations and at certain levels, become a potential threat to health (column 3). These conclusions are derived from toxicological studies on animals or man, experiments in industrial hygiene and epidemiological studies.

Irritation of the eyes and respiratory tract is the main symptom caused by photo-chemical pollution. This type of pollution appears to aggravate the symptoms of some persons with chronic respiratory conditions.

Atmospheric carbon monoxide levels sufficient to produce 2% carboxyhaemoglobin are relatively common in large cities having many automobiles. Likewise ozone is known to be lethal for man at concentrations of 6 ppm.

Many of the man-made aerosols, on the other hand, fall in the size range which can deeply penetrate into the respiratory system and act as irritants. Another fact that differentiates naturals and man-made aerosols is that whereas the formal are neutral the later are commonly acidic. This acidic aerosols can cause disruption of the lung epithelium and thus permit the harmful contaminants to penetrate the tissue.

The sites of air pollution effects on man are few in number. A clothed human presents a minimal number of sites for attack by air pollution. Clothing covers more than 90% of the skin area of man.

There is no general effect of pollutants on skin at normal ambient air concentrations. Exceptions do exist—salt spray and ultraviolet light at the seashore, pesticide sprays, or accidental spills of chemicals. Skin perspires and if the sweat absorbs corrosive compounds, irritation can occur.

The external coatings of the eye-conjunctive and cornea come into direct contact with gaseous and particulate air pollutants. Eye irritation is a major effect of photochemical air pollution, but no permanent eye injury has been attributed to photochemical air pollution. A clearing mechanism of tearing or lachrymation flushes foriegn material from the eyes, avoiding damage.

Other exposed parts of a body, such as,. hair, nails, and teeth are rarely affected by air pollution. Newspaper reports claimed that photochemical air pollution changed the colour of womens tinted hair. More frequent hair washings are required for cleanliness in polluted than in clean areas. Nails and teeth are affected by arsenic, selenium, and fluorides, these chemicals are ingested through food and drink rather than by inhalation.

Internal parts of the body such as the heart, liver, and kidney are apparently not directly affected by air pollutants. If pollutants affect the circulatory system, internal organs may, in turn, become affected. Again body defense mechanisms removed detrimental chemicals, usually *via* urine or faces.

Thus the obvious fact remains the respiratory tract is the principal site of air pollution attack on the human body.

The most important effect of air pollution is its threat to human health. Acute episodes of pollution in London, New York, and other cities have been marked by dramatic increases in death and illness rates, especially among the elderly and those with pre-existing respiratory or cardiac conditions.

The cause of chronic diseases which constitute the major public health problems of our time are difficult to determine. Assessing the contribution of particular pollutants to these conditions is complicated by the seemingly infinite variety of pollutants to which persons, particularly those in urban areas, are exposed from the day of their birth. And it is difficult to separate pollution from the other biological and physical stresses to which the people are subjected.

Nonetheless, it is well established that air pollution contributes to the incidence of such chronic diseases as emphysema, bronchitis, and other respiratory ailments. Polluted air is also linked to higher mortality rates from other causes, including cancer and arteriosclerotic heart disease. Smokers living in polluted cities have a much higher rate of lung cancer than smokers in rural areas.

When *carbon monoxide* is inhaled, it displaces the oxygen in the blood and reduces the amount carried to the body tissues. At levels commonly found in city air, it can slow the reactions of even the healthiest person, making them more prone to accidents. Moreover, it is believed to impose an extra burden on those already suffering from anemia, diseases of heart and blood vessels, chronic lung disease, Overactive thyroid, or even simple fiver. Cigarette smokers, who are already inhaling significant amounts of CO in tabacco smoke, take on an additional CO burden from polluted air.

Studies show that exposure to 10 parts per million of CO for approximately 8 hours may dull mental performance. Such levels of carbon monoxide are commonly found in cities throughout the world. In heavy traffic situations, levels of 70, 80 or 100 parts per million are not uncommon for short periods.

Sulphur oxides, produced mainly by burning coal and oil, can cause temporary and permanent injury to the respiratory system. When particulate matter is inhaled with the sulphur oxides, health damage increases significantly. The air pollution disasters of recent years were due primarily to sharply increased levels of sulphur oxides and particulates.

Health may be emperiled when the annual mean concentration of sulphur dioxide in the air rises above 0.04 parts per million. Deaths from bronchitis and from lung cancer may increase when this level of sulphur dioxide is accompanied by smoke concentrations of about 0.06 parts per million.

Photochemical oxidants have emerged relatively recently as a major health problem, and research relating to their effects on human health is still in its infancy. However, studies have shown that eye irritation begins when peack oxidant levels reach 0.10 parts per million. Increased frequency of asthema attacks occur in some patients on the days when hourly concentrations average 0,05 to 0.06 parts per million. Even the healthiest person may be effected, however; a study of cross-country runners in high school showed that their performances when hourly average oxidants levels ranged from 0.03 to 0.30 parts per million.

Less is known about the effect on health of *nitrogen oxides,* which play such an important part in producing photochemical pollution. They have been little studies until recently. However, evidence so far suggests that they may be harmful to human health.

The findings relating to particulate matter, as a class of pollutants, amply justify measures to reduce their level in the air. Included in this class of pollutants are a number of substances which are potential health hazards at much lower concentrations and which will require even more stringent controls.

Beryllium, for example, which may be emitted from industrial sources and from rocket fuel, can cause lessions in the lung, producing serious respiratory damage and even death. Since the sources of this pollutant are limited, however, it may be a problem only in specific localities.

Asbestos, long recognized as an occupational hazard, is increasingly present in the ambient air because of its use in construction materials, brake linings, and other products. Long exposure in industry produces the lung-scarring disease, asbestosis. On the other hand, mesothelioma, a type of lung cancer associated almost exclusively with asbestos exposure, does not appear to be associated only with heavy or continued exposure.

Many other particulate pollutants are a growing public health worry even though they many not constitute such an immediate and direct threat. Current studies suggest that lead levels now found in the blood and urine of urban populations—although well below those associated with classic lead poisoning—may interfere with the ability of the human body to produce blood. As air pollution becomes more widespread, increased numbers of people are being exposed to airborne lead, chiefly from automotive emissions, at levels formerly found only in congested areas.

Cigarette smoking.—Cigarette smoking is becoming more and more common everywhere. Most of the persons are chain smokers. Not only that people directly take tobacco and also in Paan, Cigarette smoke is very complex mixture of gases, liquids and particles. There are hundreds of compounds in tabacco leaves. Hundred more are created when tobacco burns. Some of the most hazardous compounds are tar, nicotine, carbon mono-oxide, cadmium, nitrogen oxide, carbondioxide, ammonia, benzene, for-maldehyde and hydrogen sulphide and dozen of others. According to Doyle C Nancy 22. 68 per cent of smoke from smoking cigarette goes into environment. The amount from cigar and pipe smoke are even higher.

The fascinating fact is that side stream smoke—the smoke from the burning end—has higher concentrations of noxious compounds that the main stream smoke inhaled by smoker. Some studies show that there is twice as much tar and nicotine inside stream smoke compared with mainstream (side stream which goes directly into the air from the burning end) and three times as much as of a compound called 3-4 benzopyrene, which is suspected as a cancer-causing agent, five times as much carbon mono-oxide which robs the blood of oxygen and fifty times as much ammonia.

In spite of the legend "Cigarette smoking is injurious to health" [The Cigarettes (Regulation of Production, supply and distribution) Bill, 1975], printed on cigarette package and its advertisement,. it is getting more popularity.

Effects of Smoking and cancer.—By far the most worrying phenomenon is the increasing use of bidis and cigarettes in India which could result in a dramatic surge in lung cancer. According to the WHO, smoking kills at least one million men and women every year in the world. Ninety per cent of all lung cancer deaths, 25 per cent of deaths from cardiovascular diseases and 15 per cent of deaths due to chronic bronchitis are directly caused by smoking.

The close association between the marketing practices of the tabacco industry and the increase in smoking, qualifies this form of cancer as a man-made "commerciogenic" disease.

In the 1950s cigarette consumption per adult in India was around 100; by the 1960s has gone up to 200. Today 90 billion cigarettes are sold each year. In addition an estimated 100 million bidis are sold every year. Bidi smokers face a 10 times higher risk of getting cancer than cigarette smokers because bids contain more poisonous and cancer-causing substances per unit weight, than cigarettes.

Despite these facts the Government has done little to control or reduce smoking because of conflicting loyalities : the needs of the exchequer and the health of the people. India is the third largest producer of tabacco in the world after the US and China. Apart from earning foreign exchange, tobacco and tobacco products provide a consistently increasing source of reveue. Revenue from tobacco, product increased from Rs. 153 crores in 1967-68 to Rs. 732 crores in 1980-81. It is in fact the most important source of Government excise taxes.

The tobacco industry also generates vast employment. Bidi-making is a major cottage industry in India and provides jobs to millions of people, and in a large number of cases, it is the sole means of their livelihood.

About three-fourth of the tobacco produced is consumed within the country. about 78 per cent of the total consumption (for approximately 250 million kg) is in the form of cigarettes, cigars and bidis. Of the rest, about 20 per cent is chewing tobacco.

In recent years, the Government has been trying to take pressure off the cigarette industry by not increasing excise taxes any further. Consequently, last year, cigarette sales increased by six per cent. Having experienced an average annual growth of barely two per cent in the last several years, the tobacco industry is now planning for faster growth unhampered by new taxes.

Meanwhile, the Government's efforts to introduce statutory warnings on cigarette packets and advertisements about the health hazards of smoking are neither being enforced properly nor are they having an impact on smoking habits. When asked in Parliament in December 1981, Health Minister B. Shankaranand admitted that the enforcement of the law regarding these warnings was being reduced to a "mockery", but excused himself by saying that this was really a State subject. The Minister said that the Central Government now also wants statutory warnings on bidi packets.

According to the WHO there is probably nothing that could be done in the way of prevention that would have a larger impact at present than eliminating tobacco smoking and chewing.

Many developing countries have started taking strong measures against smoking. Kenya recently banned all smoking in public places. Even China, which promoted smoking during the 1950s and 60s, has now launched an anti-smoking drive.

To check the widespread suspicion that cigarettes sold in developing countries have a higher level of tar, nicotine and carbon monoxide, the WHO has sponsored an international programme to test cigarettes sold in the Third World. It is not only cheaper to produce cigarettes with higher levels of tar and nicotine but greater nicotine content also helps to keep smokers hooked on to cigarettes.

Strong measures are required in India to control the looming smoking-induced cancer epidemic. Glossy bill-boards depicting young men and women enjoying a casual puff while leaning on a late-model car, are, to say the least, a cruel social joke in a country with a per capita income amongst the lowest in the world.

Several leading health experts fear that even before malnutrition and communicable diseases are brought under control, developing countries like India could be overtaken by the spreading cigarette smoking habit.

India is in no position to carry the resulting double burden of disease, as Dr. Ramalingaswami puts it. In order to combat the existing burden of poor health conditions characterised by in sanitary conditions and malnutrition, it is important to keep under check any new and evolving burden of health problems because of unregulated industrialisation or modernisation spurred on by anti-social commercial trends. The thought of 900 million people in India suffering the same rates of cancer, heart disease and various smoking-induced illnesses by the year 2000 as those prevailing in developed countries, is appalling, especially when India does not have the expensive medical facilities or the manpower needed to deal with these diseases.

Effects of vehicle exhaust products on health.—Motor vehicles give rise to local pollution in which the concentration of primary exhaust products decreases rapidly with increasing distance from the source.

There is abundant evidence that carbon mono-oxide in high concentrations interferes with the delivery of oxygen to tissues because (*a*) it reduces the oxygen carrying capacity of the blood, and (*b*) the presence of carboxyaemoglobin in blood inhibits the dissociation of oxyhaemoglobin so that less oxygen is released for given anoxia gradient. The effects on man of concentrations exceeding 20 per cent, saturation range from headache and dizziness to coma and death. Irreversible damage to the central nervous system and the heart can result from the prolonged anoxia produced by severe exposures

Effect of motor vehicles on visibility.—The most obvious effect of air pollution is the limit it puts on visibility. Motor vehicle exhaust plays a major role in reducing visibility where the photochemical complex is predominant.

Reduction in visibility is perhaps more evident and the cause of more annoyance than any other manifestation of pollution by motor vehicle exhaust. It may result in much loss of time and it presents a serious accident hazard for both air and surface traffic.

TABLE

The Pollutants and their threshold limits, effect on human and their source of emissions :

Name of Pollutant	Threshold Limit Values(TLV) (ACGIH)	Effects on Human	Main Source
1	2	3	4
Ammonia (A colourless gass with pungent odour)	25 ppm	Irritates all parts of respiratory system Irritates eyes severaly	Ammonia manufacturing plants, Fertilizer plants
Sulphur dioxide (A colourless gas with distinctive odour)	2ppm	Irritates respiratory system, Causes bronchitis	Boiler flue gas, sulphuric acid manufacturing plants, fuel burning processes, metallurgical industry.
Formaldehyde (Colourless with pungent odour)	2ppm	Irritates all parts of respiratory systems Irritates the eyes severely	Petrochemical industry Organics chemical manufacturing plants
Chlorine (A greenish-yellow gas with irritating odour)	1ppm	Severe lung irritation irritates the eyes.	Chlorine manufacturing plants Hydrochloric acid plants
Bromine (Colourless with pungent odour)	0.1 ppm	Irrigates all parts of respiratory system Irritates the eyes severaly	Petrochemical industry Organic chemicalmanufacturing plants
Chlorine (A greenish-yellow gas with irritating odour)	1ppm	Severe lung irritation Irritates the eyes.	Chlorine manufacturing plants Hydrochloric acid plants
Bromine (A dark reddishbrown fuming liquid)	0.1 ppm	Irritates all parts of respiratory system Severely irritates the eyes	Dye-stuff industry Pharmaceutical industry
Nitrogen dioxide (A red brown gas)	3ppm	Severe irritation of respiratory system. It's danger lies in dalay before it's full effect upon laungs is felt	Nitric acid manufacturing Nitration processes combustion processes
Phosgene (A colourless gas with musty smell)	0.1 ppm	Severe pulmonary oedema There may be delay of several hours before effect develops	Pesticide, insecticide, manufacturing plants.
Carbon monoxide (A colourless, odourless gas)	50 ppm	Deprives body cells of oxygen Causes, unconsciousness Carbon monoxide combines with haemoglobin	Combustion processes, metallurgical industries
Hydrogen sulphide (A colourless gas with offensive odour)	10 ppm	Respiratory paralysis, causes immediate unconsciousness In low concentration causes irritation of all parts of respiratory systems.	Petroleum refineries dyestaff industries viscose rayon plants.
Hydrogen cyanide (A colourless gas with faint odour)	10 ppm	Prevents oxygenation of body cells shortness of breath paralysis	pesticide, insecticide industry
Benzene (A colourless volatile liquid with characteristic odour)	10 ppm	Causes dizziness leukemia in low concentration causes headache	Petrochemical industry Organic chemical manufacturingf plants

1	2	3	4
Phenol (A colourless to pink crystalline substance with distinctive odour)	5 ppm	Irritates respiratory system, affects blood, Irritates eyes	Petrochemical industry Organic chemical manufacturing plant
Carbon disulphide (liquid with unpleasant odour)	10 ppm	Produce narcotic effects, nerve poison causes unconsciousness.	Rayon manufacturing plant Pesticide industry
Methyl alcohol (A colourless volatile liquid)	200 ppm	Causes dizziness, stupar nerve poison.	Petrochemical industry, organic chemical manufacturing plant
Mercury (Heavy silvery liquid)	0.1mg/m^3	High poisonous, leaves metallic taste causes nausea	Caustic soda manufacturing plant Pesticide industry
Hydrogen flouride (A colourless fuming gas or liquid)	3 ppm	The gas irritates severely the eyes	Phosphate fertilizer industry, fertilizer industry
Hydrocarbons	100 ppm to 1000 ppm	Affects central nervous system	Petrochemical industry
Sodium hydroxide (colourless sticks)	2 mg/m^3	Couses severe burns	Caustic soda industry Pulp and Paper, Soap, Textiles

Air pollution is considered a direct contributor to fast aging, asthma, berylliosis emphysema, and mesothelioma, and as a contributing cause to bronchitis, cancer of the GI tract, and cancer of the respiratory tract. But the data show further that many pollutants act in multifarious ways to induce, produce, or contribute to a multiplicity of disease states.

TABLE

Disease states for which evidence points to environmental pollutants as either direct or contribution

Disease	Ethiological pollutants
Accelerated ageing	Ozone and oxidant air pollutants (direct).
Allegic asthma	Airborn denatured grain protein, etc. (direct).
Cardiovascular disease	"Hard" waters, hereditary tendency, Cr deficiency, Co(?) (contributing).
Berylliosis	Airborne be compounds (direct).
Bronchitis	Acid gases, particulates, respiratory infection, inclement weather (contributing)
Cancer-respiratory tract	Airborne carcinogens and hredirary tendency (contributing).
Dental caries	Se (direct).
Emphysema	Airborne respiratory irritants and familial tendency (direct)
Mesotheliomas	Asbestos, associated trace metals, carcinogens in air, water, other fibres (?) (direct).
Methemoglobinomia infant death	Water borne nitrates and nitrates and nitrites (direct).
Renal hupertension	Cd in water, food, beverage in As, Se low areas(?) (Contributing).

TABLE

Air Pollutants with recognised or potential long term effects on health at usual Air Pollution levels

Substances with known effects on health (acute or chronic)	Substances thoughts to have long term effects	Potential long term effects of combinations
Arsenic	Arsenic (arsenical dermatitis)	
Asbestos	Asbestos (asbestosis, mesothelioma)	
Beryllium	Beryllium (berryliosis)	Be + F (fluoride potentiate pulmonary changes in berryliosis) Synergistic in Co$_2$ depression
Carbon mono-oxide		
Carcinogens		Carcinogens produce tumours in presence of promotors.
Fluoride	Fluoride (fluorosis)	Fluoride (promotes or accelerates lung disease).
Hydrocarbons		HC+O$_3$—tumorigen + influenza + Cancer.
Hydrogen sulphide		Antagonizes pollutants (strictly speaking not detrimental to health)
Inorganic particulates	Inorganic particulates (pulmonary sclerosis)	
Lead, Nitric oxide Nitrogen dioxide	Nitrogen dioxide (mild accelerator of lung tumours)	NO$_2$+micro-organisms (pneumonia) + HNO$_3$ (bronchiolits fibrosa Obliterans) + tars (smoker's lung cancer).
Organic oxidants (peroxyacylinitrates)		
Organic particulates (asthmagenic agents)	Asthmagenic agents (Asthma)	
Ozone	Ozone (chronic lung changes, accelerated aging)	O$_3$ + micro-organisms (lung-tumour accelerator).
Sulphur dioxide, Sulphur troxide		SO$_2$' SO$_3$ + particulates aggravate lung disease

(ii) **Effect on animals.**—Animals may be expected in general to suffer similarly to human beings. Cattle are found to be less resistant than sheep and pig. Sheep and cattle are particularly sensitive to fluorine. Where the emissions occur, fluorine tends to accumulate in the grass; the teeth of grazing animals have been known to deteriorate so much through fluorosis that the animals were enable to feed.

(iii) **Effect on Vegetation and Materials.**—Air pollution inflicts widespread and costly damage on plant life and building materials. Some experiences of the past warned of the effects of air pollution on plant life. sulphur dioxide fumes from a large copper smelting plant set up after the Civil War damaged 30,000 acres of timberland. Much of this originally forested mountain land is still barren. Today, the damage to plant life is less dramatic than in the day of unrestricted smelter operations. But the slower, chronic injury inflicted on agricultural, forest, and ornamental vegetation by increasing quantities and varieties of air pollutants has now spread to all parts of the country.

At sulphur oxide levels routinely observed in some of out cities, many plants suffer a chronic injury described as "early aging." Nitrogen dioxide produces similar injury symptoms and seems to restrict the growth of plants even when symptoms of injury are not visible. Ozone, a major photochemical oxidant, is a significant threat to leafy vegetables, field and forage crops, shrubs, and fruit and forest trees—particularly conifers. The damage from ozone in minute quantities can be great. Extended ozone exposure to 0.05 parts per million can reduce a radish yield 50 per cent. Tobacco is sensitive to ozone at a level of 0.03 parts per million.

Air pollutants also damage a wide variety of materials. Sulphur oxides will destory even the most durable products. Steel corrodes two to four times faster in urban industrial areas than it does in rural areas where much less sulphur-bearing coal and oil are burned. When particulate matter is also present in the air, the corrosion rates multiply. On third of the replacement cost of steel rails in England is estimated to be caused by sulphur pollution. The rise of sulphur oxides levels in the air is accelerating the erosion of statuary and buildings throughout the world, and in some cities, works of art made of stone, bronze, and steel must be moved indoors to preserve them from deterioration. Particulate matter in the air not only speeds the corrosive action of other pollutants but by itself is responsible for costly damage and soiling. Clothes and cars must be washed, houses painted, and buildings cleaned more often because of the particulates in the air. Ozone damages textiles, discolours dyes, and greatly accelerates the cracking of rubber.

Effects to visibility

Air pollution dims visibility, obscures city skylines and scenic beauty, interferes with the safe operation of aircraft and automobiles, and disrupts transportation schedules. In one recent year, low visibility from smoke, haze, and dust was the suspected cause of 15 to 20 plane carashes. In Los Angeles, visibility in the smog frequently lowers to less than 3 miles. During the air pollution alert in the eastern States during July 1970, visibility was almost totally obscured in some areas. The Federal Aviation Administration's visibility safety factor for airplane operation without instruments is 5 miles. Nitrogen dioxide, which reaches peak levels during morning rush-hour traffic, is responsible for the whiskey-brown haze that stains the sky over many cities. Particulates, however, are the major villain in reducing visibility. Particles (ash, carbon, dust, and liquid particles) discharged directly to the air scatter and absorb light, reducing the contrast between objects and their backgrounds. Particles are also formed in the atmosphere by photochemical reactions and by the conversion of sulfur dioxide to sulfuric acid mist. Wherever sulfur pollution is significant—which is wherever large amounts of coal and oil are burned—visibility diminishes as relative humidity rises.

Plants are more sensitive than animals to atmosphere smoke and sulphur dioxide. Smoke is particularly harmful to plants, and research in Leeds showed how radishes and other plants lose from half to nine-tenth of their growth in a polluted atmosphere if they survive at all; that soil loses its stock of accessory plant foods very rapidly under the action of polluted rain 25. Other effects are given below :

(*a*) Soil is acidified by the leaching of lime and basic materials from it; but the plant materials in soil may be increased by atmospheric pollution;

(*b*) Light is cut off by smoke in the air and by the sooty deposits on plants ;

(*c*) Leaf senescence is increased by sulphur dioxide and very serious in winter months.

Delivering the presidential address at the annual convention of the Indian Science Congress held at Banaras Hindu University in January 1981, Prof. A.K Sharma said that plants have been found to be seriously affected by air pollution. Mango trees in Bombay have been damaged due to air pollution, according to a three year study, titled "Effects of Industrial pollution on Plants" conducted by Dr. S.B. Chaphekar and his colleagues at the Institute of Science, Bombay.

This study shows that Mango trees along road side were damaged considerably, upto 30 per cent of the tree leaves were rendered dead. In areas surrounding the Hindustan Petroleum Refinery, some trees were completely ruined.

Plants show reduced photosynthesis in the presence of pollutants. Hence the air-purifying action of plants—absorbing carbon dioxide and releasing oxygen—is reduced, resulting in a vicious circle of increased pollution. A recent West German study, quoted by the National Geographic magazine, has linked acid depositions due to acid rains with the decline in forest growth. Air pollution is known to affect crops too. Researchers in Japan have linked decline in rice production with increase in atmospheric levels of sulphur dioxide.

Interestingly, the extent of damage to plants can serve as an index of ambient air pollution. According to Dr. Chaphekar, "When vegetation is injured by air pollution, symptoms characteristic of the specific pollutant usually develop. Since the pollutant itself undergoes a chemical change after it contacts the plants tissues, these symptoms are often only remaining evidence of the pollutant's assault. Thus the type of injury on a sensitive plant species provides a fairly accurate means of monitoring pollutant emission". In the absence of more sophisticated equipment—which only a few scientists have access to anyway—such methods do provide a rough and ready index of contamination.

TABLE

The following pollutants have the effect on vegetation shown—Pollutant effect on vegetation

Pollutant	Symptoms	*Maturity of leaf effected*	*Part of leaf affected*
Sulphur Dioxide	Bleached spots, bleached areas between viens, chlorosis, insect injury, winter and drought conditions may show similar markings.	Middle-aged most sensitive oldest least sensitive	Mesophyll cells
Ozone	Fleck, stipple bleached spotting, pigmentation conifer needle tips become brown and necrotic.	Oldest most sensitive youngest least sensitive	Polisade of spongy parenchyma in leaves with no polisade.
Peroxyacetylnitrate (PAN)	Grazing, silvering, or bronzing on lower surface of leaves.	Youngest most sensitive	Spongy cells.
Nitrogen dioxide	Irregular, white or brown collapsed lesions on intercoastal tissue and near leaf margin.	Middle aged leaves most sensitive	Mesophyll cells.
Hydrogen fluoride	Tip and margin burn, dwarfing, leaf abscission, narrow brown-red band separates necrotic form green tissue; fungal disease, cold and high tempers, drought, and wind may show *similar* markings, suture red spot on peach fruit	Youngest leaves most sensitive.	Epidermis and mesophyll cells.
Ethylene	Sepal withering, leaf abnormalities, flower *dropping, and* failure *of* leaf to open properly; abscission; water stress may produce similar markings.	Young leaves recover, other leaves do not recover fully	All.

Pollutant	Symptoms	Maturity of leaf effected	Part of leaf affected
Chlorine	Bleaching between viens, tips and margin burn, leaf abscission, marking often similar to that of ozone.	Mature leaves most sensitive	Epidermis and mesophyll cells.
Ammoniachloride	"Cooked" green appearance becoming brown or green on drying; overall blackening on some species.	Mature leaves most sensitive	Complete tissue.
Hydrogenchloride	Acid type necrotic lesion; tipburn on for needles; leaf-margin necrosis on broad leaves.	Oldest leaves most sensitive	Epidermis and mesophyll cells
Mercury	Chlorsis and abscission, brown spotting; yellowing of viens.	Oldest leaves most sensitive	Epidermis and mesophyll cells.
Hydrogensulfide	Basal and marginal scorching	Younget leaves most affected	Do
2, 4-Dichlorophenoxy-acetic acid (2-4)	Scalloped margins, swollen stems, yellow green mottling or stippling, suture red spot (2,4,5,-T), epinasty.	Youngest leaves most affected	Epidermis.
Sulphuric acid	Necrotic spots on upper surface similar to caustic or acidic compounds; high humidity needed.	All	All

(iv) **Effects on climate.**—Air pollution alters climate and may produce global changes in temperature.

Larger quantities of carbon dioxide are discharged into the atmosphere in the exhaust of motor vehicles, adding to the carbon dioxide produced by respiration and other human activities. Concern has been expressed that the resulting accumulation might lead to a gradual warning of the earth by reducing the transfer of surface heat to space (green house effect). On the other hand it has been reported that an increase in fine particulate matter in the atmosphere over the past 20 years may have been responsible for a world-wide decrease in temperature by interfering with incoming short-wave radiation from the sun.

The increase of condensation nuclei over cities associated with air pollution may give rise to an increased frequency of fog and precipitation.[1]

Air pollution has immense impact on the quality of regional as well as the global ecological system. Effects and the changes brought about in regional environmental systems by concentration of air pollutants from large pollution sources is now well documented. Increased precipitation, smog storms, increased acidity of rain droplets are reportedly ascribed to air pollution.

It is apprehended that some types of pollution emisions may trigger important changes in the operation of planetary ecological system. The build up of large quantities of green house gases such as carbondioxide. methane, ozone, nitrous oxide and chlorinated hydrocarbons etc., in the atmosphere, as these gases trip the low-energy radiations emitted from the earth's surface, could raise global temperatures. And if unchecked it will significantly change global weather pattern in the near future. The global impact of these changes could be very large and devastating such as flooding of coastal cities, destruction of agricultural areas and marine life in many countries.

Changes in the upper atmosphere, i.e., stratosphere are also being feared. Though the effects of the concentration of air pollutants in the higher atmosphere, i.e., stratosphere are not fully known presently but there are several possibilities that can be predicted. One such possibility is the depletion of protective shield called as 'ozone layer'. Scientists believe that increased concentration of water vapours, carbondioxide, oxides of nitrogen and sulphur, chlorofluorocarbons compounds from supersonic air crafts, surface transportation aerosol sprays and refrigeration etc., due to their longer endurance, peculiar condition in stratosphere and photochemical action, deplete the ozone layer. A continuing deterioration of earth's ozone shield would expose human beings to increased ultravoilet radiation-causing skin cancers. It would kill many plant species and reduce yields of many crops. There are already reports of ozone thinning over Northern hemisphere and ozone hole over Antarctica. The reports if are true and truth in the ozone depletion theory authenticaly proved, it will be catastrophic for life on the earth.

(v) **Effects of motor vehicle pollution on the environment.**—Of the pollutants emitted directly by motor vehicles, ethylene, carbon monoxide, nitrogen oxides (NO and NO_2) and lead are among the most important as regards their effects on the environment. Pollutants such as the oxidants,

---

[1] *Vide* Kitto Expert Committee Report.

including ozone and the peroxyacyl nitrates (PAN), are common components of the complex resulting from photochemical reactions in the atmosphere. Although the concentrations of sulphur dioxide produced by motor vehicles are generally small in comparison with those from other sources, the photochemical reaction plays an important role in oxidizing sulphur dioxide to sulphur trioxide which is then hydrated to sulphuric acid.

(*vi*) Effects of motor vehicles on vegetation.—With the exception of ethylene, pollutants emitted directly by motor vehicles have relatively little effect on plants at the concentrations usually found in the atmosphere. Under normal environmental conditions, the photochemical reaction produces pollutants that can cause injury to vegetation.

Gaseous components of the photochemical complex produced from motor vehicle exhaust are the active constituents causing injury to sensitive vegetation.

The toxicants known to cause damage to vegetation are ozone, peroxyacyl nitrates (PAN),[1] nitrogen dioxide and ethylene.

Effects

(*i*) Retards mental development
(*ii*) Affects heart functioning
(*iii*) Liver and kidney damage
(*iv*) Eye irritation
(*v*) Respiratory disorder
(*vi*) Odour problem
(*vii*) Aggravation of Asthma
(*viii*) Lung Cancer
(*ix*) Green house effect
(*x*) Acid rain

(*vii*) Effect on inert materials.—Alternate freezing and thawing cracks building materials when water seeps or is absorbed into stone or concrete. Water or high humidity is a necessary ingredient for most if not all corrosive effects upon inert materials. Dust sand, or salt particles in high winds cause pitting of painted and metallic surfaces.

TABLE

The following table shows air pollution on inert materials

Material	Manifestation	Measurement
Metal	Spoilage of surface; gross loss of metal.	Reflectance; weight gain or loss
Building stone	Discoloration; Leaching	Not usually quantitative.
Fabrics dyes	Discoloration; Fading, Weakening	Reflectance; loss of tensile strength.
Leather	Weakening, Embrittlement	Loss of tensile strength.
Paper	Embrittlement	Decreased folding resistance.
Plaint	Discoloration	Reflectance, not usually quantitative.
Rubber	Cracking	Loss of elasticity; cracks.

---

[1] Peroxyacyl nitrates that have been specifically identified include peroxypropionyl nitrate (PPN) and perozybutyryl nitrate (PBN).

(*viii*) **Socio-economic effect.**—Various monetary estimates of losses due to air pollution have been made, and all of them have been of a high order of magnitude. No one has yet included in such estimates the monetary costs of illness and deaths caused by such pollution, leaving aside the accompanying human misery.

Among the monetary losses due to such illness and death should be included direct medical costs, lost income resulting from absenteeism from work and decreased productivity.

Other costs of air pollution include the following :

(*a*) increase of travel costs and time of travel due to reduced visibility, together with increased risk of accidental injury, in travel because of decrease of visibility;

(*b*) increase of costs of artificial illumination;

(*c*) repair of damage to buildings and other structures;

(*d*) increase costs of cleaning;

(*e*) losses due to damage to crops and ornamental vegetation;

(*f*) losses due to injury to animals of economic importance;

(*g*) decrease of real estate values;

(*h*) extra costs of manufacture because of pollution from outside sources;

(*i*) loss of the dust, vapour or gas *per se*, which if collected, might be of economic value.

The sociological importance of air pollution results largely from individual economic losses. If economic damage were reduced, the sociological gains would be significant. This added to the effect of cleanliness of the areas, might tend to reduce the development of slums.

(*ix*) **Other effects.**— Other effects of air pollution include damage to property, aesthetic values and interference with production and services.

Air pollution especially caused by smoke. soot and particulates tend to increase the rate of soiling of clothes, house furnishings, displayed merchandise walls and ceilings and buildings structures. The added expenses of frequent cleaning and repairing represents the increased costs of living in polluted area. Public property is also damaged by air pollutants as they have adverse reactions on stone metals, wood and paints, etc. Corrosion of metals, withering of stones and wood by acidic gases, mists,. Sulphur dioxide, carbon dioxide now pose a serious threat to the survival of historical monuments like the Taj the Roman Colosseum the Westminster Abbey and other architectural and art forms. Real estate property in polluted areas become devalued more rapidity than normal.

Air pollution interfere with production and services. Traffic delays causes by poor visibility resulting from photo chemical action of air pollutants and depressing health effects on human beings are the primary factors responsible for this.

Aesthetic quality of the environment could be directly damaged by smoke, chemical fumes, dust, etc. Aesthetic damage cannot be measured in monetary terms but the blotting of the horizon in a smoke-filled valley can well discourage tourist trade and reduce the land value of spectacular view sites. Aesthetic have an economic value in such cases.

10. Air pollution and meteorology.—Air pollution is an undersirable addition to the atmosphere of the substances that are either foreign to it or are in quantities exceeding there natural concentrations. Concentrations of pollutants can be either increased or decreased by weather conditions. The weather influences pollution in a number of ways, the winds transport it from one place to another and the dilution of pollution depends on various meteorological factors like wind direction and turbulence. Wind direction indicates the direction of travel of the pollutants. The wind speed determine how rapidly the contaminant will advance into the area. Other things being equal, the concentrations down wind from a source will be inversely proportional to the wind speed.

The random notions of widely different scales and periods are mainly responsible for the movement and diffusion or pollutants about the mean downward path. This diffusion also depends on the vertical temperature distribution in the lower layers of the atmosphere. The decrease temperature with height is called the lapse. Atmosphere with lapse rate of about 10 degree centigrade/km are called adiabatic. If the temperature of the ambient air decreases with high at a rate greater than the dry adiabatic rate it is said to be super adiabatic lapse rate.

Super adiabatic lapse rate mainly occur close to the ground in the lowest few hundred meters of the atmospheres. They are associated with (1) sunny day time conditions, and (2) cold and dry air over warmbodies of water. In unstable atmosphere pollutants are easily mixed in the vertical atmosphere with lapse rates less than the adiabatic are said to be stable and the verticle motion is damped. In stable atmospheres pollutants are not easily mixed in the vertical. As isothermal condition is one in which there is no change of temperature with height (moderate stability) while inversion occurs when the temperature actually increases with high (strong stability and little vertical mixing).

Inversion occur (1) at night near the ground during clear skies and light winds, (2) when there is warm air covers overcold bodies of water, and (3) after a summer shower when the ground is cold by evaporation, etc.

Mixing height (or mixing depth) is the thickness of an atmospheric layer measured from the surface upward through which pollutants are presumed to mix by virtue of conviction caused by day time heating at the surface, low mixing heights with strong winds have the same effects on pollution transport as light winds associated with larger mixing heights.

Natural cleaning of the pollutants occurs by one or more of three process: fall out, rain out and wsh out. When the particles in a plume are very small their vertical motion due to gravitational settling is negligible in comparison with that due to turbulence. It is probable that a good deal of removal of such fine particles is by process of impaction on natural surfaces. Many small particles act as nuclei of condensation and are thus removed in rain. Since the sulphur dioxide readily oxidises in the atmosphere into sulphur trioxide in the presence of sunlight and since sulphur trioxide unites readily with water to form sulphuric acid, and important mode of removal of sulphur dioxide would be rain. When precipitation sweeps out the contaminants during its descent, the process of removal may be called a wash out. There is no doubt that some large particles are collected and washed out by rain drops during there descent. Cleansing by this type of rain action is thus limited to removal of the larger particles.

These meteorological principles may help in the control of pollution from an industrial plant if they are applied in the selection of its location, in its design and equipment and in its day to day operation. In addition, weather and climate factors are to be taken into account in laying out zones for industrial use, in identifying causal factors in existing pollution problems and in establishing air quality criteria.

The ideal solution to air pollution problems is to remove all contaminants at the sources provided that the materials so removed are used advantageously in bye-product manufacture. Unless they can be used in this way, the disposal or storage of the collected material may become a serious problem. In the long run, it may prove more economical to use the natural diffusing power of the atmosphere when there are at their maximum for the disposal of wastes than it is to collect, haul to distant points and dump them there. At times the diffusing capacity of turbulent winds is very large and the mixing so rapid that the contaminants or dispersed into very small concentrations which cause neither annoyance nor damage. The atmosphere is a natural source which can be both used and conserved by scientific management.

There is urgent need in our country for field studies of pollution concentrations from specified sources in relation to meteorological veriables. A good deal of valuable information can be gained with a relatively impretentious meteorological installation. A minimum programmes will have to include observation of wind speed and direction, atmospheric turbulence lapse rates taken simultaneously with concentration, measurements at appropriate points. This mimimum programme applies only to the study of pollution from a single sources, such as, an industrial plant. The analysis of the pollution produced by a whole city must be handled in a different way.

11. Control and prevention of air pollution.—The control of air pollution is ultimately in engineering problem. In principle it should be possible to reduce environmental air pollution by applying one or more for the following procedures *(a)* containment, *i.e.*, prevention of escape of toxic substances into the ambient air, *(b)* replacement of certain technological processes or fuels by new ones that produce less air pollution or (*c*) reduction of concentration of toxic substances in air by dilution. Containment can be achieved by a variety of engineering methods, such as, development of equipment as inertial separates, electrostatic precipitators, scrubbers and fabric filters. Reports of these developments have appeared in the technical literature and abstracts of these articles are published regularly by a number of national bodies. It should, however, be pointed out that the improvement of containment methods have been accompanied by a considerable rise in the operating cost and that the economic factor often seriously hampers their application. It can be noted that containment methods, although very useful, are never completely effective.

The second principle of control, that of replacing a technological process that causes air pollution by a new one that does not has been considerably less successful, in practice. The reason is obvious. The substitute process has to be technologically equivalent to the old one in all essentials, such as, the quality of the final product and the availability of raw materials, and it has also to be satisfactory as regards cost of production. All these requirements are difficult to meet and call for costly and lengthy toxicological research. But substitution may in certain cases be the only if solution to a specific air pollution control problem.

The third principle, dilution, should be used only if the first two methods are not applicable or are unsatisfactory for either technological or economic reasons, but it should be remembered that dilution is valid so long as it is within the self-cleaning capacity of the environment. For example, some air pollutants are readily removed by vegetation. The capacity for this is, however, limited and trouble occurs when the atmosphere is overburdened with pollutants. In details of these three are discussed below :

12. Air pollution control measures.—

(*i*) Settling Chambers

(*ii*) Cyclones

(*iii*) Bag Filters

(*iv*) Electrostatic precipitators

(*v*) Scrubbers

(*vi*) Absorpition Towers

(*vii*) Incinerators

A. Reduction of amount of pollution.—Pollutants from use of fuels for heating and for generation of power include smoke, grit and dust, and gases and vapours containing oxides of sulphur carbon monoxide and oxides of nitrogen, and often complex oraganic or metallic compounds, particularly in the exhaust gases from internal combustion engines, such as, these powered by diesel oil or gasoline and used for transport.

On the basis of existing knowledge, much of this pollution could be avoided without undue capital expenditure. Smoke, for example, is the visible sign of inefficient combustion with consequent waste of fuel. By ensuring controlled provision of the air supplies for burning coal and oil in industrial boilers and many other furnaces. There should be little or no smoke and a consequent saving of fuel for the same service.

Grit and dust are discharged from industrial furnaces burning coal or coke at high rates, especially with pulverized fuel burners. To remove much of the grit and dust involves the use of special equipment, such as, cyclone grit arrestors, electrostatic precipitators, scrubbers employing water and filters.

B. Mitigation of effects.—On discharge from a chimney, the dust and gases are carried by the wind and dispersed, but the amount and direction of dispersion are dependent on meteorological conditions that differ greatly not only from place to place but from time to time. Topography and the density size and arrangement of nearby buildings also have their effect on dispersion on the direction wind, and on the frequency, extent and structure of the direction of the wind, and on the frequency, extent and structure of temperature inversion which in many areas often leads to a layer of stagnant air where the pollutants can accumulate for periods of hours and even days.

If dispersion is to be adequately achieved, the effective height of chimney should be such as to ensure that under the least favourable meteorological conditions the concentration of pollutants in the near ground level will not have a serious effect on health. The effective height may be greater than the height of the structure as a result of the upward velocity and buoyancy of the discharge leaving the chimney.

C. Zoning.—Indiscriminate siting of dwellings of factories discharging pollutants has produced conditions under which the people of certain areas are frequently exposed the harmful concentrations that could have been avoided by zoning. Zoning of areas and siting of dwellings and factories should take into account meteorological and particularly micrometeorological conditions. Some areas might well be designated "smoke control areas" where emission of smoke is prohibited. In such areas it is essential that the equipment should be capable of burning the fuel for which it was designed without emission of smoke or that only smokeless fuels, such as, coke, gas or electricity should be used.

D. Instrumentation.—All plants likely to emit undue quantities of pollutants if improperly operated should be equipped with appropriate control and warning instruments to guide the operators and inform the management.

E. Training.—The training of management executives and operators in methods of keeping down the emission of pollutants from industrial operation is urgently required.

F. Legislation.—The administrative control of atmospheric pollution can be most effectively developed in to appropriate law at national level through the action of a committee of persons representing public health administration, fuel usage, industrial hygiene, agriculture science, industry and town planning. Such a committee would recommend the necessary legal instrument suitable to its unique country problems. In 1981 Government of India passed Air (Prevention and Control of Pollution) Act.

G. Standards.—When legislation is introduced, it is natural for officials and those who are operating industrial plants to expect that there should be a standard of emission laid down. In spite of this, when it comes to establishing standards there is a danger in writing specific figures into the legislation because industrial and technical performance is continually changing, causing standards to become outdated as it is found in western countries. Therefore, the standards of performance for the purpose of controlling the emission of pollutants should not be written into legislation, but should be incorporated in form of regulations, capable of being altered by the administrative group, without necessitating return to the Legislature for authority. The operative words "use of the best practicable means" which are used in the control of the emission of pollutants in British factories, seem to establish a very important principle.

H. Research.—Intensified research is needed with the object of obtaining more information on the ultimate interaction and fate of pollutants, especially at the time of temperature inversions and fog when the concentration of pollutants is likely to be greatest. Not only that air pollution problems are too complex for immediate and easy solution and therefore required expensive equipment and highly trained investigators for their resolution. Institute of higher learning and the appropriate international and governmental agencies should be encouraged to undertake research in solving these more recalcitrant problems.

I. Education.—If legislation for the reduction of air pollution is to be effective, it must have the backing of public opinion, and this implies acknowledgeable public. There is therefore a need for the Central authority to institute a programme of public education, explaining the general nature of air pollution, its adverse health effects, the ways in which the public can cooperate in the reduction of pollution. When such an educational programme is effective the activities of the control authority are made considerably easier.

TABLE

Size ranges of industrial and other dusts and fumes in order of increasing sizes

	Substance	Approximate particle diameter (microns)
1	Carbon black	0.01—0.2
2	Zinc oxide fume	0.01—0.4
3.	Ammonium chloride fume	0.1—1
4.	Cement alkali fume	0.1—3
5.	Pigments	0.1—10
6.	Smetter or metallurgical dust	0.1—100
7.	Tobacco smoke	0.2
8.	Atmospheric dust	0.5
9.	Alkali fumes	1—5
10.	Silica dust	1—10
11.	Milk (Spray dried)	1—10
12.	Sulphuric acid mist	1—15
13.	Flour	1—75
14.	Coal dust	1—100
15.	Foundry dusts	1—1000
16	Condensed zinc dust	2
17.	Atmospheric fog	2—15
18	Cement dust	3—100
19	Pulverized coal	5—500
20	Sulphide ore for floatation	7—200
21.	Talc	10
22.	Sprayed zinc dust	15
23.	Fertilizers	25—1000
24.	Saw dust	50—1000

Zutshi, P K : A perspective on Current Air Pollution Problems, P.8, B.A.R.C., Bombay

Common important constituents of suspended particles in polluted atmosphere

Ammonia
Antimony
Arsenic
Asbestos
Benzene soluble organics
Beryllium
Bismuth
Cadmium
Calcium
Carbon
Chlorides
Chromium
Cobalt
Copper
Flourides
Iron
Lead
Manganese
Molybdenum
Nickel
Nitrates
Phosphates
Potassium
Silicates
Sodium
Sulphates
Sulphides
Titanium
Vanadium
Zinc

13. Cost in control.—The estimated costs are based on assumed future control requirements. Still, the yearly cost to control the industrial sources of these four major pollutants is relatively low, less than 1 per cent of the value of the annual output of the industries involved, although the costs to some industries is much greater.[1]

What air pollution costs ?

14. Results in damages.—Economic studies are beginning to identify some of the more obvious costs. To paint steel structures damaged by air pollution. Commercial laundering, cleaning, and dyeing of fabrics soiled by air pollution. Washing cars dirtied by air pollution. Damage to agricultural crops and livestock. Adverse effects of air pollution on air travel. Even more difficult to tie down are the costs of replacing and protecting precision instruments or maintaining cleanliness in the production of foods, beverages, and other consumables. It is equally difficult to assess damage, soiling, and added maintenance to homes and furnishings or how air pollution acts on property values. The cost of fuels wasted in incomplete combustion and of valuable and potentially recoverable resources such as sulphur wasted into the air is also hard to count. It is still more difficult to determine the dollar value of medical costs and time lost from work because of air pollution—or to calculate the resulting fall in productivity of business and industry.

15. Extent of the air pollution problem in India.— By taking the amount of fuel consumed for commercial and non-commercial purposes an estimate has been made for the total emissions of major pollutants in the country's atmosphere. We consume nearly 562 million tons of fossil fuel and combustibles every year with a consequent release of about 94 million tons of poisonous materials into our atmosphere. Amounts of individual major pollutants thus released per year are prescented in Table.

Despite distinctive natural climatic conditions which act as natural scrubber for mitigating air pollution air pollution problems in India are becoming severe. In the process of rapid industrialization, urbanization, increased private and public transportation. India is passing through the typical pattern of air pollution hazard which the developed nations suffered in their early stages of growth and now paying heavy price for rectifying it.

Air quality, particularly, in the urban areas of our country is badly deteriorating. On national scale we seem to add every year about four million tonnes of sulphur dioxide, seven million tonnes of particulates, one million tonnes of carbon mono-oxide 0.5 million tonnes of nitrogen oxide and 0.2 million tonnes of hydrocarbons into the air coming from domestic, industrial and transportation sources.

Taking a bird's eye view, Calcutta and Burdwan in West Bengal, Bombay, Poona and Thana in Maharashtra, Coimbatore, Madurai in Tamil Nadu, Ahmedabad, Baroda in Gujarat, Kanpur, Agra, Ghaziabad in Uttar Pradesh, Delhi itself,. Ludhiana in Punjab, Yamuna Nagar, Faridabad in Haryana, account for nearly 80 per cent air polluting industries. Industries account for nearly 45% of the total air pollution load. These industries include petrochemical complexes, fertilizer, extiles, leather, thermal power plants, mining processing, chemical industries. These industries emit smoke, particulate matters gases besides a number of other toxic substances in thousands of tonnes into the atmosphere.

---

[1] *Vide* India's Environment, 1982 Ed. p. 143.

The deterioration of air quality in many of our cities is further compounded by air contaminants emitted from domestic municipal the country. Pollution load assessment and quality of ambient air in 10 problem areas has already been completed by the Central Board through intensive surveys. A net work of monitoring stations (260) under National Ambient Air Quality Monitory programme initiated in 1984-85 has been established through out the country to monitor ambient air quality in the industrial areas in order to assess the compliance of standards fixed under MINAS by Central Department of the Environment and the vehicular exhausts emissions. Air quality data for period between1987 to 89 have been analysed and interpreted in the recently published report titled. "Ambient Air Quality Status of Some Cities/Towns in India", to assess the distribution and concentration of pollutioon loads in these cities, incinerations, and increasing transportation. Bombay provides an example to illustrate the catastrophic dimensions of air pollution in India. A recent study showed that Bombay emits daily about 2971 tonnes of air pollutions in the air, of which 52% (1538 TPD) comes from transport, 46% (1357 TPD) from industries and 2% (62 TPD) from domestic and other sources, perhaps highest than anywhere else in the country. Air pollution levels of oxides of nitrogen and sulphur and particulate matter is fairly high. In some of its pockets especially Thane and Chambur it has twice as much Sulpherdioxide as the permissible level.

Crop productivity in India is reported to has been greatly affected due to adverse impact of industrial and transportation emissions. Fears in recent years have been expressed about the eating away effects of power plant and refinery emissions on ancient and rare monuments like the Taj.

Control of air pollution is difficult and a complex task. Complete eradication/prevention of the pollution is impossible and undesirable as such would deprive the society of the benefits of productive economic activities. Control of air pollution is basically a technical/engineering problem. The control is possible through any or all of the following procedures suggestied by WHO :

(a) Containment, i.e., prevention of escape of toxic substances into ambient air by engineering devices such as inertial separators, electrostatic precipitators, scrubbers and fabric filters.

(b) Replacement of certain technological processes or fuels by new ones that produces less air pollution.

(c) Reduction of concentration of toxic substances in air by dilution such as vegetation.

In addition to technological measures legislature and administrative measures are equally important for the control. In India, the control measures, in view of the threatening dimensions of air pollution perceived in the recent years have now begun. Legislative mechanism after exclusive recent legislation on air pollution, i.e., Air (Prevention and Control of Pollution) Act, 1981 has been given a new impetus. Administrative mechanism has also been provided for under the above Act by creating Central and State pollution control boards. Administrating a system of consent order, monitoring activities and enforcement through fines and criminal prosecutions, these boards acting under the provisions of the Act and under delegation of executive functions under Art. 258 (3) the Constitution, exercise control activity for regulation of industrial and vehicular emissions.

16. International standardization in air pollution : Nomenclature, units and methods of measurement.—Agreement between nations on nomenclature and methods of measurement of air pollution is obviously desirable if the results of research work in different countries are to be compared.

There is an urgent need to abolish from technical literature imprecise terms such as "smog" and "smaze" scientists are obliged to describe air pollution in different parts of the world accurately in terms of its origin and constitution. It is particularly important to abolish the use of such a hybrid word as "smog" when it conveys an erroneous impression of the nature of the pollution.

Likewise, there is danger in the imprecise use of the meteorological terms "temperature inversion", "inversion base" and "inversion celing". These phenomena, being of various types and extent and capable of existing side, by side, must be accurately defined.

In reporting concentrations and dimensions of pollutants the metric system should used and temperatures should be reported in degrees centigrade. Concentrartion of particulate and gaseous pollutants should be reported in terms of mass per unit volume, which necessitates standardizing the temperature and pressure of the unit of volume used.

Concern with standardization of units of concentration must not howver, lead to over-simplification of the description of air pollution. Pollutants have other dimensions and properties which must be described as accurately as possible; mass per unit volume of a particulate pollutant is an adequate term only if its physical and chemical nature have been determined, since its biological effects may be almost wholly dependent on these properties.

It is important to state the periods over which samples are taken. These will obviously vary, depending on the purpose for which sampling is done: "spot" samples are important in some contexts (*e.g.*, as random checks on pollution at many points) but they would be of limited value for defining the environment in epidemiological surveys. Where appropriate, continuous-recording instruments may be used from which peak concentrations (the acuteness of the peaks will depend on the time-constant of the instrument) can be read and average concentrations over specified periods calculated. Care must be taken in using such instruments since they often lack specificity. The results they give must therefore be subject to frequent critical scrutiny and checking by other analytical methods.

The nature of the pollutant under consideration also determines or influences the selection of the sampling period. Some compounds, for example polycyclic hydrocarbons, vary in their stability and may be oxidized or destroyed by light or by other pollutants. Allowance must be made for this fact when conducting surveys, for if samples are collected over too long a period the less stable compounds will be lost and therefore discounted.

For purposes of international comparison of routine measurements, a short-term sample might be defined as one taken over a period of 30 minutes and a long-term sample as one taken over a period of 24 hours. It is recognized that in some circumstances these period may not be applicable, but it is recommended that they be used where possible.

Having stated in outline the principles to be observed in collecting and describing air pollutants, the Committee considered it essential to emphasize the importance of selecting sampling sites so that the samples taken are representative of the air actually breathed. Otherwise, the care taken in making measurements will be entirely in vain.

Air may be polluted by particles or by gases. A common particulate pollutant is smoke, which is an aerosol formed as a result of the incomplete combustion of carbonaceous fuels. In coal-burning communities this complex mixture of carbon, ash, crystals and tar is the pollutant most frequently measured. Traditionally, concentrations of smoke (or "permanently suspended matter") are expressed in terms of mass per unit volume, but the figure is usually arrived at by measuring the soiling of a filter paper and subsequent reference to a calibration curve from which an assessment of mass concentration can be made. Obviously, the validity of smoke measurements in gravimetric terms must depend on the frequent reassessment of the calibration curves with respect to time, whether, and changing habits of fuel usage. The optical assessment of blackness must obviously be made before the blackening of the filter reaches a maximum. Sampling rates must be adjusted so that the linear velocity at the face of the filter is such that only particles small enough to be inhaled are measured. The method of assessing particulate pollution by measuring the soiling of the filter papers has much to commend it; it is technically simple and does not require expensive apparatus; moreover, it is possible that in some countries that blankness of the smoke may be more closely related to morbidity than the mere particulate mass. But there are many disadvantages of this method of assessment. Some pollution is now far less black than formerly, whilst some pollutants, *e.g.*, diesel smoke, are much blacker per unit weight than coal smoke. There is no easy solution to these problems, unless the object of the sampling procedure is carefully defined. The object may be to measure blackness, particulate mass, or the surface area of the particles. The use of membrane or glass-fibre filters enables workers to weigh the particles or estimate their projected surface area, but it remains necessary to develop a chemically inert, non-friable, non-hygroscopic filter material of low resistance to air on which to collect adequate samples of particles.

In order to make intelligent investigations of the possible effects of particulate pollution many microscopic examination techniques must be used but as these are research tools the need for standardization is not so urgent.

Sulphur dioxide is probably the most important geseous pollutant in coal or oil-burning communities, and many methods of estimating its concentration are at present in use. A common method is that in which air, after the removal of smoke by filtration, is bubbled through hydrogen peroxide solution and the resultant sulphuric acid determined by titration with standard alkali. This method is simple but lacks specificity, being a measure of acid gases rather than of sulphur dioxide, but since this gas is by far the predominant acid pollutant in most coal and oil-burning towns the results reflect with considerable fidelity the concentration of sulphur dioxide in the air. There are accurate calorimetric methods in use, and some workers favour the estimation of total sulphate which in their locality is closely related to the sulphur dioxide concentrations in the air. Increases in the conductivity of aqueous solutions and the decolourization of solutions of iodine are phenomena commonly used in automatic recording instruments and are adequate for monitoring if the composition of the pollutants remains reasonably constant. But gaseous pollution often varies in a manner that invalidates these methods; for example, ammonia may increase the conductivity of a solution and be reported as sulfur dioxide, and oxides of nitrogen might interfere with colorimetric reactions. Constant vigilance is therefore needed.

INDEX

(THE) AIR (PREVENTION AND CONTROL OF POLLUTION) ACT, 1981
  acquittal is sustained order of (Sec 40) 406
  Air pollution cannot exceed Standard prescribed by the Board-Emission of (Sec. 22) 389
  Air pollution control areas—declaration of (Sec. 19) 382
  Any industrial unit—State Board is empowered to direct the closure of 400
  boards—power and functions of 377
  Chairman—qualifications of (Sec 5) 372
  chairman of the Board not entitled to continue in the service after the supersession of the Board (Sec 47) 410
  Company—meaning of (Sec 40) 406
  compliance of the Sec 21 384
  Construction—General Principle of (Sec. 2) 370
  Contradictory evidence with regard to the port hole in chimney is concluded (Sec. 40) 406
  directions given to (Sec. 31-A) 399
  Director—meaning of (Sec. 40) 406
  Discrimination and violation of Art. 14 of the constitution (Sec. 21) 386
  Exercise of power under Sec. 31-A 400
  Financial memorandum 367
  fund Account and Audit (Sec. 32) 401
  guilt not established accused rightly acquitted (Sec. 21) 386
  it is the Board alone—which is empowered to grant sanction (Sec. 43) 408
  Locality—respectable witnesses of (Sec. 24) 392
  Magistrate not affected—power of (Sec 52) 412
  memorandum Regarding Delegated Legislation 368
  no inconsistency with Sec 133 Cr P C.—Provisions Compared (Sec. 52) 412
  Noise pollution—horn-type loudspeaker—use of (Sec. 17) 379
  notes on clause appended 363
  Objects and Reasons—Statement of 362
  Penalties and procedure 403
  Power to issue directions—under Sec. 31-A 398
  Pre-condition—direction from Central Government cannot be held to be 400
  Public nuisance described (Sec. 52) 413
  Removal of the factory—justification of (Sec 22) 387
  Respectable (Sec 24) 392
  Scope and object of the Acts (Sec. 21) 395
  Search—necessity of recording of reasons (Sec. 24) 392
  search by Magistrate (Sec. 24) 392
  search by unauthorised person (Sec. 24) 393
  search of the motor-car (Sec. 24) 393
  search of Police party and Search witnesses (Sec. 24) 393
  search of a woman (Sec. 24) 394
  Section 1—short title, extent and commencement 369
  Section 2—Definitions 369
  Section 3—Central Pollution Control Board 370
  Section 4—State Pollution Control Boards constituted under Sec. 4 of 370
  Section 5—Constitution of State Boards 371

(THE) AIR (PREVENTION AND CONTROL OF POLLUTION) ACT, 1981 *(Contd.)*

Section 6—Central Board to exercise the powers and perform the functions of a State Board in the Union territories 372
Section 7—Terms and conditions of service of members 373
Section 8—Disqualifications 374
Section 9—Vacation of seats of members 375
Section 10—Meeting of Board 375
Section 11—Constitution of Committees 375
Section 12—Temporary association of persons with Board for particular purposes 375
Section 13—vacancy in Board not to invalidate acts or proceedings 376
Section 14—member-secretary and other employees of State Boards 376
Section 15—delegation of powers 376
Section 16—functions of Central Board 377
Section 17—functions of State Boards 378
Section 18—power to give directions 380
Section 19—power to declare air pollution control areas 381
Section 20—power to give instructions for ensuring standards for emission from automobiles 382
Section 21—restrictions on use of certain industrial plants 383
Section 22—persons carrying on industry, etc.,—standards laid down by State Board .. 387
Section 22-A—power of Board to make application to court for restraining persons from causing air pollution 389
Section 23—furnishing of information to State Board and other agencies in certain cases 390
Section 24—power of entry and inspection 391
Section 25—power to obtain information 394
Section 26—power to take samples of air or emission and procedure to be followed in connection therewith 394
Section 27—reports of the result of analysis on samples taken under Sec. 26 396
Section 28—State Air Laboratory 396
Section 29—analyst 397
Section 30— reports of analysts 397
Section 31—appeals 397
Section 31-A—power to give directions 398
Section 32—contributions by Central Government ... 401
Section 33—fund of Board 401
Section 33-A,—borrowing powers of Board 402
Section 34—budget 402
Section 35—annual report 402
Section 36—account and audit 403
Section 37—failure to comply—directions issued under Sec. 31-A ... 403
Section 38—penalties for certain acts 405
Section 39—penalty for contravention of certain provisions of this act 405
Section 40—offences by companies 406
Section 41—offences by government department .. 407

(THE) AIR (PREVENTION AND CONTROL OF POLLUTION) ACT, 1981 *(Contd.)*
- **Section 42**—protection of action taken in good faith 408
- **Section 43**—cognizance of offences 408
- **Section 44** —members officers and employees of Board to be public servants 409
- **Section 45**—reports and returns 409
- **Section 46**—bar of jurisdiction 409
- **Section 47**—power of state government to supersede State Board 409
- **Section 48**—special provision in the case of suppression of the central board or the State Boards constituted .. 410
- **Section 49**—dissolution of State Boards constituted under the act 411
- **Section 50**—omitted by act 47 of 1987 411
- Section 51—maintenance of register 412
- Section 52—effect of other laws 412
- **Section 53**—power of central government to make rules 413
- **Section 54**—power of state government to make rules 414
- **"Seize"**—meaning of (Sec 24) 392
- **Statutory duty of the Board**—not discharged (Sec. 17) 380
- **"To inspect"**—meaning of (Sec. 24) 392
- **trial on a fanciful unwarranted and technical ground is not sustained**—discharge the accused at the threshold of (Sec. 37). 404
- two or more witnesses (Sec. 24) 393
- violation of the provisions (Sec. 21) 387
- **Word "shall"**—meaning of (Sec. 18) 381
- **wrong observation against U.P. Pollution Board and district administration**—whether could be justified (Sec. 5) 372

(THE) AIR (PREVENTION AND CONTROL OF POLLUTION) RULES, 1982 417
- **Construction**—general principles of 417

(THE) CONSTITUTION OF INDIA 1045

Art. 19(1)(g)—right to freedom to practice any profession .. 1046

Article 48-A—protection and improvements of environment and safeguarding of forests and wild life 1047

Article 245—extent of laws made by Parliament and by Legislatures of states .. 1050

Article 246—subject-matter of laws made by Parliament and by the legislatures of states 1051

Article 249—power of Parliament to legislate with respect to a matter in the state list in the national interest 1051

Article 252—powers of parliament to legislate for two or more states by consent and adoption of such legislation by any other state 1052

Competence to legislate on water pollution 1049

Constitution—Importance
  amendment in the preamble of 1045

Constitutional effort
  for protection and improvement from pollution 1046

Constitutional recognition to environmental pollution problem 1049

Entry 6 —of list II 1049

Entry 17—of list II 1049

Entry 56—of list I 1049

Environmental law
  precautionary principle and the polluter pays principle are part of 1057

Environmental pollution
  forest and wild life play an important role in prevention of 1047

Environmental protection ... 1047

Fundamental duties 1047

Introduction 1045

Law made under Art. 252(1)
  applicability of 1057

Legislature
  Governor whether included in 1056

Legislative powers of Parliament 1055

Onus of proof 1047

Passing of resolution in accordance with Art. 252(1) of the Constitution of India
  effect of 1052

Pollution free atmosphere
  Right of a citizen 1053

"Precautionary Principle" and the "Polluter Pays" principle
  acceptance of 1058

Protection and improvement of environment
  object of Article 48-A— described 1053

Resolution under Cl. (1) of Art. 252
  effect of 1055

Restriction for cutting trees not held unreasonable ... 1047

Right to environment is part of the right to life 1054

Scope of Art. 252
  of the constitution 1055

State have sufficient authority to enact law 1058

Wild life forms part of our cultural heritage 1049

(THE) CONSUMER PROTECTION ACT, 1986 1068
Air pollution control system installed for commercial purpose
  defect in the system—whether complainant a consumer 1070
Drainage system
  duty of the M.C.D. to repair the sewerage system 1070
Education
  sceptic tank open student of U.K.G. drowned in the tank 1070

Introduction to Sec. 3 and 7 1086
(THE) EMPLOYMENT OF MANUAL SCAVENGERS AND CONSTRUCTION OF DRY LATRINES (PROHIBITION) ACT, 1993 1087
Constitution
  introduction to the Act and its relation to Art. 47 of 1087
Definitions
  provision of Sec. 2 deals in 1087
Provision of Sec. 3
  prohibition of employment of manual scavengers etc. 1088
Provision of Sec. 10
  power of executive authority to prevent environmental pollution in certain cases. 1088
Provision of Sec. 14
  penalty for contravention of the provisions of the Act and rules, orders, directions and Schemes 1089
(THE) ENVIRONMENT (PROTECTION) ACT, 1986 459
Ambiguous expression 462
Appendix
  no development zone 527
Appointment of officers and their powers and functions 474
Authority
  constitution of 466
Bar of Jurisdiction 501
Central Government
  is empowered to constitute an authority to take measures to protect the environment 469
Central Government
  power of—petitions—not maintainable 467
Cognizance of offences 498
Court
  court can levy cost upon the Polluter 469
  duty of 499
Definitions 461
Directions
  disobedience of 467
Direction for closure of the unit was made
  other facilities also stopped— plea of reasonable opportunity of being heard—Rejected 476
Directions issued
  to be implemented 475
Direction issued by the Government
  validity of 490
Direction for the stoppage of mining operations within 2 kms. radius—Report of export body—considered 468
Displaced mine owners
  direction regarding rehabilitation of 490
Eco-system
  is to be preserved 472
Effect of other laws 501
Effluents and to prevent air, water and soil pollution by the abattoir
  grant of permission of conditions of treatment of 486
Emissions and effluents from plant causing hardship to the local population
  remedial action for 482

(THE) ENVIRONMENT (PROTECTION) ACT, 1986 *(Contd.)*
Enactment of notifications
cannot be accepted—plea which defeats the purpose and object of 477
Environment
an Act to provide for the protection and improvement of.. 459
Environmental courts
establishment of—need of 461
Environmental degradation
control of 471
Environment and Ecology
maintenance of 471
Environment and Ecology of the area
payment of compensation by way of cost for the restoration of 485
Environmental laboratories 494
Environmental pollution
directions for stone crushers 480
Environment and *vice versa*
development should not be at the cost of 468
Evidence
rule of 497
explanation 475
Forests is a serious offence effecting environment
Destruction of 462
Forest land from deforestation to maintain ecology and to prevent environmental degradation and hazardous effect on right to life
preservation of 473
Furnishing of information
to authorities and agencies in certain cases 490
Generallia specialibus non-derogant 461
Government analysts 494
Government regarding pollution steps indicated
duty of 500
Gypsum and iron based sludge
disposal and storage of .. 486
Industries
restrictions, prohibitions regarding construction and setting up of 475
Information, reports or returns 500
Injuries to victims
quantum of compensation on the basis of 488
Intention and attempt
distinction of 499
Irish consignment of butter
direction to forbear release of 484
Legislation
intention of 465
Marginal note
is a part of Sec 7 479
Members, officers and employees of the authority
constituted under Sec. 3 to be public servants 500
Mining in the Doon Valley area
should be stopped 489
Mining operations by lime stone quarries
catagorical suitability of continuance of 482
Notification—
Aquaculture authority in coastal states and union territories 520
constitution of Taj Trapezium Zone Pollution (Prevention and Control) Authority ... 532
Central ground water board 522
Delegations of power to give directions to state Governments—of A.P., Assam, Bihar, Gujarat, Haryana, H P., Karnataka, Kerala, M.P., Mizoram, Orissa, Rajasthan, Sikkim and Tamil Nadu 503
of Goa and Jammu and Kashmir 503
of Meghalaya, Punjab and Uttar Pradesh 503
of Maharashtra 503
of Tripura 503
of West Bengal and Manipur 503
Delegations of power to give directions—power of chairman Central Pollution Control Board for general emission and effluent standards 525

(THE) ENVIRONMENT (PROTECTION) ACT, 1986 *(Contd.)*
Notification *(Contd.)*
  Environmental Impact Assessment Authority for the capital region 519
  Environment impact assessment of developmental projects. 530
  Environment pollution (prevention and control) authority for national capital region 522
  List of environmental laboratories and analysts for the purposes of analysis of samples 504
  Loss of ecology (prevention and payments of compensation) authority for state of Tamil Nadu 524
  No development zone in state of Assam... 526
  Officers authorised for taking cognizance of offences 518
  Power delegated recognition to laboratories 517
  Restricting certain activities in specified area of Aravali range causing environmental degradation 527
Objects and reasons
  statement of 459
Offences by companies 496
Offences by firms
  liability of partners 496
Offences by Government Departments 497
Old concept that development and ecology cannot go together
  is no longer acceptable ... 472
Penal provision
  must be strictly construed 496
Penalty for contravention
  of the provisions of the Act and the rules, orders and directions 495
Penalty—*Mensrea*
  essential 496
Penalty and punishment
  if anonymous 497
Person 492
Persons carrying on industry operation, etc.,
  not to allow emission or discharge of environmental pollutants in excess of the standards 479
Persons handling hazardous substances to comply with procedural safeguards.... 480
Pollution Control Board
  directions to 462
Poor and illiterate victims
  settlement of claims . .. 487
Power of central government
  to take measures to protect and improve environment 463
Powers of entry and inspection.......................... 491
Power to delegate 501
Power to give directions 474
Power to make rules 501
Power to take sample and procedure
  to be followed in connection therewith 492
Precautionary principle 466
Principles of natural justice
  violation of.... 498
Protection of action
  taken in good faith 498
Protection of environment
  duty of court in cases of 499
Provisions
  of the environment Act consists of four chapters with 26 Sections 479
Proviso
  is intended to limit the enacted provision. 497
Public interest litigation
  procedural law whether applies to 481
Punishment
  quantum of 496
Reckless mining operations and restoration
  of natural balance in public interest prevention of..... . 483

(THE) ENVIRONMENT (PROTECTION) ACT, 1986 *(Contd.)*

Reports of Government Analysts 495
Residential buildings around chemical industries
  restraint in erection of 473
Rules made
  under this Act to be laid before Parliament 502
Rules to regulate environmental pollution ... 478
Samples
  lifting of 494
Scope and objects
  explained 465
Sea water
  only such land reclamation as would disturb the natural course of 468
Section
  Interpretation of 462
  short title, extent and commencement 460
Statutes
  interpretation of 460
Stench and stink caused by open drains and public excretion by slum dwellers
  clearance of 488
Tata Iron and Steel Co Ltd. (TISCO)
  prevention of pollution of discharge from washeries of 488
Vested powers
  in the Central Government under Sec. 5 476
Victims in mass tort actions
  claims of 484

(THE) ENVIRONMENT (PROTECTION) RULES, 1986 533
  Application 627
  Brief description 627
  Definitions 533
  Directions 536
  Dyes and dye-intermediates 627
  Ecological balance
    in the coastal areas protection of 539

  Interpretation
    rules of 534
  Interpretation of statute
    principle of 534
  Manner of giving notice 543
  Notifications
    coastal stretches as coastal regulation zone (CRZ) and regulating activities in the CRZ 667
    Annexure I—coastal area classification and development regulations 671
    Annexure II—guidelines for development of beach resorts/hotels in the designated areas 673
    Annexure III—list of petroleum products permitted for storage in part areas 674
    dumping and disposal of fly ash discharged from cool or lignite based thermal power plants 650
  Notifications—Ecologically fragile area 675
    Annexure—guidelines for permitting restricting industries and industrial units in the Dahanu Taluka, Thane District in Maharashtra 676
    Green categories 676
    Orange category 678
    Red category 678
  Notification—Environmental clearance for industries ... 630
    Schedule I—list of project requiring environmental clearance from the central government 632
    Schedule II—list of projects requiring environmental clearance from the state government 633

(THE) ENVIRONMENT (PROTECTION) RULES, 1986 *(Contd.)*
Schedule III—composition of the export committees for environmental impact assessment 634
Notification—Environmental clerance of projects 637
Schedule I—list of project requiring environmental clearance from the central government 639
Schedule II—application form 640
Schedule III—composition of the expert committees for environmental impact assessment 642
Schedule IV—procedure for public hearing 643
Notification—Environmental impact assessment of development projects in relation to thermal power plants 644
Schedule I—category of thermal power plants requiring environmental clerance from the state government . . . 645
Schedule II—procedure for seeking environmental clearance of projects 645
Schedule III—composition of the expert committees for environmental impact assessment 648
Schedule IV—procedure for public hearing 649
Notification—powers of entry and inspection in listed officers. 655
powers of entry and inspection in listed persons 651
prohibition on the use of benzidine-based dyes 627
prohibition on benzidine-based dyes and its salts ... 627
prohibition on the handling of azodyes 628
Schedule—list of azodyes .. 628
prohibition on industries and mining operation etc., in Dehradun. 659
Annexure—guidelines for permitting, restricting industrial units in the Doon valley area 660
Category green 660
Category orange. 662
Category red 664
prohibition of industries in Murud-janjira 659
prohibition on storage of chemicals in Antop Hill, Bombay 665
Objections
filing of 627
Penal provision 539
Persons 538
Procedure for submission of samples for analysis, and the form of laboratory report thereon 542
Procedure for taking samples 541
Prohibited substances 627
Prohibition and restriction on the handling of hazardous substances in different areas 544
Prohibition and restriction on the location of industries and the carrying on processes and operations in different areas 538
Qualifications of Government Analyst 543
Schedule I 546
Appendix A—Form I—notice of intention to have sample analysed 605
Form II—nemorandum to Government Analysist ... 606
Form III—report by Government Analyst 606
Form IV—form of notice .. 607
Form V—environmental statement for the financial year ending 608

(THE) ENVIRONMENT (PROTECTION) RULES, 1986 *(Contd.)*
Schedule II—general standards for discharge of effluents .. 610
Schedule III—ambient air quality standards in respect of noise 610
Schedule IV—standards for emission of smoke, vapour, etc., from motor vehicles 610
Annexure I
mass emission standards for petrol driven vehicles ... 612
Annexure II
break down of the operating cycle used for the tests ... 613
Annexure III
reference fuel for type and production conformity tests 614
Annexure IV
limit values of exhaust gas capacity applicable for diesel driven vehicles the engine tests at steady speed 614
Schedule V 615
Schedule VI—General standards for discharge of environmental pollutants
[Part-A : Effuents] 616
Part-B—waste water generation standards 619
Part-C—load based standards 620
Part-D—general emission standards 620
Part-E—noise standards .. 622
Annexure I
for the purposes of Part A, B and C 623
Annexure II
for the purpose of part-D 624
Schedule VII—national ambient air quality standards (NAAQS) 625
service of notice 542
short title and commencement 533
Standards of emission or discharge of environmental pollutants 534
Submission of enviromental statement 545

User of stream
  to be only reasonable user 1072
Water tank
  injunction to restrain interference with the use of. 1082
(THE) INDIAN FOREST ACT, 1927 877
Acts prohibited in such forests 884
Additional powers to make rules 899
All persons bound to aid in case of accident at depot 893
Appeal from order
  passed under Sec. 11, Sec 12, Sec 15, or Sec. 16 882
  under Sec. 55, Sec. 56 or Sec 57 896
Appeal
  under Sec. 17 882
Bar of accrual
  of forest rights 879
Cattle Trespass Act, 1871 to apply 898
Certain kinds of timber to be deemed property
  of government until title thereto proved and may be collected accordingly .. 893
Commutation of rights 882
(The) control over forests and lands not being the property of government 888
(The) control of timber and other forest property in transit 891
Drift and stranded timber
  collection of. 893
Drift timber
  notice to claimants of ... 893
Disposal on conclusion of trial for forest offence
  or produce in respect of which it was committed 895
(The) Duty on timber and other forests – produce .. 890
Exercise of rights admitted .. 881
Expropriation
  of forests in certain cases 889
Extinction of rights 880
Failure to perform service
  for which a share in produce of government forest is employed 900
Government and its officers–
  not liable for damage to such timber 894
Forests
  power to assume management of 889
Forest officers
  deemed to be public servants 899
  not to trade 899
Forest–Produce
  Power to make rules to regulate transit of 891
Forest – Produce tools etc.,
  when liable to confiscation 895
Forest settlement officer
  power of 880
  Proclamation by 879
  record to be made by . 881
Government and forest officer
  not liable for damage to forest-produce at depot .. 893
Indemnity for acts done in good faith 889
Inquiry by forest settlement officer 879
Interpretation clause 877
Land acquired under
  this act to be deemed to be needed for a public purpose under the Land Acquisition Act, 1894 . . 901
Lien on forest produce for such money 901
Limit not to apply
  to purchase money or royalty 891
Management of forests
  the joint property of government and other persons 900

(THE) INDIAN FOREST ACT, 1927 (*Contd.*)
No right acquired over reserved forest except as here provided. 883
Nothing in the chapter to prohibit acts done in certain cases 888
Notification declaring forest
  reserved 883
  by state government . . 878
Order on claims to rights of pasture or to forest produce. 881
Payments to be made
  by claimant before timber is delivered to him 894
Penalties for acts
  in contravention of notification under Sec. 30 or of rules under Sec. 32 887
Penalties and procedure 895
Penalties for breach for rules 899
  made under Sec. 41 892
Penalty for counterfeiting or defacing marks on trees and timber and for altering boundary - marks 896
Persons bound
  to assist forest officer and police officer 899
Pleaders 883
Power to acquire land over which right is claimed 880

(THE) WATER (PREVENTION AND CONTROL OF POLLUTION) CESS ACT, 1977 330

Applicability of the Act
  to Tata Engineering and Locomotive Co. Ltd. 334
Cess is to be levied on the water consumed (Sec. 3) 335
Construction of statute—
  guiding principles 332
Construction of the terms and expressions—
  two rules 333
Fouling water of public spring or reservoir (Sec. 17) 334
Industry
  meaning of (Sec. 3) 335
Metallurgical industry and engineering industry—
  difference of 333
Notification 347
Object of the enactment 332
Objects and reasons—
  statement of 330
Purpose for enactment 331
Rayon grade pulp—
  if chemical industry or textile industry or paper industry 333
Schedule I
  glass industry-If covered under entry 8 346
  industries engaged in processing milk into milk products if falls within the ambit of entry 15 346
  sugarcane is vegetable 346
  sugar industry—if falls under item 15 346
  true meaning and scope of the entries of. 346
Schedule II—table for rate of cess and purpose for which water is consumed 347
  Section 1—short title, extent, application and commencement 330
  Section 2—definitions 334
  Section 3—levy and collection of cess 334
  Section 4—affixing of meters 335
  Section 5—furnishing of returns 336
  Section 6—assessment of cess 336
  Section 7—rebate 336
  Section 8—crediting proceeds of cess to consolidated fund of India and application thereof 337
  Section 9—power of entry 338
  Section 10—interest payable for delay in payment of cess 338
  Section 11—penalty for non-payment of cess within the specified time 338
  Section 12—recovery of amount due under the act 338
  Section 13—appeals 339
  Section 14—penalty 339
  Section 15—offences by companies 339
  Section 16—power to amend schedule I 340
  Section 17—power to make rules. 340
Survey of water pollution problems (Sec. 17) 344
Tata Engineering and Locomotive Co. Ltd. Jamshedpur for levy of cess.—liability of 334

(THE) WATER (PREVENTION AND CONTROL OF POLLUTION) CESS ACT, 1977 *(Contd.)*
Tata Engineering and Locomotive Co. Ltd.—
  if metallurgical industry 334
Whether the generality of the power under Sec. 17 can be over looked 341
Word "shall"—
  meaning of (Sec. 13) 339
(THE) WATER (PREVENTION AND CONTROL OF POLLUTION) CESS RULES, 1978 348
  Form I 356
  Form 1-A 357

  Rule 1—short title and commencement... 348
  Rule 2—definitions 348
  Rule 3—standards of meters and places where they are to be affixed 348
  Rule 4—furnishing of returns 349
  Rule 5—manner of payment of the cess to the central government and the time within which it shall be paid 349
  Rule 6—rebate 350
  Rule 6-A—collection by States/Union Territories .. 354
  Rule 7—powers to be exercised by the officer or the authority of the state government under Sec 9 354
  Rule 8—authority to impose penalty under Sec 11 355
  Rule 9—appeal 355
Schedule 359
Vires, scope and amplitude of Rule 6 350
Word "commissioned" and "so long as it functions successfully". (Rule 6) ... 351
Word "installation"—
  meaning of (Rule 6) 357
Word "shall"—
  meaning of (Rule 4) 349

(THE) WATER (PREVENTION AND CONTROL OF POLLUTION) ACT, 1974 166
  "Act of firm" (Sec. 47) 251
  Adverse effects on various facts of human life etc .. 172
Amendment
  extends to the whole of the state of Uttar Pradesh by virtue of the Resolution 173
Board has power to give "Directions" (Sec. 33) 240
Boating and water sking 172
  civil court to entertain any suit or proceeding restraining a party to cause pollution.
  whether Sec. 58 prohibits the jurisdiction of . 270
Combined scope
  of Secs 4 and 11 181
Comments of legislature
  on various clauses of 168
Company
  small functionaries committed no offence as they were not responsible for conduct of the day-to-day business of, (Sec 47) 261
Company shall be deemed to be guilty of the offence (Sec. 47) 261
Complaint for the offence
  under Secs. 43 and 44. withdrawal of 245
Complaint is not maintainable
  as the place of sewage discharge is not specified (Sec 26) .. 231
Complaint with vague language
  not maintainable (Sec. 26) 230
  congnizance of an offence (Sec 49) 262
Conditional order of discharge of effluents
  from the factory even into the lagoons (Sec. 24) 212
Court is empowered to intervene and protect the fundamental right to life and liberty of the citizens (Sec. 24) 212
Definitions
  of board (Sec. 2) 173
  of central board (Sec 2) . 173
  of "company" (Sec. 47) . . 247

(THE) WATER (PREVENTION AND CONTROL OF POLLUTION) ACT, 1974 *(Contd.)*

Definitions *(Contd.)*
- of "existing company" (Sec. 47) 248
- of member (Sec. 2) 173
- of occupier (Sec. 2) 173
- of outlet (Sec. 2) 173
- of pollution (Sec. 2) 173
- of prescribed (Sec. 2) 174
- of "private company" (Sec. 47) 248
- of "public company" (Sec. 47) 248
- of sewage effluent (Sec. 2) 174
- of sewer (Sec. 2) 174
- of state board (Sec. 2) 174
- of state government (Sec. 2) 174
- of stream (Sec. 2) 174
- of trade effluent (Sec. 2) 174

Degradation of coastal waters
- due to intensive shrimp farming in coastal states of India (Sec. 25) 226

Directions and observations
- to prevent further pollution and the environmental degradation (Sec. 59) 274

Director (Sec. 47) 349

Director of a company or partner of a firm
- can be tried for the offence committed by the company (Sec. 47) 255

Doctrine of implied repeal
- rules of interpretation (Sec. 33) 238

Doctrine of promissory estoppel
- applicability against government (Sec 25) 224

Drawing untreated sullage
- from the sewers is against the provisions of—stoppage order is justified (Sec. 26) 230

Duty of Nagar Mahapalika
- to prevent the pollution of water Sec. 19 191

Every person
- who was responsible to the company for the conduct of business of the company (Sec. 47) 261

Evolving a national policy
- for location of chemical and other hazardous industries (Sec. 24) 207

Exercise of power
- state government is empowered to supersede the state board 278

Fact—question of
- (Sec. 59) 274

Financial capacity and responsibility to tanneries 188

Financial memorandum
- attached to 171

Firm (Sec. 47) 250

Further ordersdepending upon the contents of the report-requirement of (Sec. 25) 228

Gaon Pradhan—
- if public servant (Sec 50) 267

General principle
- of construction 174

Good faith—
- belief must be reasonabale (Sec. 59) 271
- meaning of (Sec 59) 271
- moral element of honesty (Sec 59) 274

"Good faith" in General Clauses Act and Penal Code
- distinction between definition of (Sec. 59) 273

High Courts
- should not ordinarily grant orders of stay in criminal proceedings relating to pollution control (Sec. 19) 193

Illegality of search—
- if vitiater the seizure (Sec. 23) 201

Implied repeal
- of Sec. 133, Cr. P.C. under Sec. 33 238

Inspect—meaning of
- (Sec. 23) 198

Justification of directions under Sec. 33 235

(THE) WATER (PREVENTION AND CONTROL OF POLLUTION) ACT, 1974 *(Contd.)*
Laying down certain conditions and compliance thereof—Sec. 25 216
Liability of co-operative society and its secretary (Sec. 47) 252
Liability of occupier
  of officer in charge of actual operation of the coustic chlorine plant (Sec. 24).. 208
Liability
  of a partner of firm (Sec. 47)......... 251
Manager (Sec. 47). 249
Managing agent (Sec. 47) 249
Managing director (Sec. 47) 249
Measure of liability
  of an enterprise engaged in an hazardous or inherently dangerous industry (Sec. 47) 257
Memorandum regarding delegated legislation 172
Nature
  of search Sec. 23 199
Necessity of sanction (Sec. 43) 244
Notes on clauses 168
Not public servant
  (Sec 50)..... 267
Object of the Act (Sec. 24) 206
Offence committed
  by the firm (Sec. 47) . 250
Officer (Sec. 47)..................... 250
  penalties and procedure under Sec 41 242
Personal liability
  of chairman and managing director—of chlorine gas (Sec. 24)......... 210
Petitioner entitled
  to move the court to enforce the statutory provisions of the Act Sec 19 191
Power of the board to grant sanction
  for prosecution (Sec. 49) .. 265
Power of the board
  to seek remedies from a magistrate (Sec. 33) 238
Power to issue directions
  with regard to closure of industry Sec. 33-A 239
Proceeding under Sec. 33
  of the Act are obviously legal proceedings under the Act 236
Proper complaint (Sec. 24) 206
  Prosecution against director and secretary of company, (Sec 47)... 251
Prosecution of manager
  in the obsence of the proprietor (Sec. 47).. 251
Provisions
  of section 33-A 239
  of section 60 276
Public servant (Sec. 50) 266
  recretional activities may be hampered by water pollution 172
Requirements of the section
  full compliance of (Sec 49) 266
Responsibility for causing the pollution in the wells soil etc.
  determination of (Sec. 24) 211
Responsibility
  of-Sec. 44 245
Restrictions
